48938 **(ORNL/TM—9678) Application of the finite element groundwater model FEWA to three regional aquifers.** Wong, K.F.V.; Yeh, G.T. (Oak Ridge National Lab., TN (USA)). Jun 1986. Contract AC05-84OR21400. 112p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE86014408.

This report documents the calibration with field data and predictive application of a finite element model of water through aquifers (FEWA). FEWA was described in a report written by G.T. Yeh and D.D. Huff in 1983. The model was first compared with the United States Geological Survey (USGS) two-dimensional model and found superior in treating anisotropic media when the coordinates cannot be made to coincide with the principal directions of hydraulic conductivities. In addition, there was no necessity to define nodal points outside the region, as required by the USGS model. FEWA was next calibrated with measured potentiometric surfaces from the Love Canal area in New York and the Conesville area in Ohio. There were satisfactory matches between computed results and available field data. The calibration and predictive runs of FEWA were then accomplished with the Hialeah-Preston well field data over the Biscayne aquifer in south Florida. The calibration run yielded two values of hydraulic conductivity in the area, and the predictive run gave results that matched well with available data. 18 refs., 28 figs.

48939 **(BMI/ONWI—606) Evaluation of seismic reflection data in the Davis and Lavender Canyons study area, Paradox Basin, Utah.** Kitcho, C.A.; Wong, I.G.; Turcotte, F.T. (Woodward-Clyde Consultants, San Francisco, CA (USA)). Aug 1986. Contract AC02-83CH10140. 53p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86015026.

Seismic reflection data purchased from petroleum industry brokers and acquired through group speculative surveys were interpreted for information on the regional subsurface geologic structure and stratigraphy within and surrounding the Davis and Lavender Canyons study area in the Paradox Basin of southeastern Utah. Structures of interest were faults, folds, joints, and collapse structures related to salt dissolution. The seismic reflection data were used to interpret stratigraphy by identifying continuous and discontinuous reflectors on the seismic profiles. Thickening and thinning of strata and possible areas of salt flowage or dissolution could be identified from the seismic data. Identifiable reflectors included the tops of the Precambrian and Mississippian, a distinctive interbed close to the middle of the Pennsylvanian Paradox salt formation (probably the interval between Salt Cycles 10 and 13), and near the top of the Paradox salt. Of the 56 faults identified from the seismic reflection interpretation, 33 trend northwest, west-northwest, or west, and most affect only the deeper part of the stratigraphic section. These faults are part of the deep structural system found throughout the Paradox Basin, including the fold and fault belt in the northeast part of the basin. The faults bound basement Precambrian blocks that experienced minor activity during Mississippian and early Pennsylvanian deposition, and showed major displacement during early Paradox salt deposition as the Paradox Basin subsided. Based on the seismic data, most of these faults appear to have an upward terminus between the top of the Mississippian and the salt interbed reflector.

48940 **(N—86-23089) Workshop on the Tectonic Evolution of Greenstone Belts.** (Lunar and Planetary Inst., Houston, TX (USA)). 1986. 143p. (NASA-CR—176619; CONF-860180—). NTIS, PC A07/MF A01.

From Workshop on the tectonic evolution of greenstone belts; Houston, TX, USA (16 Jan 1986).

The Workshop on the Tectonic Evolution of Greenstone Belts, which is part of the Universities Space Research Association, Lunar and Planetary Institute, of Houston, Texas, met there on Jan. 16-18, 1986. A number of plate tectonic hypotheses have been proposed to explain the origin of Archean and Phanerozoic greenstone/ophiolite terranes. These hypotheses are explored in the abstracts.

48941 (N—86-23089, pp vp) **High precision U-Pb geochronology and implications for the tectonic evolution of the Superior Province.** Davis, D.W.; Corfu, F.; Krogh, T.E. 1986. NTIS, PC A07/MF A01. (NASA-CR—176619; CONF-860180—).

From Workshop on the tectonic evolution of greenstone belts; Houston, TX, USA (16 Jan 1986).

The underlying mechanisms of Archean tectonics and the degree to which modern plate tectonic models are applicable early in Earth's history continue to be a subject of considerable debate. A precise knowledge of the timing of geological events is of the utmost importance in studying this problem. The high precision U-Pb method has been applied in recent years to rock units in many areas of the Superior Province. Most of these data have precisions of about + or - 2-3 Ma. The resulting detailed chronologies of local igneous development and the regional age relationships furnish tight constraints on any Archean tectonic model. Superior province terrains can be classified into 3 types: (1) low grade areas dominated by meta-volcanic rocks (greenstone belts); (2) high grade, largely metaplutonic areas with abundant orthogneiss and foliated to massive I-type granitoid bodies; and (3) high grade areas with abundant metasediments, paragneiss and S-type plutons. Most of the U-Pb age determinations have been done on type 1 terrains with very few having been done in type 3 terrains. A compilation of over 120 ages indicates that the major part of igneous activity took place in the period 2760-2670 Ma, known as the Kenoran event. This event was ubiquitous throughout the Superior Province.

48942 **(NUREG/CR—4705) Identification of a northwest trending seismogenic graben near Charleston, South Carolina.** Lennon, G. (South Carolina Univ., Columbia (USA). Dept. of Geology). Aug 1986. 50p. NTIS, PC A03/MF A01 - GPO. File Number TI86901646.

Shallow stratigraphic drilling (to approximately 85 m) and gamma logging in the miezoseismal area of the Charleston, 1886 earthquake was used to map three Tertiary unconformities. Results suggest the presence of a northwest extending graben lying between Charleston and Kiawah Island, SC. The 40 km long and 18 km wide graben is bounded on three sides by inferred, mappable faults. These are the Woodstock Fault on the northwest, the Ashley River Fault on the southwest and the Charleston Fault on the northeast. The Charleston fault extends northwest from Goose Creek, near Charleston through Woodstock and toward Ridgeville. It lies parallel to and a few kilometers to the northeast of a similar trace developed on the base of the middle Eocene Santee Limestone reported by Colquhoun and others. The Ashley River Fault extends northwest from Kiawah Island through or near Rantowles, SC. Sparse gamma-log control does not allow for a precise location of the trace or its displacement, as is the case for the Charleston Fault. Nevertheless, the zone of tectonic distortion has been limited to three kilometers of a line joining central Kiawah Island and Rantowles. Findings herein are supported by releveling data. Also these findings are useful to explain hydrogeologic anomalies reported and encountered in the Charleston area. The Ashley River Fault and the Charleston Fault are projected to land surface using cross-sections of Pleistocene sediments and geodetic data.

48943 **Mantle circulation and the lateral migration of subducted slabs.** Garfunkel, Z.; Anderson, C.A.; Schubert, G. (Department of Geology, The Hebrew University of Jerusalem, Israel). *Journal of Geophysical Research;* **91**: No. B7, 7205-7224(10 Jun 1986).

The irregular motions of plates and the irregular distribution of plate consumption and generation require that subduction zones and descending lithospheric slabs migrate laterally. Absolute plate motions indicate that slab migration is generally retrograde; that is, it is opposite to the direction of motion of the plates to which the slabs are attached, at rates of 10—25 mm yr^{-1}. As a result, the

downward motions of slabs are generally steeper than their dips, probably because of their negative buoyancy relative to the surrounding mantle. An important consequence of lateral slab migration is the displacement of material away from one side of the slab and inward flow of an equal volume toward the other side. This generates a mass flux in the mantle that is comparable in magnitude with the flux involved in the overturn of the oceanic lithosphere. The flow induced by slab migration is, therefore, an important part of the large-scale mantle circulation associated with plate motions. Two-dimensional numerical models with retrograde slab migration explicitly prescribed as a boundary condition show that migrating slabs, in contrast with nonmigrating ones, are at an angle to streamlines in the surrounding mantle.

48944 **Attenuation and scattering of broadband P-italic and S-italic waves across North America.** Taylor, S.R.; Bonner, B.P.; Zandt, G. (Earth Sciences Division, Lawrence Livermore National Laboratory, University of California, Livermore). *Journal of Geophysical Research;* **91**: No. B7, 7309-7325(10 Jun 1986).

Differential attenuation (δt-italic*) measurements of teleseismic P-italic and S-italic waves are made in the frequency range 0.05—5.0 Hz across North America using broadband seismic data from the Department of Energy's Regional Seismic Test Network and Lawrence Livermore National Laboratory's Basin and Range network. Data from four events have been analyzed by first assuming frequency independent Q-italic. The observed regional variations for (δt-italic*) are consistent with previous studies and show greater attenuation for stations in the Basin and Range relative to those in shield regions of North America.

From 4. international Kimberlite conference; Perth, Australia (10 Aug 1986).

A swarm of thin, isochemical but heteromorphic dikes crops out in the valley of Hasbidito Creek in NE Arizona. The swarm is part of the dominantly potassic, mid-Tertiary Navajo volcanic field of the Colorado Plateau. Whole-rock chemical analyses of five samples from four of the dikes indicate that they are chemically identical to the katungites of Uganda. These dikes show the characteristic seriate-porphyritic texture of lamprophyres. Samples of an olivine-melilitite dike from the same swarm lack this texture and the chemical analysis, while similar to those of the other dikes, shows effects from the incorporation of xenocrystic olivine. Over 20 mineral phases have been identified in the Arizona samples and as many as 18 phases may occur in a single sample. The major phases are phlogopite, olivine, perovskite, opaque oxides, +- melilite and +- clinopyroxene. Based upon the modal mineralogies and textures of ten dike samples, we recognize five general non-equilibrium assemblages. Comparison of these assemblages with recent experimental results shows that they represent various combinations of complete and incomplete reactions. Reaction relations were determined by entering melt and phase compositions into the computer program GENMIX to obtain balanced reactions. By combining petrographic observations with mineral chemical data, balanced reactions from GENMIX, and the recently determined phase diagrams we are able to trace crystallization paths for the katungite magma.

48948 **(UCRL—53630) Hydrothermal interaction of crushed Topopah Spring tuff and J-13 water at 90, 150, and 250°C using Dickson-type, gold-bag rocking autoclaves.** Knauss, K.G.; Beiriger, W.J.; Peifer, D.W. (Lawrence Livermore National Lab., CA (USA)). May 1985. Contract W-7405-ENG-48. 29p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014752.

As part of the Package Environment subtask of the Waste Package task within the Nevada Nuclear Waste Storage Investigations (NNWSI) Project, experiments were conducted to study the hydrothermal interaction of rock and water representative of a potential high-level waste repository in tuff. These experiments used crushed Topopah Spring tuff from both drillcore and outcrop samples. The data, when considered in conjunction with results from analogous experiments using solid wafers of tuff, define near-field repository conditions and can be used to assess the ability to use "accelerated" tests based on the surface area/volume (SA/V) parameter and temperature; allow the measurement of chemical changes due to reaction in phases present in the tuff before reaction; and permit the identification and chemical analysis of secondary phases resulting from hydrothermal reactions. Some of the results presented in this report have been used to demonstrate the usefulness of geochemical modeling in a repository environment using the EQ3/6 thermodynamic/kinetic geochemical modeling code. The tuff was reacted with a natural ground water in Dickson-type gold-bag rocking autoclaves that were periodically sampled under in situ conditions. Five short-term (<90-day) experiments using crushed tuff were run covering the range 90 to 250°C and 50 to 100 bars. This report will focus on the results of experiments with crushed tuff, while a companion report will cover results of analogous short-term experiments run with solid waters of tuff.

48949 **Use of digital image analysis to estimate fluid permeability of porous materials: Application of two-point correlation functions.** Berryman, J.G.; Blair, S.C. (Lawrence Livermore National Laboratory, University of California, P.O. Box 808 L-156, Livermore, California 94550). *Journal of Applied Physics;* **60**: No. 6, 1930-1938(15 Sep 1986).

Scanning electron microscope images of cross sections of several porous specimens have been digitized and analyzed using image processing techniques. The porosity and specific surface area may be estimated directly from measured two-point spatial correlation functions. The measured values of porosity and image specific surface were combined with known values of electrical formation factors to estimate fluid permeability using one version of the Kozeny-Carman empirical relation. For glass bead samples with measured permeability values in the range of a few darcies, our estimates agree well (+- 10—20%) with the measurements. For samples of Ironton-Galesville sandstone with a permeability in the range of hundreds of millidarcies, our best results agree with the laboratory measurements again within about 20%. For Berea sandstone with still lower permeability (tens of millidarcies), our predictions from the images agree within 10—30%. Best results for the sandstones were obtained by using the porosities obtained at magnifications of about 100 x (since less resolution and better statistics are required) and the image specific surface obtained at magnifications of about 500 x (since greater resolution is required).

48950 **Phase transitions, Grueneisen parameter, and elasticity for shocked iron between 77 GPa and 400 GPa.** Brown, J.M.; McQueen, R.G. (Geophysics Program, University of Washington, Seattle). *Journal of Geophysical Research;* **91**: No. B7, 7485-7494(10 Jun 1986).

Sound velocities determined in iron, shock compressed to pressures between 77 GPa and 400 GPa, indicate that two phase

transitions exist on the Hugoniot. A discontinuity in sound velocities at 200 +- 2 GPa may mark the transition of epsilon-c iron to γ iron. A second discontinuity at 243 +- 2 GPa is believed to indicate the onset of melting. The calculated temperature at melting lies between 5000 K and 5700 K. When extrapolated from the Hugoniot melting point, the Lindermann criterion yields an estimate of 5800 +- 500 K for the melting of pure iron at the inner core boundary pressure of 330 GPa. The product of density times the thermodynamic Grueneisen parameter in liquid iron, calculated from the present data, is 19.6 +- 0.8 Mg m^{-3}. A temperature profile ranging from 3800 K at the core-mantle boundary to 5000 K at the earth's center is calculated using the present data. Sound velocities for epsilon-c iron provide a better match to seismic velocities for the earth's inner core than do those of γ iron. A comparison between liquid iron velocities and the velocity profile through the outer core provides further evidence for alloying of iron with "lighter elements" in the core.

48951 (BMI/ONWI—512) Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites. Wagner, R.A.; Loken, M.C.; Tammemagi, H.Y. (RE/SPEC, Inc., Albuquerque, NM (USA)). Jul 1986. Contract AC02-83CH10140. 231p. NTIS, PC A11/MF A01; GPO Dep. File Number DE86014477.

This report describes preliminary thermal and thermomechanical numerical analyses of a potential nuclear waste repository at four salt sites: Paradox Basin, Utah; Permian Basin, Texas; Richton Dome, Mississippi; and Vacherie Dome, Louisiana. The analysis is subdivided according to three distinct geometric regions: canister, disposal room, and repository. An evaluation of the thermal and thermomechanical responses is performed to assess the suitability of each site to host a nuclear waste repository, under a given set of conceptual design assumptions that have not been optimized. In order to compare the thermal and thermomechanical responses of the rock, the same base case repository conditions were assumed to be used as a ruler to measure salt response relative to each site. Absolute values have not been determined; this report presents a relative comparison of differences that exist between sites due to depth and salt creep characteristics. This report represents the first attempt at calculating relative differences in rock responses and in no way represents values which should be used in a specific design. 44 refs., 21 figs., 11 tabs.

48952 (NP—6770137) Distributions of trace elements, secondary elements and main elements on sediments and manganese nodules in the Central Pacific south east of Hawaii. Guerkan, A. (Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Bergbau und Huettenwesen). 6 Feb 1981. 178p. (In German). NTIS (US Sales Only), PC A09/MF A01. File Number DE86770137.

The distribution of the trace elements, the additional and main elements within the samples of sediment cares and manganese nodules from the Central Pacific Ocean was studied. The principal interest of the chemical investigations was concerned with the heavy metals Mn, Fe, Co, Ni, Cu, and Zn, which are contained as well in the Pacific ocean sediments as in micro- and macro nodules. The distribution of the heavy metal contents depending upon their genetic origin was determined. (HK).

48953 Geochemistry of lead in rivers, estuaries and the continental shelf of the southeastern US. Windom, H.L.; Smith, R.G.; Maeda, M. (Skidaway Institute of Oceanography, Savannah, GA). 17: 43-56(1985).

Transport by southeastern rivers has insignificant influence on the lead concentration of southeastern shelf waters. If the rate of mobilization and transport of lead by these rivers is representative of uncontaminated fluvial transport during the Pleistocene, only about 5% of the prehistoric output of lead to the North Atlantic can be accounted for by river input. Lead concentrations in southeastern shelf waters are similar to those of North Atlantic Water from the upper 1000 m, which is probably similar to the intrusion source water for the shelf. Atmospheric inputs to the shelf of the same magnitude as observed for the Western North Atlantic are difficult to reconcile given the residence time of shelf waters and their lead concentration unless the rate of loss of lead to shelf sediments is about the same as the atmospheric flux. 29 references, 2 figures, 5 tables.

48954 (BNL—38342) Biological processes associated with the pycnocline and surface fronts in the southeastern Bering Sea. Whitledge, T.E.; Walsh, J.J. (Brookhaven National Lab., Upton, NY (USA). Applied Science Dept.; University of South Florida, St. Petersburg (USA). Dept. of Marine Science). 1985. Contract AC02-76CH00016. 17p. (CONF-8505303—1). NTIS, PC A02. File Number DE86014135.

From 17. international Liege colloquim on ocean hydrodynamics; Liege, Belgium (13 May 1985).

The southeast Bering Sea was sampled for five years between the Pribilof Islands and the Aleutian chain to investigate the significance of frontal regions on nutrient and chlorophyll distributions. Analysis of the data demonstrated that the fronts were always identifiable by either nutrient or chlorophyll concentrations. (ACR)

48955 (INIS-mf—10189) Determination of deep water circulation in the East Atlantic Ocean by means of a box-model based evaluation of C-14 measurements and other tracer data. Schlitzer, R. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1984. 101p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE86752581.

Radiocarbon (C-14) measurements proved to be an efficient means of determining the average, large-area deep water circulation in the Atlantic Ocean. The thesis under review explains and discusses measurements carried out in the equatorial West Atlantic and North Atlantic Ocean. The samples have been taken during mission 56 of the RS 'meteor' in spring 1981. The gas has been obtained by vacuum extraction and the measurements have been performed in proportional counter tubes, the error to be accounted for amounting to 2per mille. These measured data, together with measurements of the potential temperatures, the silicate and CO_2 concentrations, and measured data from the South-East Atlantic Ocean, have been used to calculate on the basis of a box model of the Atlantic Ocean the deep water flow from the West to the East Atlantic Ocean, the deep water circulation between the various East Atlantic basins, and the turbulent diffusion coefficients required to parameterize the deep water mixing processes.

48956 (SAND—86-0829) In situ heat transfer experiment (ISHTE): Ocean Test Cruise report (Alcyone Cruise, Leg IV) September 1985. Percival, C.M. (ed.). (Sandia National Labs., Albuquerque, NM (USA). Seabed Programs Div.). Aug 1986. Contract AC04-76DP00789. 128p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE86014743.

In September of 1985 a cruise was conducted aboard the Research Vessel Melville to test the In Situ Heat Transfer Experiment (ISHTE). This was the final test of the experiment before its 1-yr deployment. The location of the test was the designated ISHTE site, MPG-I, 1100 km north of Hawaii. The water depth at MPG-I is 5800 m. In addition to testing ISHTE, the cruise included biological activities in support of the Subseabed Disposal Project. During the recovery operation, the ISHTE platform was accidently dropped to the seafloor with the backup recovery line deployed. A subsequent biology operation cut this line and necessitated a grapnel recovery. Even though the testing of the platform was significantly disrupted by the accident, the majority of the platform equipment was operated and performed satisfactorily. The accident indicates that the ISHTE platform can probably be recovered from the seafloor under most circumstances by using an accurate navigational system.

48957 (AD-A—167374/8/XAB) North/south asymmetry in solar activity and its effects on the high-energy cosmic-ray diurnal variation. Shea, M.A.; Smart, D.F.; Swinson, D.B.; Humble, J.E. (New Mexico Univ., Albuquerque (USA). Dept. of Physics and Astronomy). 1986. 7p. NTIS, PC A02/MF A01.

Using a data base extending from 1955 through 1980 we find that the northern hemisphere of the sun was decidedly more active than the southern hemisphere for the period 1959 through 1970. From 1971 through 1980 there was no systematic asymmetry. Extending the time period through 1984, but using a different data base, we find an apparent change around October 1982, after which there are decidedly more flares occurring in the southern hemisphere of the sun than in the northern hemisphere. Examination of the diurnal variation amplitude present in the extremely high energy (approximately 100 GeV) cosmic radiation measurements indicates a consistent north/south asymmetry until about 1971 which we suggest is the result of the asymmetric solar activity.

48958 (AD-A—167692/3/XAB) Amplitude distribution of cosmic ray events in extrinsic IR detectors. Technical report. Aukerman, L. (Aerospace Corp., El Segundo, CA (USA). Electronics Research Lab.). 15 Mar 1986. 23p. (TR—0086(6427-01)-1). NTIS, PC A02/MF A01.

A method of calculating the amplitude distribution of cosmic-ray events in IR detectors utilizing known range-energy relationships for the various cosmic particles (mostly protons and helium nuclei) and published cosmic-ray energy spectra is described. Good agreement is obtained between the calculated amplitude distribution and the spurious events observed in an extrinsic detector during a flight test.

48959 (AD-A—167923/2/XAB) Periodic amplitude variations in Jovian continuum radiation. Progress report for period ending February 1986. Kurth, W.S.; Gurnett, D.A.; Scarf, F.L. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). 2 Apr 1986. 31p. NTIS, PC A03/MF A01.

An analysis of periodic variations in the amplitude of continuum radiation trapped in the Jovian magnetosphere shows structure with periods near both five and ten hours. Contrary to a plausible initial idea, the continuum amplitudes are not organized by position of the observer relative to the dense plasma sheet. Instead, there seem to be preferred orientations of system III longitude with respect to the direction to the sun which account for the peaks. This implies a clock-like modulation of the continuum radiation intensity as opposed to a searchlight effect. The importance of the dipole longitude-solar wind alignment to the amplitude of the continuum radiation implies the source region of the radiation is near the magnetopause and may tie the generation of the radio waves to the clock like modulation of energetic electron fluxes from Jupiter.

48960 (AD-A—167924/0/XAB) Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986. Gurnett, D.A.; Kurth, W.S.; Scarf, F.L.; Poynter, R.L. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). 26 Mar 1986. 21p. NTIS, PC A02/MF A01.

Radio emissions from Uranus were detected by the Voyager 2 plasma-wave instrument about 5 days before closest approach at frequencies of 31.1 and 56.2 khz. The bow shock was identified by an abrupt broadband burst of electrostatic turbulence about 10 hours before closest approach at a radial distance of 23.5 ru. Once inside of the magnetosphere, strong whistler mode hiss and chorus emissions were observed at radial distances less than about 8 R/sub u/, in the same region where the energetic-particle instruments detected intense fluxes of energetic electrons. A variety of other plasma waves, such as (f sub c) electron-cyclotron waves, were also observed in this same region. At the ring plane crossing, the plasma wave instrument detected a large number of impulsive events that are interpreted as impacts of micron-sized dust particles on the spacecraft. The maximum impact rate was about 20 to 30 impacts/sec, and the north-south thickness of the impact region was about 4000 km. This paper presents an overview of the principal results from the plasma-wave instrument, starting with the first detection of radio emissions from Uranus, and ending a few days after closest approach.

48961 (ANL—85-22, pp 98-99) Feasibility studies of accelerator mass spectrometry of ^{205}Pb and its application to solar neutrino detection. Henning, W.; Kutschera, W.; Ernst, H.; Korschinek, G.; Kubik, P.W.; Mayer, W.; Morinaga, H.; Nolte, E.; Ratzinger, U.; Mueller, M.; Schuell, D. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

^{205}Tl was proposed as a geological solar-neutrino detector nine years ago by M. Freedman and his collaborators at Argonne. However, a ^{205}Tl experiment has several severe problems which need to be solved before it can be useful. The present experiment was directed at the detection and identification of the ^{205}Pb atoms in a geological sample at ultralow concentration. The authors recent involvement in the technique of accelerator mass spectrometry which allows the detection of radioisotopes at extremely low concentrations suggested to them the application of this technique to ^{205}Pb. Employing the high-energy ion beams (2.3 GeV) from the UNILAC accelerator at the GSI Darmstadt, they are able to demonstrate a suppression of neighboring isotopes to better than 1 in 10^{10} and of neighboring elements to about 1 in 10^{3}. While these results are very encouraging, the minimum number of atoms detectable is still severely limited by the efficiency of producing multiply-charged ions from present ion sources. Future improvements in ion-source performance are presently being investigated.

48962 (ANL-HEP-CP—86-39) New evidence from Soudan 1 for underground muons associated with Cygnus X-3. Ayres, D.S. (Argonne National Lab., IL (USA). High Energy Physics Div.). 5 Jun 1986. Contract W-31-109-ENG-38. 5p. (CONF-860575—34). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014587.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

The Soudan 1 experiment has obtained additional evidence for underground muons associated with the x-ray pulsar Cygnus X-3. We report the preliminary analysis of data recorded during the October 1985 radio outburst of Cygnus X-3, which show a significant excess of muons for a narrow range of Cygnus X-3 phases.

48963 (CEA-CONF—7944) Neutron stars and supernovae. Schaeffer, R. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Sep 1984. 17p. (In French). (CONF-8409260—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750866.

From CERN accelerator school; Gif-sur-Yvette, France (3 Sep 1984).

The neutron star observations and theoretical estimations are presented; composition model is given. The presupernova, supernova collapse and observation of neutrinos emitted by a supernova are also presented.

48964 (DOE/ER/10719—T3) Research in nuclear astrophysics: stellar collapse and supernovae. Progress report. Lattimer, J.M.; Yahil, A. (State Univ. of New York, Stony Brook (USA)). Aug 1986. Contract AC02-80ER10719. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014252.

This proposal describes the nuclear astrophysics research program in the Earth and Space Sciences Department at Stony Brook. The central themes in the many projects that comprise this program are supernovae, neutron star formation, and the equation of state of hot, dense matter. There is a close coupling between the physics of nuclear matter on the one hand, and supernova and neutron stars on the other. (The collapse of massive stars is thought to lead to Type II supernovae and the creation of neutron stars. A

summary of the historical background and of recent developments in the theory of Type II supernovae, complete with references, is contained in the Appendix.) The properties of nuclear matter, together with those of the weak interactions, determine the outcome of models of Type II supernovae; thus, optical observations of supernovae and neutrons stars may set some limits on the nuclear equation of state. In the future, the detection of neutrinos, which are the only available observables of the internal supernova mechanism, will impose tighter constraints on nuclear matter properties.

48965 **(DOE/ER/40048—171-L6) Search for the beta-decay of ^{180}Lu to ^{180}Hf/sup m/.** Kellogg, S.E.; Norman, E.B. (Washington Univ., Seattle (USA). Nuclear Physics Lab.; Lawrence Berkeley Lab., CA (USA)). 1986. Contract AC03-76SF00098;AC06-81ER40048. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014378.

The t/sub 1/2/ = 5.7 minute ^{180}Lu isotope was produced in the ^{180}Hf(n,p) reaction and its subsequent β decay back to ^{180}Hf was studied with a Ge(Li) spectrometer. A radiochemical technique was used to measure the fractional population of the I/sup π/,K=(8$^-$,8) isomer in ^{180}Hf to be f/sub m/ = 0.005 +- 0.018%. The limit of f/sub m/ is shown to be too small to account for the nucleosynthesis of ^{180}Ta/sup m/ in the r-process. The possible existence of a high-spin isomer in ^{180}Lu and its astrophysical consequences are discussed. 23 refs., 3 figs., 3 tabs.

From 3. international conference on low-level counting; Bratislava, Czechoslovakia (21 Oct 1985).

48969 **(INIS-mf—10406) Reflection and transmission of polarized light by planetary atmospheres.** Rooij, W.A. de. (Vrije Univ., Amsterdam (Netherlands)). 12 Sep 1985. 262p. NTIS (US Sales Only), PC A12/MF A01. File Number DE86703135.

In this thesis the reflection and transmission of sunlight by planetary atmospheres is studied, taking full account of the polarization of light. The atmospheres are treated as being locally plane-parallel, and are assumed to consist of a number of homogeneous layers, the lowest one being either a ground surface or a semi-infinite homogeneous layer. Includes Dutch summary; 220 refs.; 33 figs.; 33 tabs.

48970 **(INIS-mf—10417) Star clusters and associations. Physics and evolutions of stars.** Ruprecht, J.; Palous, J. (eds.). (Ceskoslovenska Akademie Ved, Prague. Astronomicky Ustav). 1983. 314p. (In English and Russian). (CONF-8309388—). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233.

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

All 33 papers presented at the symposium were inputted to INIS. They dealt with open clusters, globular clusters, stellar associations and moving groups, and local kinematics and galactic structures.

48971 (INIS-mf—10417, pp 2-12) **Structural properties of open star clusters and their relation to the Galaxy.** Ruprecht, J. (Ceskoslovenska Akademie Ved, Prague. Astronomicky Ustav). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

Structural peculiarities of most open star clusters are discussed. They might indicate dynamical influences and disruption of clusters. The distribution of the number of disturbed clusters relatively to the total number of clusters seems to suggest some connection with the distribution of interstellar matter in the sky.

48972 (INIS-mf—10417, pp 28-36) **Age groups and composite diagrams for young open clusters.** Mermilliod, J.-C. (Lausanne Univ., Switzerland). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

Stellar evolution for intermediate mass stars and stellar content of young open clustes are discussed within the framework of the age group concept. The composite colour-magnitude diagrams for 14 age groups, including a total of 75 clusters, form the basis of these investigations. Preliminary results are given of an extensive programme of observing radial velocities of red giants and dwarfs in open clusters aimed at determining membership and binarity as well as orbital elements. Results of a study of the distribution of the projected rotational velocities of red dwarfs in nearby open clusters are also presented.

48973 (INIS-mf—10417, pp 49-59) **Behaviour of brighter binaries and yellow giants in open clusters.** Goetz, W. (Akademie der Wissenschaften der DDR, Sonneberg. Zentralinstitut fuer Astrophysik). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The behaviour is discussed of groups of massive stars in open clusters. The high concentration of binaries and yellow giants toward the centre of open cluster NGC 2632 (Praesepe) is not a singular phenomenon. It can be found in the Hyades and in the Coma-Berenices cluster, which are nearly of equal age, but not in younger and older objects. This phenomenon depending on the mean mass of a star group, its evolutionary phase, the mean age of the cluster and the time of star formation within it, can be explained by the diagram of the evolution of star clusters, i.e., by cosmogonic reasons. It is not caused by gravitational effects.

48974 (INIS-mf—10417, pp 60-65) **Collective effects in the rotation of stars in clusters and associations.** Zhilyaev, B.E.; Marchenko, S.V. (AN Ukrainskoj SSR, Kiev. Glavnaya Astronomicheskaya Observatoriya). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

14 star clusters and associations were selected for the analysis. The selection included stars of the same spectral type within the range of two to three spectral sub-types. For comparing the characteristics of rotation a random selection was made of stars from the galactic field. The comparison was based on statistical criteria using

distribution functions. The distribution functions are given for star clusters M39 (A0 V-A2 V), interval B0 V-F3 V the cluster stars and the field have a statistically equivalent dispersion of rotation velocity. A comparison is made of rotation velocities of the western and eastern parts of the Orion 1 association. It was found that in the star cluster α Persei in the interval B8 V-A2 V and in the Pleiades in the interval F2 V-F6 V the stars in the core have a higher rotation than stars on the periphery.

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

In the seventies, astronomers from some European socialist countries, participating in the multilateral cooperation of the academies of these states, decided to collaborate in a detailed astrometric, photometric and spectroscopic investigation of open star clusters. Hungarian scientists were expected to carry out multicolour photometry of open cluster stars. Considering that the majority of selected stars are far too dim to be measured by the moderate-sized photoelectric telescope of the Hungarian Academy of Sciences and that individual photoelectric photometry of cluster members would be extremely time-consuming, photographic UBV photometry was chosen as the most advantageous solution. The first steps in this task were taken - more than 200 plates were collected in these spectral bands - and a short review is presented on the observations in order to inform the cooperating partners. At the same time, a proposal is made to supplement the list of jointly studied open clusters, and information is requested from collaborators in the other countries on cluster membership probabilities and spectra of stars in order to take the preliminary steps in laboratory measurements.

48977 (INIS-mf—10417, pp 80-87) **Lund catalogue of open cluster parameters.** Lyngaa, G. (Lund Observatory, Sweden). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The catalogue is computer-based and issued in collaboration with the CDS in Strasbourg. The outlay of the catalogue is described, particularly the tracer system for data base handling. A new examination of cluster appearances on survey charts was entered in the 1983 edition. Various parameters are compared and their accuracy discussed.

48978 (INIS-mf—10417, pp 89-102) **Collective processes in the formation of star clusters.** Polyachenko, V.L. (AN SSSR, Moscow. Astronomicheskij Sovet). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The stability problem is solved for spherical collisionless systems with different degrees of star distribution anisotropy in the velocity space. It is shown that the development of an instability in systems of stars with highly eccentric orbits may lead to a distinct elliptical deformation.

48979 (INIS-mf—10417, pp 103-114) **Binaries and evolution of globular clusters.** Stodolkiewicz, J.S. (Polska Akademia Nauk, Warsaw. Centrum Astronomiczne). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The influence of binaries on the evolution of globular clusters is studied numerically using the Monte Carlo method. It is assumed that initially the stellar systems are composed of single stars only and binaries are born (as a result of three-body encounters) during the evolution of the clusters. The life of each hard binary in the cluster is studied individually. It is shown that the first binaries appear long before core collapse is completed and then a population of a few hard binaries remains in the cluster during its whole life. Practically all energetic binary-single star interactions take place in the deep, internal parts of the core, populated mostly by the heaviest stars of the cluster. The binary-single star interactions become a source of energy which stops the collapse of the core and causes expansion and gradual disintegration of the whole cluster during the post-collapse phase.

48980 (INIS-mf—10417, pp 119-140) **Investigation of central parts of globular clusters, performed in Pulkovo.** Kadla, Z.I.; Gerashchenko, A.N. (Glavnaya Astronomicheskaya Observatoriya AN SSSR, Pulkovo, USSR). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The Pulkovo refracting telescope was used to image on photographic plates the V system magnitudes of associations NGC 5272, 5904, 6205, 6341 and 7078. The telescope at the Ondrejov observatory was used for a detailed investigation of the central parts of these associations. The best resolution of the central part was found for the NGC 6205 association. The authors also deal with the probability of the occurrence of variable stars of the RR Lyrae type. Classification into sub-types IIA, IIB and IA is presented. Period-amplitude diagrams are discussed as is the doubly ionized helium zone.

48981 (INIS-mf—10417, pp 141-144) **Brightness distribution in globular clusters derived by the narrow-slit scanning method.** Mironov, A.V.; Rastorguev, A.S.; Naumova, E.V. (AN SSSR, Moscow. Astronomicheskij Sovet; Leningradskij Gosudarstvennyj Univ., USSR). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

Preliminary results of observations of 11 globular clusters made with the aid of a narrow long slit are presented. The photometric profiles were recorded directly in the operational store of a computer, with the telescope stopped in its motion about the polar axis. The photometric profiles obtained were compared with King's models and with the generalized isochronous model. The finite length and width of the slit were considered. The theoretical brightness distribution agrees well with observations in the central regions of the clusters at R<or aprox. 3'-5'. The radii of cores and the effective radii were determined. Large-scale fluctuations of density, possibly caused by bright stars or by fluctuations of the abundant galactic background, were observed in clusters M12, M13 and NGC 6712.

48982 (INIS-mf—10417, pp 145-155) **Lessons from the globular cluster NGC 5466.** Brosche, P.; Geffert, M.; Ninkovic, S. (Bonn Univ., Germany, F.R. Sternwarte; Astronomska Opservatorija, Belgrade, Yugoslavia). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

NGC 5466 is a "loose" globular cluster (large core radius) with low metallicity. Its absolute velocity was measured and leads to perigalactic distances around 6 kpc. The value of the observed "tidal radius" is clearly too large in comparison with the theoretical value.

48983 (INIS-mf—10417, pp 156-160) **Galactic orbits of globular clusters.** Rastorguev, A.S.; Surdin, V.G. (AN SSSR, Moscow. Astronomicheskij Sovet). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

Perigalactic distance R/sub p/, eccentricity e/sub min/ and the mean square error of e/sub min/ were calculated for 108 globular clusters. The distribution of R/sub p/ and e/sub min/ in the given set of clusters is presented graphically. The obtained values of R/sub p/ are compared with values obtained by Peterson.

48984 (INIS-mf—10417, pp 161-166) **Fate of globular clusters.** Surdin, V.G. (Moskovskij Gosudarstvennyj Univ., USSR. Gosudarstvennyj Astronomicheskij Inst. "GAISh"). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The evolution of globular clusters under dissipation and dynamical friction is considered. It is shown that a gravothermal catastrophe in the cluster core will take place before the cluster is completely destroyed under dissipation or falls into the Galactic centre under dynamical friction. The objects which are formed in the cluster-core contraction process (massive black holes or close binaries) also fall into the centre of the Galaxy or populate its bulge.

48985 (INIS-mf—10417, pp 168-187) **Dynamical evolution of the environment of an OB association.** Tenorio-Tagle, G. (Max-Planck-Institut fuer Physik und Astrophysik, Garching, Germany, F.R. Inst. fuer Astrophysik). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The physical conditions are reviewed of a large variety of structures such as giant HII regions, holes, shells and rings, present in the interstellar medium. Such structures are thought to result from the energy input from OB associations in the form of ionizing radiation, strong stellar winds and supernova explosions. A study of the effects produced by every single energy source is proposed as a way to evaluate, understand, and relate the observed structures to a given energy input. In particular, predictions from the study of the HII region evolution around a stellar association are reviewed. Such an evolution lasting 10^7yr accounts for the aging of the exciting stars. The resulting effects are then compared with the large (expanding and static) shells observed in our Galaxy, and with alternative theoretical models. A sequence of events based on the observed properties and the theoretical models is proposed as a likely scenario for the evolution of the environment of an OB association.

48986 (INIS-mf—10417, pp 188-199) **Dust distribution in the Rosette nebula and MON OB2 association region.** Guseva, N.G. (AN Ukrainskoj SSR, Kiev. Glavnaya Astronomicheskaya Observatoriya). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

A detailed study was made of the distribution of dust matter within a radius of 30′ from the centre of open cluster NGC 2244 which is the centre of star association MON OB2 and in the surroundings of emission nebula "Rosette". The author's own catalog was used of star magnitudes B and V and spectral types of more than 2000 stars of the O-A-B type to 13.0/sup m/ on an area of 19 quadratic degrees centred in star cluster NGC 2244. Also used were Ogura's UBV photometric data and proper star motions after van Alten. Absorption measurements using indices E/sub B-V/ helped to identify a more complex spatial arrangement of the dust cloud than was previously assumed.

48987 (INIS-mf—10417, pp 200-211) **Non-stable motions and instability in stellar associations.** Mirzoyan, L.V. (AN Armyanskoj SSR, Byurakan. Astrofizicheskaya Observatoriya). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The results are discussed of investigations carried out since the discovery of stellar associations. It is shown that both proper motions, provided they have been accurately determined, and radial velocities of stars in the associations indicate the expansion and subsequent disintegration of stellar associations. Results concerning multiple systems of the Trapezium type, which occur almost exclusively in associations as their cores, are discussed separately. Statistical investigations and investigations of their dynamic evolution by means of a computer, have brought evidence of the dynamic instability of these systems. An analysis of the proper motions of cores of Herbig-Haro objects entering associations, also indicates non-stationary (disintegrating) motions associated with evolution. The expansion and disintegration of stellar associations and Trapezium-type systems, the receding of Herbig-Haro objects from parental T-Tauri type stars characterize the continuous diminishing of mass density, i.e., the disintegration and dispersion of matter. This is also brought out by observations of flow or emission processes of matter from many young stars (of the R Cygni, Wolf-Rayet, Be, T Tauri, etc. types). Recently, evidence was obtained of considerable mass loss of OB stars. Finally, the results of radio-astronomical observations of diffuse matter and cosmic masers have also indicated expansive motions. Results of various observations of existing stellar associations made it possible to draw the conclusion that the trend of evolutionary processes in the present Galaxy corresponds to the disintegration and dispersion of matter, at least in the early stages of evolution.

48988 (INIS-mf—10417, pp 212-217) **Proper motions and kinematical properties of Orion Trapezium type stellar systems.** Yatsenko, A.I. (AN Ukrainskoj SSR, Kiev. Glavnaya Astronomicheskaya Observatoriya). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The study of the evolution and stability of star associations should involve the study of internal motion in the cores of associations, in particular of multiple stellar systems of the Orion Trapezium type. On the basis of information on proper motion in a number of systems of the Orion Trapezium type given in three stellar catalogues, it was found that the kinematics of these systems does not in effect differ from the kinematics of single stars of spectral types BI-BII. The dispersion of internal relative velocities of the trapezium components is about 2.5 times less than the dispersion of peculiar velocities of B-type stars; this proves the existence of a genetic relationship between the trapezium stars. The dispersion of velocities of internal motion of components of the trapezium is approximately +- 5 km/s.

48989 (INIS-mf—10417, pp 218-231) **On the most probable number of flare stars in the Pleiades field.** Szecsenyi-Nagy, G. (Eoetvoes Lorand Tudomanyegyetem, Budapest, Hungary). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

In order to observe flare stars of nearby open clusters and star associations, astronomers of many countries employ the same method. This method of photographic photometry by wide-field telescopes is only partly standardized. Differences in the various

steps of the method, in the fields of view of the telescopes and in sky brightness of the observatories participating in the common work can make the statistical evaluation of the results more difficult and can lead to delusive conclusions. A critical evaluation of the problematic points of the observations and reports is given. Statistical results of flare star observations in the Pleiades field made during the past two decades are summarized. It is shown that the estimated number of flare stars in the region observed as published by scientists of the Byurakan Astrophysical Observatory is too low. A model of the flare star system of the field is presented. It is composed of seven differently populated subsystems with various mean flare frequencies. The strength of this model is shown on the basis of the photographic observations of the last decade. The total number of flare stars in the Pleiades field is estimated to be higher than 2500 and the expected number of flare-up observations in order to discover all of them is given (nearly 23000).

48990 (INIS-mf—10417, pp 232-239) **Hyades moving group.** Bubenicek, J.; Palous, J. (Karlova Univ., Prague, Czechoslovakia. Fakulta Matematicko-Fyzikalni; Ceskoslovenska Akademie Ved, Prague. Astronomicky Ustav). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The motion of A stars from a new catalogue of space velocity vectors is analyzed. Stars moving almost in parallel with the Hyades open star cluster, i.e., members of Eggen's Hyades moving group were rediscovered. The proper motions of A stars were independently investigated using the convergent point method. A list of A-star moving group members was compiled. The shape and age distribution of this stellar group is discussed.

48993 (INIS-mf—10417, pp 242-252) **Effect of stellar luminosity and temperature calibration on determination of initial mass function.** Myakutin, V.I. (AN SSSR, Moscow. Astronomicheskij Sovet). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The initial mass function for association Orion OB was made up from data obtained by uvbyβ-photometry and MK spectral classification. B-type stars were chosen for analysis. A comparison was made of luminosity and effective temperature of stars obtained using both methods. It was found that small differences in calibration of uvbyβ-photometry and MK spectral classification lead to significant differences in the mass of B-type stars.

48994 (INIS-mf—10417, pp 253-254) **Nitrogen content in atmospheres of late giants determined from NH molecular bands in UV spectral range.** Shavrina, A.V. (AN Ukrainskoj SSR, Kiev. Glavnaya Astronomicheskaya Observatoriya). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The present state of research into the generation of spiral patterns in the responsive density wave theory is discussed. The latter is based on a conjecture of symmetry breaking in the equations of motion of stellar orbits in differentially rotating stellar disks by an oval perturbation growing with time. Analytical approaches based on first-order epicyclic approximation as well as computer experiments are performed to investigate the consequences of this working hypothesis.

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The A, B, C and K "constants" are estimated in the vicinity of the Sun from the gradients of U, V linear velocity components in the X, Y plane. Differences were found between very young (age$<5 \times 10^7$ years) and medium-old (age2×10^8 years) stars. Noncircular motions of the very young stars are interpreted as the result of expansion of the local system.

48998 (INIS-mf—10417, pp 292-301) **Open star clusters and the structure of the galactic disk.** Lyngaa, G. (Lund Observatory, Sweden). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

Open star clusters are in many respects the best objects to observe if one wants to study the structure and evolution of the galactic disk. Distances, ages and element abundances can all be relatively well determined for these objects. Relevant data are discussed and different conclusions examined regarding abundance and age gradients in the disk. These disk properties are related to existing models for galactic evolution.

(Ural'skij Gosudarstvennyj Univ., Sverdlovsk, USSR). 1983. (In Russian). NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The distribution of open clusters in the Galaxy plane is studied using recent data. It is shown that clusters tend to be localized in Galactic longitudes 120deg-300deg which coincide with the direction of Magellanic Clouds and Magellanic Stream. Two age pe-

culiarities of the spatial distribution of open clusters are given. The dependence of linear diameters on the distance from the Galaxy centre is discussed. The necessity is suggested of correcting parameters of the zero-age main sequence for objects of early spectral classes, and of interstellar absorption.

49000 (INIS-mf—10417, pp 37-48) **Galactic distribution of open clusters of different ages and the angular velocity of the spiral structure.** Balazs, B.A.; Lynga, G. (Konkoly Observatory, Hungary; Lund Observatory, Sweden). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

Results are presented based on the galactic distribution of open clusters of various ages. The shape and angular velocity of the spiral pattern is discussed on the basis of this distribution. The results suggest that 1. we might be forced to scale down our whole Galaxy, accepting R/sub Sun/=7 kpc as the galactocentric distance of the Sun; 2. the angular speed of the pattern lies somewhere between 33 and 36 km s^{-1}/kpc (or between 23 and 25 if R/sub Sun/=10 kpc); accordingly the location of the Sun is close to the so called co-rotation circle and, therefore, the galactic position of our solar system is an exclusive one; 3. the spiral pattern seems to be compatible with "long density waves", consequently the source of the wave energy should apparently be looked for in the central regions of our Galaxy.

49002 (INIS-mf—10417, pp 258-261) **Stability of stellar disk and ratio of halo to disk masses in the Galaxy.** Morozov, A.G. (Voronezhskij Gosudarstvennyj Univ., USSR). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The criterion is presented of local stability of a non-homogeneous stellar disk of finite thickness with regard to non-axisymmetric perturbations. The criterion was verified by a numerical experiment, and it was found that Caldwell and Ostriker's galactic model meets this criterion.

49003 (INIS-mf—10417, pp 280-286) **Local galactic kinematics.** Lindblad, P.O.; Westin, T.; Zentelis, N.; Loden, K. (Stockholm Observatory, Sweden). 1983. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703233. (CONF-8309388—).

From Symposium on star clusters and associations and their relation to the evolution of the galaxy; Prague, Czechoslovakia (27 Sep 1983).

The distribution of bright stars is shown. In the x, z plane are recorded the positions of stars younger than 3 x 10^7 years, with V<6.sup(sm)5. The positive x axis is oriented towards the galactic anticentre and the z axis to the north galactic pole. The Gould Belt system has an inclination of 20° to the galactic plane. Graphically presented are components of stellar velocity in the direction of the galactic anticentre for stars younger than 3 x 10^7 years as a function of distance. Olano's model for local interstellar hydrogen is described.

49004 (LA-UR—86-2350) **Smooth particle hydrodynamics: theory and application to the origin of the moon.** Benz, W. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 9p. (CONF-8606175—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013854.

From Workshop on the use of supercomputers in stellar dynamics; Princeton, NJ, USA (2 Jun 1986).

The origin of the moon is modeled by the so-called smooth particle hydrodynamics (SPH) method (Lucy, 1977, Monaghan 1985) which substitutes to the fluid a finite set of extended particles, the hydrodynamics equations reduce to the equation of motion of individual particles. These equations of motion differ only from the standard gravitational N-body problem insofar that pressure gradients and viscosity terms have to be added to the gradient of the potential to derive the forces between the particles. The numerical tools developed for "classical" N-body problems can therefore be readily applied to solve 3 dimensional hydroynamical problems. 12 refs., 1 fig.

49005 (N—86-25307) **International Ultraviolet Explorer atlas of O-type spectra from 1200 to 1900 angstrom.** Walborn, N.R.; Nichols-Bohlin, J.; Panek, R.J. (National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). Dec 1985. 153p. (NASA-RP—1155). NTIS, PC A08/MF A01.

The IUE archives provide an unprecedented sample of uniform, high-quality ultraviolet stellar spectra. In particular, they contain high-resolution SWP data for nearly 200 different O stars. We have undertaken a survey of the 1200-1900 A region in about 120 of them having homogeneous optical spectral classifications to investigate systematically the behavior of the ultraviolet features, incuding the prominent stellar wind profiles and the degree to which they correlate with the optical types. The standard extracted spectrograms have been rebinned to a constant wavelength resolution of 0.25A and uniformly normalized (not dereddened) at the GSFC RDAF. They are then plotted at 10A/cm, with reseau, photometric quality and echelle order junction flags available. This atlas contains such plots for about 100 stars, arranged in spectral-type, luminosity and peculiar object sequences. The results show a high degree of correlation between the ultraviolet features, both photospheric and stellar-wind, and the optical classifications for the majority of the O-type stars.

49006 (N—86-25316) **Possible importance of synchrotron/inverse Compton losses to explain fast mm-wave and hard x-ray emission of a solar event.** Correia, E.; Kaufmann, P.; Costa, J.E.R.; Vaz, A.M.Z.; Dennis, B.R. (National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). Feb 1986. 11p. (NASA-TM—88659; INPE—3809-PRE/895; CONF-8509317—1). NTIS, PC A02/MF A01.

From SMM topical workshop on rapid fluctuations in solar flares; Lanham, MD, USA (30 Sep 1985).

The solar burst of 21 May 1984 presented a number of unique features. The time profile consisted of seven major structures (seconds), with a turnover frequency or approx. 90 GHz, well correlated in time to hard x-ray emission. Each structure consisted of multiple fast pulses (.1 seconds), which were analyzed in detail. A proportionality between the repetition rate of the pulses and the burst fluxes at 90 GHz and or approx. 100 keV hard x-rays, and an inverse proportionality between repetition rates and hard x-ray power law indices have been found. A synchrotron/inverse Compton model has been applied to explain the emission of the fast burst structures, which appear to be possible for the first three or four structures.

49007 (N—86-26263) **Search for metal lines in the spectra of DA white dwarfs. Semiannual Report, 1 October 1984-31 March 1985.** Wegner, G.A. (Dartmouth Coll., Hanover, NH (USA)). Jun 1986. 22p. (NASA-CR—176825). NTIS, PC A02/MF A01.

A theoretical analysis was carried out in order to interpret the ultraviolet spectra of DB white dwarfs obtained earlier with the International Ultraviolet Explorer (IUE) satellite. Here the results of the IUE ultraviolet spectroscopy combined with visual data and model atmospheres of DB white dwarfs are reported. In particular, a search for spectra lines due to the element carbon using the ultraviolet was made. In no case is there a positive detection of carbon and from these data, and upper limits for carbon by number relative to helium are derived in the range of C: He 10 to the minus 5 power to 10 to the minus 7 power for the 16 DB stars with ultra-

violet spectra in the temperature range 11400 K T/sub EFF/ less than 2300 K. The low carbon abundances found in the atmospheres of the DB stars agree well with the hypothesis that the atmospheric carbon observed in the cooler DQ members of the helium-rich white dwarf sequence is produced by a convective dredging mechanism.

49008 **(N—86-26266) Highly ionized atoms in cooling gas.** Edgar, R.J.; Chevalier, R.A. (Virginia Univ., Charlottesville (USA)). 1986. 16p. (NASA-CR—176819). NTIS, PC A02/MF A01.

The ionization of low density gas cooling from a high temperature was calculated. The evolution during the cooling is assumed to be isochoric, isobaric, or a combination of these cases. The calculations are used to predict the column densities and ultraviolet line luminosities of highly ionized atoms in cooling gas. In a model for cooling of a hot galactic corona, it is shown that the observed value of N(N V) can be produced in the cooling gas, while the predicted value of N(Si IV) falls short of the observed value by a factor of about 5. The same model predicts fluxes of ultraviolet emission lines that are a factor of 10 lower than the claimed detections of Feldman, Brune, and Henry. Predictions are made for ultraviolet lines in cooling flows in early-type galaxies and clusters of galaxies. It is shown that the column densities of interest vary over a fairly narrow range, while the emission line luminosities are simply proportional to the mass inflow rate.

49009 **(N—86-26270) Investigation of the energy balance of solar active regions using the ACRIM irradiance data. Final Report.** Petro, L.D. (Atmospheric and Environmental Research, Inc., Cambridge, MA (USA)). Feb 1986. 82p. (NASA-CR—176788). NTIS, PC A05/MF A01.

The detection of a significant correlation between the solar irradiance, corrected for flux deficit due to sunspots, and both the 205 nm flux and a photometric facular index were examined. A detailed analysis supports facular emission as the more likely source of correlation with the corrected radiance, rather then the error in sunspot correction. A computer program which simulates two dimensional convection in a compressible, stratified medium was investigated. Subroutines to calculate ionization and other thermodynamic variables were also completed.

49010 **(PB—86-196086/XAB) Solar-Geophysical Data Number 499, March 1986. Part 1 (prompt reports). Data for February 1986, January 1986, and late data.** Coffey, H.E. (National Geophysical Data Center, Boulder, CO (USA)). Mar 1986. 175p. (SGD—499-PT-1). NTIS, PC A08/MF A01.

Contents include: Detailed index for 1985-86; Data for February 1986-- (IUWDS alert periods (Advance and worldwide), Solar-activity indices, Solar flares, Solar radio emission, Vostok inferred interplanetary magnetic field polarity, Stanford mean solar magnetic field); Data for January 1986--(Solar-active regions, Sudden ionospheric disturbances, Solar radio spectral observations, Cosmic-ray measurements by neutron monitor, Geomagnetic indices, Radio-propagation indices); Late data-(Solar-active regions, Solar radio-spectral observations, Culgoora, Cosmic-ray measurements by neutron monitor, Calcium plage data).

49011 **(PB—86-196094/XAB) Solar-Geophysical Data Number 499, March 1986. Part 2 (comprehensive reports). Data for September 1985, and miscellanea.** Coffey, H.E. (National Geophysical Data Center, Boulder, CO (USA)). Mar 1986. 36p. (SGD—499-PT-2). NTIS, PC A03/MF A01.

Contents: Detailed index for 1985-86; Data for September 1985-- (Solar flares, Solar radio bursts at fixed frequencies; Solar x-ray radiation from GOES satellite; Mass ejections from the sun; Active prominences and filaments); (Meudon carte synoptique 7 July - 26 September 1985, Solar irradiance).

49012 **(PB—86-196102/XAB) Solar-Geophysical Data Number 499, March 1986. Supplement.** (National Geophysical Data Center, Boulder, CO (USA)). Mar 1986. 87p. (SGD—499-SUPPL). NTIS, PC A05/MF A01.

The supplement contains the description and explanation of the data in the monthly publication Solar-Geophysical Data, compiled by the National Geophysical Data Center (NGDC) in Boulder, CO USA. Solar-Geophysical Data is intended to keep research workers informed on a timely schedule of the major events of solar activity and the associated interplanetary, ionospheric, radio propagation, and other geophysical effects.

49013 **(RRK—85-12) Geodesic bi-scalars in some isotropic universes.** Nariai, Hidekazu. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Apr 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703136.

A general formula for the geodesic bi-scalars in the Robertson-Walker universes with flat 3-space is derived, together with that for the bi-scalar Green's function corresponding to the 4-dimensional commutation function for a quantized scalar field. In terms of that formula, several explicit expressions for the geodesic bi-scalar are obtained.

49014 **Microwave-background anisotropy and decaying-cold-particle scenarios.** Kolb, E.W.; Olive, K.A.; Vittorio, N. (Theoretical Astrophysics Group, Fermi National Accelerator Laboratory, Batavia, Illinois 60510). **34**: No. 4, 940-943(15 Aug 1986). Contract AC02-83ER40105.

Decaying-particle scenarios for galaxy formation are subject to constraints from limits on the anisotropy of the microwave-background radiation. In this paper we obtain limits on the properties of decaying cold dark matter.

49015 **Equivalence of active and passive gravitational mass using the moon.** Bartlett, D.F.; Van Buren, D. (Department of Physics, University of Colorado, Boulder, Colorado 80309). **57**: No. 1, 21-24(7 Jul 1986).

A limit is established for the violation of the equality of passive and active gravitational mass. Our test is based on an asymmetry in the composition of the moon. We hypothesize that the 2-km offset between the moon's center of figure and center of mass indicates an asymmetry in the distribution of Fe and Al. Unless the Fe on one side and the Al on the other attract each other with the same force, the moon will not be in the orbit predicted by classical mechanics. Using the results from laser ranging and a model for the moon's interior we find that the ratios of active to passive mass for Fe and Al are the same to a precision of 4 x 10/sup -12/.

49016 **Statistics of peaks of Gaussian random fields.** Bardeen, J.M.; Bond, J.R.; Kaiser, N.; Szalay, A.S. (Washington Univ., Seattle; Stanford Univ., CA; California Univ., Berkeley; Cambridge Univ., England; Fermi National Accelerator Lab., Batavia, IL). *Astrophysical Journal;* **304**: 15-61(May 1986).

A set of new mathematical results on the theory of Gaussian random fields is presented, and the application of such calculations in cosmology to treat questions of structure formation from small-amplitude initial density fluctuations is addressed. The point process equation is discussed, giving the general formula for the average number density of peaks. The problem of the proper conditional probability constraints appropriate to maxima are examined using a one-dimensional illustration. The average density of maxima of a general three-dimensional Gaussian field is calculated as a function of heights of the maxima, and the average density of upcrossing points on density contour surfaces is computed. The number density of peaks subject to the constraint that the large-scale density field be fixed is determined and used to discuss the segregation of high peaks from the underlying mass distribution. The machinery to calculate n-point peak-peak correlation functions is determined, as are the shapes of the profiles about maxima. 67 references.

49017 **Search for scattered X-ray halos around variable sources - the X-ray halo of Cygnus X-1.** Bode, M.F.; Priedhorsky, W.C.; Norwell, G.A.; Evans, A. (Manchester Victoria Univ., England; Los Alamos National Lab., NM; Keele Univ,, England). *Astrophysical Journal;* **299**: 845-851(Dec 1985).

The results of a program to search for the presence of halos due to X-ray scattering by interstellar grains in the line-of-sight to variable X-ray sources are reported. As part of this program, four

Einstein HRI images of Cyg X-1 were examined. The analysis technique exploits the intrinsic aperiodic variability of this source to map the point response function of the optics. Any scattered halo present will not reflect short-term central source time variability, since such variability is smoothed by differential time delays of order days. Thus, a residual, nonvariable component to the surface brightness distribution (comprising about 12 percent or more of the source flux) is interpreted as a scattered halo. The Cyg X-1 halo is consistent with those of other sources found in previous studies using different techniques. Comparison is also made with a scattering model and, despite uncertainties in source spectrum and distance, reasonable agreement with the observatons is found using a standard interstellar grain model. The potential of X-ray scattering as a probe of the properties of interstellar grains is demonstrated. 23 references.

49018 **CSSP implementation plan for space plasma physics programs.** Baker, D.N.; Williams, D.J. (Los Alamos National Lab., NM; Johns Hopkins Univ., Laurel, MD). *EOS, Transactions, American Geophysical Union;* **66**: 1217(Dec 1985).

The Committee on Solar and Space Physics (CSSP) has provided NASA with guidance in the areas of solar, heliospheric, magnetospheric, and upper atmospheric research. The budgetary sitation confronted by NASA has called for a prioritized plane for the implementation of solar and space plasma physics programs. CSSP has developed the following recommendations: (1) continue implementation of both the Upper Atmosphere Research Satellite and Solar Optical Telescope programs; (2) initiate the International Solar Terrestrial Physics program; (3) plan for later major free-flying missions and carry out the technology development they require; (4) launch an average of one solar and space physics Explorer per yr beginning in 1990; (5) enhance current Shuttle/Spacelab programs; (6) develop facility-class instrumentation; (7) augment the solar terrestrial theory program by FY 1990; (8) support a compute modeling program; (9) strengthen the research and analysis program; and (10) maintain a stable suborbital program for flexible science objectives in upper atmosphere and space plasma physics.

49019 **(N—86-25070) Morphological study of waves in the thermosphere using DE-2 observations. Final Technical Report.** Gross, S.H.; Kuo, S.P.; Shmoys, J. (Polytechnic Inst. of New York, Farmingdale (USA)). May 1986. 57p. (NASA-CR—176775; POLY-MRI—1451-86). NTIS, PC A04/MF A01.

Theoretical model and data analysis of DE-2 observations for determining the correlation between the neutral wave activity and plasma irregularities have been presented. The relationships between the observed structure of the sources, precipitation and joule heating, and the fluctuations in neutral and plasma parameters are obtained by analyzing two measurements of neutral atmospheric wave activity and plasma irregularities by DE-2 during perigee passes at an altitude on the order of 300 to 350 km over the polar cap. A theoretical model based on thermal nonlinearity (joule heating) to give mode-mode coupling is developed to explore the role of neutral disturbance (winds and gravity waves) on the generation of plasma irregularities.

49020 **Comment on "increase of ion kinetic temperature across a collisionless shock: I. A new concept by L. C. Lee et al." and "Ion acceleration in quasiperpendicular magnetosonic shock waves with subcritical mach number by Y. Ohsawa and J. Sakai".** Winske, D.; Gosling, J.T.; Thomsen, M.F. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Geophysical Research Letters;* **13**: No. 6, 561-562(Jun 1986).

The question of ion heating at subcritical collisionless shocks is reviewed in light of newly proposed mechanisms.

49021 **Electrical changes of the polar ionosphere during magnetospheric substorms.** Ahn, B.H.; Kamide, Y.; Akasofu, S.H. (Department of Earth Science, Teachers College, Kyungpook National University, Taegu, Korea). *Journal of Geophysical Research;* **91**: No. A5, 5737-5754(1 May 1986).

Changes of the distribution of the potential, electric fields, ionospheric currents, field-aligned currents, the Joule heat production rate, the particle energy injection rate and the total energy dissipation rate are examined in detail by comparing them at a presubstorm epoch and the maximum epoch for several substorms on March 17, 18, and 19, 1978. The data sets are obtained on the basis of the magnetic records from the six International Magnetospheric Study meridian chains of observatories by using the computer code developed by Kamide e-italict-italic a-italicl-italic. (1981) and the conductivity model developed by Ahn et al. (1983b). A number of global features that are found to be common to most of the substorms examined in this study include the following: (1) The positive potential cell in the morning sector extends into the evening sector during substorms. (2) When it is intensified, the westward electrojet on the nightside tends to flow equatorward of the positive potential ridge. (3) The so-called "Harang discontinuity" may be identified as the ridge of the negative potential cell. (4) The distribution of field- aligned currents determined by our method is more complicated than the statistical pattern obtained by polar orbiting satellites. (5) The basic ionospheric current pattern is fundamentally the same during a fairly quiet period, a slightly disturbed period and a substorm period. (6) The highest Joule heat production occurs along the westward extension of the westward electrojet, while the particle energy injection rate is high along the westward electrojet in the morning sector.

49022 **(AERE-R—11796) Controlled removal by ion beam etching of surface contaminant layers on transmission electron microscope specimens.** James, A.W. (UKAEA Atomic Energy Research Establishment, Harwell. Materials Physics and Metallurgy Div.). Oct 1985. 12p. H.M. Stationery Office, London, price Pound 4.00.

The basic principles of transmission electron microscope specimen preparation by ion beam thinning are described. The rate of material removal from stainless steel specimens has been assessed and this information has been used to demonstrate the controlled thinning of a TEM specimen. Three examples where ion beam wiping can be used to remove contaminated surface layers of TEM specimens are given: (i) chlorine-enriched surface regions on stainless steel; (ii) Cu-S rich films on ferritic steels; (iii) oxide films on sintered aluminium. These examples make it clear that ion beam wiping is an essential step in the preparation of some TEM specimens where accurate chemical analysis is required.

49023 (ANL—85-22, pp 158-159) **Geometric treatment of the Stark effect in high Rydberg states of hydrogen.** Peshkin, M.; Vager, Z. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Although the Stark effect in hydrogen has been understood for more than fifty years, an intuitive or geometrical picture appears to have been lacking. The authors have carried out a simple calculation starting from the usual zero-order states in the parabolic basis. For large values of the principal quantum number n, these can be interpreted as elliptical orbits of definite eccentricity and orientation. (More accurately, the use of zero-order wave function swashes out all time dependences at frequencies comparable with the orbital frequencies, so that the current interpretation regards the electron as smeared around its elliptical orbit with each element of the smear moving independently and conserving angular momentum for itself alone.) Now introducing the external electric field causes these orbits to process and pendulate in simply understandable modes, which the authors calculate. The motions may be useful for analysis of experiments in which phenomena such as ori-

entation-dependent ionization play a role. A full report of this work is being prepared for publication.

49024 (ANL—85-22, pp 204) **Barrier to inversion in NF_3.** Berkowitz, J.; Greene, J.P. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Although the photoelectron spectrum of NF_3 had been reported by several previous investigators, none had observed vibrational fine structure in the first band. The authors were able to obtain the fortunate combination of sensitivity and resolution to reveal this vibrational structure. The bifurcated nature of the band was interpreted as a transition from pyramidal NF_3 to pyramidal NF_3^+, the latter having a lower barrier to inversion. The span of the Franck-Condon region in the transition is sufficient to surmount the barrier, whose magnitude can be estimated from the spectrum to be ~0.75 eV. This is one of the very few cases for which an accurate experimental measurement of an inversion barrier is known.

49025 (ANL—85-22, pp 204) **Vibrational autoionization in PF_3: doing violence to the propensity rule.** Berkowitz, J.; Greene, J.P. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The photoionization spectrum of PF_3^+ was measured. In its threshold region, it displays two prominent progressions of autoionization peaks. When these are analyzed, together with earlier photoabsorption studies and photoelectron spectrum, they lead to the conclusion that vibrational autoionization is occurring, with Δ nu $\leqq$ -13. This conclusion stands in sharp contrast with the current theory of vibrational autoionization, which predicts a propensity rule Δ nu = -1. Other examples from the recent literature have been reviewed, and suggest to us that a more general theory of vibrational autoionization is required.

49026 (ANL—85-22, pp 204-205) **Bonding and ionization energies of N-F and P-F compounds.** Berkowitz, J.; Greene, J.P.; Foropoulos, J. Jr.; Neskovic, O.M. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

NF_3, N_2F_4, NF_2, PF_3, P_2F_4, PF_2 and PF_2I have been studied by photoionization mass spectrometry. Modified or confirmatory values have been obtained for the heats of formation of NF_3^+, NF_2^+ and NF^+ and the ionization potentials of NF_3 and NF^2. The step-wise bond energies are deduced to be $D_0°(NF)$ = 3.27 +/- 0.02 eV; $D_0°$(FN-F) 2.85 +/- 002 eV; and $D_0°(F_2N - F)$ = 2.47 +/- 0.01 eV. Heats of formation at 0 K have been measured for PF_3^+ (89.6 +/- 0.5 kcal/mole), PF^+ ($\leqq$ 214.8 kcal/mole) and PF_2I (-142.3 +/- 1.0 kcal/mole). The directly measured ionization potential of PF_2 is 8.85 +/- 0.01 eV. The step-wise bond energies are found to be $D_0°$ (PF) = 4.60 +/- 0.43 eV; $D_0°$ (FP-F) = 5.22 +/- 0.43 eV; and $D_0°$ (F_2P - F) = 5.71 +/- 0.02 eV.

49027 (ANL—85-22, pp 206) **Photoionization of P_2.** Berkowitz, J.; Greene, J.P. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

An attempt was made to generate the radical PF_2 by microwave discharge through PF_3. A weak PF_2 signal was observed (the pyrolysis of P_2F_4 proved to be a more satisfactory source of PF_2) but instead a measurable concentration of P_2 was detected. Numerous autoionization lines were observed, and were found to correlate with certain photoabsorption lines reported earlier. This molecule is of some interest because it is not the normally stable form of phosphorus vapor (P_4 is the stable form above solid phosphorus) and because there is a reversal in the relative stability of electronic ground and first excited states of P_2^+, compared to the isoelectronic N_2^+. In addition to photoabsorption, the photoelectron spectrum had been reported earlier, but not the photoionization spectrum.

49028 (ANL—85-22, pp 207) **Photoionization of SO radical.** Berkowitz, J.; Greene, J.P.; Hagerup, W.A. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The SO radical was generated by microwave discharge through SO_2. A portion of the discharged gas entered the ionization region of the photoionization mass spectrometer, and the photoionization spectrum of SO was obtained in this manner. An accurate ionization potential could be deduced, and considerable autoionization structure was observed. The structure is complex, and does not lend itself to simple analysis.

49029 (ANL—85-22, pp 207) **Photoionization mass spectrometric study of PH_2 and PH_3.** Berkowitz, J.; Greene, J.P.; Gibson, S.T.; Hillhouse, G.L. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The yield of ionic species PH_3^+, PH_2^+ and PH^+, produced by photoionization of PH_3 were studied as a function of wavelength. In a separate experiment, the free radical PH_2 was generated by pyrolysis of benzylphosphine, and its photoionization spectrum was obtained in situ. From an analysis of the results, the authors have deduced the step-wise bond energies upon adding H atoms to P, the respective ionization potentials, and the $^3B_1$ - $^1A_1$ separation in PH_2^+. The latter conclusion is noteworthy because the relative stability of triplet and singlet is reversed from the ordering in the first row isoelectronic species CH_2 and NH_2^+.

49030 (ANL—85-22, pp 209) **Spin-rotation and hfs constants for the X $^2\Sigma^+$ and B $^2\Sigma^+$ states of CaI.** Childs, W.J.; Goodman, G.L.; Goodman, L.S.; Pfeufer, V. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The molecular-beam, laser-rf double-resonance technique was used to study the spin-rotation and hyperfine interactions in the X $^2\Sigma^+$ electronic ground state of the CaI molecular radical. The strengths of these interactions, including their dependences on the vibrational and rotational quantum numbers, were precisely measured. The ground-state observations were then supplemented by measurements of the hfs in the optical B $\rightleftharpoons$ X transitions so that the spin-rotation and hfs interactions in the excited B $^2\Sigma^+$ state could be evaluated. This work was published in J. Mol Spectrosc. 107, 94 (1984).

49031 (ANL—85-22, pp 209-210) **Molecular-orbital model of alkaline-earth monohalide electronic structure.** Goodman, G.L. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have now obtained precise values for the spin-rotation and hfs interaction strengths (both magnetic-dipole and electric-quadrupole) in the four calcium monohalide radicals CaF, CaCl, CaBr, and CaI, When the dependence on nuclear structure is divided out one finds a smooth monotonic dependence for each interaction as one proceeds from lightest (CaF) to heaviest (CaI) halide. A molecular-orbital model is constructed by placing the electrons in progressively less stable orbits until the structure is completed and the hfs is calculated and compared with experimental values.

49032 (ANL—85-22, pp 211) **Dependence of CaF electric-dipole moment on vibrational state.** Childs, W.J.; Goodman, L.S. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

A measurement last year of the electric-dipole moment of the X $^2\Sigma^+$ state of CaF in its vibrational ground state (v = 0) was supplemented by corresponding data for the v = 1 state. The tran-

sition N, J, F = 2, 2.5, 3 ⇌ 2, 1.5, 2, previously studied in the v = 0 manifold, was measured for v = 1 in a homogeneous d.c. electric field to determine the Stark splitting. By selecting a particular Stark component of the line and switching the apparatus repetitively between the component for v = 1 and v = 0, the authors were able to measure accurately the v-dependence of the Stark shift. The resulting shift is much larger than was just reported for CaCl. The interpretation is not yet complete.

49033 (ANL—85-22, pp 211-212) **Semi-empirical Sternheimer shielding factors for the atomic 4f and 5d shells.** Childs, W.J.; Cheng, K.T. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In a recent study of $^{+}$-mesic atom hfs, Tanada et al. made precise measurements of the electric-quadrupole moments of several nuclei. They then combined this information with published atomic many-electron hfs studies to obtain Sternheimer shielding factors for the relevant electron shells. The very large scatter in the values found appeared to arise from the widely different methods used by the atomic hfs experimenters in interpreting their data. The authors have succeeded in reducing this scatter very substantially by using a consistent configuration-average Dirac-Fock method for evaluating all the hfs radial integrals, and by reexamining the various assumptions made in analyzing the existing hfs data. The scope was expanded to include all nuclei for which dependable quadrupole moment values (from $^{+}$-mesic atom hfs or Coulomb-excitation methods) and atomic hfs measurements are available.

49034 (ANL—85-22, pp 213) **Ab initio calculation of 4f/sup N/6s^2 hyperfine structure in neutral rare-earth atoms.** Cheng, K.T.; Childs, W.J. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The multi-configuration Dirac-Fock (MCDF) method is used to calculate excitation energies, Lande g-values, and hyperfine-structure constants for low levels of 4f/sup N/6s^2 configurations in the neutral rare-earth atoms. Although no adjustable parameters are used, the results are in rather good agreement with experiment.

49035 (ANL—85-22, pp 215-216) **Lamb shifts and fine structures on n = 2 in helium-like ions.** Berry, H.G.; Engstroem, L.; Hardis, J.E.; Livingston, A.E.; Zei, D.; Somerville, L.P.; Ray, W.J.; Young, L. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Measurements have been made on foil-excited titanium and nickel beams at the Tandem-Linac. The titanium results from several runs at the Argonne Linac have yielded a measurement of the 2s-2p(J=2) transition which is in excellent agreement with the latest calculations. Nickel spectra obtained with 365-MeV nickel beams showed many new yrast transitions in 4- and more electron nickel ions, but the presently available Linac beams are too low in energy to permit the study of the 2-electron spectrum in any detail. Measurements in the same transitions (J=0, 1, 2) in neon have been completed and are being analyzed.

49036 (ANL—85-22, pp 216) **High-spin states in neon.** Hardis, J.E.; Livingston, A.E.; Curtis, L.J.; Berry, H.G. (Univ. of Chicago, IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have followed up their previous measurements in doubly-excited systems of ions of three and four electrons. They have completed precision measurements of the quartet $1s2s2p\ ^4P$ - $^{1s2}p^2\ ^4P$ and quintet $1s2s2p^2\ ^5P$ - $1s2p^3\ ^5S$ transitions of three- and four-electron neon respectively. The authors were able to use 8-MeV doubly-charged ions from the Dynamitron for these experiments. The wavelengths, fine structure, and lifetimes have been compared with several new relativistic theories. They agree reasonably well, particularly with the correlated relativistic Hartree-Fock calculations of Cheng and other recent, relativistic many-body calculations.

49037 (ANL—85-22, pp 216) **Optical measurements of molecular-ion fragmentation.** Berry, H.G.; Engstrom, L.; Huldt, S.; Martinson I.; Curtis, L.J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have previously made measurements in Lund, Sweden of the excitation functions of excited states in ionized carbon and nitrogen, following breakup of CN^{+} in a thin carbon foil. The results show the effect of a neighboring ion on the production of excited states is sensitive to the excitation energy. The measurements were made with very thin carbon foils and up to 6-MeV CN^{+} ion beams. During a visit of Indrek Martinson and Larry Curtis, the authors made further measurements on the light emitted following breakup of N_2^{+} and CH/sub n/$^{+}$ projectiles in very thin carbon foils at Dynamitron energies. The most interesting aspect of this work was the strong variation in the yields of hydrogen Lyman α light as functions both of carbon foil thickness, and of the number n of hydrogen atoms on the initial molecule. A preliminary model explaining these results is being developed.

49038 (ANL—85-22, pp 217) **Mean life measurements in fluorine.** Berry, H.G.; Somerville, L.P.; Young, L.; Ray, W.J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Berkowitz and Ruscic (see Ann Report 1983) have suggested the possible use of a high-lying excited state in neutral fluorine as a candidate for a UV laser source. This level lies above the first ionization limit and decays partly by autoionization and partly by photoemission. The authors have used the beam-foil technique to measure its decay lifetime through observations on the photon decay mode. Several other lifetimes were measured in neutral and singly-ionized fluorine and neon. In particular, the authors measured the same transition in isoelectronic neon.

49039 (ANL—85-22, pp 217-218) **Alignment and orientation production in hydrogenic states.** Berry, H.G.; DeHaes, J.C.; Neek, D.; Somerville, L.P. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have made a series of measurements to investigate the final surface interaction of a thin foil on a fast ion beam. The excitation distribution and wavefunction shapes depend on the bulk of the foil and, more critically, on the final surface interaction. Previous measurements have already allowed some preliminary analysis of the observed total charge-state distributions (see for example, Argonne reports by Berry and Brooks and also by Gemmell et al.). The present objective is a more detailed microscopic understanding of the important final surface processes.

49040 (ANL—85-22, pp 218-219) **Multiply-excited states of the sodium isoelectronic sequence.** Berry, H.G.; Young, L.; Engstroem, L.; Somerville, L.P.; Kurtz, C. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have made beam-foil studies of the spectra of sodium and magnesium. Their purpose is in part to verify recent suggestions of transitions between highly-excited, doubly-excited levels in neutral sodium. Such levels may be natural reservoirs of highly-excited, but long-lived, states which can be used in soft x-ray laser systems. The authors verified all the previous sodium measurements, and made some new classifications within the doubly-excited term scheme. In addition they have measured the lifetimes of all the identified states, and are comparing them with theory. Similar transitions are also expected in the near ultra-violet

spectrum of singly-ionized magnesium. The authors have obtained preliminary spectra, and at least one of the expected transitions is observed. Work is continuing on these spectra.

49041 (ANL—85-22, pp 220) **Laser-fast ion beam interactions at the Dynamitron.** Berry, H.G.; Young, L.; Ray, W.J.; Zabransky, B.J.; Amrein, R.L. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

An initial attempt was made to observe collinear laser excitation of neutralized hydrogen and neon beams. No fluorescence was observed. The authors concluded that resonance was not observed because of the broad velocity distribution of the beam ions from the Dynamitron. They have now made measurements of the voltage ripple at the Dynamitron ion source (relative to ground potential). The measurements confirm that the ripple is large (about 400 volts at 1 MeV) and is made up of several significant frequencies. Work is proceeding on eliminating these ripple frequencies.

49042 (ANL—85-22, pp 220) **Autoionization of helium following excitation by fast, multiply charged ions.** Arcuni, P.; Berry, H.G. (Univ. of Chicago, IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Using two parallel plate electrostatic spectrometers, the authors have measured the autoionization spectra of doubly-excited helium, following excitation by charged, 700 to 3500 KeV lithium ions produced by the Dynamitron. In particular, they studied the effect of projectile nuclear charge on the helium autoionization profiles and the continuum in which they are embedded.

49043 (ANL—85-22, pp 221-223) **Fast ion beam-laser interactions.** Berry, H.G.; Young, L.; Engstroem, L.; Hardis, J.E.; Somerville, L.P.; Ray, W.J.; Kurtz, C. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors are using collinear laser excitation of fast ion beams to study a number of atomic structure problems. The problems include the determination of fine and hyperfine structure in light positive and negative ions, plus measurements of absolute wavelengths of light from two-electron ions. In addition the authors intend to use a similar experimental arrangement to study excitation and decay of high Rydberg states first in the absence of fields and then in crossed electric and magnetic fields.

49044 (ANL—85-22, pp 227-230) **Enhanced electron capture by fast heavy di-clusters exciting solids .** Cooney, P.J.; Faibis, A.; Kanter, E.P.; Koenig, W.; Maor, D.; Zabransky, B.J. (Millersville State College, PA). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have studied the dependence of the charge-state-distributions of heavy-ion fragments resulting from the foil-induced dissociation of 4.2-MeV N_2^+ ions on the thickness of the carbon target foil. The results were compared to those distributions measured for impact of 2.1-MeV N^+ projectiles. Whereas the charge-state distributions for atomic ion impact are already equilibrated in the thinnest targets used (2 $\mu g/cm^2$), those measured for molecular ion impact are strongly dependent on the target thickness, even for the thickest targets (100 $^+ g/cm^2$). The distributions for molecular-ion impact show a marked shift towards lower charge states, evidencing an enhanced electron capture probability over the case of monatomic ion impact. A quantitative model was developed to explain this phenomenon.

49045 (ANL—85-22, pp 230-232) **Post-foil interaction in foil-induced molecular dissociation.** Faibis, A.; Kanter, E.P.; Koenig, W.; Plesser, I.; Vager, Z. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have investigated the foil-induced dissociation of 175- 250- keV/amu CH^+, NH^+, and OH^+, FH^+ and NeH^+ ions by coincident detection of the fragment atoms. The dissociation energies corresponding to in-foil and post-foil interactions were deduced from the measured relative flight times of the fragment pairs to a set of detectors downstream from the target. The authors considered final states consisting of a) a proton and a heavy-ion and, b) a hydrogen atom and a heavy-ion. Surprisingly, in both cases the energy released in the post-target interaction shows a similar linear increase with the charge state of the heavy partner.

49046 (ANL—85-22, pp 232-233) **Charge-state-distributions of foil-excited heavy Rydberg atoms.** Faibis, A.; Kanter, E.P.; Koenig, W.; Zabransky, B.J. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Studies of foil-excited fast (MeV/amu) heavy ions have demonstrated large yields of high Rydberg atoms formed in such beams. Further experiments have suggested a strong target-thickness dependence of the yields of such atoms. These results have been puzzling in view of the supposed short mean free paths of such atoms in solids. In an effort to better understand these results, the authors have measured the yields of Rydberg atoms ($n \sim 100$-200) in foil-excited ^{32}S ions at an incident energy of 125 MeV.

49047 (ANL—85-22, pp 236) **Semiempirical Sternheimer shielding factors for the atomic 4f and 5d shells.** Childs, W.J.; Cheng, K.T. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In a recent Physical Review Letter, workers at Los Alamos reported new electric-quadrupole moment values for selected nuclei through study of hfs in the X-ray spectra of muonic atoms. On combining these true moment values with the apparent values previously deduced for the same nuclei from many-electron hfs studies, the authors evaluated Sternheimer shielding factors for several electron shells in various atoms. They were struck by the unreasonably large scatter in the resulting shielding factors. After some study, the authors concluded that the scatter arose from (1) questionable assumptions and procedures used earlier in analyzing the many-electron hfs, and (2) the diversity of methods used in evaluating quadrupole radial hfs integrals. Limiting themselves to the atomic 4f and 5d shells, they made a study of all atoms for which (a) a true quadrupole moment value (i.e. one determined either by muonic hfs or Coulomb excitation) was known and (b) the many-electron hfs had been studied.

49048 (ANL—85-22, pp 236-237) **Ab initio calculation of 4f/sup N/6s² hyperfine structure in neutral rare-earth atoms.** Cheng, K.T.; Childs, W.J. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Over the last few years a great deal of precise hfs data has been obtained for the low-lying levels of the 4f/sup N/6s² configurations of the neutral rare-earth atoms. The observed splittings have usually been interpreted using semi-empirical effective-operator method in which the effective radial hfs integrals were determined though least-squares fits to experimental data. In previous work, these values were compared with theoretical values, usually obtained by the configuration-average Dirac-Fock or similar methods. Although the level of agreement was normally good, a substantial number of adjustable parameters was used. In the present study a true ab initio multiconfiguration Dirac-Fock method is used to calculate the hfs splitting directly from the known values of nuclear moments. No adjustable parameters are used, and the hfs is evaluated in first order perturbation theory.

49049 **(BNL—38396) Lattice dynamics of the heavy Fermion compound UBe/sub 13/.** Tranquada, J.M.; Heald, S.M.; Pick, M.A.; Fisk, Z.; Smith, J.L. (Brookhaven National Lab., Upton, NY (USA); Los Alamos National Lab., NM (USA)). 1986. Contract AC02-76CH00016;AS05-80ER10742. 6p. (CONF-860753—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014774.

From International conference on EXAFS and near edge structure; Saumur, France (7 Jul 1986).

UBe_3 has unusual electronic and magnetic properties due to a narrow band of U 5f states near the Fermi energy. We have used EXAFS to compare the interatomic forces in UBe_{13} with those in $ThBe_{13}$, which has the same structure but no 5f electrons. From measurements made over the range 10 to 308 K, we have determined the temperature dependences of the mean square relative displacements (MSRD's) for the first actinide-beryllium and actinide-actinide shells in each material. The MSRD's for the corresponding shells in the two compounds were found to be quite similar. The thermal motion of the nearest-neighbor actinide-actinide pairs is shown to be due entirely to a single Einstein mode, the square of whose frequency is proportional to the actinide-Be force constant. We conclude that the presence or absence of 5f electrons on the actinide has very little effect on the actinide-beryllium bonding. 9 refs., 5 figs.

49050 **(BNL—38486) Oxygen K-edge absorption spectra of small molecules in the gas phase.** Yang, B.X.; Kirz, J.; Sham, T.K. (State Univ. of New York, Stony Brook (USA). Dept. of Physics; Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 5p. (CONF-860753—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014178.

From International conference on EXAFS and near edge structure; Saumur, France (7 Jul 1986).

The absorption spectra of O_2, CO, CO_2 and OCS have been recorded in a transmission mode in the energy region from 500 to 950 eV. Recent observation of EXAFS in these molecules is confirmed in this study. 7 refs., 3 figs.

49051 (CONF-8409129—, pp 8-12) **Multiphoton ionization of atoms in strong fields.** Crance, M. (CNRS, Orsay, France). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

Most of the features observed in strong field multiphoton ionization cannot be interpreted by perturbation theory applied at the minimum non-vanishing order. When it is realistic to assume that only one electron is involved in the process, experimental results are well reproduced by calculations in which some discrete quasi-resonant states are treated on the same footing as the initial state. These methods are not applicable to complex atoms such as noble gases. We present a simple picture of multiphoton processes which allows an interpretation of the most salient experimental features in multiphoton stripping and electron-energy spectroscopy of noble gases. 11 references, 2 figures.

49052 (CONF-8409129—, pp 13-22) **Multiphoton transitions in the ionization continuum of atoms.** Agostini, P.; Petite, G. (Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette, France). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

This paper contains two main parts: in the first one the authors summarize their contribution to the study of ATI (Above-Threshold Ionization) and discuss the role of the ponderomotive force. In the second, new results are reported on multiple ionization of calcium atoms with picosecond pulses. 26 references, 6 figures, 3 tables.

49053 (CONF-8409129—, pp 23-30) **Multiply charged ions produced in multiphoton ionization of rare gas atoms.** Lompre, L.A.; Mainfray, G. (Centre d'Etudes Nucléaires de Saclay, Gif-sur-Yvette, France). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

The present paper will be devoted to multiphoton ionization of many electron atoms in the outer shell, as rare gases. It induces removal of several electrons and the production of multiply charged ions. The production of doubly charged ions has been investigated in detail. Doubly charged ions can e produced, either by simultaneous excitation of at least two electrons, or by a stepwise process via singly charged ions. This depends mainly on the laser intensity and the photon energy. The basic interaction processes involved are considerably more complicated than for one-electron atoms. A new theoretical model will have to be developed to take into account electron correlation effects. 19 references, 5 figures.

49054 (CONF-8409129—, pp 31-41) **Studies of collision-free nonlinear processes in the ultraviolet range.** Rhodes, C.K. (Univ. of Illinois, Chicago). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

The collision-free response of atomic systems generated by intense irradiation at 193 nm exhibits several unusual properties. The behavior observed for the dependencies on atomic number, intensity of illumination, frequency, and polarization are discussed. The experimental evidence points to collective atomic motion involving several electrons and implicates a possible role for a Coster-Kronig mechanism, enabling rapid energy transfer among atomic subshells. 50 references, 2 figures.

49055 (CONF-8409129—, pp 42-47) **Multiphoton excitation of doubly excited states of two-electron atoms.** Freeman, R.R.; Bloomfield, L.A.; Cooke, W.E.; Bokor, J.; Jopson, R.M. (AT & T Bell Labs., Murray Hill, NJ). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

One of the outstanding problems in atomic physics is to better understand the dynamics of highly excited two-electron systems. On the experimental side, single photon excitation studies have been limited to relatively low-lying states in He, while electron scattering experiments do not adequately resolve individual states. This paucity of experimental data is due to three general characteristics of these highly excited double electron states: (1) they have high energies usually greater than 1 Ryd; (2) they have little overlap with the ground state; (3) single photon excitation will not efficiently excite these states. It is the purpose of this paper to discuss the multiphoton excitation of these sperial states in two-electron systems. 12 references, 4 figures.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

A photoionization experiment is characterized by the initial bound state of the atom, the polarization, frequency, intensity and also temporal distribution of the ionizing radiation, as well as the partial saves describing the final continuum state. The basic observable is the total ionization rate which can be differentiated with respect to the kinetic energy of the emitted photoelectrons yielding total and partial photoionization cross-sections. Additional information can be extracted if the angular distribution of either electron emission or spin polarization is measured. The angle-resolved measurement reveals interference effects which average to zero whenever the signal is integrated over all angles, quite analogously to the angular correlations observed, e.g., in γ-γ cascades or scattering of particles. At a high enough laser intensity the atom may be ionized by simultaneous absorption of several photons and photoionization is observed below the threshold for one-photon ionization. The actual light intensity required to produce such a signal strongly depends on whether or not an excitation step is in resonance with an atomic transition. The least intensity is required if photons of different frequencies are present in the light beam, each in resonance with atomic frequencies, leading to resonant stepwise ionization. Depending on the quantum numbers of the resonant interme-

diate states, the angular distribution may exhibit rather high anisotropy. By varying the polarization and frequency of the photons, one can excite different intermediate states and study their influence on the ionization signal. In this context we will also address the question of how well photoionization of Rydberg states can be described using the electric dipole approximation. 31 references 7 figures.

49057 (CONF-8409129—, pp 68-75) **Field fluctuations and multiphoton processes.** Zoller, P. (Univ. of Innsbruck, Austria). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

The origin of all laser field fluctuation effects in multiphoton processes is the nonlinearity inherent in any process where many photons are absorbed or emitted; an atom absorbing a number of photons is sensitive not only to mean intensity and bandwidth of the light but also to the kind and details of the fluctuations, i.e., the higher-order statistics of the radiation field. A theory of field fluctuation effects in multiphoton transitions consists of two element: (1) a noise model to describe the fluctuations and (2) a solution to the atomic density matrix equations with a stochastic driving field. The authors summarize some aspects of how to formulate and solve the problem of resonant multiphoton processes in stochastic fields. 18 references, 4 figures.

49058 (CONF-8409129—, pp 76-81) **Two-photon absorption from a phase diffusing laser field.** Elliott, D.S. (Purdue Univ., West Lafayette). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

In this report, the author will discuss a recent experiment in which we measured the influence of field frequency fluctuations on unsaturated two-photon absorption. The statistical properties of the frequency fluctuations in this experiment are carefully controlled, and the laser lineshape is nearly Lorentzian. This experiment provides direct confirmation of theoretical results of Mollow on the linewidth of two-photon absorption by a phase-diffusing field. This report is organized as follows. The first section presents the background of the experiment, including Mollow's results for two-photon absorption from a phase diffusing field, and a simple extension of his work to include the effect of the finite correlation time of the fluctuations. The next unit describes the manner in which the experiment was conducted, and a discussion of the results appears in the final section.

49059 (CONF-8409129—, pp 91-97) **Multiphoton effects during collisions.** Burnett, K.; Cooper, J. (Imperial College, London, England). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

We should like to present a brief progress report on multiphoton transitions occurring during collisions. The aim of the work is the development of techniques for studying collision dynamics using off-resonant excitation of atomic transitions in the presence of collisions. We shall start with the now comparatively well understood subject of collisional redistribution, dealing with single-photon absorption during collisions. The natural extension of this work to multiphoton effects is what we are pursuing. The first type of multiphoton effect we'll look at involves saturation of a two-level system: the Rabi problem of collision physics. This is an enormous topic that we shall discuss briefly and very naively. We shall turn lastly to multilevel systems where much less in known and much more remains to be done. This report will use qualitative arguments. For more rigorous discussions the reader should consult the references given in the text. 17 references, 5 figures.

49060 (CONF-8409129—, pp 99-109) **Pressure effects in the multiphoton ionization of atoms and molecules.** Johnson, P.M.; Li, L.; Porter, R.N. (State Univ., of New York, Stony Brook). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

Thirty years ago R.H. Dicke wrote "In the usual treatment of spontaneous radiation by a gas, the radiation process is calculated as though the separate molecules radiate independently of each other. This simplified picture overlooks the fact that all the molecules are interacting with a common radiation field and hence cannot be treated as independent. The model is wrong in principle and many of the results obtained from it are incorrect". Many subsequent results of magnetic resonance spectroscopy, and more recently of laser interactions have shown that Dicke stated a fundamental truth and that a collective treatment of molecules in a radiation field is often necessary. Notable examples in nonlinear optics include third harmonic generation and coherent antistokes Raman spectroscopy. We would like to present here another experimental effect which we feel is best explained by treating non-interacting molecules as a collective system. This effect is the quenching of the AC Stark shift upon an increase in the partial pressure of the molecule interacting with the radiation field. 15 references, 5 figures.

49061 (CONF-8409129—, pp 131-140) **Theoretical studies of resonantly enhanced multiphoton ionization processes in molecules.** Dixit, S.N.; Lynch, D.L.; McKoy, V. (California Institute of Technology, Pasadena). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

Multiphoton absorption and ionization processes add a new dimension to the study of excited state dynamics in atomic and molecular systems. The theoretical analysis of multiphoton ionization of diatomic molecules is nontrivial with complexities arising from the molecular aspects and from the multiphoton nature of the process. The authors have developed a general formalism for analysis of resonantly enhanced multiphoton ionization (REMPI) processes in diatoms. In this paper the vibrational branching ratios resulting from a (3 + 1) REMPI of H_2 via the $C^1Pi/sub\ u/$ state are analyzed.

49062 (CONF-8409129—, pp 151-163) **Resonant two-photon ionization and dissociation of the hydrogen atom and molecule.** Welge, K.H.; Rottke, H. (Universitaet Bielefeld, Germany, F.R.). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

In this paper we report on two experimental studies: (a) the ionization of the H atom in strong external electric fields around the ionization limit by state-selective two-photon, one-photon resonant excitation through single sublevels of the n = 2 Stark manifold as intermediate step, and (b) the two-photon, one-photon resonant ionization and dissociation of the H_2 molecule through selected rotational-vibrational levels of the $B^1\Sigma^+/sub\ u/$ electronic state as intermediate step. 27 references, 9 figures.

49063 (CONF-8409129—, pp 164-173) **Multiphoton ionization photoelectron spectroscopy for excited-state atoms and molecules.** Kimura, K. (Institute for Molecular Science, Okazaki, Japan). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

Multiphoton ionization (MPI) is remarkably enhanced, when atoms and molecules are pumped to resonant excited states by visible and UV lasers. On the other hand, a photoelectron spectroscopic technique using resonant MPI has been developed to study photoelectron spectra of electronically excited states in this laboratory and other in the early 1980's. Such laser photoelectron spectroscopy makes it possible to obtain excited-state photoelectron spectra which are very useful for studying dynamic behavior of excited states and ionic states from a new spectroscopic point of view. 28 references, 3 figures.

(Central Research Institute of Physics, Budapest, Hungary). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

According to the fundamental laws of the intense field QED, the general processes governing the laser-induced electron emission from atoms or solids traditionally may be interpreted as two complementary limiting interaction processes of the same phenomenon. The first is the multiphoton type process, when the electron interacts only with several well determined small number of photons (quantum limit), the second is the tunnelling type, when the number of the interacting photons is increasingly high (classical limit). While practically all research activity was concentrated both theoretically and experimentally to the multiphoton questions, less attention was paid to the tunnelling case, in spite of the fact that the early beginning of the intense field QED started with the pronunciation of this latter. After a short summarizing formulation of the topics, we describe several experiments performed by use at the Laval University for the study of the laser induced tunnelling. The surface photoeffect of gold proved to be a good experimental tool for these studies giving complementary results to the experiments carried out by use for the tunnel ionization of gas atoms. 36 references, 9 figures.

Contract W-7405-ENG-36;AC05-84OR21400;FG05-86ER53217. 23p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014232.

From NATO advanced study conference; Les Houche, France (16 Jun 1986).

Changes in the radial wave functions for d electrons which occur preceding the onset of the transition series of elements and for f electrons preceding the onset of the lanthanide and actinide series are examined. The sensitivity of the radial wave functions to variations in the effective potential is discussed, and the large variation in the radial wave functions between the LS terms of certain types of excited configurations in these regions of the periodic system is analyzed. Several examples of electron-impact ionization are explained by analyzing the effective potentials for the excited electrons in the intermediate autoionizing states. 46 refs., 18 figs. (WRF)

49068 (CONF-8606166—1) **Detection of single atoms by resonance ionization spectroscopy.** Hurst, G.S. (Tennessee Univ., Knoxville (USA). Dept. of Physics). 1986. Contract AC05-84OR21400. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86011974.

From Meeting of the Fellows of the Royal Society; London, UK (27 Jun 1986).

Rutherford's idea for counting individual atoms can, in principle, be implemented for nearly any type of atom, whether stable or radioactive, by using methods of resonance ionization. With the RIS technique, a laser is tuned to a wavelength which will promote a valence electron in a Z-selected atom to an excited level. Additional resonance or nonresonance photoabsorption steps are used to achieve nearly 100% ionization efficiencies. Hence, the RIS process can be saturated for the Z-selected atoms; and since detectors are available for counting either single electrons or positive ions, one-atom detection is possible. Some examples are given of one-atom detection, including that of the noble gases, in order to show complementarity with AMS methods. For instance, the detection of ^{81}Kr using RIS has interesting applications for solar neutrino research, ice-cap dating, and groundwater dating. 39 refs., 7 figs., 2 tabs.

49069 (DOE/ER/53188—T1) **Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles. Annual report, 1 October 1984-30 September 1985.** Gay, T.J. (Missouri Univ., Rolla (USA). Dept. of Physics). 1 Jan 1985. Contract FG02-84ER53188. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014243.

The major effort of this past year has been spent in designing and building the resistor assemblies and controls necessary to modify the UMR ion energy-loss spectrometer for studies of the type described in our original proposal. Specifically, we are interested in the collision $He^{++} + H \rightarrow He^{+}(n) + H^{+}$ and measurement of the total capture cross section as a function of n for He^{++} energies between 25 and 200 keV.

49070 (INIS-mf—10411) **Inner shell ionization by fast protons, alpha particles and carbon ions.** Dijk, J.H. van. (Rijksuniversiteit Groningen (Netherlands)). 12 Oct 1984. 123p. NTIS (US Sales Only), PC A06/MF A01. File Number DE86703113.

The subject of this thesis is the study of inner-shell excitations of atoms induced by fast charged particle collisions. A new method is described for measuring the spectrum of delta-electrons emitted by ^{208}Pb after excitation by 15 MeV protons or 50 MeV alpha particles. Experimental equipment is described. Results of both experiments are presented and compared with PWBA models and with calculations based on a semi-classical approximation. The small-impact-parameter ionization probabilities obtained are then compared with literature. Also small-impact-parameter measurements done with 100 MeV carbon ions are described. Besides K-shell measurements, the author also presents L-subshell ionization probability results for Pb. An appendix is added in which energy straggling problems in solid targets are treated. Includes Dutch summary; 117 refs.; 46 figs.; 19 tabs.

49071 (IPPJ—728) **Some physical differences between sheet plasma and multicusp plasma as volume produced H^- or D^- ion sources.** Uramoto, Joshin. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Mar 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703119.

In the H^- ion volume production by means of a sheet plasma the extracted H^- ion current increases towards the outside across the magnetic field. This fact means that H^- ions are produced outside of the sheet plasma, and is in contrast with the fact that H^- ions in the multicusp plasma are produced almost in the center region without magnetic field. Furthermore, in the optimum condition for extracting H^- ions from the sheet plasma, the potential of the first extraction electrode is biased more negatively than that of the discharge anode or the plasma potential, while, in the optimum condition for the multicusp plasma, it is biased more positively. These physical differences between the two plasmas are related

with confinement regions of electrons and ambipolar diffusions of plasma without magnetic field or across magnetic field.

49072 (IPPJ—730) Measuring method and confirmation of H^-, D^- ion current by sheet plasma, 1. Uramoto, Joshin. (Nagoya Univ. (Japan). Inst. of Plasma Physics). May 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703121.

Usually, it is very difficult to separate an electron current from H^- or D^- ion current under volume production, because both electrons and H^- or D^- ions are extracted from a discharge plasma in H_2 or D_2 gas. However, H^- or D^- ion current by volume production in the sheet plasma can be easily separated from electron current by using the weak magnetic field applied to the sheet plasma itself. Then, if the H^- or D^- ion current is compared with positive ion (mainly H_3^+ or D_3^+) current which is extracted by changing sign of the acceleration voltage from plus (for H^- or D^- ion) to minus, the H^- or D^- ion current can be confirmed more exactly.

49073 (IPPJ—731) Size effects of vacuum chamber for H^-, D^- ion volume production by sheet plasma, 1. Uramoto, Joshin. (Nagoya Univ. (Japan). Inst. of Plasma Physics). May 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703122.

In order to produce H^- (D^-) ions effectively by volume production in the sheet plasma, effects of vacuum chamber are studied by using two sizes of metal vacuum chamber and by changing their bias voltages for the plasma potential of the sheet plasma. Then, we find the H^- (D^-) ion current increases abruptly with distance between the sheet plasma surface and the chamber wall perpendicular to the magnetic field, while it takes a maximum near a floating potential of the chamber (negative for the plasma potential outside of the sheet plasma). These effects are related with a size of space where the plasma potential is higher than those of boundaries parallel and perpendicular to the magnetic field. That is, the H^- (D^-) ion current increases with the spatial size in which H^- (D^-) ions are confined and hydrogen (deuteron) positive ions are lost rapidly along the magnetic field.

49074 (KU-HCOE-FL2-R—85-27) Low-energy heavy-atom impact as a tool for production and classification of doubly excited states. Andersen, N. (Copenhagen Univ. (Denmark). H.C. Oersted Inst.; Aarhus Univ. (Denmark). Inst. of Physics). 1985. 9p. (CONF-860148—6). NTIS (US Sales Only), PC A02/MF A01. File Number DE86752094.

From 2. United States/Mexico cooperative symposium on atomic and molecular physics; Cocoyoc, Mexico (1 Jan 1986).

Low-energy heavy-atom impact may be an efficient way of preferentially populating doubly excited levels. Using neon as an example, this paper discusses why this is so. The similarity of the structure of the energy level diagrams for doubly excited neon and the level scheme for neutral magnesium is pointed out, suggesting that collective quantum numbers may describe the electron pair.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

We describe recent measurements which have provided, in unprecedented detail, insights into the electronic mechanisms through which energy carried into a material by photon irradiation is absorbed, localized and rechanneled to produce desorption, surface modification, erosion and damage. The specific object of these studies has been desorption induced by electronic transition in alkali halide crystals, with particular emphasis on the dynamics of changes in the surface and near-surface regions. In our experiments, the irradiating ultraviolet photons are provided by a synchrotron storage ring, and the dynamical information about desorption products is obtained from optical measurements of the quantum states, yields and velocity distributions of neutral ground-state and excited-state atoms ejected from the surface of the irradiating material. These studies have shown that the dominant exit channels in photon-induced particle emission are those producing ground-state and excited-state neutral atoms. Using dynamical information about these desorbing neutral species, obtained, for example, by laser-induced fluorescence and laser Doppler spectroscopy, we are generating an increasingly comprehensive picture of the dynamics of electronic energy flow into and out of pure crystalline surfaces in these prototypical dielectrics. We are also beginning to be able to relate desorption dynamics to specific materials properties, and to discriminate between pure surface and near-surface effects in these materials. Applications of these techniques to the problem of photon-induced surface damage and to analysis of surface dynamics in dielectric materials are discussed, and the relationships between these nearly ideal model materials and the non-crystalline, covalently bonded materials more typical of real optical elements are pointed out. 19 refs., 13 figs.

49076 (LRAP—47) Report to the evaluation committee on Swedish atomic and molecular physics. Svanberg, S.; Lundberg, H. (Lund Univ. (Sweden). Dept. of Physics). 1985. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703228.

The scientific evaluation is planned to be performed by an international group of prominent physicists. Groups being evaluated have been requested to present background material on their research. The atomic physics program discussed in this report form the basis for a large applied laser spectroscopy program. Projects on atmospheric remote sensing, combustion diagnostics, industrial laser applications and medical diagnostic spectroscopy have emerged from this program. Accomplishments and publications 1980-1985 are presented and the planned research 1985-1988 is described. Project financing and cooperation with other groups is discussed. The list of references contains 80 papers.

49077 (ORNL—6293) Two-photon induced fluorescence and other optical effects in irradiated and doped fused silica. Kramer, S.D. (Oak Ridge National Lab., TN (USA)). Jul 1986. Contract AC05-84OR21400. 57p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86014422.

The objective of this program was to assess and identify irradiation techniques which could be used to modify the optical characteristics of doped fused silica. Primary emphasis was placed on determining if gamma ray or neutron bombardment of the glass would enhance certain Raman and nonlinear optical effects. In particular, the effect of irradiation on optical two photon induced fluorescence was studied in detail. The maximum radiation exposures used were 10^6 rads (Si) of gamma rays and neutron fluences of 1×10^{14} neutrons/cm^2. The optical measurements were made at room temperature between one and four months after irradiation. The maximum input light intensity was 10^9 watts/cm^2 at a near infrared (1.06 μ) input wavelength which was chosen to lie in a transparent spectral region of the glass. Under these experimental conditions a careful search revealed no detectable two-photon induced fluorescence in the region from 550 to 900 nm. The upper limit for the photon efficiency of this process was determined to be less than 1×10^{-10}%. 89 refs., 12 figs.

49078 (OUP—86-05) Symmetries and rotational line intensities in diatomic molecules. Veseth, L. (Oslo Univ. (Norway). Fysisk Inst.). Feb 1986. 38p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703229.

The general theory of angular momenta and the full rotation group is used to reconsider the theory of the intensity factors of rotational lines in the spectra of diatomic molecules (Hoenl-London factors). It is shown that the use of the rotational symmetry (rotation matrices) leads to compact derivations of the symmetry properties of the molecular wave functions, as well as the matrix elements of the transitions operator. The present work is restricted to spin-allowed electric dipole transitions, and the general sum rule characteristic of this type of transitions is rederived by use of the general angular momentum theory. A main purpose of the present work has been to provide a unified theoretical basis for exact numerical computations of Hoenl-London factors for all types of spin-allowed electric dipole transitions in diatomic molecules. The computed Hoenl-London factors are then in the next step intended to

be the basis for construction of synthetic molecular band spectra, with particular applications to upper atmosperic emissions.

49079 (RAL—84-116) More seminars on muonium spectroscopy. Cox, S.F.J. (Rutherford Appleton Lab., Chilton (UK)). Dec 1984. 75p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86703112.

The paper concerns topics which illustrate the use of muonium spectroscopy in four major areas. The experimental method - muon spin rotation (muSR) is employed in the four topics, which include: muSR studies in magnetism, muons in metals and metal hydrides, muonium in semiconductors and muSR studies in chemistry.

File Number DE86013573.

From 1. symposium on computational chemistry on cray supercomputers; Minneapolis, MN, USA (11 Jun 1986).

Whenever energy is deposited non-thermally in a system, further evolution of that system is governed by a competition between hot processes and energy relaxation to a Boltzmann distribution. Thus the study of energy transfer in molecular collisions is central to many areas of application including laser-beam energy deposition, laser-beam production, and mode-selective chemistry. Molecular energy relaxation is often dominated by slightly off-resonant vibrational-to-vibrational (V-V) energy transfer. Thus we have embarked on a research project whose long-term goal is the accurate quantum mechanical prediction of V-V energy transfer probabilities in molecular collisions. Such calculations are very difficult and will require at least a class-VI computer for their execution. We have selected HF-HF collisions for detailed study because they have been very widely studied experimentally. A recent compilation of chemical laser systems contains 240 systems of which 190 involve hydrogen halides, and most of these involve HF. The major loss process limiting the efficiency of HF chemical lasers under most conditions are collisional self-deactivation.

49081 Collision strengths and line strengths for all transitions among the levels of the 1s-italic^{2}2s-italic^{2}2p-italic,1s-italic^{2}2s-italic2p-italic^2, and 1s-italic^{2}2p-italic^3 configurations of boron-like ions. Sampson, D.H.; Weaver, G.M.; Goett, S.J.; Zhang, H.; Clark, R.E.H. (Department of Astronomy, Pennsylvania State University University Park, Pennsylvania 16802 Los Alamos National Laboratory, Groups T-4 and X-7 Los Alamos, New Mexico 87545). *Atomic Data and Nuclear Data Tables;* **35**: No. 2, 223-266(Sep 1986). Contract FG02-85ER53208.

Collision strengths and electric-dipole line strengths have been calculated for all fine-structure transitions among the levels of the 1s-italic^{2}2s-italic^{2}2p-italic, 1s-italic^{2}2s-italic2p-italic^2, and 1s-italic^{2}2p-italic^3 configurations in 17 boron-like ions with nuclear charge number Z-italic in the range 10< or =Z-italic< or =74. From these results the collision strengths and line strengths for transitions between energy terms and their analogs in j-italicj-italic coupling can also be obtained. The collision strength data cover impact-electron energies < or =3.25Z-italic^2 Ry or 44.2Z-italic^2 eV. The effects of configuration mixing, parentage mixing, and intermediate coupling have been included in the calculations. The method used in calculating the collision strengths is a Coulomb-Born-Exchange method well suited for treating many members of an isoelectronic sequence simultaneously. The complete results have been given in terms of fits to simple functions of the impact-electron energy that are readily integrated over a Maxwellian distribution to obtain collision rates. Some discussion is given of important differences between the present method and the more usual Coulomb-Born-Exchange method, where it is assumed that the free electron sees the screened nuclear charge (Z-italic—N-italic).

49082 Collision strengths and line strengths for all transitions among the levels of the 1s-italic2l-italic2l-italic' configurations of Li-like ions. Zhang, H.; Sampson, D.H.; Clark, R.E.H. (Department of Astronomy, Pennsylvania State University University Park, Pennsylvania 16802). *Atomic Data and Nuclear Data Tables;* **35**: No. 2, 267-318(Sep 1986).

Collision strengths and electric-dipole line strengths have been calculated for all fine-structure transitions among the levels of the ls-italic2l-italic2l-italic' configurations in 19 Li-like ions with nuclear charge number Z-italic in the range 6< or =Z-italic< or =74. From these results the collision strengths and line strengths for transitions between energy terms and their analogs in j-italicj-italic coupling can also be obtained. The collision strength data cover impact-electron energies < or =3.25Z-italic^2 Ry or 44.2Z-italic^2 eV. The effects of configuration mixing, parentage mixing, and intermediate coupling have been included in the calculations. The method used in calculating the collision strengths is a Coulomb-Born-Exchange method well suited for treating many members of an isoelectronic sequence simultaneously. The complete results have been given in terms of fits to simple functions of the impact-electron energy that are readily integrated over a Maxwellian distribution to obtain collision rates.

49083 Experimental apparatus for photon/ion coincidence measurements of dielectronic recombination. Gardner, L.D.; Kohl, J.L.; Lafyatis, G.P.; Young, A.R.; Chutjian, A. (Harvard-Smithsonian Center for Astrophysics, Cambridge, Massachusetts 02138). **57**: No. 9, 2254-2265(Sep 1986).

An inclined beams apparatus for the measurement of absolute cross sections for dielectronic recombination between free electrons and singly or multiply charged ions is described. The collision products, a photon and a lower-charge-state ion, are detected in delayed coincidence. Measurements of dielectronic recombination in C^{3+} are described to illustrate the use of the apparatus and techniques. Verification of the calibrations and operation of the apparatus is demonstrated through measurements of charge transfer and electron impact excitation.

49084 Orbital forces and chemical bonding in density-functional theory: Application to first-row dimers. Averill, F.W.; Painter, G.S. (Metals and Ceramics Division, Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37831). **34**: No. 4, 2088-2096(15 Aug 1986). Contract AC05-84OR21400.

The local-density-functional description of chemical bonding in first-row homonuclear dimers is analyzed in terms of both static and dynamic orbital forces. The dynamic orbital force of the i-italicth molecular orbital is equal to the negative of the derivative of the one-electron energy epsilon-c/sub i-italic/ with respect to the p-italicth nuclear coordinate, i.e., -partialepsilon-c/sub i-italic//partialX/sub p/. The static orbital force is also equal to a derivative of the one-electron energy, but the differentiation is carried out with the orbital held fixed, i.e., (-partialepsilon-c/sub i-italic//partialX/sub p/)psi. It is shown that the static force is the orbital's contribution to the total Hellmann-Feynman force, whereas the dynamic force describes the change in the total force due to change in the orbital's occupation number. The chemical bond force in the first-row dimers is observed to be a delicate balance between bonding and antibonding orbital forces. Most of the bond force comes from the 2σ/sub g-italic/ orbital and to a lesser extent from the 1π/sub u-italic/ state. The polarization of the core orbitals in N_2, O_2, and F_2 is found to originate indirectly through their interaction with the 3σ/sub g-italic/ orbital. The dynamic orbital force gives accurate predictions about the change of equilibrium bond distances accompanying electronic ionization and excitation. The formalism and results are related to earlier Hartree-Fock studies.

49085 Lifetimes for spontaneous emission from the X-italic $^3u^-$ (v-italic = 1) and a-italic $^1\Delta$ states of CH^-. Okumura, M.; Yeh, L.I.; Normand, D.; Lee, Y.T. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory; Department of Chemistry, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **85**: No. 4, 1971-1976(15 Aug 1986). Contract AC03-76SF00098.

The radiative decay of excited CH^- trapped in a radio frequency ion trap was measured, and the total excited state population was probed by observing the depletion of trapped CH^- caused by photodetachment at 1.16 eV, below the expected electron affinity for the ground $^3\Sigma^-$ state. The signal decayed biexponentially with time. We assigned the long lived state (lifetime 5.9+0.8, -0.6 s) as the metastable a-italic $^1\Delta$ state previously identified in the photoelectron spectrum. The fast decay, with a lifetime of 1.75 +- 0.15 ms, was attributed to the first excited vibrational level of the ground $^3\Sigma^-$ state, in good agreement with a theoretical result by Manz, Zilch, Rosmus, and Werner. These results support the electron affinity of 1.238 eV for CH^- obtained by Kasdan, Herbst, and Lineberger from photoelectron spectroscopy, and contradict the value of 0.74 eV determined by Feldmann from photodetachment spectroscopy.

49086 **Infrared spectra of the cluster ions $H_7O^+{}_3xH_2$ and $H_9O^+{}_4xH_2$.** Okumura, M.; Yeh, L.I.; Myers, J.D.; Lee, Y.T. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory; Department of Chemistry, University of California, Berkeley California 94720). *Journal of Chemical Physics;* **85**: No. 4, 2328-2329(15 Aug 1986). Contract AC03-76SF00098.

Infrared spectra of hydrated hydronium ions weakly bound to an H_2 molecule, specifically $H_7O^+{}_3xH_2$ and $H_9O^+{}_4xH_2$, have been observed. Mass-selected parent ions, trapped in a radio frequency ion trap, are excited by a tunable infrared laser; following absorption, the complex predissociates with loss of the H_2, and the resulting fragment ions are detected. Spectra have been taken from 3000 to 4000 cm^{-1}, with a resolution of 1.2 cm^{-1}. They are compared to recent theoretical and experimental spectra of the hydronium ion hydrates alone. Binding an H_2 molecule to these clusters should only weakly perturb their vibrations; if so, our spectra should be similar to spectra of the hydrated hydronium ions $H_7O^+{}_3$ and $H_9O^+{}_4$.

49087 **Alkaline earhtlike spectra in highly ionized members of the Sm isoelectronic sequence.** Curtis, L.J. (Department of Physics and Astronomy, Universtiy of Toledo, Toledo, Ohio 43606). *Journal of the Optical Society of America B: Optical Physics;* **3**: No. 8, 1102-1106(Aug 1986).

Energies and radiative transition probabilities have been computed for the 5s-italic^2 ^{1}S-italic/sub o-italic/—5s-italic5p-italic ^{1}/sup ,/^{3}P-italic/sub J-italic/ intervals in highly ionized members of the 62 electron samarium isoelecctronic sequence by using a-italicb-italic i-italicn-italici-italict-italici-italico-italic multiconfiguration Dirac-Fock methods. For Z-italic>74 these become the lowest-lying levels, and the ion assumes an alkalkine earthlike structure. Excitation energies and E1, M1, E2, and M2 transition probabilities for the 5s-italic5p-italic levels are reported for the ions Re^{+13} through U^{+30}. Isoelectronic trends in the relative spacings of the 5s-italic5p-italic levels were also investigated by using semiempirical screening parameterizations of the intermediate coupling equations for the spin—orbit and exchange energies. These trends are compared with systematic regularities noted earlier in the homologous Be, Mg, Zn, and Cd sequences, and possibilities for precise extrapolative predictions are examined.

49088 **Transitions of the type 2s-italic-2p-italic in oxygen-like Y, Zr, and Nb.** Behring, W.E.; Brown, C.M.; Feldman, U.; Seely, J.F.; Reader, J.; Richardson, M.C. (Laboratory for Solar Physics and Astrophysics, Goddard Space Flight Center, Greenbelt, Maryland 20771). *Journal of the Optical Society of America B: Optical Physics;* **3**: No. 8, 1113-1115(Aug 1986).

Transitions of the type 2s-italic—2p-italic in the oxygenlike ions Y XXXII, Zr XXXIII, and Nb XXXIV were identified in spectra recorded at the University of Rochester's Omega laser facility. Solid targets were spherically irradiated by 24 beams of frequency-tripled (351-nm) Nd:glass laser radiation. The spectra were photographed with a 3-m grazing incidence spectrograph. The identified transitions of the oxygen-like ions are in the range 30 to 73 A-circle. The wavelengths for the magnetic-dipole transitions within the 2s-italic^{2}2p-italic ground configurations of these ions are predicted from the experimental energy levels.

49089 **Corrections to van der Waals forces.** Manson, J.R.; Ritchie, R.H. (Department of Physics and Astronomy, Clemson University, Clemson, South Carolina 29634). **57**: No. 2, 261-261(14 Jul 1986).

A Comment on the Letter by C. K. Au and Richard J. Drachman, Phys. Rev. Lett, 56, 324 (1986).

49090 **Evidence for correlated double-electron capture in low-energy collisions of O/sup 6+/ with He.** Stolterfoht, N.; Havener, C.C.; Phaneuf, R.A.; Swenson, J.K.; Shafroth, S.M.; Meyer, F.W. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **57**: No. 1, 74-77(7 Jul 1986). Contract AC05-84OR21400.

Production of L-italicM-italicM-italic-Auger and L-italic$_1$L/sub 23/M-Coster-Kronig electrons in 60-keV O/sup 6+/+He and 40-keV C/sup 4+/+He collisions were measured with high resolution by the method of 0° Auger spectroscopy. Oxygen impact is found to create intense Coster-Kronig lines attributed to the configurations 1s-italic^{2}2pnl with n-italic> or =6 which are produced by double-electron capture. Strong evidence is provided that the double-capture process involves electron-correlation effects whose analysis leads beyond the independent-electron model.

49091 **Optical pumping of rare-gas metastable atom beams with a frequency modulated multimode dye laser.** Lynn, J.G.; Hart, H.W.; Jeys, T.H.; Dunning, F.B. (Rice University, Houston, Texas 77251). *Applied Optics;* **25**: No. 13, 2154-2157(1 Jul 1986).

Very efficient stable optical pumping of an argon metastable atom beam is achieved using a frequency-modulated multimode dye laser. Frequency modulation is accomplished by rapidly oscillating the laser output coupler using a piezoelectric translator. This technique appears attractive for use in optically pumping a wide variety of atomic species.

49092 **Electron-impact ionization of multicharged metal ions: Ni/sup 3+/, Cu/sup 2+/, Cu/sup 3+/, and Sb/sup 3+/.** Gregory, D.C.; Howald, A.M. (Physics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **34**: No. 1, 97-102(Jul 1986). Contract AC05-84OR21400.

Absolute electron-impact ionization cross sections were measured as a function of collision energy for the multicharged metallic ions Ni/sup 3+/, Cu/sup 2+/, Cu/sup 3+/, and Sb/sup 3+/. The measurements cover an energy range from below threshold to 1000 eV (1500 eV for Cu/sup 2+/). Recent distorted-wave direct ionization calculations agree with the measurements for Ni/sup 3+/, Cu/sup 2+/, and Cu/sup 3+/ within 20%. Inner-shell excitation followed by autoionization produces up to a factor-of-2 enhancement in the Sb/sup 3+/ cross section, and a rapid decrease in this indirect contribution at higher energies indicates the dominance of dipole-forbidden excitations.

49093 **Molecular physics and chemistry applications of quantum Monte Carlo.** Reynolds, P.J.; Barnett, R.N.; Hammond, B.L.; Lester W.A. Jr. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). **43**: No. 3, 1017-1026(Jun 1986). Contract AC03-76SF00098.

We discuss recent work with the diffusion quantum Monte Carlo (QMC) method in its application to molecular systems. The formal correspondence of the imaginary-time Schroedinger equation to a diffusion equation allows one to calculate quantum mechanical expectation values as Monte Carlo averages over an ensemble of random walks. We report work on atomic and molecular total energies, as well as properties including electron affinities, binding energies, reaction barriers, and moments of the electronic charge distribution. A brief discussion is given on how standard QMC must be modified for calculating properties. Calculated energies and properties are presented for a number of molecular systems, including He, F, F^-, H_2, N, and N_2. Recent progress in extending the basic QMC approach to the calculation of "analytic" (as opposed to finite-difference) derivatives of the energy is presented, together with an H_2 potential-energy curve obtained using analytic derivatives.

49094 **Monte Carlo calculations of atoms and molecules.** Schmidt, K.E.; Moskowitz, J.W. (Courant Institute of Mathematical Sciences, 251 Mercer St., New York, N.Y. 10012). **43**: No. 3, 1027-1042(Jun 1986).

The variational and Green's function Monte Carlo (GFMC) methods can treat many interesting atomic and molecular problems. These methods can give chemical accuracy for up to 10 or so electrons. The various implementations of the GFMC method, including the domain Green's function method and the short-time approximation, are discussed. Results are presented for several representative atoms and molecules.

49095 **Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon.** Bhalla, C.P.; Tunnell, T.W. (Kansas State Univ., Manhattan). **32**: No. 2, 141-158(1984). Contract AC02-76ER02753.

Theoretical transition rates and transition energies for the states of the excited electron configurations, 1s 2s nl and 1s 2p nl, of lithium-like argon were calculated. The values of n considered range from n = 2 to n = 4 with all allowed values of l included, l = 0 to l = n-1. Numerical results for the theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios are given. These quantities are related to the dielectronic recombination rates and cross sections of helium-like argon.

49096 **Diagnostics for the NBETF actively cooled beam dump.** Theil, E.; Jacobson, V. (Lawrence Berkeley Lab., CA, USA). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

Lawrence Berkeley Laboratory's Neutral Beam Engineering Test Facility is currently testing multi-megawatt beams with pulse durations of up to 30 seconds. For this purpose, an actively cooled beam dump composed of heat-absorbing panels that dissipate the beam energy via high speed water flow has been installed and tested. The panels are mounted in a complex assembly necessary to accommodate the variety of ion sources to be tested. The beam dump required new diagnostics of two kinds: beam diagnostics that provide graphic and quantitative information about the beam, as inferred from energy transferred to the water, and panel diagnostics that provide graphic and quantitative information about the beam dump itself.

49097 **Electron-impact collision strengths for excitation of He-like ions from the levels with n = 1 and 2 to all singly excited levels with higher n ≦ 5.** Sampson, D.H.; Goett, S.J.; Clark, R.E.H. (Pennsylvania State Univ., University Park). *Atomic Data and Nuclear Data Tables;* **29**: No. 3, 467-534(Nov 1983). Contract AC02-76ET53056.

Intermediate-coupling collision strengths were calculated for all transitions of the kind 1s2p/sup 2S + 1/P/sub J/ - 1sn'l'/sup 2S' + 1/L'/sub J'/ with n' = 3,4 and 5 and l' ≧ 1 (p, d, f, g) for 20 He-like ions with nuclear charge number Z in the range 4 ≦ Z ≦ 74. The method used is a Coulomb-Born-Exchange method especially well suited for calculating results from any members of an isoelectronic sequence simultaneously. The calculations were made for nine impact-electron energies in threshold units epsilon = 1.0, 1.2, 1.5, 1.9, 2.5, 4.0, 6.0, 10.0, and 15.0. The results are given in the form of fits to a simple function of epsilon that is readily integrated over a Maxwellian to obtain collision rates. The parameters required in obtaining collision strengths for the simpler transitions from the 1s2p levels to the 1sn's levels the 3 ≦ n' ≦ 5 and for the transitions from the ground level and the 1s2s levels to all singly excited levels with higher n values ≦ 5 are given, as well. Results for transitions between energy terms and their jj coupling analogs are also included. In addition, calculated values for the transition energies and the electric-dipole radiative line strengths are given for all transitions. 21 references, 11 tables.

49098 **(AD-A—168008/1/XAB) GAMBLE-II imploding sodium plasma. 2. Uniformly filled z-pinch. Memorandum report, October 1985-February 1986.** Davis, J.; Rogerson, J.E.; Apruzese, J.P. (Naval Research Lab., Washington, DC (USA)). 8 May 1986. 35p. (NRL-MR—5776). NTIS, PC A03/MF A01.

The dynamics and radiative properties of a GAMBLE II imploded uniformly filled sodium z-pinch plasma are described. Parameters for the initial plasma have been carefully chosen to coincide with current experiments involving a capillary discharge. Results indicate that the sodium helium-like resonance line achieves sufficiently high radiated flux levels to provide an interesting source of radiation for fluorescence and x-ray laser experiments with a comparison neon plasma.

49099 **(DOE/ER/60415—2) Vacuum ultraviolet electronic properties of liquids. Eighteen year progress report, November 1, 1968-January 31, 1987.** Painter, L.R. (Tennessee Univ., Knoxville (USA). Dept. of Physics and Astronomy). Jul 1986. Contract FG05-86ER60415. 33p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014677.

The principal aim of this program has been to study the eletronic structure of liquids over a broad energy range, 2 to 25 eV. These studies basically consist of measuring the reflectance, transmittance, photoionization and photoemission of liquids in the vacuum ultraviolet spectral region as a function of angle of incidence and photon energy. Such measurements are analyzed to yield the optical and dielectric functions of the liquid as functions of photon energy. These functions describe electron motion in liquids as stimulated by nuclear radiation, visible and ultraviolet light, and charged particles. A knowledge of the interactions of radiation with molecular liquids has direct biological application in terms of understanding radiation damage to living material, to radiotherapy, to radiation dosimetry, to problems in cell biology, and to calculation of the actual degree of adhesive interactions between biological cells and between cells and artificial matter. Applications are made to radiation chemistry, upper atmospheric physics, and aerosol formation. 31 refs.

49100 **(SAND—85-2707C) Numerical solutions to creeping flow equations. Part 1. Falling ball rheometry.** Wagner, N.; Mondy, L.A.; Miller, J.D.; Graham, A.L.; Cook, W.A. (Princeton Univ., NJ (USA). Dept. of Chemical Engineering; Sandia National Labs., Albuquerque, NM (USA); Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36;AC04-76DP00789. 16p. (CONF-860760—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014142.

From 17. annual meeting of the Fine Particle Society; San Francisco, CA, USA (28 Jul 1986).

Numerical solutions are described for the velocity and stress fields in a viscous Newtonian liquid contained in a cylindrical vessel during the passage of a solid sphere settling under the influence of gravity. By taking advantage of the mathematical analogy between incompressible creeping flow of a Newtonian liquid and incompressible elasticity in a Hookean solid, we use advanced, finite element, computer programs developed for solid mechanics to perform creeping flow calculations. The drag on the sphere, in an unbounded fluid, would be given by Stokes' law. Using finite element stress codes we calculate the additional drag on the sphere due to the presence of the containing walls of the cylinder and the upper free surface of the liquid. Good agreement with experimental data and with analytical calculations is obtained for a range of ball sizes. Our findings indicate that the finite element method is an accurate computational technique for solving this class of multiphase hydrodynamics problems.

49101 **(UCRL—94277) 2D Lagrange MHD code.** Tipton, R.E. (Lawrence Livermore National Lab., CA (USA)). Jul 1986. Contract W-7405-ENG-48. 10p. (CONF-860703—26). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014440.

From 4. international conference on megagauss magnetic-field generation and related topics; Santa Fe, NM, USA (14 Jul 1986).

An MHD model has been implemented on a 2D Lagrangian mesh with cylindrical symmetry. The magnetic diffusion equations for both B/sub θ/ and B/sub r'/, B/sub z/ are solved. The code has been used to model several simple experiments involving induced currents in conducting rings. The calculated results have been compared with the experimental data. The goal of this research is to develop a detailed computational model to aid in the design of High Explosive Generators. 8 refs., 3 figs.

49102 **(UCRL—94800) Direct computation of wall bounded aerosol turbulent flow interactions.** Buckingham, A.C. (Lawrence Livermore National Lab., CA (USA)). 1986. Contract W-7405-ENG-48. 16p. (CONF-8609116—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013221.

From 3. international conference on numerical methods for non-linear problems; Dubrovnik, Yugoslavia (15 Sep 1986).

A method is described for direct numerical simulations of the statistical interactions between spherical solid particles and a turbulent carrier gas that entrains them. At the present stage of method development, the emphasis is on analysis of wall bounded turbulent, two phase, compressible flow. The bounding geometry described here is a two dimensional channel. The numerical procedure is designed to resolve statistical flow features of both dispersed and continuous phases. The numerical simulations combine a truncated spectral transform collocation procedure for the continuous phase with a Monte Carlo Lagrangian procedure for the dispersed phase. The continuous phase is iteratively matched at discrete time intervals to a random-walk Lagrangian statistical sampling procedure for the dispersed phase momenta and position expectancies. Ensemble averaging produces statistical velocity moments for both dispersed and continuous phases. 20 refs., 8 figs.

49103 **Desingularization of periodic vortex sheet roll-up.** Krasny, R. (Courant Institute of Mathematical Sciences, New York University 251 Mercer Street, New York, New York 10012). *Journal of Computational Physics;* **65**: No. 2, 292-313(Aug 1986).

The equations governing periodic vortex sheet roll-up from analytic initial data are desingularized. Linear stability analysis shows that this diminishes the vortex sheet model's short wavelength instability, yielding a numerically more tractable set of equations. Computational evidence is presented which indicates that this approximation converges, beyond the critical time of singularity formation in the vortex sheet, if the mesh is refined and the smoothing parameter is reduced in the proper order. The results suggest that the vortex sheet rolls up into a double branched spiral past the critical time. It is demonstrated that either higher machine precision or a spectra filter can be used to maintain computational accuracy as the smoothing parameter is decreased. Some conjectures on the model's long time asymptotic state are given.

49104 **FLIP: A method for adaptively zoned, particle-in-cell calculations of fluid in two dimensions.** Brackbill, J.U.; Ruppel, H.M. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Computational Physics;* **65**: No. 2, 314-343(Aug 1986).

A method is presented for calculating fluid flow in two dimensions using a full particle-in-cell representation on an adaptively zoned grid. The method has many interesting properties, among them an almost total absence of numerical dissipation and the ability to represent large variations in the data. The method is described using a standard formalism and its properties are illustrated by supersonic flow over a step and the interaction of a shock with a thin foil.

49105 **Velocity of propagation of the ^{3}He-A-italic-B-italic interface in hypercooled ^{3}He-A-italic.** Buchanan, D.S.; Swift, G.W.; Wheatley, J.C. (Condensed Matter and Thermal Physics Group, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). **57**: No. 3, 341-344(21 Jul 1986).

We have measured the velocity of propagation of the ^{3}He A-italic-B-italic interface as a function of temperature and pressure for the ^{3}He-A-italic initially in a hypercooled state. Velocities as high as 67 cm/s have been observed. Nucleation of the A-italic phase occurred at greatly different temperatures in two different regions of the experimental cell.

49106 **Fourier path integral methods: A model study of simple fluids.** Freeman, D.L.; Coalson, R.D.; Doll, J.D. (Department of Chemistry, University of Rhode Island, Kingston, Rhode Island 02881). **43**: No. 3, 931-934(Jun 1986).

The free energy of normal liquid helium is calculated. (AIP)

49107 **Simplified kinetic treatment of heavy molecule velocity persistence effects: application to species separation.** de la Mora, J.F.; Mercer, J.; Rosner, D.E.; Fenn, J.B. (Yale Univ., New Haven, CT). **74**: 617-626(1981). Contract FG01-78ET11384.

From 12. international symposium on rarefied gas dynamics; Charlottesville, VA, USA (7-11 Jul 1980).

A formalism is supplied to account for inertial non-equilibrium in dilute mixtures of heavy molecules in a light bath. It is shown that the usual local gradient flux laws are not valid in situations typical of aerodynamic species separation experiments. A more general framework, including the inertia of the heavy species, is introduced based on a Fokker-Planck kinetic equation, which the authors solve approximately for the two-dimensional stagnation point flow prevailing in the opposed jet geometry. The predictions compare favorably with available experiments and, on the basis of this formulation, specific recommendations for future experiments are made. 12 references, 3 figures.

49108 **(ANL—85-22, pp 8) Electroproduction of the delta isobar in nuclei.** Geesaman, D.F.; Green, M.C.; Holt, R.J.; Jackson, H.E.; Kowalczyk, R.S.; Lee, T.S.H.; Schiffer, J.P.; Zeidman, B. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

A study of the electroproduction of the delta isobar in complex nuclei has been proposed and approved at the Stanford Linear Accelerator (SLAC). The 1.6-GeV and 8-GeV spectrometers will be used to investigate the scattering of medium-energy electrons (T/sub e/ = 0.5 to 2.0 GeV) by targets of ^{12}C and ^{56}Fe. The particular feature to be studied in this experiment will be the separation of the longitudinal and transverse cross sections at relatively low four-momentum transfer, $q^2 \sim 0.1$ $(GeV/c)^2$, where the kinematic conditions correspond to those obtained in pion excitation of the delta.

49109 **(ANL—85-22, pp 34-35) Neutrino oscillations at LAMPF.** Carlini, R.; Choi, C.; Donohue, J.; Fazely, A.; Freedman, S.J.; Fujikawa, B.; Garvey, G.T.; Green, M.; Harper, R.; Imlay, R.; Lesko, K. (Los Alamos National Lab., NM). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Work at Argonne continues on the construction of the neutrino oscillation experiment (E645). Construction of detector supports and active shield components were completed at the Provo plant of the principal contractor for the project (the Pittsburgh-Des Moines Corporation). Erection of the major experimental components was completed at the LAMPF experimental site in mid-March 1985. Work continues on the tunnel which will house the

detector. Construction of detector components (scintillators and proportional drift tubes) is proceeding at Ohio State University and Louisiana State University. Consolidation of these components into the 20-ton neutrino detector is beginning at LAMPF.

In Physics Division annual review, 1 April 1984-31 March 1985.

Data acquisition on the neutron β-decay experiment was accomplished during three six-week reactor cycles during 1983. The experiment runs were completed on October 4, 1983; the reactor is now shut down for a year of refitting.

49111 (ANL—85-22, pp 41-42) **Search for super-heavy particles in cosmic rays.** Dawson, J.; Freedman, S.J.; Gobbi, B.; Kroupa, M.; Napolitano, J. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Magnetic monopoles with masses on the order of 10^{16} GeV/c^2 are predicted by Grand Unified field theories. Some astrophysical predictions of production rates of these objects in the early universe suggest an observable abundance in the present universe. Our search for these heavy magnetic monopoles consists of a layered array of large-area plastic-scintillator counters with a geometrical factor of 3.8 m^2-ster. These counters, used previously in a search for low ionization by fractionally charged particles, are sensitive to single photons or about 1.5% of the ionization of single minimum-ionizing particles. In a series of runs with a total active time of 230 days the authors observed no candidate events and can assign a 90% confidence limit of 4.1 x $_{10}$-12/cm^2-s-sr to the flux of these particles at the earth's surface for highly ionizing particles.

49112 (ANL—85-22, pp 44-45) **Measurement of the electric dipole moment of the neutron.** Freedman, M.S.; Ringo, G.R.; Dombeck, T.W.; Carpenter, J.M.; Jarmie, N.; Lynn, J.W.; Moses, J.D. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The purpose of this project is to measure the electric dipole moment (EDM) of the neutron. Such a measurement would probably constitute the most sensitive test of time-reversal symmetry now available. The present situation is that with about a factor-of-10 improvement in sensitivity, a whole class of gauge theories - those which explain CP failure by introducing a new scalar field - can be given a definitive test. Since the measurement of the neutron EDM is fundamentally a frequency measurement, its statistical uncertainty is inversely proportional to the duration of the measurement. It is therefore natural to try the measurement on ultracold neutrons (UCN). The present state of the project is that the basic experimental ideas have been tested and shown to be practical, as have several other ideas for enhancing the production of UCN, such as the use of reflectors around the moving crystal and funnels to concentrate the UCN in real space at the expense of their concentration in velocity space. Although it was originally planned to do the experiment at IPNS, difficulties with cold moderators and the availability of a higher flux source at Los Alamos have caused us to move the experiment there.

49113 **(ANL-HEP-CP—86-47) Soudan 2 nucleon decay experiment.** Thron, J.L. (Argonne National Lab., IL (USA)). 1986. Contract W-31-109-ENG-38. 13p. (CONF-8604202—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014578.

From 7. workshop on grand unification; Toyama City, Japan (16 Apr 1986).

The Soudan 2 nucleon decay experiment consists of a 1.1 Kton fine grained iron tracking calorimeter. It has a very isotropic detection structure which along with its flexible trigger will allow detection of multiparticle and neutrino proton decay modes. The detector has now entered its construction stage.

49114 **(ANL-HEP-CP—86-76) SSC physics signatures and trigger requirements.** (Argonne National Lab., IL (USA)). 1985. Contract W-31-109-ENG-38. 23p. (CONF-8511150—10). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014606.

From Workshop on triggering, data acquisition and computing for high energy/high luminosity hadron-hadron colliders; Batavia, IL, USA (11 Nov 1985).

Strategies are considered for triggering on new physics processes on the environment of the SSC, where interaction rates will be very high and most new physics processes quite rare. The quantities available for use in the trigger at various levels are related to the signatures of possible new physics. Two examples were investigated in some detail using the ISAJET Monte Carlo program: Higgs decays to W pairs and a missing energy trigger applied to gluino pair production. In both of the examples studied in detail, it was found that workable strategies for reducing the trigger rate were obtainable which also produced acceptable efficiency for the processes of interest. In future work, it will be necessary to carry out such a program for the full spectrum of suggested new physics.

49115 **(BNL—38285) Antinucleon physics.** Dover, C.B. (Brookhaven National Lab., Upton, NY (USA). Physics Dept.). 1986. Contract AC02-76CH00016. 22p. (CONF-860575—23). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013913.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

Some of the recent data from LEAR, Brookhaven, and KEK on low and medium energy interactions of antinucleons (anti N) with nucleons (N) are reviewed and interpreted. Emphasis is on elastic and charge exchange scattering, total cross sections, and studies of anti NN annihilation, with particular focus on the emerging evidence for broad resonances and/or bound states of the anti NN system and the selection rules which reveal the quuark-gluon dynamics of the annihilation process. 69 refs., 8 figs.

49116 **(BNL—38304) Spin effects in exclusive reactions at high P/sub perpendicular/.** Makdisi, Y. (Brookhaven National Lab., Upton, NY (USA). AGS Dept.). 1986. Contract AC02-76CH00016. 6p. (CONF-860575—29). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014131.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

Production and decay angular distributions from the process $\pi^- p \rightarrow rho^- p$ at 90° in the center-of-mass are presented. A large spin flip amplitude is observed, the ramifications of which are noted in the contex of the known theories.

49117 **(BNL—38385) Search for the ξ(2.2) in anti pp formation.** Christenson, J.H.; Kreiter, G.A.; Nemethy, P.; Sculli, J.; Yamin, P. (New York Univ., NY (USA). Dept. of Physics; Brookhaven National Lab., Upton, NY (USA). AGS Dept.). 1986. Contract AC02-76CH00016. 9p. (CONF-860701—7). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014167.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The results are reported of a search at the Brookhaven National Laboratory AGS for the ξ(2.2) with a mass resolution of 3 MeV/c^2. Thirty-seven thousand events of the form anti pp $\rightarrow$ K^+K^- and two hundred thousand events of the form anti pp $\rightarrow$ $\pi^+\pi^-$ were studied in the incident momentum interval from 1.25 GeV/c to 1.56 GeV/c, corresponding to a mass interval of 110 MeV/c^2 about the reported ξ mass.

49118 **(CEA-CONF—8014) Elastic and inelastic scattering of antiprotons.** Lemaire, M.C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). From Symposium on medium energy nucleon and antinucleon scattering; Bad Honnef, F.R. Germany (18 Jun 1985).

During the last two years very interesting results have been collected at LEAR on both the elementary p anti p and the anti p

nucleus interactions. A review of all the interesting experimental results already available is far beyond the scope of the present talk. Its topic will be essentially limited to report on the new experimental informations dealing with the knowledge of the fundamental properties of the anti p p elementary interaction and the determination of the characteristics of the anti p nucleus interaction. The results of the anti p p cross sections measured at low momenta by the PS173 and PS172 experiments are discussed. The anti p nucleus elastic scattering angular distributions collected by the PS184 experiment have significantly contributed to define the properties of the p nucleus optical potential and stimulated a lot of microscopic calculations. The results are reviewed. A comparison to the informations obtained from the measurements of X-rays in anti protonic atoms done by the PS176 and PS186 experiments is given. The interpretation of the inelastic scattering data measured for the ^{12}C(anti p, anti p)$^{12}C^*$ system at 47 and 180 MeV for various discrete states is presented: special emphasis will be given to the study of spin-flip transitions to unnatural parity states which would provide significant constant on the isovector tensor component of the N anti N interaction. Status on the experimental study of the (anti p, p) reaction is discussed.

49119 (CEA-N—2442) Study of the quark fragmentation in charged current ν and anti ν interactions of deuterium. Bolognese, T. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF); Paris-11 Univ., 91 - Orsay (France)). Oct 1985. 207p. (In French). NTIS (US Sales Only), PC A10/MF A01. File Number DE86750858.

In this work we present some results obtained in the framework of the WA25 experiment which studies the neutrino and antineutrino interactions on the bubble chamber BEBC filled with deuterium. We have analysed the general properties of the hadrons produced. The fragmentation of the "u" and "d" quarks and the "uu", "ud", "dd" diquark systems have been studied and compared with the Lund model predictions. We have studied the Q^2 and W^2 dependence of the fragmentation functions obtained in the ν(anti ν) D_2 (WA25) and the ν(anti ν) Ne (WA47) experiments and compared it to the predictions of the quantum chromodynamics (QCD). A detailed analysis of the transverse momentum of hadrons allowed us to clarify the effects due to the quark primordial transverse momentum, the soft gluon production, and the perturbative effects predicted by QCD. We finally selected a small sample of 3 jets candidate events which may due to the fragmentation of a hard gluon.

49120 (CERN—86-02-Vol.1) Physics at LEP. Vol. 1. Ellis, J.; Peccei, R. (eds.). (European Organization for Nuclear Research, Geneva (Switzerland)). 21 Feb 1986. 440p. NTIS (US Sales Only), PC A19/MF A01. File Number DE86703236.

This report surveys physics which may be investigated at LEP, the Large Electron-Positron collider under construction at CERN. Five general areas are emphasized, namely: precision measurements at the Z^0 peak; studies of toponium; searches for possible new particles; QCD, $\gamma\gamma$, and heavy quark studies; and experiments at the highest LEP energies up to and beyond the W^+W^- pair-production threshold. Wherever possible, full cross section formulae are given, together with references to the original literature where more details may be found.

49121 (CERN—86-02-Vol.2) Physics at LEP. Vol. 2. Ellis, J.; Peccei, R. (eds.). (European Organization for Nuclear Research, Geneva (Switzerland)). 21 Feb 1986. 318p. NTIS (US Sales Only), PC A14/MF A01. File Number DE86703237.

49122 (DOE/ER/03509—22) [Research in elementary particle physics]. Progress report, August 1, 1985-July 31, 1986. Lannutti, J.E. (Florida State Univ., Tallahassee (USA). Dept. of Physics). 1986. Contract AS05-76ER03509. 56p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86014676.

The experimental effort reported was divided between fixed target physics and preparation for future collider experiments. Experiments include di-hadron high p/sub t/ inclusive production, E/ iota decay, work in preparation for the DO collider experiment (particularly building the central uranium calorimeter, software and electronics development, and beam testing and calibration), and generation of Monte Carlo events for the CERN ALEPH collider experiment. A theoretical program is also reported which includes the phenomenology of strong and electroweak interactions and Monte Carlo simulations of various field theories. (LEW)

49123 (DOE/ER/40048—163-L6) Parity and time-reversal violation in nuclei and atoms. Adelberger, E.G. (Washington Univ., Seattle (USA). Nuclear Physics Lab.). 1986. Contract AC06-81ER40048. 12p. (CONF-860575—21). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013146.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

Two topics are briefly reviewed: the parity (P)-violating NN interaction and the time-reversal (T) and P-violating electric moments (EDM's) of atoms. The $\Delta I = 1$ P-violating NN amplitude dominated by weak π^{+-} exchange is found to be appreciably smaller than bag-model predictions. This may be a dynamical symmetry of flavor-conserving hadronic weak processes reminiscent of the $\Delta I = 1/2$ rule in flavor-changing decays. General principles of experimental searches for atomic EDM's are discussed. Atomic EDM's are sensitive to electronic or nuclear EDM's and to a P-and-T-violating electron-quark interaction. Even though the experimental precision is still $\sim 10^4$ times worse than counting statistics, the recent results have reached a sensitivity to nuclear EDM's which rivals that of the neutron EDM data. Further significant improvements can be expected. 17 refs., 4 figs.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Gluon emission and the transverse momentum (p/sub t/) of partons confined in nucleons were studied using deep-inelastic charged-current neutrino-nucleon interactions. For this analysis we use the flow of hadronic energy in the azimuthal direction around the momentum transfer referenced from the neutrino-muon scattering plane. A five standard deviation asymmetry was found. Analysis of this asymmetry indicates a (p/sub t/) of 0.35 +- 0.12 GeV/c if QCD corrections are included, and 0.56 +- 0.05 GeV/c if they are excluded. Some evidence was also observed for x dependence in p/sub t/. Data were taken at Fermilab in 1982 using a 200 ton (fiducial mass) fine grained calorimeter and a dichromatic neutrino beam.

49125 (INIS-mf—10179) Study of the production of hadrons in muon-proton reactions at 280 GeV at the CERN proton synchrotron. Dengler, F. (Technische Univ. Muenchen, Garching (Germany, F.R.). Fakultaet fuer Physik). 28 Feb 1985. 165p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE86752579.

In the experiment NA9 of the European Muon Collaboration EMC for the first time in a muon experiment at high energies the possibility is offerred to detect all final-state hadrons and to measure their momentum. About a third of the particles can be identi-

fied beyond by means of Cherenkov and time-of-flight counters. By the measurement of the incoming and the scattered muon the kinematical variables of each event are determined. By application of a detailed simulation of the NA9 spectrometer on events from the Lund Monte-Carlo program the systematic errors and losses of the experiment were estimated, and the data were corrected on these errors and losses. In the analysis of the multiplicities of charged hadrons it was stated that known properties like KNO scaling behaviour and a logarithmic increase of the mean multiplicities with the hadronic c.m. energy W are also observed in this experiment. Furthermore by study of the correlation of the multiplicities in the forward and backward hemisphere and by means of the charge distribution as function of the rapidity it was shown that the assumption is justified at the energies of this experiment that the fragmentation processes in the forward and backward jet proceed independently. Effects were found which are to be explained in the quark-parton model: The dependence of the mean charge of the forward jet on W^2 and Bjorken x can only be understood if the contribution (40%) of events by scattering on sea quarks is regarded in this experiment. An estimation of this contribution to the mean charge of the forward jet by means of the quark distribution functions led to a good agreement with the data.

This annual report contains short descriptions of the work performed at the named institute together with a list of publications, contributions to conferences, dissertations, and diploma theses. The work concerns nuclear structure studies by hyperfine structure, experiments with synchrotron radiation, experiments at CERN, e^+e^- interactions at PETRA, and muon-nucleon interactions.

49127 (LA—10655-C, pp 41-62) **Neutrino electron scattering at LAMPF.** White, D.H. (Brookhaven National Lab., Upton, NY). Feb 1986. NTIS, PC A10/MF A01. File Number DE86008572.

In Proceedings of the nineteenth LAMPF Users Group meeting.

A major accomplishment in elementary particle physics in the last fifteen years has been the success of the electroweak model of Glashow, Weinberg, and Salam in describing the unification of the electromagnetic and weak forces. The theory explains the experimental facts within the precision with which they are known in terms of a single phenomenological parameter. Many deeper uncertainties remain, particularly the origin of the masses of the intermediate vector bosons, but here the authors shall consider the limits of applicability of the standard model assuming that verifying the theory is a worthwhile goal and that exposing limitations of the theory may cast light on the deeper aspects, which are yet speculative. The theory is described below from an experimenter's point of view, with heavy emphasis on the observables, including a summary of the present experimental situation and a proposal for a new measurement of theta/sub W/ at LAMPF.

49128 (LA—10655-C, pp 63-94) **Searching for muon number violating at LAMPF: current results and future prospects.** Cooper, M.D. Feb 1986. NTIS, PC A10/MF A01. File Number DE86008572.

In Proceedings of the nineteenth LAMPF Users Group meeting.

The experimental status of rare decays that violate muon number conservation is summarized. These results represent an international effort in this active field, with experiments at laboratories in the United States, Switzerland, Canada, and the Soviet Union. Substantial improvements over the data of two years ago are shown that demonstrate the present knowledge for the four muon processes. As many of these experiments are still running or coming into operation, immanent progress to the level stated in column four is expected. The last column shows that new experiments are being planning now that should yield results around 1990. This paper will focus on the present and future prospects for the decays $\mu^+ \to e^+\gamma$ and $\mu^+ \to e^+\gamma\gamma$ that are being pursued at LAMPF. The experimental apparatus is described.

49129 **(LBL—21716) Direct lepton production in hadronic and nuclear collisions at low p/sub t/ and low pair mass.** Roche, G. (Lawrence Berkeley Lab., CA (USA)). Jun 1986. Contract AC03-76SF00098. 10p. (CONF-860575—22). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013472.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

A brief review of the direct production of single leptons and dileptons in hadronic collisions at low p/sub t/ and low pair mass is given. Several open questions are pointed out and the universality of lepton production is briefly discussed. The Bevalac Di-Lepton Spectrometer project is presented. 25 refs., 5 figs.

49130 **(RRK—85-3) Unconstrained multiplet in N=2 conformal supergravity.** Hayashi, Masahito; Uehara, Shozo. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics; Kyoto Univ. An unconstrained (general) multiplet was studied in N = 2 conformal supergravity. Transformation law, embedding formula and multiplication rule are explicitly presented at the linearized level.

49131 **(SLAC—300) Measurement of the average lifetime of hadrons containing bottom quarks.** Klem, D.E. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jun 1986. Contract AC03-76SF00515. 73p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86014070.

Thesis.

This thesis reports a measurement of the average lifetime of hadrons containing bottom quarks. It is based on data taken with the DELCO detector at the PEP e^+e^- storage ring at a center of mass energy of 29 GeV. The decays of hadrons containing bottom quarks are tagged in hadronic events by the presence of electrons with a large component of momentum transverse to the event axis. Such electrons are identified in the DELCO detector by an atmospheric pressure Cherenkov counter assisted by a lead/scintillator electromagnetic shower counter. The lifetime measured is 1.17 psec, consistent with previous measurements. This measurement, in conjunction with a limit on the non-charm branching ratio in b-decay obtained by other experiments, can be used to constrain the magnitude of the V/sub cb/ element of the Kobayashi-Maskawa matrix to the range 0.042 (+0.005 or -0.004 (stat.), +0.004 or -0.002 (sys.)), where the errors reflect the uncertainty on tau/sub b/ only and not the uncertainties in the calculations which relate the b-lifetime and the element of the Kobayashi-Maskawa matrix.

49132 **(SLAC-PUB—4026) J/psi results from Mark III.** Stockhausen, W. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jul 1986. Contract AC03-76SF00515. 7p. (CONF-8605162—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014475.

From International symposium on production and decay of heavy flavours; Heidelberg, F.R. Germany (19 May 1986).

Results from the Mark III collaboration on related hadronic and radiative decays of the J/psi are presented. From a data sample of 5.8 million produced J/psi decays disintegrations into either γ, ω, or phi plus K anti K, K anti Kπ, eta$\pi\pi$ or $\pi\pi$ are studied. These results are valuable in the understanding of the nature and composition of the 2^{++} θ(1720) and the 0^{-+} iota(1440), the primary candidates for gluonic matter.

49133 **Forward-angle cross sections for pion-nucleon charge exchange between 100 and 150 MeV/c-italic.** Fitzgerald, D.H.; Baer, H.W.; Bowman, J.D.; Cooper, M.D.; Irom, F.; King, N.S.P.; Leitch, M.J.; Piasetzky, E.; Briscoe, W.J.; Sadler, M.E.; Smith, K.J.; Knudson, J.N. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). **34:** No. 2, 619-626(Aug 1986).

The differential cross sections for the πN charge-exchange reaction, $\pi^-p \to \pi^0 n$, have been measured in an angular range corresponding to 0.99> or =cost-italich-italice-italict-italica-italic/sub c.m./> or =0.90 at 100.6, 106.7, 113.4, 125.2, 130.9, 136.4, and

147.1 MeV/c-italic. A striking feature of the charge-exchange reaction at forward angles is the presence of a deep minimum near 120 MeV/c-italic, caused by interference between s-italic- and p-italic-wave scattering. The parameters of this minimum, of interest both intrinsically and for applications to π-nucleus single- and double-charge-exchange reactions, are well determined by the measurements. Our data are compared with the results of existing partial-wave analyses, and the data are discussed in terms of the isospin-odd, s-italic-wave scattering length, a-italic$_1$-a$_3$.

49134 Measurement of elastic electron scattering from the proton at high momentum transfer. Arnold, R.G.; Bosted, P.E.; Chang, C.C.; Gomez, J.; Katramatou, A.T.; Martoff, C.J.; Petratos, G.G.; Rahbar, A.A.; Rock, S.E.; Sill, A.F.; Szalata, Z.M.; Sherden, D.J.; Lambert, J.M.; Lombard-Nelsen, R.M. (Department of Physics, The American University, Washington D.C. 20016). 57: No. 2, 174-177(14 Jul 1986).

We have performed absolute measurements of the differential cross section for elastic e-italic-p-italic scattering in the range of momentum transfer from Q-italic^2 = 2.9 to 31.3 (GeV/c-italic)^2. Combined statistical and systematic uncertainties in the cross-section measurements ranged from 3% at low Q-italic^2 to 19% at high Q-italic^2. These data have been used to extract the proton magnetic form factor G-italic/sub M-italic//sup p-italic/(Q^2). The results show a smooth decrease of Q-italic^{4}G/sub M//sup p/ with momentum transfer above Q-italic^2 = 10 (GeV/c-italic)^2. These results are compared with recent predictions of perturbative QCD.

49135 Determination of the neutrino fluxes in the Brookhaven wide-band beams. Ahrens, L.A.; Aronson, S.H.; Connolly, P.L.; Gibbard, B.G.; Murtagh, M.J.; Murtagh, S.J.; Terada, S.; White, D.H.; Callas, J.L.; Cutts, D. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). 34: No. 1, 75-84(1 Jul 1986).

The neutrino fluxes phi(E-italic(ν/sub μ/)), phi(E-italic(nu-bar/sub μ/)), and phi(E-italic(ν/sub e-italic/)) in the Brookhaven Alternating Gradient Synchrotron wide-band beams have been determined by measurements of quasielastic interactions observed in a massive, high-resolution detector. These fluxes are accurately reproduced by Monte Carlo calculations.

49136 Study of the reaction p/sub up-arrow/p→pπ^+n with polarized beam from 3 to 12 GeV/c. Wicklund, A.B.; Arenton, M.W.; Ayres, D.S.; Diebold, R.; Kramer, S.L.; May, E.N.; Nodulman, L.J.; Sauer, J.R. (Argonne National Laboratory, Argonne, Illinois 60439). 34: No. 1, 19-41(1 Jul 1986). Contract W-31-109-ENG-38.

We present density-matrix elements and single-spin correlations for the reaction p/sub up-arrow/p→pπ^+n at 3, 4, 6, and 11.75 GeV/c, using both longitudinal and transverse beam polarizations. For small momentum transfers, the spin correlations are mainly due to off-shell π^+p elastic scattering, while for larger t-italic there are large polarization effects associated with the production dynamics for p/sub up-arrow/p→Δ/sup ++/n. Comparison of longitudinal and transverse polarization correlations suggests that the Δ/sup ++/-production spin effects are due mainly to unnatural-parity exchanges. We present a model-dependent amplitude analysis, and extract the energy dependence of the natural- and unnatural-parity-exchange contributions.

49137 Production of G(1590) and other mesons decaying into eta pairs by 100 GeV/c πp on protons. Alde, D.; Knapp, E.A.; Donskov, S.V.; Inyakin, A.V.; Kachanov, V.A.; Kakauridze, D.B.; Khaustov, G.V.; Kulik, A.V.; Lednev, A.A.; Mikhailov, Yu.V. (Los Alamos National Lab., NM, USA). 269: No. 2, 485-508(2 Jun 1986).

New data on the scalar G(1590) meson which decays into etaeta have been obtained in an experiment at the CERN SPS. eta pairs are detected with the electromagnetic calorimeter GAMS both through their decay into 4γ and into 8γ. epsilon(1300), f(1270), f(1525) as well as the spin-4 h(2030) mesons have also been observed to decay in the same mode. Their branching ratios have been evaluated. The presence of high-mass spin-O and spin-2 structures is discussed.

49138 (ANL—85-22, pp 144) **Binding energies of hypernuclei and 3-body Λ NN forces.** Bodmer, A.R.; Usmani, Q.N. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors are continuing their variational calculations of the Λ-separation energies of the s-shell hypernuclei (/sub Λ/^{3}H, /sub Λ/^{4}He, /sub Λ/^{5}He) using Monte Carlo techniques, and also for a Λ in nuclear matter (the well depth D/sub Λ/) using the Fermi hypernetted chain approach. These calculations are in an advanced stage and are now nearing completion.

49139 (ANL—85-22, pp 145) **Coulomb effects and charge symmetry breaking for the Λ = 4 hypernuclei.** Bodmer, A.R.; Usmani, Q.N. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The effect ΔB/sub c/ of the Coulomb interaction on the LAMDA separation energy B/sub Λ/ of /sub Λ/^{4}He was obtained by variational calculations made for /sub Λ/^{4}He and ^{3}He. These calculations were made for several values of q^2 in the range $0 \leqq q^2 \leqq 9$ where q is the proton charge, i.e., the Coulomb repulsion was artificially boosted.

49140 (ANL—85-22, pp 145-146) **Alpha-cluster calculations of /sub Λ/^{9}Be.** Bodmer, A.R.; Usmani, Q.N. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Variational calculations are being continued for /sub Λ/^{9}Be, using a $2\alpha + \Lambda$ model. The best available local but l dependent $\alpha\alpha$ potentials (fitted to $\alpha\alpha$ phase shifts) are used. The $\alpha\Lambda$ potential is obtained by effective interaction calculations by folding effective Λ N and Λ NN potentials into the α-particle density to reproduce B/sub Λ/(/sub Λ/^{5}He). Λ NN Wigner forces also imply a repulsive $\alpha\alpha\Lambda$ potential.

49141 (ANL—85-22, pp 146) **Binding energies of Λ Λ hypernuclei and the Λ Λ interaction.** Bodmer, A.R.; Usmani, Q.N.; Carlson, J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The binding energies of the Λ Λ hypernuclei /sub Λ Λ/^{10}Be and /sub Λ Λ/^{6}He were calculated variationally with a $2\alpha + 2\Lambda$ and with an $\alpha + 2\Lambda$ model respectively. For /sub Λ Λ/α^{10}Be the integrations were made with Monte Carlo techniques while for /sub Λ Λ/^{6}He direct numerical methods were used. A wide range of phenomenological Λ Λ potentials based on meson-exchange models was considered.

49142 (ANL—85-22, pp 156) **Basic physics with magnetic monopoles.** Lipkin, H.J.; Peshkin, M. (Weizmann Institute of Science, Rehovoth, Israel). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The renewed interest in magnetic monopoles has called attention to peculiar problems arising in the application of conventional electrodynamics to systems containing both electric and magnetic charges. The authors are preparing a paper in which they identify the new physics issues involved when both kinds of charge are present, and they demonstrate paradoxes which arise when this new physics is neglected.

49143 (ANL—85-22, pp 156-158) **Constituent quark model for old and new particles.** Lipkin, H.J. (Weizmann Institute of Science, Rehovoth, Israel). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The model of baryons made of three constituent quarks and of mesons made of a quark-antiquark pair bound by the forces of quantum chromodynamics has been used to interpret and suggest new experiments to further the author's understanding of the structure of the old particles and help in the search for new particles. A series of lectures given at the Canadian Yukon Advanced Study Institute reviewed the general approach and present status and the notes have been written up for publication. In addition two papers were published describing the new research.

49144 **(CNRS-CPT—85-P-1776) Problem of "global color" in gauge theories.** Horvathy, P.A.; Rawnsley, J.H. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Jun 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86750878.

The problem of "global color" (which arose recently in monopole theory) is generalized to arbitrary gauge theories: a subgroup K of the "unbroken" gauge group G is implementable if the gauge bundle reduces to the centralizer of K in G. Equivalent implementations correspond to equivalent reductions. Such an action is an internal symmetry for a given configuration if the Yang Mills field reduces also. The case of monopoles is worked out in detail.

49145 **(DESY—86-035) Gauss'-law and the infraparticle problem.** Bucholz, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Mar 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752384.

It is shown that a state carrying an "electric" charge which can be determined with the help of Gauss' law cannot be an eigenstate of the mass operator. (orig.).

49146 **(DOE/ER/03992—557) Finite temperature corrections to the Van der Waals potential.** Chiu, C.B.; Dicus, D.A.; Joseph, K.B.; Teplitz, V.L. (Texas Univ., Austin (USA). Center for Particle Theory; Arms Control and Disarmament Agency, Washington, DC (USA). Strategic Affairs Div.; Maryland Univ., College Park (USA). Dept. of Physics). Jun 1984. Contract AS05-76ER03992. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014630.

Finite temperature corrections to the two photon exchange potential between polarizable systems are evaluated. A complex (additive) correction is found of the form: ReV/sup T/ $\sim 1/r$, ImV/sup T/ $\sim$ constant, for $r < 1/T$; and ReV/sup T/ $\sim 1/r^6$, ImV/sup T/ $\sim 1/r$, for $r > 1/T$. These results are to be compared with the Feinberg-Sucher zero temperature answer ReV/sup T=O/ $\sim 1/r^7$, ImV/sup T=O/identical to O. 9 refs.

49147 **(DOE/ER/03992—567) Factorization theorem for decaying spinning particles.** Dicus, D.A.; Sudarshan, E.C.G.; Tata, X. (Texas Univ., Austin (USA). Center for Particle Theory; European Organization for Nuclear Research, Geneva (Switzerland)). Oct 1984. Contract AS05-76ER03992. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014625.

It is demonstrated that the differential cross-section for multiparticle production via the production and subsequent decay of a heavy, spinning particle factorizes into a production piece and a decay piece provided we choose our kinematic variables properly and the parent decays into at least three particles. 11 refs.

49148 **(DOE/ER/03992—568) Is there a delta-delta-pi problem.** Dicus, D.A.; Teplitz, V.L. (Texas Univ., Austin (USA). Center for Particle Theory; Arms Control and Disarmament Agency, Washington, DC (USA). Strategic Affairs Div.; Maryland Univ., College Park (USA). Dept. of Physics). Oct 1984. Contract AS05-76ER03992. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014624.

Chew's dedication to the goal of solving the problem of strong interaction dynamics and his attention to all aspects of the problem are recalled. It is then pointed out that deduction of g/sub $\Delta\Delta\pi$/ from P33 πN inelastically appears to give a value significantly less than almost all theoretical calculations and review efforts to data to resolve this apparent discrepancy.

49149 **(DOE/ER/40105—572) Induced second-class form factors in Σp β-decay.** Carson, L.J.; Oakes, R.J.; Willcox, C.R. (Northwestern Univ., Evanston, IL (USA). Dept. of Physics and Astronomy; Argonne National Lab., IL (USA). High Energy Physics Div.). 1986. Contract AC02-83ER40105. 42p. (ANL-HEP-PR—85-99). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014809.

A study of induced second-class currents emerging as a consequence of broken SU(3) flavor symmetry Σ^- β-decay is presented. Working within the framwork of the MIT bag model, all form factors describing the $\Sigma^- \to n$ weak transition are calculated, including QCD vertex corrections to order α/sub s/. It is found that the weak-electric dipole form factor g_3 is suppressed by confinement effects to be approximately -0.1. This is shown to have a negligible effect on the electron asymmetry α/sub e/, and hence strengthens the case that recent data for α/sub e/ in Σ^- β-decay are consistent with Cabbibo model predictions. 21 refs., 5 figs., 4 tabs.

49150 **(DOE/ER/40201—1) Report on the 1985 DPF meeting.** (Oregon Univ., Eugene (USA)). 1985. Contract FG06-85ER40201. 20p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014708.

The workshop reported was held to investigate physics issues related to the proposed Superconducting Super Collider. Sessions addressed electroweak interactions, experiment and phenomenology beyond the Standard Model, quantum chromodynamics, hadron physics, theory beyond the Standard Model, and detectors and accelerators. A list of participants is provided, as is also a bibliography of recent papers by the participants. (LEW)

49151 **(INR—1943/6,7/PH/A) Quark and gluon jets in proton-antiproton interactions associated with large p perpendicular to photons.** Lukaszuk, L.; Szeptycka, M. (Institute of Nuclear Research, Warsaw (Poland)). 1982. 14p. Energetics and Atomic Energy Information Centre, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

It is shown that the production of high p photons in proton-antiproton interactions may serve as a source of experimental information about the properties of gluon jets.

49152 **(INS—536) Composite models of 'elementary' particles and fields.** Terazawa, H. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Apr 1985. 49p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703137.

Composite models of "elementary" particles and fields, leptons, quarks, and gauge bosons (and also Higgs scalars, if any), are reviewed and discussed in a pedagogical way.

49153 **(INS—537) Derivation of mass relations for composite W* and Z* from effective Lagrangian approach.** Yasue, Masaki; Oneda, Sadao. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Apr 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703235.

In an effective-Lagrangian model with gauge bosons (W,Z,γ) and their neighboring spin J=1 composites (W*,Z*), we find relations among their masses, m sub(W), m sub(Z), m sub(W*) and m sub(Z*): m sub(W) m sub(W*) = cos theta m sub(Z) m sub(Z*) (as a generalization of m sub(W) = cos theta m sub(Z)) and m sub(W)^2 + m sub(W*)^2 + tan^2 theta m sub(W0)^2 = m sub(Z)^2 + m sub(Z*)^2 with m sub(W0) being the mass of W in the standard model provided that the system respects the SU(2) sub(L) x U(1) sub(Y) symmetry. W* and Z* are taken as the lowest-lying excited states belonging to an SU(2) sub(L)-triplet in the symmetric limit. The existence of W* coupling to the V-A current modifies the relation between G sub(F) and M sub(W) and that of Z* generates a new interaction of the (Jsup(em))^2-type as well as the deviation of sin theta sub(W) observed at low energies from the mixing angle sin theta in neutral-current interactions.

49154 (LBL—21695) Identifying heavy Higgs bosons. Cahn, R.N. (Lawrence Berkeley Lab., CA (USA)). Jun 1986. Contract AC03-76SF00098. 4p. (CONF-8605163—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013487.

From Workshop on physics simulation at high energies; Madison, WI, USA (5 May 1986).

Two techniques for identifying heavy Higgs bosons produced at SSC energies are discussed. In the first, the Higgs boson decays into ZZ, with one Z decaying into an e-pair or μ-pair and the other into a neutrino pair. In the second, the production of the Higgs boson by WW fusion is tagged by detecting the quarks that produced the bremsstrahlung virtual W's. The associated Higgs decay is identified by one leptonic and one hadronic decay. Both methods appear capable of finding a heavy Higgs boson provided the SSC design parameters are achieved. 16 refs., 2 figs., 2 tabs.

49155 (LPC—85-13) QCD at collider energies. Nicolaidis, A.; Bordes, G. (College de France, 75 - Paris. Lab. de Physique Corpusculaire). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86750868.

We examine available experimental distributions of transverse energy and transverse momentum, obtained at the CERN p anti p collider, in the context of Quantum Chromodynamics. We consider: i) The hadronic transverse energy released during W^{+-} production. This hadronic transverse energy is made out of two components, a soft component which we parametrize using minimum bias events and a semihard component which we calculate from QCD. ii) The transverse momentum of the produced W^{+-}. If the transverse momentum (or the transverse energy) results from a single gluon jet we use the formalism of Dokshitzer-Dyakonov-Troyan, while if it results from multiple gluonic emission we use the formalism of Parisi-Petronzio. iii) The relative transverse momentum of jets. While for W^{+-} production quarks play an essential role, jet production at moderate psub(T) and present energies is dominated by gluon-gluon scattering and therefore we can study the Sudakov form-factor of the gluon. We suggests also how through a Hankel transform of experimental data we can have direct access to the Sudakov form-factors of quarks and gluons.

49156 (OUP—85-24) Low momentum penguin contributions in a chiral theory. Eeg, J.O. (Oslo Univ. (Norway). Fysisk Inst.). Nov 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703238.

It has been shown that penguin diagram contributions corresponding to u-quark loop momenta below a scale Asub(x) approximately= 1 GeV are enhanced and could at least partly explain the $\Delta I=1/2$ rule. Thus a previous calculation within the bag model is confirmed. The present calculation is performed within an effective chiral theory with pions and kaons coupled to quarks. It has been found that low momentum left-left loop contributions are important, while left-right contributions can be neglected.

49157 (OUP—86-03) Low momentum penguin loop contributions and the $\Delta I=1/2$ rule. Eeg, J.O. (Oslo Univ. (Norway). Fysisk Inst.). Feb 1986. 40p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703239.

Contributions to the penguin diagram due to low loop momenta are considered. Using a chiral effective field theory, including quarks coupling to pions and kaons, sizeable contributions from u-quark loop momenta below the chiral symmetry breaking scale are found. Thus a previous result obtained within the bag model is confirmed. It is concluded that the low momentum penguin loop contributions seem to improve the theoretical understanding of the $\Delta I=1/2$ rule. 39 refs.

49158 (OUP—86-07) Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory. Eeg, J.O. (Oslo Univ. (Norway). Fysisk Inst.). Mar 1986. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703234.

Bremsstrahlung-like pole diagrams for $K^{+-} \to \pi^{+-}\gamma\gamma$ are considered. By means of Ward-identities for the electromagnetic couplings involved, the sum of these diagrams are related to the meson self-energy, which is calculated within an effective chiral theory with mesons coupling to quarks. The branching ratio for $K^{+-} \to \pi^{+-}\gamma\gamma$ is estimated to be of order 10^{-6}, that is of the same order of magnitude as the experimental bound. Thus, the obtained result is at least one order of magnetude bigger than the result obtained a decade ago, based on the triangle diagran for $s \to d\gamma\gamma$. This process could therefore provide a test for the considered chiral model.

49159 (RRK—85-9) Axial weak currents in the Wess-Zumino term. Fujikawa, Kazuo. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Mar 1985. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703138.

The conventional axial gauging of the Wess-Zumino term leads to the results which do not necessarily agree with the expectations on the basis of quark level Ward-Takahashi identities. This discrepancy arises from the fact that the quark level anomalous identities reflect the short distance structure of QCD, whereas the gauging of the Wess-Zumino term reflects the axial symmetry in the spontaneously broken chiral phase. The low energy theorem for axial weak fields is not sharply defined, in contrast to the case of vector fields where no such complications arise.

49160 (SLAC-PUB—4001) CP violation in B and D decays. Bigi, I.I. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jun 1986. Contract AC03-76SF00515. 8p. (CONF-8605162—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012959.

From International symposium on production and decay of heavy flavours; Heidelberg, F.R. Germany (19 May 1986).

Non-leptonic B decays offer the best opportunity to discover the violation of CP invariance outside the neutral K system. Employing the Standard Model one predicts - with reasonable confidence - CP asymmetries of up to 20% (or even more in some cases). The branching ratios for the individual exclusive modes of interest are not expected to exceed the 10^{-3} level in most cases; the identification of such decays poses non-trivial problems. It is shown that by summing intelligently over appropriate classes of decays one can greatly enhance statistics without jeopardizing the signal. Data that contain 10^8 produced B mesons would allow meaningful searches for CP violation. It is noted that "New Physics" could lead to CP asymmetries in D^0 decays of order 1%. Due to higher branching ratios one can search for such effects in samples of 10^8 produced D mesons. 7 refs.

49161 (SLAC-PUB—4029) Anomalous dimensions of multiquark bound states. Ji, C.R. (Stanford Linear Accelerator Center, Menlo Park, CA (USA); Stanford Univ., CA (USA). Inst. of Theoretical Physics). Jul 1986. Contract AC03-76SF00515. 3p. (CONF-860575—33). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014470.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

The evolution of six-quark color-singlet state distribution amplitudes is formulated as an application of perturbative quantum chromodynamics to nuclear wave functions. We present a general method of solving the evolution equation for multiquark bound states and predict the asymptotic Q^2 slope for the deuteron charge form factor as a result.

49162 (SLAC-TN—86-3) Hadron cascade code, FLUKA82; setup and coupling with EGS4 at SLAC. Ranft, J.; Moehring, H.J.; Jenkins, T.M.; Nelson, W.R. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Apr 1986. Contract AC03-76SF00515. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014388.

This note describes a SLAC implementation of the FLUKA hadronic cascade code coupled with the EGS4 electromagnetic cascade code. As an example of the use of FLUKA-EGS, the momentum distribution of π^+ mesons produced by 18 GeV electrons striking a 0.3 r.l. beryllium target is calculated and successfully compared with the experimental results taken from the SLAC Users Handbook.

49163 Quark confinement and hadronic interactions. Lenz, F.; Londergan, J.T.; Moniz, E.J.; Rosenfelder, R.; Stingl, M.; Yazaki, K. (Swiss Institute for Nuclear Research (SIN), CH-5234 Villigen, Switzerland). *Annals of Physics (New York);* **170**: No. 1, 65-254(Aug 1986).

A study of quark models for many-hadron systems is presented. The starting point in the construction of these nonrelativistic models is a proper formal definition of the concept of color singlet and nonsinglet clusters in a multiquark system which respects the exchange symmetry of the quarks. This definition provides a natural way to impose saturation of the confining forces.

49164 New interaction for the enhancement of the ΔI-italic = (1/2) amplitude in weak decays. Ma, E. (Department of Physics, University of California, Davis, California 95616 and Department of Physics and Astronomy, University of Hawaii at Manoa, Honolulu, Hawaii 96822). **57**: No. 3, 287-289(21 Jul 1986).

The low-energy limit of superstring theory admits certain new quarks and scalar bosons. Their interaction with the known quarks may lead to a significant enhancement of the ΔI-italic = (1/2) amplitude in weak decays.

49165 Can the data from the CERN p-italicp-bar collider limit gaugino masses?. Baer, H.; Hagiwara, K.; Tata, X. (High Energy Physics Division, Argonne National Laboratory, Argonne, Illinois 60439;). **57**: No. 3, 294-297(21 Jul 1986). Contract W-31-109-ENG-38;FG06-85ER40224.

We show that the hadronic decays of the W-italic gaugino (W-italic-tilde) and Z-italic gaugino (Z-italic-tilde) produced via each of the processes W-italic→W-italic-tildegamma-tilde, W-italic→W-italic-tildeZ-italic-tilde, and Z-italic°W-tildeW-tilde lead to a substantial monojet and dijet + missing p-italic/sub T-italic/ rate at the CERN collider. If the latter two decays are kinematically allowed, one should expect a comparable number of spectacular dilepton and trilepton events with little hadronic activity. In addition, there would also be jet + lepton + missing p-italic/sub T-italic/ signals. Absence of such signals could lead to the most stringent direct experimental limits on W-italic-tilde and Z-italic-tilde masses currently possible.

49166 Neutral-meson-antimeson mixing for a heavy isosinglet quark constituent. Barger, V.; Phillips, R.J.N.; Whisnant, K. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706). **57**: No. 1, 48-50(7 Jul 1986).

If there exists a heavy isosinglet h-italic quark that mixes with the d-italic quark in the weak eigenstates, then the neutral meson H-italic°(hd-bar) can mix maximally with its antiparticle H-bar°(h-bard) through lowest-order flavor-changing neutral currents regardless of how small the h-italic-d-italic mixing angle may be. The H-italic°-H-bar° mixing parameter ϵ depends essentially on the H-italic° mass; for m-italic/sub H-italic/ <25 GeV, ϵ can be as large as 0.4.

49167 Radiative corrections to the ratio of Z- and W-boson production. Dicus, D.A.; Willenbrock, S.S.D. (Center for Particle Theory and Theory Group, University of Texas, Austin, Texas 78712). **34**: No. 1, 148-154(1 Jul 1986).

We calculate the order-α/sub s-italic/ ² corrections to Z-boson production in p-italicp-bar collisions for which there are no corresponding corrections to W-boson production. These corrections affect the ratio of Z- and W-boson production, a quantity which is useful for counting the number of species of neutrinos. We find that these corrections are much smaller than the uncertainty in the ratio stemming from the quark and gluon distribution functions and the value of Λ/sub QCD/.

49168 Cross section for four-gluon production by gluon-gluon fusion. Parke, S.J.; Taylor, T.R. (Fermi National Accelerator Lab., Batavia, IL, USA). **269**: No. 2, 410-420(2 Jun 1986).

The cross section for two-gluon to four-gluon scattering is given in a form suitable for fast numerical calculations.

49169 QCD radiative corrections to parton-parton scattering. Ellis, R.K.; Sexton, J.C. (Fermi National Accelerator Lab., Batavia, IL, USA). **269**: No. 2, 445-484(2 Jun 1986).

We present the matrix elements squared for all (2->2) and (2->3) parton scattering subprocesses calculated at O(αsub(s)³). The matrix elements are presented in n dimensions to regulate singularities due to the emission of soft or collinear radiation. We use these results to discuss one-hadron inclusive scattering, considering only a limited number of parton subprocesses. A preliminary analysis is made of the implications of our results for gluon-gluon scattering in the absence of quarks.

49170 (CEA-CONF—7938) Dynamical supersymmetry breaking. Affleck, I. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1985. 10p. (CONF-850375—24; SPh-T—85-062). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750871.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

Supersymmetry, and in particular, dynamical supersymmetry breaking, offers the hope of a natural solution of the gauge hierarchy problem in grand unification. I briefly review recent work on dynamical supersymmetry breaking in four-dimensional Higgs theories and its application to grand unified model building.

49171 (LA-UR—86-2540) Test of time reversal symmetry with resonance neutron scattering. Bowman, J.D. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 5p. (CONF-860575—26). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013831.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

The possibility of searching for time-reversal symmetry violation in the scattering of epithermal neutrons from nuclei is discussed. Sources of both statistical and systematic errors are reviewed. A qualitative assessment of the size of the time reversal is made and a schematic design of an experiment to test time reversal symmetry is presented. (DWL) 10 refs., 1 fig.

49172 (OUP—83-31) Fermionic vacuum fluctuations between chiral plates. Luetken, C.A.; Ravndal, F. (Oslo Univ. (Norway). Fysisk Inst.; Texas Univ., Austin (USA). Dept. of Physics). Aug 1983. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703240.

As a primitive model of spontaneous breakdown of chiral symmetry for strongly interacting quarks, confined fermions between parallel plates have been considered. The massless fermion field satisfies the chiral MIT boundary conditions. Explicit expressions for the fermion condensate and the vacuum expectation value of the energy-momentum tensor are obtained.

49173 Phenomenologically consistent discrete symmetries in superstring theories. Joshipura, A.S.; Sarkar, U. (Institute of Mathematical Sciences, Madras 600113, India). **57**: No. 1, 33-36(7 Jul 1986).

The light matter supermultiplets are specified uniquely in most superstring theories when compactified on Calabi-Yau manifolds. It is pointed out that the discrete symmetries considered earlier in these models cannot give rise to a phenomenologically consistent fermion mass spectrum and suppress fast proton decay. We propose here a simple model which demonstrates the type of discrete symmetries one has to look for to make the superstring theories phenomenologically acceptable. Some interesting consequences of the model are pointed out.

49174 Two-photon decay widths of Higgs bosons in minimal broken supersymmetry. Bates, R.; Ng, J.N.; Kalyniak, P. (Theory Group, TRIUMF, 4004 Wesbrook Mall, Vancouver, British Columbia, Canada V6T 2A3). **34**: No. 1, 172-181(1 Jul 1986).

The two-photon decay widths of nonstandard Higgs bosons are studied in a minimal broken-supersymmetry model. For two-Higgs-doublet models in general, a large enhancement of these widths relative to the standard model is possible. However, we find for the case studied that a severe upper bound on this possible enhancement is imposed by the supersymmetry features of the model. With only the t-italic quark as the heaviest fermion we find a two-photon width of 100 keV for a 160-GeV/c-italic^2 scalar Higgs boson is possible. The corresponding width for a pseudoscalar is 60 keV.

49175 Effect of self-consistent treatment of one-gluon exchange in the Freidberg-Leenor-topological soliton model. Haider, Q.; Liu, L.C. (Los Alamos National Lab., NM, USA). *Journal of Physics G: Nuclear Physics;* **12**: No. 3, L75-L81(Mar 1986). Contract W-7405-ENG-36.

The effects of one-gluon exchange on the static properties of ground-state hadrons have been examined in detail within the framework of Friedberg-Lee non-topological soliton model. It is noted that the perturbative approach, employed in many bag models, is inadequate. A self-consistent non-perturbative procedure for calculating one-gluon exchange is proposed.

49176 (CEA-CONF—7939) Theoretical derivation of mass spectra in lattice gauge theories. Drouffe, J.M. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1985. 9p. (CONF-850375—23). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750870.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

A short review of the theoretical possibilities for determining the particle spectra in lattice gauge theories is done. As an example, the determination of QCD spectrum at strong coupling in a random lattice model which is rotationally invariant, is presented.

49177 (CNRS-CPT—85-P-1795) Relativistic and nonrelativistic classical field theory on five dimensional space-time. Kunzle, H.P.; Duval, C. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Jul 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86750877.

This paper is a sequel to earlier ones in which, on the one hand, classical field theories were described on a curved Newtonian space-time, and on the other hand, the Newtonian gravitation theory was formulated on a fivedimensional space-time with a metric of signature and a covariantly constant vector field. Here we show that Lagrangians for matter fields are easily formulated on this extended space-time from simple invariance arguments and that stress-energy tensors can be derived from them in the usual manner so that four-dimensional space-time expressions are obtained that are consistent in the relativistic as well as in the Newtonian case. In the former the theory is equivalent to General Relativity. When the magnitude of the distinguished vector field vanishes equations for the (covariant) Newtonian limit follow. We demonstrate this here explicity in the case of the Klein-Gordon/Schroedinger and the Dirac field and its covariant nonrelativistic analogue, the Levy-Leblond field. Especially in the latter example the covariant Newtonian theory simplifies dramatically in this fivedimensional form.

49178 (CONF-8409129—, pp 82-90) **Electron scattering in the presence of laser radiation.** Rosenberg, L. (New York Univ., NY). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

This paper focuses on the problem of electron scattering in a radiation field and describes in detail what is needed to provide a proper theoretical framework for such problems.

49179 (DOE/ER/03992—554) Renormalization group analyses of an SU(2) lattice guage theory. Eubank, S.; Chiu, C. (Texas Univ., Austin (USA). Center for Particle Theory). May 1984. Contract AS05-76ER03992. 34p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014632.

Using Migdal's recursion relation for renormalization group calculations, we describe an approximation for the average value of a Wilson loop and calculate ka^2 vs $1/g^2$ for SU(2) actions of the form $s/sub p/ = -2(\beta/sub f/ \cos \theta/2 + \beta,'sub a/ \cos \theta)$. We use loops as large as 40 x 40 on a 4-dimensional lattice. We also find evidence for a phase transition in the region $\beta/sub a/ \sim -2$, $\beta/sub f/ > 0.7$ using Tan and Xu's modification of the recursion relation. 14 refs., 7 figs.

49180 (DOE/ER/03992—561) Tree unitarity constraints on supersymmetric theories. Dicus, D.A.; Nandi, S. (Texas Univ., Austin (USA). Center for Particle Theory). Jul 1984. Contract AS05-76ER03992. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014626.

The constraints of tree unitarity are applied to a general broken supersymmetric theory. These constraints give relations among the coupling constants for the coupling of the supersymmetric fermions to the W and Z bosons and relations between these couplings and the fermion masses. We also get bounds involving the coupling constants and the masses. For a specific model, where coupling constants are known, these can be used to set upper bounds on the masses of the supersymmetric particles. These bounds and the relations must be satisfied in any model where supersymmetry is broken at the tree level.

49181 (DOE/ER/03992—578) Renormalization of the axial vector current in QCD. Chiu, C.B.; Pasupathy, J.; Wilson, S.L. (Texas Univ., Austin (USA). Center for Particle Theory; Indian Inst. of Science, Bangalore. Centre for Theoretical Studies). Feb 1985. Contract AS05-76ER03992. 34p. (CPT—85-002). NTIS, PC A03/MF A01; GPO Dep. File Number DE86014621.

Following the method of Ioffe and Smilga, the propagation of the baryon current in an external constant axial-vector-field is considered. The close similarity of the operator-product-expansion with and without an external field is shown to arise from the chiral invariance of gauge interactions in perturbation theory. Several sum rules corresponding to various invariants both for the nucleon and the hyperons are derived. The analysis of the sum rules is carried out by two independent methods, one called the ratio method and the other called the continuum method, paying special attention to the nondiagonal transitions induced by the external field between the ground state and excited states. Up to operators of dimension six, two new external-field-induced vacuum expectation values enter the calculations. Previous work determining these expectation values from PCAC are utilized. Our determination from the sum rules of the nucleon axial-vector renormalization constant $G/sub A/$, as well as the Cabibbo coupling constants in the SU_3 symmetric limit ($m/sub s/ = 0$), is in reasonable accord with the experimental values. Uncertainties in the analysis are pointed out. The case of broken flavor SU_3 symmetry is also considered. While in the ratio method, the results are stable for variation of the fiducial interval of the Borel mass parameter over which the left-hand-side and the right-hand-side of the sum rules are matched, in the continuum method the results are less stable. Another set of sum rules determines the value of the linear combination $7F - 5D$ to be $\simeq 0$, or $D/(F + D) \simeq 7/12$. 17 refs., 16 figs.

49182 (DOE/ER/40048—28-N6) Non-topological soliton bag model. Wilets, L. (Washington Univ., Seattle (USA). Dept. of Physics). 1986. Contract AC06-81ER40048. 34p. (CONF-8606183—3). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014283.

From NATO international advanced course on physics of strong fields; Maratea, Italy (1 Jun 1986).

The Friedberg-Lee soliton model, which effects confinement by a quantal scalar field, is discussed. The Lagrangian for the non-topological soliton model is the usual QCD Lagrangian supplemented by a non-linear scalar sigma field term. Static solutions to the field equations are considered in the mean field approximation. Small amplitude oscillations are discussed. Quantum alternatives to the mean field approximation are also considered. Methods of momentum projection and Lorentz boost are described, and the generator coordinate method is discussed. Calculations of the N-N interaction are reviewed briefly. Also discussed is one-gluon exchange, as well as the pion and dressing of the baryons. The hadron states are summarized. One loop quantum corrections are discussed briefly. Work in progress is mentioned in the areas of N-anti N annihilation, the many bag problem, and a Pauli equation for the nucleon. 31 refs. (LEW)

49183 (DOE/ER/40048—29-N6) New force in nature. Fischbach, E.; Sudarsky, D.; Szafer, A.; Talmadge, C.; Aronson, S.H. (Washington Univ., Seattle (USA). Dept. of Physics; Purdue Univ., Lafayette, IN (USA). Dept. of Physics; Brookhaven National Lab., Upton, NY (USA). Physics Dept.; European Organization for Nuclear Research, Geneva (Switzerland)). 1986. Contract AC06-81ER40048. 17p. (CONF-860575—32). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014284.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

We review recent experimental and theoretical work dealing with the proposed fifth force. Further analysis of the original Eotvos experiments has uncovered no challenges to our original assertion that these data evidence a correlation characteristic of the presence of a new coupling to baryon number or hypercharge. Various models suggest that the proposed fifth force could be accommodated naturally into the existing theoretical framework. 40 refs.

49184 (DOE/ER/40108—5) Unusual initial and final state effects in quantum chromodynamics. Final report, July 15, 1983-July 14, 1986. Nelson, C.A. (State Univ. of New York, Binghamton (USA). Dept. of Physics). Jul 1986. Contract AC02-83ER40108. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014707.

This work was in the area of theoretical high energy and nuclear physics. To avoid the non-cancellation of infrared divergences in hadron-hadron scattering, it was proposed that the partons be identified with nearly degenerate, coherent quark-gluon "jet" states. For deep-inelastic lepton-hadron scattering, explicit calculation using the operator product expansion showed that the usual non-singlet coefficient function follows despite different O(α/sub s/) finite parts in F_2/sup NS/ and A/sub n//sup NS/. It was also shown that a "jet" based factorization occurs at higher twist, through the general order α/sub s/(α/sub s/ log ω)/sup n/ where the soft cutoff ω characterizes the quark jet, when initial quark jets are used to avoid the non-cancelling infrared divergences. The phi phi symmetry tests for P/CP determination and for discrete symmetry violations were generalized to the generic sequential decay $X \rightarrow V_1V_2$ for X of any spin, with each $V \rightarrow 2$ or 3 spin-0 bosons, anti ll, or anti qq. The correlation between the decay planes in Higgs boson decays into a W pair (or a Z pair), for example, provides a test of the Higgs bosons' CP eigenvalue, and a sensitive probe of the Higgs coupling. 24 refs. (LEW)

49185 (DOE/ER/40233—T1) Topics in gauge theories and unification of elementary particle interactions. Srivastava, Y.N.; Vaughn, M.T. (Northwestern Univ., Chicago, IL (USA)). 4 Apr 1986. Contract FG02-85ER40233. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86013957.

The proposed research includes work on (1) jets in minimum bias, (2) quantum Hall effect and applications of quantum electrodynamics to microelectronics and (3) renormalization group analysis of unified gauge theories. In addition, rates were computed for vector boson decay modes of the nucleon in N=1 supergravity models, and is doing further work on supersymmetric signals at SLC and LEP, and on superstring phenomenology.

49186 (DOE/ER/45144—T2) [Research in the theory of condensed matter and elementary particles.] Progress report. (Chicago Univ., IL (USA)). [1986]. Contract FG02-84ER45144. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86013958.

Progress is summarized in these areas: a new formulation of two dimensional critical phenomena and string theory, supersymmetric critical phenomena and string compactification, conformal field theory on orbifolds, Gaussian models with twisted boundary conditions, modular invariance and supersymmetric critical phenomena, critical indices, conformal invariance, and current algebra, renormalization group fixed points and the string equation of motion, fermionic string field theory, N = 2 super Riemann surfaces, the spinor field in covariant superstring theory, covariant quantization of superstrings, models of aggregation, and quasi-supersymmetry in the BCS mechanism. Further work is proposed in the areas of two dimensional critical phenomena, two dimensional conformal field theory and string theory, the physics of computation, models of aggregation, and the many vortex Aharonov-Bohm problem. 57 refs. (LEW)

49187 (INS—530) N=1 supergravity on the light-cone superspace. Hori, Takayuki. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Mar 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703107.

The action of N=1 supergravity in the light-cone gauge is explicitly expressed in terms of an unconstrained light-cone superfield which contains the physical components of fields only. The superspace action is manifestly invariant under the kinematical supertransformations which consist of a part of the gauge preserving transformations. Our procedure is based entirely on the component formalism and the generalization to extended supergravities is straightforward.

49188 (LA-UR—86-2386) Constraints on general SU(2)/sub L/ x SU(2)/sub R/ x U(1) electroweak models from nuclear beta decay. Herczeg, P. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 7p. (CONF-860741—11). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013844.

From International symposium on weak and electromagnetic interactions in nuclei; Heidelberg, F.R. Germany (1 Jul 1986).

The implications of beta-decay experiments for more general versions of SU(2)/sub L/ x SU(2)/sub R/ x U(1) models are analyzed, including the most general one which allows for CP-violation, unequal left- and right-handed quark mixing angles, and mixing in the leptonic sector. For each scenario, the constraints on the pertinent parameters from beta-decay measurements are compared with the constraints provided on them by other data.

49189 (NBI-HE—84-44) Supersymmetric extension of the chiral model and the Wess-Zumino term in two dimensions. Abdalla, E.; Abdalla, M.C.B. (Niels Bohr Inst., Copenhagen (Denmark)). 1984. 4p. Also published in Phys. Lett., B (28 February 1985) v. 152(1/2) p. 59-62.

We formulate the supersymmetric version of the chiral model summed to the Wess-Zumino term. The β-function of this model has a non-trivial zero, where the fermion decouples.

49190 (NIKHEF-H—85-12) On the quantization of non-compact field theories in Minkowski space. Holten, J.W. van. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Oct 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703108.

The definition and regularization of Minkowski-space path integrals for field theories with non-compact field manifolds is examined. It is shown that a quantization procedure including constrained auxiliary field components in a positive definite Hilbert space necessarily requires non-standard analytic continuation of Green's functions for these constrained fields. 12 refs.; 3 figs.

49191 (RRK—85-4) Supergravity theories. Uehara, S. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Feb 1985. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703140.

A review on the recent status of the supergravity theories is presented.

49192 (RRK—85-6) Phase structure of the SU(3) gauge-Higgs system, 2. Adjoint Higgs. Kikugawa, Masayoshi; Maehara, Toshinobu; Saito, Juichi; Tanaka, Hidekazu; Yamaoka, Yoshihiro; Sasaki, Ryu. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics; Hiroshima Univ. (Japan). Dept. of Physics). Feb 1985. 39p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703109.

The phase structure of the SU(3) adjoint Higgs model is studied by a Monte Carlo simulation. We report the results of the simulation carried out on a four-dimensional euclidean lattice of size 3^4 and $6^3 \times 3$. We find clear signals of the transition from a symmetric phase to broken ones. At finite temperature, the broken Higgs phase consists of three parts i.e., the SU(2) x U(1)-confined phase, the U(1)-Coulomb and SU(2)-confined normal Higgs phase, and the finite temperature Higgs phase with SU(2) x U(1) Coulomb interactions. We conjecture that the last one will disappear at zero temperature. The symmetric phase is divided into two by a deconfining transition. The deconfined symmetric phase will disappear at zero temperature.

49193 (RRK—85-7) Higher derivative regularization and chiral anomaly. Nagahama, Yoshinori. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Feb 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703110.

A higher derivative regularization which automatically leads to the consistent chiral anomaly is analyzed in detail. It explicitly breaks all the local gauge symmetry but preserves global chiral symmetry and leads to the chirally symmetric consistent anomaly. This regularization thus clarifies the physics content contained in the consistent anomaly. We also briefly comment on the application of this higher derivative regularization to massless QED.

49194 Four-dimensional boson field theory. II. Existence. Baker G.A. Jr. (Theoretical Division, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Journal of Mathematical Physics (New York);* **27**: No. 9, 2379-2393(Sep 1986). Contract W-7405-ENG-36.

The existence of the continuum, quantum field theory found by Baker and Johnson [G. A. Baker, Jr. and J. D. Johnson, J. Phys. A 18, L261 (1985)] to be nontrivial is proved rigorously. It is proved to satisfy all usual requirements of such a field theory, except rotational invariance. Currently known information is consistent with rotational invariance however. Most of the usual properties of other known Euclidean boson quantum field theories hold here, in a somewhat weakened form. Summability of the sufficiently strongly ultraviolet cutoff bare coupling constant perturbation series is proved as well as a nonzero radius of convergence for high-temperature expansions of the corresponding continuous-spin Ising model. The description of the theory by these two series methods is shown to be equivalent. The field theory is probably not asymptotically free.

49195 Spectra of supersymmetric O(N-italic) sigma models in 0+1 dimension. Sathiapalan, B. (Department of Physics, University of Pennsylvania, Philadelphia, Pennsylvania 19104). *Journal of Mathematical Physics (New York);* **27**: No. 9, 2429-2433(Sep 1986).

The spectra of the supersymmetric O(N-italic) nonlinear sigma models in 0+1 space-time dimension are computed exactly for any N-italic, using group theoretical methods. The allowed representations are O(N-italic) analogs of the Wigner d-italic functions.

49196 Purely cubic action for string field theory. Horowitz, G.T.; Lykken, J.; Rohm, R.; Strominger, A. (Department of Physics, University of California, Santa Barbara, California 93106). **57**: No. 3, 283-286(21 Jul 1986).

We show that Witten's open—bosonic-string field-theory action and a closed-string analog can be written as a purely cubic interaction term. The conventioanl form of the action arises by expansion around particular solutions of the classical equations of motion. The explicit background dependence of the conventional action via the Becchi-Ronet-Stora-Tyutin operator is eliminated in the cubic formulation. A closed-form expression is found for the full nonlinear gauge transformation law.

49197 Wess-Zumino action from the Grammer-Yennie approximation. Tucci, R. (High Energy Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). **34**: No. 2, 571-584(15 Jul 1986). Contract W-31-109-ENG-38.

We study a path integral which represents a jet of collinear particles under a soft axial background in four space-time dimensions. The background is treated using a background-field gauge. We perform special infinitesimal changes of variable on the path integral. Our changes of variable correspond to infinitesimal translations of the jet with respect to the soft background. We show that the vector gauge-invariant Wess-Zumino action arises in this situation.

49198 Induced quantum numbers in (2+1)-dimensional QED. Blankenbecler, R.; Boyanovsky, D. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). **34**: No. 2, 612-618(15 Jul 1986). Contract AC03-76SF00515.

In this paper the vacuum-polarization effects of fermions interacting with Abelian gauge fields are studied in 2+1 dimensions. We find that for a gauge-field configuration with magnetic flux 2πF, there is an induced charge Q, spin S, and angular momentum J given by Q = -1/2(m/absolute value of m)F, S = F-italic/4, J = -(1/4)(m/absolute value of m)F^2 (m = fermion mass). A simple argument is offered to explain the physics of these quantum numbers. Some subtleties associated with the induced spin and angular momentum are explained in detail. The induced spin is shown to be related to the (1+1)-dimensional chiral anomaly.

49199 Superweak C-italicP-italic nonconservation arising from an underlying quarternionic quantum dynamics. Adler, S.L. (The Institute for Advanced Study, Princeton, New Jersey 08540). **57**: No. 2, 167-169(14 Jul 1986).

We show that the hypothesis of an underlying quaternionic dynamics for particle physics naturally implies an effective complex C-italicP-italic-nonconserving interaction of s-italicu-italicp-italice-italicr-italicw-italice-italica-italick-italic f-italico-italicr-italicm-italic, but arising in s-italice-italicc-italico-italicn-italicd-italic o-italicr-italicd-italice-italicr-italic in the quarternionic perturbation. The energy scale for the appearance of strong quaternionic effects is estimated to be 20 TeV.

49200 Feeble intermediate-range forces from higher dimensions. Bars, I.; Visser, M. (Physics Department, University of Southern California, Los Angeles, California 90089-0484). **57**: No. 1, 25-28(7 Jul 1986).

We develop a scenario in which feeble intermediate-range forces emerge as an effect resulting from the compactification (a-italic-grave-accent l-italica-italic Kaluza-Klein) of a five-dimensional model. It is conjectured that this general strategy will prove applicable to more realistic multidimensional theories such as the ten-dimensional superstring. We speculate that deviations from the standard gravitational force: similar to the ones reported recently as a "fifth force": may be interpreted as evidence for higher dimensions.

49201 Quark vacuum polarization and the Luescher term. Olsson, M.G.; Suchyta C.J. III. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706). **57**: No. 1, 37-39(7 Jul 1986).

The Luescher term found in the QCD string model and in Monte Carlo lattice gauge calculations is significantly modified by vacuum polarization due to light-quark loops. This modification improves agreement with experiment.

49202 Numerical determination of the QCD β function. Gavai, R.V.; Karsch, F. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). **57**: No. 1, 40-43(7 Jul 1986). Contract AC02-76CH00016.

The β function of SU(3) lattice gauge theory with three flavors of light dynamical quarks is obtained numerically by use of the (improved) ratio method. It appears to have a dip structure similar to that found in the theory without quarks. Our data seem to suggest that deviations from asymptotic scaling may be small for βapprox. >5.3.

49203 Monte Carlo calculation of the spin-dependent potentials for heavy-quark spectroscopy. Campostrini, M.; Moriarty, K.; Rebbi, C. (Istituto Nazionale di Fisica Nucleare, Sezione di Pisa, Italy and Brookhaven National Laboratory, Upton, New York 11973). **57**: No. 1, 44-47(7 Jul 1986). Contract AC02-76CH00016.

We calculate by lattice numerical methods the spin-dependent potentials relevant for heavy-quark spectroscopy. We find a long-range nonperturbative component in one of the spin-orbit potentials, whereas all other potentials exhibit a short-ranged perturbative behavior.

49204 Large-n-italic behavior of the deep-inelastic structure functions and the renormalization- and factorization-scheme dependences. Nakkagawa, H.; Nie-acute-accentgawa, A.; Yokota, H. (Institute for Natural Science, Nara University, 1230 Horai-cho, Nara 631, Japan). **34**: No. 1, 244-253(1 Jul 1986).

The problem of singular perturbation coefficients for n-italic→ that appear in the second-order QCD calculation of the moment of the deep-inelastic structure function F-italic$_2$/sup n-italic/ is investigated by applying the optimized perturbation theory (OPT). Special emphasis is paid to the connection with the kinematical analysis based on the resummation of singular terms. The main results of the present paper are as follows. (i) The simultaneous application of the generalized two-scale OPT to the factorization- and renormalization-scheme dependences of F-italic$_2$/sup n-italic/ not only absorbs the most singular $\ln^2 n$ terms in the perturbation coefficients into the effective mass scale with which the coupling constant runs, but also sweeps up the less singular lnn-italic terms to end up with a suppressing "form factor." (ii) Applying the single-scale OPT to the renormalization-scheme dependence of the Q-italic^2 dependence of the structure function R-italic$_2$/sup n-italic/—d lnF-italic$_2$/sup n-italic//d lnQ-italic, all the singular terms are completely absorbed into the effective mass scale, leaving the non-singular perturbation coefficients. The R-italic$_2$/sup n-italic/ thus optimized and the R-italic$_2$/sup n-italic/ obtained from the F-italic$_2$/sup n-italic/ optimized as in (i) are shown to agree remarkably well more than expected formally and also to agree numerically very well. (iii) Results (i) and (ii) agree up to the most singular terms with those obtained through the kinematical analyses of Brodsky and Lepage and of Amati e-italict-italic a-italicl-italic.

49205 Comparison of an exact fermion Monte Carlo algorithm with the pseudofermion method using staggered fermions. Gavai, R.V.; Gocksch, A. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). **56**: No. 25, 2659-2663(23 Jun 1986). Contract AC02-76CH00016;AS03-81ER40029.

We present first results obtained from a simulation of lattice QCD with staggered fermions by a Monte Carlo algorithm that incorporates the effect of the fermion determinant exactly. The chiral condensate chi-barchi and various Wilson-loop expectation values are measured on a 4^4 space-time lattice and the results are compared with the same quantities measured on the same-size lattice with the pseudofermion method. A quantitatively good agreement is found.

49206 On the fermion mass and lattice size dependence of SU(2) gauge theory thermodynamics. Kogut, J.B.; Polonyi, J.; Wyld, H.W.; Shigemitsu, J.; Sinclair, D.K. (Illinois Univ., Urbana, USA. Dept. of Physics; Ohio State Univ., Columbus, USA. Dept. of Physics; Argonne National Lab., IL, USA). **270**: No. 2, 155-168(16 Jun 1986). Contract W-31-109-ENG-38;AC02-76ER01545.

SU(2) lattice gauge theory with four Dirac fermions is studied on lattices of 2×6^3 and 4×8^3 for bare fermion masses m ranging from 1.0 to 0.10 in lattice units. The results are compared with effective field theory descriptions of the finite temperature deconfining transition. As m decreases the effective theory fails to describe the abruptness of the crossover from the hadronic to plasma phase on the 4×8^3 lattice. The 2×6^3 data are compared to the 4×8^3 data and are found to be artifically smooth and misleading. Large lattices are essential in the studies of the thermodynamics of gauge theories with fermion feedback.

49207 Equivalence of the light-cone formulation and the gauge-invariant formulation of string dynamics. Peskin, M.E.; Thorn, C.B. (Stanford Linear Accelerator Center, CA, USA; Florida Univ., Gainesville, USA. Dept. of Physics). **269**: No. 3/4, 509-529(9 Jun 1986). Contract AC03-76SF00515;AS05-81ER40008.

We show how to fix the newly discovered gauge-invariant string field theory to the light-cone gauge. We prove that this procedure leads to the well-known light-cone formulation of string field theory, with no additional propagating degrees of freedom.

49208 Testing two versions of lattice gauge theory: Creutz ratios in U-italic(1)$_3$. Cahill, K.; Reeder, R. (Department of Physics and Astronomy, University of New Mexico, Albuquerque, New Mexico 87131). **43**: No. 3, 1043-1060(Jun 1986).

In our simplicial version of lattice gauge theory, we approximate Euclidean path integrals by tiling space-time with simplexes and by linearly interpolating the fields throughout each simplex from their values at the vertices. We compare this method with Wilson's lattice gauge theory for U-italic(1) in three dimensions. As a standard of comparison, we compute the exact values of Creutz ratios of Wilson loops in the continuum theory. Monte Carlo computations using the simplicial method give Creutz ratios within a few percent of the exact values for reasonably sized loop at $\beta = 1$, 2, and 10. Similar computations using Wilson's method give ratios that typically differ from the exact values by factors of 2 or more for $1<$ or $=\beta<$ or $=3.5$ and that have the wrong β dependence. The better accuracy of the simplicial method is due to its use of the action and domain of integration of the exact theory, unaltered apart from the granularity of the simplicial lattice. We also present data on the action density and the mass gap.

49209 Lattice gauge theory with a fast highly parallel computer. Chist, N.H. (Department of Physics, Columbia University, New York, New York 10027). **43**: No. 3, 1061-1072(Jun 1986).

Results for the temperature of the color deconfinement phase transition in pure S-italicU-italic(3) lattice gauge theory are described. These were obtained on a specially built 16-node, 256 Megaflop computer using the Metropolis algorithm. The architecture, performance, and expansion plans for this machine are also discussed.

49210 β function, scaling, and improved action for S-italicU-italic(3) lattice gauge theory. Gupta, R.; Guralnik, G.; Patel, A. (Theory Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). **43**: No. 3, 1101-1104(Jun 1986).

We present a detailed analysis of the nonperturbative β function along the Wilson axis for the S-italicU-italic(3) pure gauge theory using the Monte Carlo renormalization group method. The scaling behavior of the string tension, the deconfinement transition temperature, and the O^{++} glueball mass obtained from published data is compared. The results show that there is no asymptotic scaling for K-italic/sub F-italic/equivalent$(6/g\text{-italic}^2)<6.1$. We also estimate the renormalized action generated by the $\sqrt{3}$ block transformation for use in future calculations.

49211 Deconfining phase transition in lattice quantum chromodynamics. Gottlieb, S.A.; Kuti, J.; Toussaint, D.; Kennedy, A.D.; Meyer, S.; Pendleton, B.J.; Sugar, R.L. (Department of Physics, University of California at San Diego, La Jolla, California 92093). **43**: No. 3, 1105-1116(Jun 1986).

We present a large-scale Monte Carlo calculation of the deconfining phase transition temperature in lattice quantum chromodynamics without fermions. Using the Wilson action, the transition

temperature as a function of the lattice coupling g-italic is consistent with scaling behavior dictated by the perturbative β function for 6/g-italic^2>6.15.

49212 Large-scale calculations for hadron spectroscopy. Rebbi, C. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). **43**: No. 3, 1117-1128(Jun 1986). Contract AC02-76CH00016.

Some recent Monte Carlo calculations for quantum chromodynamics, performed on Euclidean lattices of rather large extent, are reviewed. The purpose of the calculations is to provide accurate determinations of quantities, such as interquark potentials or mass eigenvalues, which are relevant for hadronic spectroscopy. Results obtained in quenched QCD on $16^3 \times 32$ lattices are illustrated, and a discussion of computational resources and techniques required for the calculations is presented.

49213 Lattice QCD: Going beyond the mass spectrum. Sharpe, S.R. (Physics Department, FM-15, University of Washington, Seattle, Washington 98195). **43**: No. 3, 1129-1146(Jun 1986).

The present status of lattice measurements with fermions is discussed. Methods are presented which improve the extraction of particle masses using staggered fermions. It is suggested that fermion physics on blocked lattices might show improvement as compared to that on lattices generated with the Wilson action. This idea is tested by comparing results from $18^3 \times 42$ lattices generated at $\beta = 6.2$ with results from the $6^3 \times 14$ lattices obtained from them by twice blocking with a 3/sup 1/2/ transformation. Also, a comparison of $8^3 \times 16$ blocked and Wilson axis lattices is made. Finally, three point correlators are used to elucidate the properties of the scalar isoscalar channel.

49214 Monte Carlo studies with the ST-100 array processor. Sugar, R.L. (Department of Physics, University of California, Santa Barbara, California 93106). **43**: No. 3, 1147-1170(Jun 1986).

Monte Carlo simulations with the 100 Mflop ST-100 array processor are described. The architecture of the array processor and its applicability to large-scale numerical simulations is discussed. Results are presented for the Abelian Higgs model, a charge density wave transition in a quasi-one-dimensionl system and the finite temperature phase transition in S-italicU-italic(3) lattice gauge theory.

49215 Molecular dynamics algorithm for simulation of field theories in the canonical ensemble. Kogut, J.B.; Sinclair, D.K. (Illinois Univ., Urbana, USA. Dept. of Physics; Argonne National Lab., IL, USA. High Energy Physics Div.). **270**: No. 1, 39-49(26 May 1986).

We add a single scalar degree of freedom ("demon") to the microcanonical ensemble which converts its molecular dynamics into a simulation method for the canonical ensemble (euclidean path integral) of the underlying field theory. This generalization of the microcanonical molecular dynamics algorithm simulates the field theory at fixed coupling with a completely deterministic procedure. We discuss the finite size effects of the method, the equipartition theorem and ergodicity. The method is applied to the planar model in two dimensions and SU(3) lattice gauge theory with four species of light, dynamical quarks in four dimensions. The method is much less sensitive to its discrete time step than conventional Langevin equation simulations of the canonical ensemble. The method is a straightforward generalization of a procedure introduced by S. Nose for molecular physics.

49216 Parity anomalies in gauge theories in 2+1 dimensions. Rao, S.; Yahalom, R. (Stanford Linear Accelerator Center, CA, USA; Fermi National Accelerator Lab., Batavia, IL, USA; California Inst. of Tech., Pasadena, USA). **172**: No. 2, 227-230(15 May 1986). Contract AC03-76SF00515.

It is shown that the introduction of massless fermions in an abelian gauge theory in 2+1 dimensions does not lead to any parity anomaly despite a non-commutativity of limits in the structure function of the odd part of the vacuum polarisation tensor. However, a parity anomaly does exist in non-abelian theories due to a conflict between gauge invariance under large gauge transformations and the parity symmetry.

49217 (BNL—38297) Summary of hypernuclear sessions. Chrien, R.E. (Brookhaven National Lab., Upton, NY (USA). Physics Dept.). 1986. Contract AC02-76CH00016. 10p. (CONF-860575—28). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014123.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

Fifteen papers on hypernuclear physics are briefly summarized. Topics covered include the physics of deuterium and its strangeness analogues, a candidate for an S = -1 dibaryon resonance, bag model predictions for dibaryons, planned dibaryon searches, narrow Sigma states, calculations of quasi-free Sigma production, weak decay of Lambda hypernuclei, a cloudy quark-bag model calculation of the kaon-nucleon interaction, the Bonn potential applied to the Lambda-nucleon system, calculations of kaon photoproduction, and a proposed search for an eta-mesic bound nuclear system. (LEW)

49218 (BNL—38298) Review of high energy hadron-nucleus data. Lissauer, D. (Brookhaven National Lab., Upton, NY (USA). Physics Dept.; Tel Aviv Univ. (Israel). Dept. of Physics). 1986. Contract AC02-76CH00016. 21p. (CONF-860441—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014185.

From 5. international conference on ultra-relativistic nucleus-nucleus collisions (Quark Matter '86); Pacific Grove, CA, USA (13 Apr 1986).

New data on hadron-nucleus interactions are summarized, focusing on: estimation of the rate of energy loss of the incident hadron as it propagates through the target, and determining where the energy is deposited in central hadron-nucleus collisions. The present status of pA $\rightarrow$ p + X inclusive measurements is discussed. Measurements from visual detectors which allow investigation of global event properties are presented. Data taken from calorimeters, where one can trigger and measure transverse energy and energy flow over a given rapidity region, are discussed. 22 refs., 20 figs. (LEW)

49219 (DOE/ER/40048—26-N6) Fundamental interaction studies in nuclei. Haxton, W.C. (Washington Univ., Seattle (USA). Dept. of Physics). 1986. Contract AC06-81ER40048. 12p. (CONF-860575—31). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014282.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

There is a growing class of nuclear and atomic physics experiments in which the special properties of many-body systems are exploited in tests of fundamental symmetries. Three representative topics are discussed: parity nonconservation in the NN interaction, time reversal-odd nuclear moments, and matter-enhanced neutrino oscillations.

49220 (NEANDC(J)—117/U, pp 41-51) Format of JENDL. Nakagawa, T. (Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

The ENDF/B format is adopted for JENDL. In this paper, the basic aspects of the ENDF/B format are explained and differ-

ences among recent versions of the ENDF/B format are summarized.

49221 (NEANDC(J)—117/U, pp 68-98) **Processing of the nuclear data file and the problems of JENDL.** Hasegawa, A. (Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

A brief outline of the processing of the nuclear data files is presented. Particular stress is placed on the problems encountered in the processing of the JENDL2, JENDL-3PR1 and PR2 (Japanese Evaluated Nuclear Data File version 2, version 3 preliminary-1 and -2 files). Some recommendations to resolve the problems are also made.

49222 (NEANDC(J)—117/U, pp 99-118) **Double differential neutron emission cross sections at 14 MeV measured at OKTAVIAN.** Takahashi, A. (Osaka Univ., Yamadaoka, Japan). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

A review is given for double differential neutron emission cross sections at 14 MeV, measured at OKTAVIAN since 1981. The present status of evaluated nuclear data libraries (ENDF/B-IV and JENDL-3PR1) pertaining to fusion reactors is shown by comparison with the measured data. Results show that insufficient secondary neutron data are given in ENDF/B-IV for D, Li, Be, B C, F, Na, Cl, Ti, Cr, Mn, Ni, Cu, Zr, Nb, Mo, W and Pb, although the data for N, O, Si, Al and Fe are fairly well evaluated. Significant improvements are seen in JENDL-3PR1 & 3PR2.

49223 (NEANDC(J)—120/U) **Proceedings of the 1985 seminar on nuclear data.** Asami, Tetsuo; Mizumoto, Motoharu (eds.). (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Jun 1986. 437p. (JAERI-M—86-080; INDC(JPN)—106/L; CONF-8511220—). JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI86901587.

From Seminar on nuclear data; Tokai, Japan (12 Nov 1985).

Separate abstracts were prepared for 39 papers presented in this conference. Subjects addressed at the conference included: nuclear data activities at the Institute of Atomic Energy in Beijing, China; at the research center for nuclear techniques in Bandung, Indonesia; and of the Japanese Nuclear Data Committee (JNDC). The main thrust of the conference was nuclear research in Japan including activities of the JNDC working groups, the relation between absolute and relative measurements of nuclear data, nuclear data for fusion reactors, and problems in heavy nuclide nuclear data. A poster session was held in which a large variety of topics was discussed dealing mostly with neutron research. (DWL)

49224 (ANL—85-22, pp 9-11) **Study of the 165-MeV pion absorption mechanism in ^{3}He through the (π^+,2p) and (π^-,pn) reactions.** Ashery, D.; Geesaman, D.F.; Levenson, S.M.; Schiffer, J.P.; Stephans, G.; Ungricht, E.; Zeidman, B.; Anderson, B.D.; Das, G.; Madey, R.; McKeown, R.D. (Tel Aviv Univ., Israel). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

New measurements of the angular dependences of the ^{3}He(π^+,pp) and ^{3}He(π^-,pn) reactions were carried out to provide more quantitative information on the cross section and on the orbital angular momenta involved. The experiment was performed in the P^3 area at LAMPF with 165-MeV pions incident on a liquid ^{3}He target. Preliminary analyses indicate that the angular distribution for π^+ resembles that of the $\pi^+ + d \rightarrow pp$ reaction. The π^- angular distribution is quite similar to the π^+ distribution and is consistent with symmetry about 90°. This is in contrast to the asymmetric π^- angular distribution seen at 65 MeV. Information on the three-body absorption ($\pi^+ + {}^3\text{He} \rightarrow {}^3\text{p}$) has also been obtained. It appears that the integrated cross sections for 3-body absorption is roughly half that of the 2-body mechanism. In a second data run in the fall of 1984, the (π^+,2p) and (π^-,pn) reactions were studied at 250 MeV at proton lab angles of 20°, 40°, 75° and 130°. The 165-MeV data were also extended to the proton angle of 20°. The analysis of the data, which included significant normalization checks on the previous data is currently under way.

49225 (ANL—85-22, pp 11) **Study of the (π,πp) reaction and quasifree scattering in ^{4}He.** Ashery, D.; Geesaman, D.F.; Jackson, H.E.; Schiffer, J.P.; Zeidman, B.; Segel, R.E.; Gram, P.A.M. (Tel Aviv Univ., Israel). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The measurement of inelastic pion scattering observed in coincidence with a recoil proton has been approved for a target of ^{4}He. Angular distributions will be obtained for π^+ energies of 160, 220, and 350 MeV. Emergent pions will be detected in the LAS spectrometer while an array of scintillation counters that span a large solid angle will be used to detect protons.

49226 (ANL—85-22, pp 18) **Tensor polarization in pion-deuteron elastic scattering.** Holt, R.J.; Freeman, W.S.; Geesaman, D.F.; Specht, J.R.; Ungricht, E.; Zeidman, B.; Stephenson, E.J.; Moses, J.D.; Farkhondeh, M.; Gilad, S.; Redwine, R.P. (Fermi National Accelerator Lab., Batavia, IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

During this year the analysis of measurements of t_{20} in π-d elastic scattering was completed and a final summary manuscript was prepared for publication. The results consists of angular distributions of the deuteron tensor polarization in π-d elastic scattering at pion energies of 140, 180, 220 and 256 MeV. Theoretical calculations in which the effects of pion absorption on the elastic channel are small reproduce the data. No rapid angular or energy dependence was found near a pion energy of 134 MeV, where another experiment at SIN has suggested the existence of dibaryon resonances.

49227 (ANL—85-22, pp 43) **Search for a light-scalar boson emitted in nuclear decay.** Napolitano, J.; Freedman, S.J.; Nelson, J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Using the Physics Division Dynamitron to produce ^{4}He (0$^+$, 20 MeV) via radiative capture of protons on a tritium target, the authors performed a sensitive search for Higgs-like scalar particles with masses roughly between 3 and 14 MeV. This work has been published. In this paper the authors point out that even though this work is more than 2 orders of magnitude more sensitive than the only previous experiment, uncertainties in the theoretical interpretation strongly suggest that a significantly more sensitive experiment be performed to lay the issue to rest.

49228 (ANL—85-22, pp 122-124) **Faddeev-Monte Carlo studies of three-body forces in the triton.** Wiringa, R.B.; Friar, J.L.; Gibson, B.F.; Payne, G.L.; Chen, C.R. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Conventional five-channel Faddeev wave functions for the triton have been used as input to a Monte Carlo integration routine to study the effect of three-body potentials on the triton binding energy. Momentum-space Faddeev calculations including the

Tucson-Melbourne three-body potential were carried out by the Purdue and Bochum groups in 1983 that suggested that there was little effect on the binding energy of the triton. This was in disagreement with variational Monte Carlo studies of Carlson, Pandharipande and Wiringa (CPW) done at Argonne and Urbana, which indicated a significant additional binding ~1 MeV. To investigate this discrepancy, the authors used configuration-space Faddeev wave functions obtained for three realistic NN potentials [Reid soft core, Argonne v_{14} and Super-soft core (C)] and computed Monte Carlo expectation values of three different three-body potentials (Tuscon-Melbourne, Brazil, and Urbana model V). The results are presented.

49229 (ANL—85-22, pp 124-125) **Variational Monte Carlo calculations of few-body nuclei.** Wiringa, R.B.; Schiavilla, R.; Pandharipande, V.R. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Preliminary results have been obtained for the proton momentum distribution, N/sub dp/(k), the d + p breakup momentum distribution, N/sub dp/(k), and the d + p cluster amplitudes in ^{3}He, using the Reid NN potential, and the Urbana and Argonne NN potentials with the Urbana three-body potential. The calculated quantities agree reasonably well with recent (e,e'p) data from Saclay, when the three-body potential is included in the Hamiltonian. The calculations for ^{3}He have also been performed using 5-channel Faddeev wave functions provided by the Los Alamos-Iowa group. The results are similar, but the Faddeev wave functions give more binding than the variational ansatz the authors have been using, and also have a better value for the distorted wave parameter D_S. The authors are currently trying to analyze the Faddeev wave function in hopes of making improvements to the variational ansatz, which could then be used in ^{4}He and larger systems as well as in ^{3}He.

49230 (ANL—85-22, pp 125) **Relativistic effects in three-body nuclei.** Coester, F.; Glockle, W.; Lee, T.S.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

It is well known that realistic two-body forces alone cannot account quantitatively for the observed binding energy of the triton. The authors have investigated simple three-body models amenable to exact numerical solution of both the relativistic and the nonrelativistic Faddeev equations. In these models the authors found again a high order cancellation of positive and negative contributions to the relativistic corrections of the binding energy. The overall relativistic effect is a net decrease in binding. The authors have also calculated momentum distributions for the models and find increases >10% for momenta $p>3fm^{-1}$.

49231 (ANL—85-22, pp 131-132) **Electromagnetic form factors of the deuteron.** Chung, P.L.; Coester, F.; Polyzou, W.N. (Univ. of Iowa, Iowa City). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Measurements of the deuteron form factors over a wide range of momentum transfer can provide important clues to the role of subnucleon degrees of freedom in nuclear dynamics. The authors are calculating the contributions of one-body operators to the deuteron form factors for arbitrary momentum transfer in a consistent unambiguous fashion. The results are needed for the next step which will be to examine the interaction terms in the charge current density required by the data and to interpret them in terms of subnucleon degrees of freedom.

49232 **(BNL—38336) Future dibaryon research at BNL.** Pile, P.H. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 8p. (CONF-860575—30). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014182.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

An experiment designed to search for a strangeness -1 dibaryon is discussed. The experiment will use the ^{3}He(K$^-$, π^+)nD/sub π/ reaction and is expected to begin near the end of the year at the BNL AGS using the existing LESB-I beamline and hypernuclear spectrometer system. Planned searches for a strangeness -2 dibaryon are also discussed. The strangeness -2 dibaryon searches will however require the construction of a new 1.8 GeV/c kaon beam line at the AGS.

49233 **(INS—532) Tensor analyzing power in backward pd elastic scattering and its connection to pp → πd at intermediate energies.** Nakamura, A.; Satta, L. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Mar 1985. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703146.

The tensor analyzing power for pd backward elastic scattering is calculated in the energy range 150 <= Tsub(p) <= 800 MeV. Two main contributions are considered: the one nucleon exchange and the so called triangle graph, including pp → πd as a subprocess. The pd backward elastic cross section and tensor analyzing power are fairly well reproduced by the model.

49234 **(LA-UR—86-2139) Three-body force in the three-nucleon system.** Gibson, B.F. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 16p. (CONF-8604194—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012399.

From International symposium on three-body force in the three-nucleon system; Washington, DC, USA (24 Apr 1986).

A brief summary of the symposium is presented. Three-nucleon force models are discussed, including the two-pion exchange potential, NN-ΔN coupled-channels model, and phenomenological parametrization. Relevant experimental data and model calculations are discussed including form factors, binding energies, charge radii, and charge density for ^{3}H and ^{3}He. A calculation of the EMC effect for ^{3}He is also made using Sasakawa's wave function and compared to experimental data obtained at SLAC. The paper ends with discussions of proton-deuteron scattering, investigations at intermediate energies, and QCD efforts to understand the three-body problem. (DWL)

49235 **(UCRL—94764) Exploratory gas-target experiment at PEP using the TPC/2 γ facility.** Dietrich, F.S.; Melnikoff, S.O.; Van Bibber, K.A. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 4p. (CONF-860575—14). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012806.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

A pilot nuclear-physics experiment at the PEP ring was performed by bleeding deuterium, argon, and xenon gases into the interaction region containing the TPC/2Y facility. The purpose of the experiment was to obtain information for the design of a dedicated nuclear-physics interaction region at PEP, as well as to obtain a first view of the physics that could be studied at such a facility. 1 ref., 4 figs.

49236 **(WUD—84-15) Determination of the magnetic form factor of the deuteron at a momnetum transfer of $q^2\hbar 0.5$ (GeV/c)^2.** Remenschnitter, B. (Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 8 - Naturwissenschaften 1 - Physik). Jul 1984. 67p. (In German). NTIS (US Sales Only), PC A04/MF A01. File Number DE86752580.

In the framework of this thesis a coincidence apparature at the Bonn 2.5 GeV synchrotron was tested by elastic electron-deuteron scattering at a momentum transfer of $q^2=0.5$ (GeV/c)^2. These data taken up there were evaluated in the computing center of the Wuppertal University and further analyzed for the determination of the differential cross section of the elastic electron-deuteron scattering. Because of the experiences which were made in this evaluation following can be said: By a pulse-height time-of-flight cut in the hodoscopes a separation of the elastically scattered deuterons from the proton background can be well realized. The comparison with hitherto measurements at a momentum transfer of $q^2=0.5$ (GeV/c)^2 shows that the studied elastic electron-deuteron

scattering and the cross section of this coincidence experiment resulting from this agrees within the error bounds well with earlier experiments. In this coincidence experiment further data at a momentum transfer of $q^2=0.8$ (GeV/c)^2 and $q^2=1.0$ (GeV/c)^2 were taken up. The experience in the evaluation of the data at $q^2=0.5$ (GeV/c)^2 shows that no principal difficulties are to be expected in the data analysis of $q^2=0.8$ (GeV/c)^2 and $q^2=1.0$ (GeV/c)^2.

49237 **Y-italic scaling and final state interactions in ^{3}He(e,e')x-italic.** Gurvitz, S.A.; Tjon, J.A.; Wallace, S.J. (Physics Department, Weizmann Institute of Science, Rehovot, Israel and TRIUMF, Vancouver, British Columbia, Canada V6T 2A3). **34**: No. 2, 648-653(Aug 1986).

Two theoretical approaches to y-italic scaling based on different treatments of final state interactions are compared. Experimental data show scaling in both treatments; however, there is strong disagreement between data and the West prediction based on a Faddeev momentum distribution. Partial inclusion of final state interaction by Sick, Day, and McCarthy substantially improves the comparison with data. Dramatic sensitivity to the treatment of final state interaction suggests that existing theoretical analyses are not decisive.

49238 **Radiative neutron capture by deuterium.** Mitev, G.; Colby, P.; Roberson, N.R.; Weller, H.R.; Tilley, D.R. (Duke University and Triangle Universities Nuclear Laboratory, Durham, North Carolina 27706). **34**: No. 2, 389-400(Aug 1986).

The ^{2}H(n,γ)^{3}H reaction has been studied with polarized and unpolarized neutrons of energies ranging from 9 to 14 MeV. Angular distributions of cross section were measured at E-italic/sub n/ (lab) = 9.0, 10.8, and 14.0 MeV, $\sigma(90^0)$ was measured at 6.85 MeV, and an analyzing-power angular distribution was measured at 9.0 MeV. The results for σ(t-italich-italice-italict-italica-italic) agree with the existing ^{2}H(γ,n)^{2}H data after detailed balancing. The resulting ^{3}He(γ,p)/^{3}H(γ,n) ratio for 90^0 cross sections is 1.1 +- 0.15 down to E-italic/sub x-italic/ = 10.8 MeV. The T-italic-matrix analysis of the data indicates —3% for the E-italic2 contribution to the capture cross section: comparable to that found earlier for ^{2}H(p,γ)^{3}He and in contrast to the predictions [σ/sub n/(E2)/σ/sub p/(E2) = 1/25] of a two-body direct-capture calculation.

49239 **Continuum polarization transfer in 500 MeV proton scattering and pionic collectivity in nuclei.** Rees, L.B.; Moss, J.M.; Carey, T.A.; Jones, K.W.; McClelland, J.B.; Tanaka, N.; Bacher, A.D.; Esbensen, H. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). **34**: No. 2, 627-636(Aug 1986).

A complete set of polarization transfer observables was measured for inclusive 500 MeV proton scattering from ^{2}H, Ca(nat.), and Pb(nat.) at t-italich-italice-italict-italica-italic/sub lab/ = 18.5^0 (q-italic = 1.75 fm/sup -1/). The excitation energy ranged over the entire quasielastic peak from 20 to 100 MeV. Longitudinal and transverse spin-flip probabilities were extracted from the data. These have simple model-dependent connections to the spin-longitudinal and transverse response functions for the heavy targets. Detailed analysis of the data reveals no evidence for collective enhancement in the spin-longitudinal response function. The relation of this analysis to the interpretation of the European Muon Collaboration effect in terms of excess pions is discussed in detail.

49240 **Piezonuclear fusion in isotopic hydrogen molecules.** Siclen, C.DeW.V.; Jones, S.E. (Idaho National Engineering Lab., Idaho Falls, USA). *Journal of Physics G: Nuclear Physics;* **12**: No. 3, 213-221(Mar 1986).

A rough estimate is made of the rate of fusion of the nuclei in a deuterium molecule at room temperature and atmospheric pressure. As the density of the collection of molecules is increased, the fusion rate will likewise increase, in a manner given by an easily derived semi-classical equation. With sufficient experimental data, perhaps obtained through use of a diamond-anvil high-pressure cell, density-dependent expressions for the internuclear potentials of isotopic molecular hydrogen can be constructed and values for the corresponding fusion rates calculated.

49241 (ANL—85-22, pp 12) **Dependence of the (e,e'p) reaction in the quasifree region.** Geesaman, D.F.; Green, M.C.; Chant, N.S.; Holt, R.J.; Levenson, S.M.; Maruyama, X.K.; Redwine, R.P.; Roos, P.; Sapp, W.W.; Segel, R.E.; Schiffer, J.P. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

A proposal to study the A dependence of the (e,e'p) reaction at absolute value qvector = 540 MeV/c at the Bates electron accelerator has been approved. From the A dependence of the ratio of (e,e'p) coincidence to (e,e') singles events, the macroscopic attenuation of 140 +/- 20 MeV nucleons in nuclei will be deduced. This experiment will be the first experiment at BATES to use the BIGBITE spectrometer. During three shakedown runs in 1984 the spectrometer was brought on-line with a preliminary detector stack. A gas Cerenkov counter is being constructed at Argonne for electron identification in the OHIPS spectrometer. In 1985, the final spectrometer tests will be completed and beam time will be scheduled for the experiment.

49242 (ANL—85-22, pp 13) **Study of the (p,π^-) reaction very close to threshold.** Jacobs, W.W.; Green, M.C.; Brown, J.; Emery, G.T.; Throwe, T.G.; Vigdor, S.E. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have studied the energy dependence of the differential cross section and analyzing powers of the ^{13}C(p,π^-) ^{14}O/sub gs/ reaction for outgoing pion energies of 5-20 MeV. The measurements have been performed at the Indiana University Cyclotron Facility. Most recently the authors have completed measurements for incident proton kinetic energies of 157 and 171 MeV. From this and previous data at 183 and 190 MeV, total cross sections and the s-wave amplitudes have exhibited an energy dependence consistent with that expected from a simple Coulombic interaction of the π^- with the residual nucleus. The p-wave amplitudes show this energy dependence except at 171 MeV where the p-wave amplitude for the incoming proton and target nucleus spins aligned shows a three standard deviation enhancement.

49243 (ANL—85-22, pp 22) **Inelastic scattering of pions by ^{10}B and ^{11}B.** Zeidman, B.; Geesaman, D.F.; Olmer, C.; Morrison, G.C.; Burleson, G.R.; Greene, J.S.; Morris, C.L.; Boudrie, R.L.; Segel, R.E.; Swenson, L.W.; Blanpied, G.S. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The EPICS spectrometer at LAMPF was used in a study of elastic and inelastic scattering of π^+ and π^- by targets of ^{10}B and ^{11}B at T/sub π/ = 162 MeV. Angular distributions between 20^0 and 90^0 were measured in 5^0 steps for π^+ and π^-. In addition, spectra were obtained at 3 angles each at T/sub π/ = 130 and 250 MeV, namely angles corresponding to momentum transfers where the differential cross sections for l = 2, 3, and 4 are maximized. Among the results are evidence for a rotational band built upon (1p/sub 3/2/$^{-1}$,1d/sub 5/2/)$_4$ - neutron particle-hole configurations. A number of states strongly excited at high excitation energy, are compared with theoretical shell-model predictions.

49244 (ANL—85-22, pp 38) **Beta decay of polarized nuclei and the decay asymmetry of ^{8}Li.** Bigelow, R.; Freedman, S.J.; Napolitano, J.; Quin, P.A. (Univ. of Wisconsin, Madison). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Under certain conditions, it is possible to produce vector-polarized radioactive nuclei in reactions with a polarized projectile and an unpolarized target. Using the intense polarized beams at the

University of Wisconsin, the authors have begun a program to study the weak interaction through the beta decay of polarized nuclei produced in this way. Such experiments bear on tests of CVC in light nuclei, sensitive searches for second-class weak currents, and measurements of the weak vector-coupling constant. One may also deduce the values of certain matrix elements. Our effort is presently centering on a study of the energy dependence of the beta-decay asymmetry of ^{8}Li.

49245 (ANL—85-22, pp 39-40) **Proposed new measurement of the ^{10}C superallowed beta decay.** Freedman, S.J.; Holzmann, R.; Kroupa, M.; Lesko, K.; Napolitano, J.; Nelson, J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

To determine the Cabibbo angle the authors have proposed studying the decay $^{10}C \rightarrow {}^{10}B + e^{+} + nu$. Since the dominant error in the ft-value in this system is in the partial lifetime, the authors intend to improve their knowledge of the $O^{+} \rightarrow O^{+}$ branching ratio. Since the two major decay branches lead to excited states in ^{10}B, the branching ratio corresponds to the relative intensity of 718-keV and 1022-keV gamma rays. The authors will produce ^{10}C and measure the relative yield of the two gamma-rays from the β-decay, and then measure the relative gamma-ray efficiencies in a concurrent particle-gamma coincidence experiment. In a series of preliminary runs in August 1984 the authors checked the feasibility of these measurements. The authors observed the deexcitation gamma-rays of the excited states in ^{10}B in coincidence with their respective recoil protons, as a test of the efficiency calibration. The authors also observed the 718-keV gamma-ray from the β-decay. Unfortunately, the low beam current for this series of tests did not allow them to observe the 1022-keV gamma ray from the desired decay branch.

49246 (ANL—85-22, pp 40) **Measurement of a large B(E2) in ^{10}B.** Nelson, J.; Napolitano, J.; Freedman, S.J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

It has been known for some time that the E2 transition strength from the 4.77-MeV, 3^{+} level in ^{10}B to the 0.72-MeV, 1^{+} level was measured to be much larger than one would expect in light nuclei. Kurath has shown that a large enhancement may be expected due to collective effects. However, the experimental value was still nearly three times larger than could be easily accommodated. Using the Physics Division Dynamitron, the authors remeasured this quantity using radiative capture of alpha particles on an evaporation-in-situ ^{6}Li target. Photons of 720 keV were detected using a Ge(Li) spectrometer. The detection efficiency was determined using the well-studied radiative-capture process to the 5.16-MeV state in ^{10}B. The authors find that for the $4.77 \rightarrow 0.72$-MeV transition, $B(E2) = 21 +/- 2\ e^{2}fm^{4}$ whereas Kurath predicts approximately $13e^{2}fm^{4}$.

49247 (ANL—85-22, pp 65) **Fusion cross section behavior for $^{10}B + {}^{13}C$ and $^{11}B + {}^{12}C$.** Mateja, J.F.; Garmon, J.A.; Fields, D.E.; Frawley, A.D.; Kovar, D.G.; Henderson, D.; Ikezoe, H.; Janssens, R.V.F.; Lesko, K.T.; Rosner, G.; Stephens, G.S.F. (Tennessee Technical University, Cookeville). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Time-of-flight measurements for the $^{11}B + {}^{12}C$ system were performed for comparison with results obtained last year for the $^{10}B + {}^{13}C$ system. By studying the total fusion cross section behavior for two different entrance channels which form the same compound nucleus (i.e., ^{23}Na) one hopes to understand whether the observed cross section energy dependence ($4 <$ E/sub Lab/ < 9 MeV/nucleon) is generated by limitations imposed by the compound nucleus or by entrance channel effects. The results of our measurements showed that the observed cross section behaviors for the two entrance channels were not consistent with a fusion limitation produced solely by the properties of the compound nucleus (i.e., by reaching of a critical density of compound nucleus states), and that the cross section behavior appears to be governed by entrance-channel limitations. At the highest energy measured the critical angular momenta for fusion extracted for the two systems were found to have merged to become (within the error bars) the same which suggests that at high bombarding energies a similar critical angular momenta might exist for the two entrance channels.

49248 (ANL—85-22, pp 68) **Projectile-target dependence of incomplete fusion processes.** Kovar, D.G.; Rosner, G.; Janssens, R.V.F.; Henderson, D.; Ikezoe, H.; Kolata, J.J.; Stephans, G.S.F.; Lesko, K.T.; Ungricht, E.; Wilkins, B.; Prosser, F.W. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The results of recent heavy-ion studies indicate that at higher bombarding energies not all central collisions result in the fusion of the projectile and target, but rather that an increasing fraction of these collisions involve the emission of a particle or particles from the projectile or target prior to fusion (i.e., incomplete fusion processes). To obtain information regarding the projectile-target dependence of complete and incomplete fusion processes, measurements of the velocity spectra of the evaporation residues from fusion reactions have been performed using beams of ^{16}O, ^{24}Mg, ^{28}Si, ^{32}S on a series of light- and medium-weight target nuclei. Deviations of the spectra constitute evidence for contributions from incomplete fusion processes and provide an indication of their magnitude. The analysis of these measurements have been completed, revealing evidence that for asymmetric systems (i.e., A/sub proj./ < A/sub targ./ and A/sub proj./ > A/sub targ./) incomplete fusion processes begin to contribute above some threshold velocity, contributing as much as 30% of the ER yields at the highest energy studied (E/sub Lab/ = 9 MeV/nucleon).

49249 (ANL—85-22, pp 70-71) **Evaporation-residue-velocity measurements for fusion of ^{14}N with light target nuclei.** Stephans, G.S.F.; Kovar, D.G.; Janssens, R.V.F.; Ikezoe, H.; Rosner, G.; Lesko, K.T.; Kolata, J.J.; Wilkins, B.; Gonthier, P.L.; de Toledo, A.S.; Szanto, E. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

There is strong evidence from investigations of incomplete momentum transfer that these processes involve the emission of high-energy light fragments, especially α particles, before fusion occurs. The ^{14}N measurements were performed to investigate the influence of nuclear structure in the onset of incomplete momentum-transfer reactions and to establish its energy dependence. Effort this year was spent in analysis of data obtained in TOF measurements of evaporation residues (ER) in ^{14}N-induced reactions on targets ranging in mass $12 <$ A/sub target/ < 48 at beam energies of 5.5, 7.0, and 9.2 MeV/nucleon at ANL and 15, 25, and 35 MeV/nucleon at MSU. In addition, a fusion angular distribution was measured for $^{14}N + {}^{40}Ca$ at 9.2 MeV/nucleon at ANL in order to obtain the fusion cross-section. A TOF system including two channel plates and a Si dE-E telescope was used to produce precise velocity measurements and also allow detection of high-energy light particles. The analysis of the ER velocity spectra revealed that the fraction of the beam momentum transferred to the compound system is roughly 100% at 5.5 MeV/nucleon, 92% at 15 MeV/nucleon, 72% at 25 MeV/nucleon, and 64% at 35 MeV/nucleon.

49250 (ANL—85-22, pp 141) **Electroproduction of Δ's from light nuclei.** Lee, T.S.H.; Kleppinger, W. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The (e,e') study can examine the dependence of Δ-nucleus dynamics on the nuclear density and on the Δ momentum. The electromagnetic current owing to the Δ excitation can be straightforwardly calculated in this approach by adding a $\gamma N \rightleftharpoons \Delta$ vertex interaction to the meson-exchange Hamiltonian. In 1985, the authors had carried out a calculation of (e,e'Δ) from light nuclei. The important Δ-nucleus interaction in the final state was treated by

using an optical potential extracted from the Δ-hole model of pion-nucleus scattering. Their calculation illustrated the strong dependence of the (e,e') cross section on the Δ-nucleus potential. The result was used in a proposal by the Argonne group as a part of the scientific justification of an experiment to be run at SLAC on Δ-production by GeV electrons.

49251 (ANL—85-22, pp 142) **Study of (e,e'X) reaction in the nuclear shell model.** Kleppinger, W.E. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The (e,e'X) reaction (where X can be nucleon or other hadrons) is one of the main research subjects which will be investigated in the near future using high-duty factor electron accelerators. The authors have developed a microscopic approach to the problem assuming that the nuclear states can be described by the nuclear shell model. As a first step, a computer program for calculating the (e,e'N) cross sections has been developed. The authors have used it to study (e,e'N) for ^{12}C and ^{40}Ca targets using realistic single-particle wavefunctions for the bound nucleons and distorted waves for the outgoing nucleons. Their results agree very well with the existing data both in the magnitude and energy dependence.

49252 (ANL—85-22, pp 147) **Effect of Δ(1236) on M1 properties of 1p-shell nuclei.** Kurath, D.; Lawson, R.D. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The effect of the delta resonance on the magnetic dipole properties of the 1p-shell nuclei with A ≧ 11 has been investigated. When the quark model phasing between the central and tensor transition potentials is used, the delta has little effect on the magnetic moments of the yrast $3/2^-$ and $1/2^-$ states. The effect on M1 transition matrix elements is to reduce them by about 6% with some tendency towards a smaller reduction for the lighter nuclei. For seven transitions this quenching improves the agreement between theory and experiment. However, three transitions in the A = 11 and 12 nuclei already have shell model values which are too small so that the suppression worsens the agreement between theory and experiment. Thus the almost state independent reduction in M1 transition rates predicted when the effect of the delta is included does not resolve some of the discrepancies between calculation and experiment. These results have been published.

49253 (ANL—85-22, pp 148) **Analysis of inelastic scattering of pions.** Lee, T.S.H.; Kurath, D. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The analysis of inelastic scattering of pions on nuclei at energies near the Δ resonance has led to a number of interesting results. 1. The approximate formulae representing the DWIA cross section for particular strong multipoles were refined. 2. In ^{16}O and ^{12}C it is known that the excitation of the lowest 3^- state requires an enhancement factor when calculated as a (0 h omega) → (1 h omega) transition. Similar strong E3 transitions in ^{14}C and ^{13}C when studied both by (e,e') and (π,π') experiments show that the data can be fit by enhancement of only the isoscalar amplitude. Whereas in ^{16}O and ^{12}C the amplitude-enhancement factor is found to be $E_0 \sim 2$, $E_0(^{14}C) \sim 1.55$ and $E_0(^{13}C) \sim 1.65$. 3. The analysis of observed stretched M4 transitions in ^{14}C shows good agreement with calculated (π^+,π^-) cross-section ratios for the two strongest states, but also shows disagreement between experiment and calculation in other states. A paper reporting these results has been accepted for publication.

49254 (ANL—85-22, pp 148) **Spin expectation values for nuclear ground states.** Kurath, D. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

A current experiment measures nucleon-nucleon spin correlations in scattering of neutrons with 500 to 800 MeV from a polarized proton target. Such targets generally also contain some percentage of boron, carbon and nitrogen isotopes so it is necessary to estimate the contribution to scattering from polarization of these background nuclei. As input to such an estimate, expectation values of S/sub z/ for both neutrons and protons were calculated for a range of nuclei with shell-model wave functions. Checks on such values were also made using measured magnetic moments of isospin-mirror nuclei and self-mirrored nuclei. The agreement between calculated and empirical values for the spin expectation values is generally quite good.

49255 (DOE/ER/10706—T1) **(p, Vector, π/sup +-/) reactions on Be at 650 MeV.** Hoeistad, B.; Barlet, M.; Adams, G.S.; Gazzaly, M.; Aas, B.; Pauletta, G.; Irom, F.; Jones, K.; McGill, J.A. 49259 (INIS-mf—10190) **Determination of the spectroscopic quadrupole moment and the polarizability of ^7Li by Coulomb scattering of oriented Li ions.** Weller, A. (Marburg Univ. (Germany, F.R.). Fachbereich 13 Physik). 1984. 103p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE86752582.

Following an earlier experiment of Egelhof et al. for the determination of the spectroscopic quadrupole momentum Qsub(S) of ^7Li under application of a beam of oriented ions deviations from the Rutherford cross section in the Coulomb scattering were observed. In order to determine the measured quantity, the tensor analyzing power T_{20} (order of magnitude < or approx. 0.01) with sufficient accuracy an especially for this purpose developed and optimized measurement apparature was used the main component of which is an ionization chamber with rotational symmetry and a large spatial angle (approx.= 1.8 sr). By this it was possible to study systematically the dependence of the analyzing power T_{20} on

energy and target. Thereby an accuracy could be reached which allows to determine not only quadrupole momentum and B(E2) value but additionally the tensor strength tau of the polarizability (10^{-4} effect) with a relative error of less than 20%. For the first time beside the strength parameter tau_{12} which characterizes the influence of the polarizability on the first excited state of ^{7}Li also the corresponding parameter tau_{11} of the ground state was measured. The different data sets could be consistently described in the framework of a quantum-mechanical coupled-channel theory for Coulomb excitation by means of a single parameter set Qsub(S),B (E2), tau_{11}, and tau_{12}. The nuclear momenta extracted from the data Qsub(S) = (-37.0 +- 0.9)emb, B(E2) = (8.3 +- 0.4)e^2fm^4, tau_{11} = (0.23 +- 0.04)fm^3, and tau_{12} = (0.23 +- 0.04)fm^3 confirm especially recent theoretical papers which start from a cluster structure of the ground-state wave function of ^{7}Li.

49260 (INIS-mf—10409) **Transverse excitations of ^{19}F.** Donne, A.J.H. (Vrije Univ., Amsterdam (Netherlands)). 25 Sep 1985. 136p. NTIS (US Sales Only), PC A07/MF A01. File Number DE86703150.

In this thesis aspects of the structure of the nucleus ^{19}F are discussed as a result of transverse electron-scattering experiments, with emphasis on the ground state. The magnetization distribution of this state has been obtained from the measurement of electrons scattered from ^{19}F at backward angles. An introduction to the electron-scattering formalism is presented briefly together with the interpretation of electron-scattering results in terms of the nuclear shell model. The experimental apparatus for the measurement of electron scattering through an angle of 180° is described. This instrumentation has been installed in the low-energy facility (LEF) at NIKHEF-K. Simultaneously with the study of the magnetic ground state distribution of ^{19}F, excited states of this nucleus up to an energy of 4.4 MeV have also been investigated, mainly from data obtained in the EMIN station. Also for these states, the shell-model calculations have been the guide to determine their structure. Includes Dutch summary; 126 refs.; 51 figs.; 10 tabs.

49261 (LBL—21650) **3-body final states in peripheral heavy-ion collisions: nuclear clustering structure and projectile excitation revisited.** Chan, Y.; Chavez, E.; Gazes, S.B.; Kamermans, R.; Schmidt, H.R.; Siwek-Wilczynska, J.; Stokstad, R.G.; Wilczynski, J. (Lawrence Berkeley Lab., CA (USA). Nuclear Science Div.). Feb 1986. Contract AC03-76SF00098. 8p. (CONF-860270—9). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013200.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

Even though peripheral heavy-ion collisions are less violent than their central counterparts, the large energy exchange between the reactants often leaves the primary products in excited particle-unstable states whose subsequent decay leads to 3 or more nuclei emerging in the final exit channel. These post-reaction, predominantly sequential de-excitation processes can sometimes provide interesting structural information about the parent nuclei. In fact, provided these processes are well understood, one can employ them as probes for studying initial properties of the fragments. This report discusses results of two experiments that deal with (1) non-statistical, rare decay modes of the projectile, and (2) internal excitation energy of the projectile- and target-like fragments in peripheral collisions. The physics addressed in each is different, but the experimental and data-analysis techniques are so similar that it is relevant to join them together.

Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Neutron nuclear data of ^{6}Li and ^{7}Li stored in JENDL-3PR1 were revised, mainly on the basis of the double differential cross sections measured at Osaka and Tohoku Universities. Results of the analyses of some integral experiments were also taken into consideration. The present revision was restricted to the neutron emitting reactions. The revised data reproduce well the measured double differential cross sections.

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

A brief summary is presented for measurements and analyses of double-differential neutron emission cross sections for fusion reactor materials performed at the Tohoku University Dynamitron facility. The experiments and the typical results are described for / sup 6,7/Li, ^{9}Be, C, O, Fe, Ni and Pb. The experimental results for emission spectra and scattering cross sections are discussed in comparison with JENDL-3PR1.

Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Uncertainty on the neutron nuclear data of lithium isotopes is discussed concerned with integral experiments using two kinds of lithium spheres, 40 cm and 120 cm in diameter. Experimental results of neutron leakage spectra and tritium production rates indicate that the cross section of ^{7}Li(n,n'α)T in the data file JENDL-3 PR2 is preferred in comparison with the values in ENDF/B-IV, and there are some discrepancies for the (n,2n) cross sections of lithium in both files.

49265 (NEANDC(J)—117/U, pp 160-170) **Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1.** Hashikura, H.; Oka, Y.; Kondo, S. (Univ. of Tokyo, Tokai-mura, Naka-gun, Ibaraki, Japan). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

JENDL-3PR1 which includes very important nuclides for analysis of fusion blanket experiments has been already released. The accuracy of the nuclear data has been checked by the comparison of the integral measurements with the calculational results using JENDL-3PR1. Several problems are pointed out.

49266 (NEANDC(J)—117/U, pp 171-182) **Clean benchmark experiments and analyses at FNS.** Maekawa, H. (Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Two types of clean benchmark experiments have been carried out at the FNS (Fusion Neutronics Source) facility. They are integral experiments and time-of-flight experiments. The former includes integral experiments on cylindrical assemblies with: (1) 60-cm thick lithium oxide (Li_2O), (2) 60-cm thick graphite, and (3) 40-cm thick Li_2O followed by 20-cm thick graphite. Various reaction rates such as tritium production rate and neutron spectra were measured in these experiments. The time-of-flight experiments were conducted to measure angle-dependent neutron spectra leaking from: (1) Li_2O, (2) graphite, and (3) lithium-metal slab assemblies. These experiments were numerically analyzed by making use of the DOT3.5 transport code with newly processed 125-group cross-sec-

tion sets, i.e., JENDL-3PR1, JENDL-3PR2, ENDF/B-IV, and ENDF/B-V (^{13}C only). It was found that the calculations based on JENDL-3PR1 and JENDL-3PR2 predicted tritium production rates of ^{6}Li and ^{7}Li better than those based on ENDF/B-IV. These analytical results are expected to provide useful information for the future development of the JENDL-3 nuclear data file.

49267 (UCRL—94405) Coupled-channel analysis of neutron scattering from ^{12}C between 9 and 15 MeV. Hansen, L.F.; Meigooni, A.S. (Lawrence Livermore National Lab., CA (USA); Yale Univ., New Haven, CT (USA). Dept. of Therapeutic Radiology). Jul 1986. Contract W-7405-ENG-48. 5p. (CONF-8605166—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013025.

From International conference on fast neutron physics; Dubrovnik, Yugoslavia (26 May 1986).

A deformed and energy dependent phenomenological optical model potential and coupled-channel formalism for deformed nuclei have been used in the analysis of elastic and inelastic (Q = 4.439 MeV) scattering, and analyzing power for neutrons scattered from ^{12}C in the energy range of 9 to 15 MeV. 6 refs., 1 fig., 1 tab.

49268 Spin dependence of the isospin-forbidden decay ^{8}Be(E-italic/sub x-italic/ = 27.5 MeV)→d+^{6}Li. Soderstrum, J.P.; Knutson, L.D. (Department of Physics, University of Wisconsin, Madison, Wisconsin 53706). 34: No. 2, 401-407(Aug 1986).

The first T-italic = 2 state in ^{8}Be (E-italic/sub x-italic/ = 27.483 MeV) has been studied by means of the isospin-forbidden resonance in the reaction d+ ^{6}Li→α+α. Angular distributions of the cross section and of the four analyzing powers for the reaction ^{6}Li(d-arrow-right,α) ^{4}He have been measured at energies above, below, and on resonance. Off-resonance analyzing power measurements have also been obtained for ^{2}H(^{6}Li-arrow-right,α) ^{4}He. Because of the symmetry properties of the reaction, the number of independent collision matrix elements is fairly small, and this makes it possible to determine the matrix elements directly by fitting the data. By comparing the matrix elements, one can determine partial widths (Γ_0 and Γ_2) for decay of the ^{8}Be state into d+ ^{6}Li states with channel spin 0 and 2. The measured ratio of the partial widths is $\Gamma_2/\Gamma_0 = 0.322 +- 0.091$.

49269 Radiative pion capture on /sup 13/C. Singham, M.K.; Tabakin, F. (Theoretical and Medium Energy Physics Divisions, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). 34: No. 2, 637-642(Aug 1986).

It is found that the differential cross sections for /sup 13/C(π^+,γ)/sup 13/N /sub g.s./ for 115.5 MeV kinetic energy pions can be understood within the framework of a distorted wave impulse approximation, suggesting that core polarization and precursor effects give small contributions. It is further found that, within the limits of current nuclear photopion theory, the data for the radiative capture process are incompatible with earlier measurements for the inverse reaction /sup 13/C(γ,π^-)/sup 13/N /sub g.s./. It is shown that the reconciliation of the two sets of data places stringent demands on possible modifications to the theory.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have measured the angular distributions and analyzing powers for polarized proton scattering from ^{26}Mg at 135-MeV incident energy at the Indiana University Cyclotron Facility. Angular distributions were measured in 5° steps from a laboratory angle of 10° to 60° for states in the excitation energy range from 0 to 20 MeV. Five 6$^-$ states have been identified based on the characteristic angular distributions of the cross sections and analyzing powers at 9.17-, 11.98-, 12.48-, 12.85- and 18.05-MeV excitation energy.

49271 (ANL—85-22, pp 27) **Transverse electron scattering by ^{26}Mg.** Geesaman, D.F.; Hicks, R.S.; Huffman, R.L.; Lindgren, R.A.; Maruyama, X.K.; Olmer, C.; Plum, M.A.; Wildenthal, B.H. (Indiana Univ., Bloomington). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The inelastic scattering of electrons by ^{26}Mg was studied using the 180° inelastic-electron-scattering facility at the Bates Linear Accelerator Laboratory. Measurements were made at incident energies of 140, 163, 193 and 212 MeV to map the first peak of the form factors for M6 transitions. Five 6$^-$ states were identified at 9.12, 12.49, 12.91, 14.41, and 18.06 MeV excitation. The 18.06-MeV state was identified as a T = 2, 6$^-$ level.

In Physics Division annual review, 1 April 1984-31 March 1985.

As a further investigation of the mass-asymmetry dependence of this reaction, the system ^{32}S + ^{24}Mg which forms the same compound nucleus was studied. A time-of-flight detector system was used to measure the angular distributions and the velocity spectra for individually resolved evaporation residue masses in reactions induced at E/sub lab/ (^{32}S) = 290, 250, and 200 MeV. The velocity spectra were found to be consistent, within the uncertainties of the measurements, with those expected for complete fusion at all three bombarding energies. The preliminary values for the total ER cross sections extracted are found to fall intermediate between those observed for ^{16}O + ^{40}Ca and ^{28}Si + ^{28}Si. Comparison with model calculations are presently underway.

49276 /sup 36,38/Ar(d-bar,α)/sup 34,36/Cl reactions induced by tensor polarized deuterons. Bhat, C.M.; Tagishi, Y.; Ludwig, E.J.; Brown, B.A. (University of North Carolina at Chapel Hill, Chapel Hill, North Carolina 27514 and Triangle Universities Nuclear Laboratory, Durham, North Carolina 27706). 34: No. 2, 736-739(Aug 1986).

Exact finite-range distorted-wave Born approximation analyses of cross section and vector and tensor analyzing power angular distributions for some /sup 36,38/Ar(d-arrow-right,α) transitions induced by 16 MeV polarized deuterons have been performed using full s-italicd-italic-shell model wave functions and including a D-italic-state amplitude for the α particle. The L-italic-mixing ratios R-italic for several unnatural parity transitions have been determined from comparisons of the calculations with the tensor analyzing power data. Shell-model calculations are found to be in agreement with the experimentally obtained phases of R-italic, while the predicted magnitudes agree well in some cases.

49277 Analyzing power of /sup 27/Al(n-arrow-right,n-arrow-right$_0$) at 14 and 17 MeV and the isospin dependence of the optical model potential. Martin, P.; Walter, R.L. (Department of Physics, Duke University, Durham, North Carolina 27706 and Triangle Universities Nuclear Laboratory, Durham, North Carolina 27706). **34**: No. 2, 384-388(Aug 1986).

The analyzing powers of 14 and 17 MeV neutrons elastically scattered from /sup 27/Al have been measured. Two spherical optical model analyses of these and previously published data have been performed. The first one, which concentrated only on neutron cross section data at 14 and 17 MeV and the new analyzing powers, led to a new set of spherical optical model parameters, including a spin-orbit strength and a diffuseness of about 5.6 MeV and 0.36 fm, respectively. The second incorporated cross section and analyzing power data for proton scattering at slightly higher energies, to compensate for Coulomb energy differences. The data were successfully described with a set of parameters which included isospin-dependent potentials with isospin parameters V-italic$_1$/sub R-italic/ = 22.4 MeV and W-italic$_1$/sub D-italic/ = 15.7 MeV.

49278 Entrance channel limit on the fusion of /sup 28/Si with /sup 12/C at high energy. Harmon, B.A.; Thornton, S.T.; Shapira, D.; Gomez del Campo, J.; Beckerman, M. (Department of Physics, University of Virginia, Charlottesville, Virginia 22901 and Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **34**: No. 2, 552-561(Aug 1986).

Cross sections for the fusion of /sup 28/Si+/sup 12/C have been measured at center of mass bombarding energies of 39, 43.5, 48, and 54 MeV. Velocity and energy spectra of reaction products having charge Z-italic> or =12 and mass number A-italic> or =24 were studied at several angles between t-italich-italice-italict-italica-italic/sub lab/ = 2° and 13°. Separation of fusion from other processes was made by comparison of kinematic calculations to measured spectra. The extracted critical angular momentum (l-italic/sub cr//sup fus/) of 22h-dash-bar indicates the existence of an entrance-channel-imposed limit on the high energy fusion cross section. More symmetric systems forming the same compound nucleus, /sup 40/Ca, have considerably larger limiting angular momenta. This result is consistent with the previous observation of a maximum angular momentum of 22h-dash-bar (relative to the entrance channel) for the orbiting dinuclear complex found in studies of back-angle deeply inelastic scattering of /sup 28/Si and /sup 12/C.

49279 High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions. Warburton, E.K.; Beausang, C.W.; Fossan, D.B.; Hildingsson, L.; Piel, W.F. Jr.; Becker, J.A. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). **34**: No. 1, 136-151(Jul 1986). Contract AC02-76CH00016.

/sup 36/S(/sup 14/C,x-italicny-italicpz-italicαγ) reactions were used to extend our knowledge of the high-spin states of /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti. The decay schemes were constructed from γγ-coincidence data and γ-ray angular distributions and excitation functions. The angular distributions also provided information on spin-parity assignments and multipole mixing ratios. Lifetime information was extracted from analysis of the γ-ray Doppler shifts observed in both the angular distribution and γγ-coincidence data. Assuming the probable J-italic/sup π/ assignments are correct, the yrast schemes for all five nuclei extend to the highest spin allowed for (f-italic/sub 7/2/)/sup A-40/. Results are compared to shell-model predictions generated in three different configuration spaces: (f-italic/sub 7/2/), (d-italic/sub 3/2/,f-italic/sub 7/2/), and the full (f-italic,p-italic) shell.

49280 (ANL—85-22, pp 23) Excitation of 8⁻, particle-hole states in ^{54}Fe. Geesaman, D.F.; Lawson, R.D.; Olmer, C.; Bacher, A.D.; Boudrie, R.L.; Morris, C.L.; Lindgren, R.A.; Burleson, G.R.; Greene, S.J.; Cottingame, W.B.; Segel, R.E. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The scattering of π^+ and π^- by ^{54}Fe was studied at T/sub π/ = 162 MeV utilizing the EPICS system at LAMPF. Particular interest was placed upon the excitation of 8⁻ states that result from particle-hole configurations of the form (1f/sub 7/2/$^{-1}$,1g/sub 9/2/)$_{8^-}$. In an analysis of the pion and electron scattering data, the isoscalar and isovector amplitudes were extracted for each 8⁻ state. The summed isoscalar strength was 11% of the one-particle 3-hole limit while 38% of the isovector strength was observed.

49281 (ANL—85-22, pp 24) Isoscalar quenching in the excitation of 8⁻ states in ^{52}Cr. Geesaman, D.F.; Zeidman, B.; Morrison, G.C.; Boudrie, R.L.; Morris, C.L.; Burleson, G.R.; Greene, S.J.; Swenson, L.W. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The EPICS system at LAMPF has been used in an investigation of the properties of 8⁻ states in ^{52}Cr excited by the scattering of 162-MeV π^+ and π^-. The experiment is directed toward answering a fundamental question concerning quenching in inelastic scattering. Preliminary analysis of the data indicates that the yrast 8⁻ state is predominantly a neutron particle-hole excitation and is observed at an excitation energy of ~8 MeV, somewhat lower than anticipated.

49282 (ANL—85-22, pp 25) Excitation of 8⁻ states in ^{52}Cr. Zeidman, B.; Geesaman, D.; Karbon, O.; Morrison, G.C.; Fagg, L.W.; Sober, D.I.; Maruyama, X.K.; Lindgren, R.A.; deVries, H.; van Hienen, J.F.K. (Univ. of Birmingham, England). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The 8⁻ states formed by particle-hole excitations involving (1g/sub 9/2/,1f/sub 7/2/$^{-1}$)$_{8^-}$ configurations in ^{52}Cr have been studied by scattering electrons with kinetic energies ranging from 170 MeV to 260 MeV at NIKHEF, Amsterdam. In addition to the T = 3 state at ~15.47 MeV excitation, T = 2 states have been observed at energies ranging from 8- to 12-MeV excitation.

49283 (ANL—85-22, pp 54) Inelastic scattering and single-nucleon transfer reactions induced by ^{16}O on ^{40}Ca. Stephans, G.S.F.; Kovar, D.G.; Henning, W.; Kolata, J.J.; Rehm, K.E.; Rosner, G.; Ikezoe, H.; Parko, R.; Vojtech, R. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Effort has been spent in the analysis of results obtained at ANL in measurements of elastic and inelastic-scattering, and single-nucleon transfer reactions observed in ^{16}O + ^{40}Ca at E/sub lab/ = 150 MeV. The energy resolutions of 150 keV obtained in the measurements using the split-pole magnetic spectrograph make possible the investigation of transitions to resolved states in the final nuclei. Finite-range DWBA calculations were successful in reproducing the strength of all single-nucleon pick-up and stripping reactions leaving one of the two nuclei in its ground state. By contrast, similar calculations failed to reproduce the strength of ^{16}O-induced transfer reactions on ^{208}Pb at similar energies above the Coulomb barrier. DWBA predictions of the shape of the ^{16}O + ^{3,5,6}Ca trans-

fer angular distributions, which are forward peaked, were only fair. CCBA calculations have been performed for the 150-MeV ^{16}O + ^{40}Ca elastic and inelastic data as well as for older data at lower energies (i.e., 45, 60, and 75 MeV) in order to study the energy dependence.

49284 (ANL—85-22, pp 63) **Proximity effects in deep-inelastic collisions of ^{32}S + ^{58}Ni.** Gonthier, P.L.; Hichwa, B.P.; Kovar, D.G.; Vineyard, M.F.; Stephans, G.S.F.; van den Berg, A.; Wilkins, B. (Hope College, Holland, MI). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

An experiment was performed to measure proximity effects in the deep-inelastic reactions of ^{32}S + ^{58}Ni at a projectile energy of 250 MeV. The goal of the experiment was to obtain information regarding the time scales of the dissipation of energy and transfer of nucleons between deep-inelastic products. The deep-inelastic fragments were detected in two Si detector dE-E telescopes, positioned at +/- 40 degrees, which determined the fragments energy and nuclear charge Z. The energy spectra and angular correlation of light-particles in coincidence with the deep-inelastic fragments were measured in eight Si dE-E telescopes positioned at forward and backward angles. Analysis of the results is in progress at this time.

49285 (ANL—85-22, pp 66) **Fusion evaporation residues and the distribution of reaction strength in ^{16}O + ^{40}Ca and ^{28}Si + ^{28}Si reactions.** Kolata, J.J.; Hinnefeld, J.; Kovar, D.G.; Vineyard, M.F.; Henderson, D.; Janssens, R.V.F.; Lesko, K.T.; Menchaca-Rocha, A.; Prosser, F.W.; Sanders, S.J.; Stephans, G.S.F. (Univ. of Notre Dame, South Bend, IN). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In measurements performed previously at ANL, studying the two entrance channels ^{16}O + ^{40}Ca and ^{28}Si + ^{28}Si which form the same compound nucleus ^{56}Ni, it was found that at higher bombarding energies (E/sub Lab/ > 5-7 MeV/nucleon) the distributions of reaction strength was dramatically different. Although the total reaction cross section behaviors for the two entrance channels are similar, the total evaporation residue (ER) cross sections for ^{28}Si + ^{28}Si decrease rapidly with increasing bombarding energies and up to the highest energy studied show no evidence for incomplete fusion processes. For ^{16}O + ^{40}Ca the ER cross section remains constant at approximately 1 barn with increasing bombarding energy and shows evidence of increasing contributions from incomplete fusion. To better understand this apparent dependence on the mass asymmetry in the entrance channel, coincidence measurements between evaporation residue-like products and heavy ions on the opposite side of the beam were performed for the two systems at E/sub Lab/ = 8 MeV/nucleon.

49286 (ANL—85-22, pp 71-72) **Coincidence measurements between evaporation residues and light particles produced in ^{16}O + ^{40}Ca and ^{28}Si + ^{40}Ca reactions.** Maguire, C.; Kui, Z.; Ma, W.C.; Robinson, S.; Watson, D.; Work, G.; Ikezoe, H.; Kovar, D.G.; Rosner, G.; Stephans, G.S.F.; Ungricht, E. (Vanderbilt Univ., Nashville, TN). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In order to investigate the reaction mechanism responsible for the production of the evaporation residues in the reactions ^{16}O + ^{40}Ca and ^{28}Si + ^{40}Ca at bombarding energies of E/sub lab/ = 9 MeV/nucleon, coincidence measurements between the evaporation residues and light particles (M < 4) had been performed in 1983. During the current year these data were reduced and compared to model calculations. Comparison of the observed energy spectra with Monte Carlo simulation calculations revealed no evidence for pre-equilibrium emission in the case of ^{28}Si + ^{40}Ca, but evidence for a high energy component in the proton and alpha spectra observed in the ^{16}O + ^{40}Ca reaction. One estimates that as much as 30% of the evaporation residue yields produced in ^{16}O + ^{40}Ca arise from incomplete fusion processes. These observations provide additional support to a growing body of evidence that the threshold for incomplete fusion processes depends on the mass asymmetry in the entrance channel and in particular to the relative velocity of the projectile and target to the reference frame of the compound nucleus, and that the mechanism for incomplete fusion may be associated with the Fermi motion of the individual nucleons in the interaction nuclei.

49292 (ORNL/TM—9964) **Update of ENDF/B-V Mod 3 iron: neutron-producing reaction cross sections and energy-angle correlations.** Fu, C.Y.; Hetrick, D.M. (Oak Ridge National Lab., TN (USA)). Jul 1986. Contract AC05-84OR21400. 25p. (ENDF—341). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014340.

An update of the ENDF/B-V Mod-3 evaluation for natural iron is described. The cross sections of (n,n') and (n,2n) reactions are revised. Energy-angle correlations in the secondary (n,n') neutrons are introduced in the ENDF/B-V formats. Anisotropic angular distributions are provided for the secondary neutrons in (n,2n), (n,np), and (n,nα) reactions. Revelant integral results, microscopic data, and nuclear model calculations that influence the revised results are summarized. 54 refs., 9 figs., 2 tabs.

49293 Elastic scattering of 65 MeV positive and negative pions from nickel isotopes. Fick, B.; Blecher, M.; Gotow, K.; Wright, D.; Boudrie, R.L.; Burman, R.L.; Mack, D.; Ritchie, B.G.; Roos, P.G.; Escalante, J.A.; Mishra, C.S.; Preedom, B.M.; Whisnant, C.S. (Virginia Polytechnic Institute and State University, Blacksburg, Virginia 24061). **34**: No. 2, 643-647(Aug 1986).

Angular distributions of elastic differential cross sections were obtained at 65 MeV using positive and negative pions scattered from /sup 58/Ni, /sup 60/Ni, and /sup 64/Ni. The data were compared to predictions using the Michigan State University optical potential. These predictions are not in good agreement with the data. The negative pion cross sections are more poorly described than the positive pion cross sections. The p-italic-wave part of the potential is observed to be especially sensitive to this Coulomb-nuclear interference effect.

49294 Nuclear collective flow as a function of projectile energy and mass. Doss, K.G.R.; Gustafsson, H...; Gutbrod, H.H.; Kampert, K.H.; Kolb, B.; Loehner, H.; Ludewigt, B.; Poskanzer, A.M.; Ritter, H.G.; Schmidt, H.R.; Wieman, H. (Gesellschaft fuer Schwerionenforschung, D-6100 Darmstadt, West Germany and Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). **57**: No. 3, 302-305(21 Jul 1986).

The dependence of collective nuclear flow on multiplicity and beam energy for Ca + Ca, Nb + Nb, and Au + Au collisions has been measured with the Plastic Ball detector at the Bevalac. Event by event the data are analyzed with the transverse-momentum method and a new quantitative measure of the flow effect is extracted. It is expected that comparison of the present systematic results with model calculations will lead to a more precise determination of the nuclear-matter equation of state.

49295 Reaction /sup 58/Ni(πi,2p-italic) at 160 MeV. Burger, W.J.; Beise, E.; Gilad, S.; Redwine, a.R.P.; Roos, P.G.; Chant, N.S.; Breuer, H.; Ciangaru, G.; Silk, J.D.; Blanpied, G.S.; Preedom, B.M.; Ritchie, B.G.; Blecher, M.; Gotow, K.; Lee, D.M.; Ziock, H. (Department of Physics and Laboratory for Nuclear Science, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). **57**: No. 1, 58-61(7 Jul 1986).

Data for the /sup 58/Ni(π^+,2p-italic) reaction at T-italicπ = 160 MeV were obtained for a number of angle pairs. The resultant angular correlations for T-italic$_1$+T$_2$>160 MeV (guaranteed pion absorption) peak at a separation angle corresponding to absorption on a deuteron at rest. However, simple estimates of initial- and final-state scatterings suggest that less than 50% of the absorption cross section arises from absorption on nucleon pairs. The data show little evidence for scattering of pions before absorption on nucleon pairs.

49296 (ANL—85-22, pp 52-53) **Study of transfer processes in the systems ^{58}Ni + ^{58}Ni and ^{58}Ni + ^{64}Ni at energies in the vicinity of the barrier.** Rehm, K.E.; van den Berg, A.; Henning, W.; Wolfs, F.L.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

For the systems ^{58}Ni + ^{58}Ni and ^{58}Ni + ^{64}Ni large differences in the subbarrier fusion cross sections have been observed, which were attributed in some theoretical models to the coupling of 2-neutron transfer channels with positive Q-values. The authors have measured the magnitude and the energy dependence of transfer reactions at energies in the vicinity of the barrier. The particle identification was performed with the magnetic spectrograph utilizing the new parallel plate timing detector for mass identification. The transfer processes are dominated by the one-neutron transfer reactions (^{59}Ni, ^{59}Ni) while the cross section for two-neutron transfer (^{59}Ni, ^{60}Ni) is smaller by about a factor of 3.4. The average effective Q-value for these reactions is about -1 MeV.

In Physics Division annual review, 1 April 1984-31 March 1985.

These measurements are part of a series directed towards understanding the suppression of neutron emission observed in fusion of ^{64}Ni + ^{92}Zr → ^{156}Er and not in fusion of ^{12}C + ^{144}Sm → ^{156}Er. The channel yields have been measured in the fusion reaction of both systems in order to extract the neutron multiplicity distributions. These will be compared with results from our earlier experiments for ^{156}Er and with published results for ^{16}O + ^{148}Nd → ^{164}Er. Data analysis is in progress.

49298 (ANL—85-22, pp 96) **Half-life of ^{60}Fe.** Kutschera, W.; Billquist, P.J.; Frekers, D.; Henning, W.; Jensen, K.J.; Ma, X.Z.; Mausner, L.F.; Paul, M.; Pardo, R.; Rehm, K.E.; Smither, R.K. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The half-life of ^{60}Fe has been measured to be T/sub 1/2/ = (1.49 +/- 0.27) x 10^6 y, significantly longer than the previous measurement of Roy and Kohman who in 1957 reported a value of 3 x 10^5 y uncertain by a factor of 3. The new value was obtained from measurements of specific activity through the grow-in of the ^{60}Co daughter nucleus and of the ^{60}Fe concentration. The material was produced by spallation of copper with 191 MeV protons in the Brookhaven Linac Isotope Producer (BLIP). A ^{60}Fe/Fe ratio of (9.54 +/- 1.40) x 10^{-8} was measured with the tandem-linac in conjunction with the Enge split-pole spectrograph, using such a system for the first time for a quantitative AMS measurement.

49299 (ANL—85-22, pp 147) **Shell-model study of $_4$^{100}Nb.** Amusa, A.; Lawson, R.D. (Univ. of Ife, Ile-Ife, Nigeria). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

There is a considerable body of experimental results for the energy levels and decay modes of $_{41}$^{99}Nb. This evidence is compared with a shell-model study which assumes a closed $_{38}$^{88}Sr core so that the configuration of ^{99}Nb consists of three protons and two neutron holes in the 1g/sub 9/2/ and 2p/sub 1/2/ single-particle levels. The calculation can account for most of the observed spin assignments and lifetimes for M1 and E2 decay, although there are a few discrepancies. A paper has been submitted for publication.

49300 (EGG-M—15186) Evaluation of β intensity data in nuclear decay schemes: comments on some pitfalls. Reich, C.W. (EG and G Idaho, Inc., Idaho Falls (USA)). 1986. Contract AC07-76ID01570. 11p. (CONF-8606171—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013451.

From IAEA meeting on the coordination of the international nuclear structure and decay data evaluation network; Gre.oble, France (2 Jun 1986).

Some of the problems which arise in the evaluation of decay-schemes data to obtain values for the intensities of β transitions are discussed. As examples of these problems, the decay schemes of ^{87}Br and ^{233}Pa are examined. No specific solutions to these problems are offered; but by pointing them out to the participants in the International Nuclear Structure and Decay Data Evaluation Network, it is hoped that a general understanding of them can be gained, which may ultimately lead to a consistent means of dealing with them. 14 refs., 2 figs., 1 tab.

Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-gun, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Differential data for Fe and Pb in ENDF/B-IV, ^{12}C in B-V and ^{7}Li in B-IV, JENDL-3PR1 and PR2 were checked with regard to secondary neutron spectra from (n,n') and (n,2n) reactions by 14 MeV neutrons. This verification was done by making use of neutron energy spectra measured in 14 MeV integral experiments at the OKTAVIAN facility of Osaka University. In comparison with transport calculations by 1-D Sn code NITRAN, it was pointed out that there is some uncertainty in emission spectra from (n,2n) reaction with high energy threshold.

49306 (PNL-SA—14160) **Ultralow background searches for β β-decay, cold dark matter and solar axions.** Avignone, F.T.; Ahlen, S.P.; Brodzinski, R.L.; Dimopolous, S.; Drukier, A.K.; Gelmini, G.; Lynn, B.W.; Miley, H.S.; Reeves, J.H.; Spergel, D.N. (Pacific Northwest Lab., Richland, WA (USA); South Carolina Univ., Columbia (USA). Dept. of Physics; Boston Univ., MA (USA). Dept. of Physics; Stanford Univ., CA (USA). Dept. of Physics; Harvard-Smithsonian Center for Astrophysics, Cambridge, MA (USA); Harvard Univ., Cambridge, MA (USA). Dept. of Physics). Jul 1986. Contract AC06-76RL01830. 6p. (CONF-860741—9). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013592.

From International symposium on weak and electromagnetic interactions in nuclei; Heidelberg, F.R. Germany (1 Jul 1986).

An ultralow background Ge detector in the Homestake gold mine is applied to searches for 0 nu $\beta\beta$-decay, cold dark matter candidates and invisible axions from the sun. A large body of low background Ge data imply <m/sub nu/> 2.3 eV. Particles with spin independent Z^0 exchange interactions and masses between 20 GeV and 5 TeV are excluded as dominant in the galactic halo. Finally, axions with F/2x'/sub e/ < 0.5 x 10^7 GeV are also ruled out. 11 refs., 3 figs.

49307 **Search for the double-β decay of /sup 76/Ge.** Avignone F.T. III; Brodzinski, R.L.; Evans J.C. Jr.; Hensley, W.K.; Miley, H.S.; Reeves, J.H. (University of South Carolina, Columbia, South Carolina 29208). **34**: No. 2, 666-677(Aug 1986).

A systematic study of the radioactive background in materials used in Ge-detector fabrication was conducted prior to the construction of an ultralow-background, 135 cm^3 prototype detector. The background from primordial radioactivities in the new system was lower by factors of between 1.5 x 10^3 and 2.5 x 10^4 when compared to commercial low-background detectors. Data were collected for 8089 h with the detector located 1438 m underground, resulting in improved lower limits for the half-lives for both two-neutrino and neutrinoless $\beta\beta$ decay of /sup 76/Ge to the ground state of /sup 76/Se and for the neutrinoless $\beta\beta$ decay to the first excited state of /sup 76/Se. The results of four recent theoretical calculations are compared in detail and used to extract limits on <m-italic/sub ν/>, the Majorana mass of ν/sub e-italic/, and on the amplitudes of the couplings of right-handed Majorana neutrinos. The best combination of the lowest background data from recent experiments results in a new limit T-italic/sub 1/2/°/sup ν/approx. >3 x 10/sup 23/ yr, corresponding to <m-italic/sub ν/><2.4 eV neglecting right-handed couplings or 2.8 eV including both right-handed neutrino couplings.

49308 **Experimental investigation of double-beta decay in /sup 82/Se.** Elliott, S.R.; Hahn, A.A.; Moe, M.K. (Physics Department, University of California, Irvine, California 92717). **56**: No. 24, 2582-2585(16 Jun 1986).

A time projection chamber with a selenium double-beta decay source as the central electrode has yielded a lower limit of 1.0 x 10/sup 20/ yr at 68% confidence level for the two-neutrino half-life of /sup 82/Se. This limit is consistent with the results of geochemical measurements, and disagrees with the shorter half-life predictions of nuclear theory. For the neutrinoless mode we find a corresponding lower limit of 7 x 10/sup 21/ yr, also at 68% confidence level.

6517 Nuclear Properties And Reactions, A=90-149, Theoretical

49309 (ANL—85-22, pp 55) **Quasielastic transfer strength near the barrier for ^{58}Ni + Sn.** Rehm, K.E.; van den Berg, A.; Freeman, W.S.; Henning, W.; Lee, L.L.; Lesko, K.T.; Schiffer, J.P.; Stephans, G.S.F.; Wolfs, F.L.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In continuation of a program to study the interactions between /sup 58,64/Ni and the even Sn-isotopes, the authors have measured direct reaction channels at energies close to the barrier using the newly developed parallel plate timing detector in the split-pole magnetic spectrograph. Angular distributions for quasielastic neutron transfer reactions measured for the different Sn targets are shown. The integrated cross sections at E/sub lab/ = 247 MeV change from 15 mb for ^{58}Ni + ^{112}Sn to 200 mb for ^{58}Ni + ^{124}Sn. This dependence can be understood as a consequence of the underlying Q-values for the transfer reactions. Comparing these transfer cross sections with the fusion cross sections, the authors again observe that transfer reactions are the dominant processes for reactions induced by medium-weight projectiles at energies in the vicinity of the Coulomb barrier.

49310 (ANL—85-22, pp 57-58) **Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier.** van den Berg, A.M.; Freeman, W.S.; Henning, W.; Lee, L.L.; Lesko, K.T.; Rehm, K.E.; Schiffer, J.P.; Stephans, G.S.F.; Wolfs, F.L.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The Argonne tandem-linac combination was used to study quasielastic transfer reactions induced by ^{58}Ni beams at 330 MeV and ^{64}Ni beams at 341 and 380 MeV, respectively, on the even-A / sup 112,116,120,124/Sn isotopes. Reaction products were momentum analyzed with the split-pole spectrograph and detected in a gas-filled position-sensitive focal-plane detector system. Angular distributions for elastic (+ inelastic) scattering were analyzed using the generalized Fresnel scattering model, which yields the (reduced) reaction cross section. The angular distributions for quasielastic neutron transfer reactions are bell-shaped and peak at angles roughly 10 degrees smaller than the quarter point angle for elastic scattering. The angle-integrated cross sections for one- and two-neutron pickup (stripping) reactions increases (decreases) as a function of the target mass A.

49311 (ANL—85-22, pp 59-60) **Elastic and inelastic scattering for ^{58}Ni + /sup 116,124/Sn.** van den Berg, A.M.; Freeman, W.S.; Henning, W.; Lee, L.L.; Lesko, K.T.; Rehm, K.E.; Schiffer, J.P.; Stephans, G.S.F.; Wolfs, F.L.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

As part of a systematic study of Ni-induced reactions the authors have measured elastic and inelastic scattering to low-lying states for the ^{58}Ni + ^{116}Sn and ^{58}Ni + ^{124}Sn systems at E/sub lab/ = 330 MeV. Thin targets (50 $^{+}$ g/cm^{2}) and the two-wire position information from the heavy-ion focal plane detector of the Enge split-pole spectrograph allowed the authors to determine a virtual focal plane where the energy resolution was ~ 1.5 MeV. The momentum spectra were analyzed using the peakfitting code AUTOFIT and fixed peak positions for the ground-state transitions and the transitions to the 2_1^+ states and their mutual excitation in the Ni- and Sn-isotopes. Results of preliminary Coupled Channel Born Approximation (CCBA) calculations for the system ^{58}Ni + ^{124}Sn are shown.

49312 (ANL—85-22, pp 61-62) **Quasielastic neutron transfer reactions on samarium isotopes.** van den Berg, A.M.; Rehm, K.E.; Kovar, D.G.; Kutschera, W.; Stephans, G.S.F. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

As part of a systematic study of quasielastic transfer reactions on medium-heavy and heavy targets using Ni beams from the Argonne LINAC, the authors studied the ^{58}Ni + Sm reaction at E/sub cm/ = 245 MeV. The targets used were /sup 144,149,150,152,154/Sm which become increasingly deformed with mass number A. The split-pole magnetic spectrograph was used to momentum analyze the reaction products which were detected in a focal-plane gas counter providing unambiguous mass and Z identification. As observed in other heavy-ion-induced transfer reactions, the angular distributions for quasielastic (Q > -30 MeV) neutron-transfer reactions peak at angles somewhat smaller than the quarter-point angle for elastic scattering and they can be fitted with a Gaussian function to extract the angle-integrated cross sections. The cross section for all ^{58}Ni-induced neutron transfer processes increases from σ/sub n/ = 148 mb for the spherical ^{144}Sm to σ/sub n/ = 224 mb for the deformed ^{154}Sm. The authors used the diffraction-model code FAST to investigate whether this increase can be attributed to Q-value and angular momentum matching or might be due to the increase in deformation for the heavier targets.

49313 (ANL—85-22, pp 73-74) **Angular momentum dependent fission barriers for /sup 170-188/pt.** Lesko, K.T.; Henning, W.; Rehm, K.E.; Rosner, G.; Schiffer, J.P.; Stephans, G.S.F.; Zeidman, B.; Freeman, W.S. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have continued their analysis of the fusion-fission cross sections for the reactions /sup 58,64/Ni + /sup 112-124/Sn. The angular distributions of fission fragments for all systems and the angle integrated cross sections have been extracted. The fission excitation functions were added to the previously measured evaporation residue cross sections to obtain the total fusion excitation functions and, subsequently, the fission probability functions. The authors have modelled the decay of the compound nuclei /sup 170-188/Pt using the statistical decay code of Puehlhofer, CASCADE. They have succeeded in reproducing the observed fission competition for all 14 systems using a common set of input parameters for the model.

49314 (ANL—85-22, pp 75) **Limits to fusion in heavy systems.** Henning, W.; Freeman, W.S.; Lee, L.L.; Lesko, K.T.; Stephans, G.S.F. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

All attempts to produce compound nuclei with Z $\geq$ 110 which survive prompt fission have failed up to now. To investigate such systems the authors have started experiments to produce heavy compound nuclei in ^{42}S and ^{36}S induced reactions on targets of ^{171}Yb, ^{181}Ta, /sup 181,184/W, ^{208}Pb and ^{238}U. The measurements were performed with the use of an electrostatic deflector. The data, evaporation residue yields and delayed α particles, are presently being analyzed.

49315 (ANL—85-22, pp 77) **l-distributions in fusion of ^{64}Ni + ^{92}Zr and ^{13}C + ^{144}Sm measured with the Darmstadt-Heidelberg crystal ball.** Khoo, T.L.; Janssens, R.V.F.; Kuehn, W.; Metag, V.; Ruckelshausen, A.; Habs, D.; Groger, H.; Repnow, R.; Hlavac, S.; Simon, R.; Duchin, G. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have previously observed that in fusion of ^{64}Ni and ^{92}Zr there is a suppression of neutron emission, whereas in fusion of ^{13}C and ^{144}Sm into the same compound nucleus the observed neutron multiplicity distribution is close to that expected. Possible explanations for the suppression in terms of anomalously energetic neutrons, unusually large gamma decay widths or an unknown yrast line have been ruled out. It has been suggested that the explanation may lie in a tail to very high l-values arising from, for instance, zero point fluctuations in the near-barrier ^{64}Ni-induced reaction. Therefore, it is germane to directly measure the l-distributions, which in addition, are of crucial interest in understanding the enhancement of sub-barrier fusion cross-sections. It is found that with 225 MeV ^{64}Ni, which is near the barrier, there is significantly larger yield at higher l-values than predicted by an empirical model due to Kailas & Gupta. This observation is consistent with an enhancement of sub-barrier fusion. In contrast, at 239 MeV, l/sub max/ ~ 37 is close to the Kailas-Gupta value. Furthermore, no tail to unexpectedly high-l values is observed, ruling out this possibility as an explanation for the neutron suppression. The l-distributions for the ^{13}C-induced reactions are rather similar to the expected empirical ones.

49316 (ANL—85-22, pp 87-88) **Lifetimes of very high spin states in ^{147}Gd.** Bjornholm, S.; Borggreen, J.; Pedersen, J.; Sletten, G.; Janssens, R.V.F.; Khoo, T.L.; Radfored, D.C. (Niels Bohr Institute, Copenhagen, Denmark). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Our first results on the spectroscopy of very high spin states in ^{147}Gd have been published recently. Shell model calculations tell us also that within a few more units of angular momentum the nu-

cleus now has to find extraordinary ways of producing spin, either by exciting nucleons from the next major shell or by collective rotation. In an attempt to distinguish between these two modes, lifetimes and feeding times were measured by the recoil distance method. The analysis started last year is still continuing. At this stage the results can be summarized as follows: (i) Information on the lifetimes has been obtained for all states along the yrast line with spins I ≧ 75/2 and I ≦ 59/2. (ii) The measured lifetimes confirm the single particle nature of the various states (only small hindrances or enhancements with respect to the Weisskoff estimates are found).

49317 (ANL—85-22, pp 93) **Shell-model states in N = 81-83 nuclei.** Broda, R.; Daly, P.J.; Grabowski, Z.W.; McNeill, J.; Helppi, H.; Janssens, R.V.F.; Khoo, T.L.; Lawson, R.D.; Radford, D.C. (Purdue Univ., West Lafayette, IN). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Using Ni beams from the tandem-linac accelerator and (/sup 58,60/Ni, pn) and (/sup 58,60/Ni, 2pn) reactions, the authors have completed a series of measurements on ^{146}Tb, ^{147}Dy, ^{146}Ho, ^{149}Er, ^{150}Tm and ^{151}Yb. In all the odd-odd nuclei, 10^+ millisecond isomers were observed. Their decay was studied in detail. All observations are in excellent agreement with shell-model considerations, which predict that the 10^+ member of the (πh/sub 11/2/, nuh/sub 11/2/$^{-1}$) multiplet should be a yrast isomer, decaying to the (πh/sub 11/2/, nud/sub 3/2/$^{-1}$)7^- level. These results have been submitted for publication. The level structure of ^{147}Dy has now been established up to ~ 3.7 MeV. Three isomeric levels were observed with respective half-lives of 7, 400 and 16 ns. Guided by the results of shell model calculations, most of the observed levels can be interpreted as seniority-three states arising from the coupling of s/sub 1/2/, d/sub 3/2/ and h/sub 11/2/ neutron holes with πh/sub 11/2/^{2}. The analysis of the data obtained for ^{149}Er and ^{151}Yb is still in progress.

49318 (ECN—179) **On the statistical evaluation of inconsistent measurement results illustrated on the example of the ^{90}Sr half-life.** Zijp, W.L. (Netherlands Energy Research Foundation, Petten). Dec 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703217.

The problem how to make an objective evaluation of inconsistent numerical observations made by different authors or laboratories on the same physical quantity is dealt with. The problem is treated in a practical way in the light of the example on the half-life of ^{90}Sr, and it is to some extent a response to a document by Gray (1985) on the same topic. 5 refs.; 14 tables.

(Komenskeho Univ., Bratislava, Czechoslovakia. Prirodovedecka Fakulta; Technische Univ., Dresden, German Democratic Republic. Sektion Physik). 1985. NTIS (US Sales Only), PC A07/MF A01. File Number DE86703198. (CONF-8510205—Absts.).

From 3. international conference on low-level counting; Bratislava, Czechoslovakia (21 Oct 1985).

49320 (INIS-mf—10407) **Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions.** Blasi, N. (Rijksuniversiteit Groningen (Netherlands)). 29 Oct 1984. 196p. NTIS (US Sales Only), PC A09/MF A01. File Number DE86703151.

This thesis is devoted to the study of one proton transfer reactions, performed with the use of the magnetic spectrograph QMG/2 of the KVI, in two regions of the mass table. Stripping and pickup reactions on the odd-A target nuclei ^{193}Ir and ^{197}Au are described in the first part. The experimental spectroscopic factors obtained are used to test several collective models that are based on coupling between bosons (phonons) and fermions. In the second part, the proton stripping reactions on ^{113}In and ^{115}In are studied. Shell model calculations are performed and applied to the experimental results. Includes Dutch summary; 130 refs.; 60 figs.; 36 tabs.

49321 (INR—1950/IA/PL/A) **Alpha emitters in the region from Ce to Os.** Rurarz, E. (Institute of Nuclear Research, Warsaw (Poland)). 1982. 55p. Energetics and Atomic Energy Information Centre, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

A survey is given of experimental information for alpha emitters in the range from Ce to Os. From experimentally known alpha decay energies some mass values of very neutron deficient nuclei were derived. The knowledge of these mass values makes possible the calculations of the electron capture and proton binding energies. In the range from Sm to Os the parameters of the Geiger-Nuttall type formula for calculation of alpha decay half-lives are derived. The alpha decay barrier penetrabilities and reduced widths for 95 alpha emitters in the region from Ce to Os are calculated and discussed.

49322 (KFK—4071) **Charge radii and moments of tin nuclei by laser spectroscopy.** Anselment, M.; Bekk, K.; Hanser, A.; Hoeffgen, H.; Meisel, G.; Goering, S.; Rebel, H.; Schatz, G. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Apr 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752598.

The isotope shift and hyperfine structure of the optical Sn I resonance transition $5p^2\ ^3P_0 -> 5p6s\ ^3P_1$ at lambda=286.3 nm have been studied for 18 Sn nuclei including 2 isomers. Laser induced resonance fluorescence from a collimated atomic beam of tin was observed using a tunable cw dye laser with frequency doubler. The electromagnetic nuclear moments and changes of the mean square charge radii of the nuclear charge distributions were determined. The results are discussed with respect to the information they provide on the nuclear structure of the nuclei investigated; they are compared with various theoretical models.

49323 (LBL—21532) **Intermediate mass fragment emission from 8 to 40 MeV/u.** Charity, R.J.; McMahan, M.A.; Bowman, D.R.; Liu, Z.H.; McDonald, R.J.; Wozniak, G.J.; Moretta, L.G.; Bradley, S.; Kehoe, W.L.; Megnerey, A.C. Contract AC02-85ER40210;AC03-76SF00098. 8p. (CONF-860270—10). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012800.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

Experimental data for fragmentation in the reactions ^{93}Nb = ^{9}Be, ^{12}C, and ^{27}Al are presented. Data were obtained from the LBL BEVALAC (25 to 40 MeV/u), GSI Unilac (11 to 18 MeV/u) and LBL SuperHILAC. These measurements imply, that over a large range of bombarding energies, intermediate mass fragments are produced by the bineary decay of a compound nucleus-like system. At low bombarding energies, these systems are associated with a complete fusion reaction, whereas for the larger energies the initial system is formed in an incomplete fusion reaction. The data shows a smooth evolution from the lower energies, where the statistical emission of intermediate mass fragments is well established, to the higher, intermediate energy regime. 4 refs., 2 figs.

49324 (OUP—83-35) **Deep-lying νhsub(11/2) hole states in ^{145}Nd.** Ramsoey, T.; Rekstad, J.; Henriquez, A.; Ingebretsen, F.; Guttormsen, M.; Hammaren, E.; Thorsteinsen, T.F. (Oslo Univ. (Norway). Fysisk Inst.; Jyvaeskylae Univ. (Finland). Dept. of Physics; Bergen Univ. (Norway). Dept. of Physics). 1983. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703242.

The level scheme of ^{148}Nd has been studied by measuring γ-rays following the (^{3}He, α) pick-up reaction. Up to the neutron binding energy of Bsub(n)=5.8 MeV, the γ-ray multiplicity has been measured as a function of excitation energy. Assuming that Fermi gas conditions are appropriate in the continuum part of the

level scheme, the level density parameter is determinted to be a=(14.5 +- 2.0) MeV^{-1}. The νhsub(11/2) strength function has been extracted by means of a coincidence filter technique. An almost uniform νhsub(11/2) strength function in the region 3.2-5.8 MeV of excitation energy, and a summed strength of only 50% of the shell model strength, indicate a fragmentation to higher energies.

49325 **Mass of /sup 146/Gd.** Mann, L.G.; Lanier, R.G.; Struble, G.L.; Naumann, R.A.; Kouzes, R.T. (Nuclear Chemistry Division, Lawrence Livermore National Laboratory University of California, Livermore, California 94550). 34: No. 2, 729-731(Aug 1986).

We have measured the Q-italic value of the /sup 148/Gd(p,t)/sup 146/Gd reaction by comparison with the /sup 65/Cu(p,t)/sup 63/Cu calibration reaction. The /sup 148/Gd target was fabricated from material produced in a Ta target. The tritons were analyzed with a quadrupole—dipole-dipole-dipole spectrometer. By combining the (p,t) Q-italic value with the /sup 148/Gd mass, we obtain -76 096 +- 6 keV for the /sup 146/Gd mass excess.

49326 **Decay of 83-min /sup 139/Ba to levels of /sup 139/La and the decay of 18-min /sup 141/Ba to levels of /sup 141/La.** Faller, S.H.; Stone, C.A.; Robertson, J.D.; Chung, C.; Aras, N.K.; Walters, W.B.; Gill, R.L.; Piotrowski, A. (Department of Chemistry, University of Maryland, College Park, Maryland 20742). 34: No. 2, 654-665(Aug 1986).

The level structures of odd proton /sup 139/La and /sup 141/La have been studied in γ-ray singles, Compton-suppressed singles, coincidence, and angular correlation experiments. No evidence was observed to support the existence of any levels in /sup 139/La in the gap between the 166-keV d-italic/sub 5/2/ level and the 1209-keV $(1/2)^+$ level, even though data were accumulated long enough to observe indirect feeding of the $(1/2)^+$ level. Additional spin and parity assignments are suggested for a number of levels in /sup 141/La based on angular correlation measurements.

49327 **Spectroscopic study of the high-spin states in /sup 135/Pr.** Semkow, T.M.; Sarantites, D.G.; Honkanen, K.; Abenante, V.; Adler, a.L.A.; Baktash, C.; Johnson, N.R.; Lee, I.Y.; Oshima, M.; Schutz, Y.; Chen, Y.S.; Saladin, J.X.; Chen, C.Y.; Dietzsch, O.; Larabee, A.J.; Riedinger, L.L.; Griffin, H.C. (Department of Chemistry, Washington University, St. Louis, Missouri 63130). 34: No. 2, 523-535(Aug 1986).

An in-beam spectroscopic study of /sup 135/Pr was made using a 91 MeV /sup 120/Sn(/sup 19/F,4n) reaction. Two positive parity bands were observed based on the g-italic/sub 7/2/ proton orbital with $(\pi,\alpha) = (+, +- (1/2))$. A strongly populated negative parity (-,-(1/2)) band was also seen (based on the h-italic/sub 11/2/ proton orbital). The unfavored (-,+(1/2)) structure may also be present. In both the positive and negative parity bands the first backbend is attributed to the alignment of two h-italic/sub 11/2/ protons on the basis of cranked shell model calculations. The crossing frequency was found to increase in the (-,-(1/2)) band because of blocking of the h-italic/sub 11/2/ orbital. The alignment of protons in /sup 135/Pr causes a shift of γ towards ~+10° with nearly collective prolate deformation. Also, there is some evidence for a second backbend and an upbend in the case of positive and negative parity bands, respectively. They could result from the alignment of the h-italic/sub 11/2/ neutrons.

49328 **Coincidence measurements of intermediate mass fragments produced in /sup 32/S-induced reactions on Ag at E-italic/A-italic = 22.5 MeV.** Fields, D.J.; Lynch, W.G.; Nayak, T.K.; Tsang, M.B.; Chitwood, C.B.; Gelbke, C.K.; Morse, R.; Wilczynski, J.; Awes, T.C.; Ferguson, R.L.; Plasil, F.; Obenshain, F.E.; Young, G.R. (National Superconducting Cyclotron Laboratory, Michigan State University, East Lansing, Michigan 48824). 34: No. 2, 536-551(Aug 1986).

Single- and two-particle inclusive cross sections for the production of light nuclei and intermediate mass fragments, 3< or =Z-italic< or =24, were measured at angles well beyond the grazing angle for /sup 32/S-induced reactions on Ag at 720 MeV. Information about fragment multiplicities and reaction dynamics was extracted from measurements of light particles, intermediate mass fragments, and targetlike residues in coincidence with intermediate mass fragments. Incomplete linear momentum transfer and non-compound-particle emission are important features of collisions producing intermediate mass fragments. About half of the incident kinetic energy in these collisions is converted into internal excitation. The mean multiplicity of intermediate mass fragments is of the order of 1. Particle correlations are strongly enhanced in the plane which contains the intermediate mass fragment and the beam axis.

49329 **(INR—1931/1/9A/PL/A) Evaluation of (n, 2n) reaction cross sections for ^{46}Ti, ^{107}Ag and ^{109}Ag.** Adamski, L.; Herman, M.; Marcinkowski, A.; An Jong Do. (Institute of Nuclear Research, Warsaw (Poland)). 1982. 26p. Energetics and Atomic Energy Information Centre, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

Paper contains an evaluation of four reaction cross sections: ^{46}Ti(n, 2n)^{45}Ti (from threshold to 20 MeV), ^{107}Ag(n, 2n)^{106}Ag (from threshold to 20 MeV), ^{107}Ag(n, 2n) sup(106m)Ag (from threshold to 28 MeV), ^{109}Ag (n, 2n) sup(108g)Ag (from threshold to 20 MeV). Recommended curves are based on experimental data partly supported by calculation using a combined compound-precompound model. For the ^{107}Ag(n, 2n) sup(106g)Ag reaction the results of own measurements in the energy range 13.0-17.9 MeV are given.

49330 (ANL—85-22, pp 28-32) **High-spin, two-particle, one-hole, stretched states excited by proton induced negative pion production in nuclei.** Green, M.C.; Brown, B.A.; Brown, J.; Jacobs, W.W.; Jolivette, P.L.; Throwe, T.G.; Vigdor, S.E.; Ward, T.E. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have observed the cross section and analyzing-power distributions of 2p-1h configurations from targets of oxygen, calcium, and strontium. Each target isotope was chosen to have the highest filled neutron orbital correspond to an empty proton orbital. Respectively, the observed states are based on the configurations $(1d/sub\ 5/2/)^3$, $(1f/sub\ 7/2/)^3$, and $(1g/sub\ 9/2/)^3$ having spins as large as $13/2^+$, $19/2^-$, and $25/2^+$. From the authors' strontium measurements, they have identified previously unknown $25/2^+$ and $21/2^+$ states in ^{90}Zr. Relative cross sections for these two transitions are well reproduced by simple model calculations. The analyzing power distributions for the stretched-state transitions seem to show a yet unexplained mass-independent signature. This past fall the authors carried out measurements on samarium and lead isotopes hoping to identify high-spin states based on $(1h/sub\ 11/2/)^3$ and $(1i/sub\ 13/2/)^3$ 2p-1h configurations. On-line spectra indicate some reaction cross section at the predicted excitation, though experimental energy resolution may prevent identification of particular states. Off-line data analysis is currently under way at IUCF.

49331 (ANL—85-22, pp 75) **Evaporation residue cross-sections in fusion of ^{64}Ni + ^{92}Zr and ^{13}C + ^{144}Sm.** Janssens, R.V.F.; Holzmann, R.; Henning, W.; Khoo, T.L.; Lesko, K.T.; Stephans, G.S.F.; Radford, D.C.; van den Berg, A. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

As part of a series of measurements to understand the origin of neutron suppression in ^{64}Ni + ^{92}Zr fusion, the authors have measured the evaporation residue cross-sections. These measurements have also a direct bearing on the problem of enhanced sub-barrier fusion. Residue cross-section in fusion of ^{64}Ni + ^{92}Zr and ^{13}C + ^{144}Sm have been measured over a wide range of bombarding energies, including those below the Coulomb barrier. Using a technique previously developed here at ANL, the residues were

separated from the beam by electrostatic deflection and detected at 4 angles including 0°. Analysis of the data is nearing completion.

49332 (ANL—85-22, pp 80-81) **Feeding times of high spin states in /sup 152,154/Dy: probes of nuclear structure above the yrast line.** Khoo, T.L.; Chowdhury, P.; Frekers, D.; Janssens, R.V.F.; Azgui, F.; Emling, H.; Grosse, E.; Michel, C.; Simon, R.S.; Spreng, W.; Wollersheim, H.J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Measurements of feeding times of high spin yrast states up to spin 30 h in ^{154}Dy and 36 h in ^{152}Dy were utilized to obtain information about possible spin dependent shape changes. The reactions ^{26}Mg (^{134}Xe,5n), ^{124}Sn (^{34}S,4n) and ^{26}Mg (^{128}Xe,5n) ^{128}Sn, (^{34}S,4n) were used to populate the high spin states in ^{154}Dy and ^{152}Dy, respectively. The experiments with sulfur beams were conducted at ANL, while those with Xe were performed at GSI. Feeding times as well as lifetimes were determined with the recoil distance technique. Slow feeding times into high spin states of ~ 10 ps were observed, showing for the first time that they are not always fast (< 1 ps), as has been previously assumed.

49333 (ANL—85-22, pp 82-83) **Total γ-spectrum from ^{153}Ho measured with BGO Compton-suppressed spectrometers.** Radford, D.C.; Khoo, T.L.; Ahmad, I.; Helppi, H.; Holzmann, R.; Janssens, R.V.F.; Driggert, M.; Garg, U. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have employed two Compton-suppressed-spectrometers to measure the α spectra emitted at 0° and 90° by ^{153}Ho formed in the reaction 165 MeV ^{37}Cl + ^{120}Sn. By tagging on the decay of a 229 ns isomer in this nucleus it was possible to obtain spectra emitted by this and only this nucleus. The combination of Compton-suppression and selection of a single-channel with delayed coincidence tagging produces an impressively clean spectrum. The CSS's, each consisting of a Ge detector with a BGO shield, are prototypes of the larger system being constructed by the Notre Dame-Argonne collaboration. The virtue of using a CSS, as opposed to a NaI detector, is that all features of the spectrum, including sharp lines, can be distinguished in the same detector. These data, the feeding times, and other available information suggest that the γ-decay starts out with a fast collective E2 cascade and is then funnelled, in a small spin range (ΔI ~ 8), into the aligned-particle configurations of the yrast line through stats of similar character. The data suggests a definite paucity of collective excitations in the vicinity (≦ 2 Me) of the yrast line.

49334 (ANL—85-22, pp 85-87) **K X-ray yields, M1 strength and the γ-ray quasicontinuum in ^{153}Ho.** Janssenns, R.V.F.; Radford, D.C.; Ahmad, I.; van den Berg, A.M. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The study of M1 strength in quasicontinuum spectra of nuclei at the beginning of the rare earth region could provide important information on the nature of collective motion known to occur at high spin. With this in mind, the authors have performed measurements of K-shell ionization yields in ^{153}Ho, as a function of the incident beam energy, and thus also as a function of angular momentum. X-ray spectra from a small Ge detector, as well as γ-ray spectra from a large Ge detector and a 5" x 5" NaI(Tl) detector were recorded for the ^{120}Sn(^{37}Cl,4n) reaction at 6 beam energies between 150 and 175 MeV. At the lowest beam energies the measured x-ray multiplicity is essentially comparable with that calculated from the internal conversion of the known discrete lines. However, as more angular momentum is added to the system the increase in the measured x-ray multiplicity is found to be much larger than the one calculated. This result implies the presence of other highly converted transitions populated at spins in excess of 40 h. The present analysis provides evidence that low-energy M1 strength occurs at very high spin in ^{153}Ho. A substantial fraction of this strength is carried through very weak lines with E/sub γ/ ≦ 350 keV.

49335 (ANL—85-22, pp 88) **Study of high spin states in ^{155}Ho.** Radford, D.C.; Helppi, H.; Janssens, R.V.F.; Khoo, T.L.; Broda, R.; Daly, P.J.; Grabowski, Z.W.; McNeill, J. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Changes in the character of yrast levels are of particular interest since they are a sensitive test of our understanding of the interplay between collective and single-particle modes of excitation. To further extend the systematics of the transition the authors have chosen to study high-spin states in ^{155}Ho, an isotone of ^{154}Dy. The analysis of an angular distribution measurement and of a γ-γ coincidence experiment performed last year has continued but is rather difficult. This is due to the complexity of the decay scheme which translates into the occurrence of a large number of weak γ-rays difficult to place in a level scheme consistent with all the data. Nevertheless, preliminary results indicate a transition to an oblate shape at a spin in excess of 55/2 h. This shape change is probably responsible, at least in part, for the complexity of the γ-decay mentioned above.

49336 (ANL—85-22, pp 89-90) **Nature of the backbending in the Os-Ir-Pt region.** Garg, U.; Marshalek, E.R.; Chaudhury, A.; Funk, E.G.; Kaczarowski, R.; Mihelich, J.W.; Janssens, R.V.F.; Radford, D.C.; van den Berg, A.M. (Univ. of Notre Dame, South Bend, IN). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The structure of ^{181}Ir was investigated towards higher spins through the measurement of γ-γ coincidences with the ^{150}Nd(^{35}Cl,4n) reaction. A backbending was observed in the h/sub 9/2/ 1/2⁻[541] band at a frequency h omega ~ 0.3 MeV with Δi/ sub x/ ~ 6.5 h. In contrast, only an upbend is measured near the same frequency in the core nucleus ^{180}Os. The nature of this backbend was explored in the framework of the cranked Hartree-Fock-Boguliubov approximation. Good agreement between the data and the calculations is obtained for ^{180}Os where the upbending is calculated to arise from the rotation-alignment of two i/sub 13/2/ neutrons. A similar upbend is predicted for the h/sub 9/2/ 1/2⁻[541] band in ^{181}Ir. Thus, the model cannot explain how the upbend in ^{180}Os mutates into a backbend in ^{181}Ir.

49337 (ANL—85-22, pp 91-92) **Recoil distance lifetime measurements in ^{194}Pt.** Garg, U.; Chaudhury, A.; Drigert, M.W.; Funk, E.G.; Mihelich, J.W.; Radford, D.C.; Holzmann, R.; Janssens, R.V.F.; Khoo, T.L.; Helppi, H. (Univ. of Notre Dame, South Bend, IN). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The lifetimes of the levels in the yrast band of ^{194}Pt were measured with the ^{154}Sm(^{34}S,4n) reaction at 160 MeV using the ANL plunger apparatus in conjunction with the Sum spectrometer. The results from a preliminary analysis of the authors data clearly show that the B(E2) values indeed increase significantly over spins 2^+ to 10^+ as predicted by the mixing discussed above. The increase by a factor of almost 2.5 implies that the mixing is substantial. In addition, a decline of the B(E2) values beyond spin 10^+ is also observed. The latter result is intriguing and might be indicative of the onset of triaxiality. Extension of the measurements to the neighboring /sup 186,182/Pt isotopes are planned.

49338 (BNL-NCS—37975) **Neutron cross sections for ^{152}Gd and ^{153}Gd.** Holden, N.E. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 5p. (CONF-8605158—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86012708.

From Department of Energy nuclear data committee meeting; Germantown, MD, USA (1 May 1986).

Cross section data is tabulated for ^{152}Gd and ^{153}Gd. Resonance data is given for ^{152}Gd. Both reported and revised measurements are presented for cross sections and resonance parameters. Recommendations for further cross section and resonance research for these two isotopes are made. (DWL). 15 ref., 3 tabs.

49339 (CEA-CONF—8021) **Total photon absorption.** Carlos, P. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Jun 1985. 27p. (CONF-850634—5; DPh-N-S—2283). NTIS (US Sales Only), PC A03/MF A01. File Number DE86750848.

From International school for intermediate energy nuclear physics; Veronna, Italy (20 Jun 1985).

The present discussion is limited to a presentation of the most recent total photonuclear absorption experiments performed with real photons at intermediate energy, and more precisely in the region of nucleon resonances. The main sources of real photons are briefly reviewed and the experimental procedures used for total photonuclear absorption cross section measurements. The main results obtained below 140 MeV photon energy as well as above 2 GeV are recalled. The experimental study of total photonuclear absorption in the nuclear resonance region (140 MeV<E<2 GeV) is still at its beginning and some results are presented.

(Comision Nacional de Energia Atomica, Buenos Aires, Argentina; Sao Paulo Univ., Brazil. Inst. de Fisica). 1985. NTIS (US Sales Only), PC A05/MF A01. File Number DE86703283.

In Annual report 1983-1984. Low energy nuclear physics-Experiment and theory.

49343 (OUP—86-08) **Reaction dependence in the γ-decay of highly excited rare earth nuclei.** Rekstad, J.; Atac, A.; Guttormsen, M.; Ramsoey, T.; Olsen, J.B.; Ingebretsen, F. (Oslo Univ. (Norway). Fysisk Inst.). Mar 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703243.

The γ-decay from states with low spin at high excitation energy has been studied using the (^{3}He,^{3}He)^{162}Dy and (^{3}He,^{4}He)^{162}Dy reactions. The γ-ray spectra obtained in the two reactions are almost identical and do not reveal any reaction dependence.

49344 **Direct laboratory determination of the ^{187}Re half-life.** Lindner, M.; Leich, D.A.; Borg, R.J.; Russ, G.P.; Bazan, J.M.; Simons, D.S.; Date, A.R. (Lawrence Livermore National Lab., CA, USA; National Bureau of Standards, Gaithersburg, MD, USA; British Geological Survey, London, UK). 320: No. 6059, 246-248(20 Mar 1986). Contract W-7405-ENG-48.

The authors report a half-life of (4.35 +- 0.13) x 10^{10} yr, for ^{187}Re based on the growth of ^{187}Os over a 4-yr period into a large source of osmium-free rhenium. Since this result agrees with the best geochemically determined values, no significant revision of the present galactic age limits based on the geochemical values is necessary. The agreement at the 5% level of the decay rates determined on laboratory and meteorite-age timescales places a tight constraint on cosmological models in which fundamental 'constants' are allowed to vary. In particular, the fine-structure constant, α, must have changed by less than one part in 10^8 over the past 4.5 x 10^9 yr.

49345 (ANL—85-22, pp 49) **Quasi-elastic processes in Si-induced reactions on Pb and Ca.** Kolata, J.J.; Vojtech, R.; Kovar, D.G.; Rosner, G.; Rehm, K.E.; Stephans, G.S.F.; Lesko, K.T.; Vineyard, M.F. (Univ. of Notre Dame, IN). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The previous study of quasielastic processes (elastic and inelastic scattering and few-nucleon transfer) induced by ^{28}Si on targets of ^{40}Ca and ^{208}Pb was extended to new bombarding energies and additional projectile-target combinations. Measurements were performed for ^{28}Si + ^{208}Pb at E/sub Lab/ = 165 MeV to complement previouly obtained results at E/sub Lab/ = 225 MeV, and for ^{28}Si, ^{30}Si + ^{208}Pb and ^{30}Si + ^{208}Pb at E/sub Lab/ = 225 MeV to study the influence of Q-values and nuclear structure. In these measurements, performed with the split-pole magnetic spectrograph, energy resolutions of 400 keV were achieved allowing study of transitions to resolved states of the final nucleus. The ^{28}Si + ^{40}Ca data have been analyzed to extract elastic, inelastic, and transfer angular distributions. These seem to display neither very strong transfer cross sections, nor strong perturbations of the elastic and inelastic scattering by coupling to the ^{28}Si 2+ state. Detailed DWBA and CCBA calculations are in progress. The Si = Pb data taken this year are presently being analyzed.

49346 (ANL—85-22, pp 50-51) **Energy dependence of quasi-elastic heavy ion reactions.** Rehm, K.E.; van den Berg, A.; Kovar, D.G.; Kutschera, W.; Lee, L.L.; Rosner, G.; Stephans, G.S.F. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have measured the strength of different reaction channels for the system /sup 58,64/Ni + ^{208}Pb in the energy range 345-380 MeV, which is about 15-25% above the Coulomb barrier. The cross sections for one and two neutron transfer stay constant in this energy range while the integrated cross sections for charge transfer decrease with decreasing energy. In relation to the total reaction cross section which rapidly increases with energy, this implies that neutron transfer processes are increasingly more important at energies close to the barrier. The average Q-values for these channels are slightly negative.

49347 (ANL—85-22, pp 149-150) **^{16}O + ^{208}Pb near the Coulomb barrier.** Pieper, S.C.; Rhoades-Brown, M.; Landowne, S. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

There exists data for elastic, inelastic, transfer and fusion reactions of ^{16}O + ^{208}Pb at energies below and above the Coulomb barrier. The authors have attempted to describe all of this data using coupled-channels calculations with ad hoc form factors for the transfer channels and an incoming-wave boundary condition for the fusion channel. Because all of the flux lost from the elastic channel is thus explicitly accounted for, the authors need no imaginary optical potential. The real part of the optical potential and the form factors are energy independent. The authors find that they reproduce the elastic and fusion cross sections very well. The trends of the transfer cross sections are also predicted.

From 9. course on nucleus-nucleus collisions from the Coulomb barrier up to the quark-gluon plasma; Erice, Italy (10 Apr 1985).

Heavy ions like Ar or Kr are now available at bombarding energies between approximately 20 and 50 MeV/u at GANIL or SARA. They can be used to investigate what happens when a heavy projectile interacts by nuclear forces with a heavy target. In these lectures we shall try to present some aspects of these results and see whether some general features emerge in this bombarding energy region. In the first lecture we shall summarize the results which have been obtained in the experiments where one looks at how much linear momentum the projectile can transfer to a fused system. In the second lecture we shall describe very recent results obtained with Kr projectiles. Finally, in the last part we shall investigate, from the theoretical point of view, whether nuclei could be mechanically unstable. This will be done in the framework of a time dependent Thomas Fermi approach. We shall see that compression, can be a cause of mechanical instability.

49349 **(DOE/ER/40048—162) Heavy ion fusion and fission reactions.** Vandenbosch, R. (Washington Univ., Seattle (USA). Nuclear Physics Lab.). 1986. Contract AC06-81ER40048. 24p. (CONF-8605150—2). NTIS, PC A02/MF A01. File Number DE86013147.

From Beijing symposium on physics at tandem; Beijing, China (26 May 1986).

Various methods of probing the partial wave distribution are reviewed and new results using fission fragment angular distributions are discussed. Evidence that existing models of fusion reactions near-barrier and sub-barrier energies underestimate the mean-square spin values are presented. The dynamics of fusion reactions at higher energies are also discussed. The controversy over the interpretation of fission fragment and angular distributions are reviewed. Both statistical scission models and dynamical models with incomplete K mixing are discussed. New developments related to the effective moment of inertia of the saddlepoint shape are presented.

File Number DE85781595. (CONF-8403127—).

From 5. Nordic meeting on nuclear physics; Jyvaskyla, Finland (12 Mar 1984).

The present work focusses attention on excited high-spin states in ^{200,201}Po, with emphasis on the questions - are there collective effects in these nuclei or can they still be depicted as 'shell-model nuclei'.

49352 **(INIS-mf—10200) Neutron emission in heavy ion reactions as measure for the excitation energy and the transfer of linear momentum - experiments with a 4π-scintillator tank.** Ingold, G. (Freie Univ. Berlin (Germany, F.R.). Fachbereich Physik). 15 Mar 1985. 119p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE86752603.

In the present thesis the measurement parameter 'neutrons multiplicity' is introduced for experiments with heavy ions by a 4π scintillator tank for the first time inclusive multiplicity distributions were measured in coincidence with projectile-like fragments, with light charged particles, and with heavy reaction products from fusion-like processes for ^{20}Ne+^{197}Au and ^{20}Ne+^{238}U at 220 MeV, 290 MeV, and 400 MeV. The inclusive spectra show a characteristic partition for the neutron emission from peripheral and central collision. For the peripheral collisions the components for the transfer and the projectile break-up in the projectile-like spectra can be discriminated. For the more central collisions a new method for the determination of the mean linear momentum transfer is presented. From the inelastic scattering to the complete fusion to each neutron number an impact-parameter range can be assigned. A strong correlation is observed between the mass transferred from the projectile to the target, the momentum, and the energy transfer. With increasing incident energy the mean momentum transfer becomes more incomplete. For the missing momentum transfer preequilibrium particles are responsible the contribution of which in the neutron number spectra for the light evaporated particles can be well separated from the break-up respectively evaporation component. Angular distributions of fission fragments could by this be measured for the first time in dependence on the linear momentum transfer. The slope of the anisotropy also indicates a strong correlation between the momentum and angular momentum transfer. The latter shows a saturation at high spins. The determination of effective moments of inertia of the fissioning nuclei and their comparison with the predictions of the model of a rotating liquid drop becomes possible for differentially posed spin windows.

49353 **(LBL—21580) Transfer and breakup reactions at intermediate energies.** Stokstad, R.G. (Lawrence Berkeley Lab., CA (USA). Nuclear Science Div.). Apr 1986. Contract AC03-76SF00098. 28p. (CONF-8604165—8). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86013199.

From International conference on heavy ion physics; Rochester, NY, USA (21 Apr 1986).

The origin of the quasi-elastic peak in peripheral heavy-ion reactions is discussed in terms of inelastic scattering and transfer reactions to unbound states of the primary projectile-like fragment. The situation is analogous to the use of reverse kinematics in fusion reactions, a technique in which the object of study is moving with nearly the beam velocity. It appears that several important features of the quasi-elastic peak may be explained by this approach. Projectile-breakup reactions have attractive features for the study of nuclear structure. They may also be used to determine the partition of excitation energy in peripheral reactions. At intermediate energies, neutron-pickup reactions leading to four-body final states become important. Examples of experiments are presented that illustrate these points. 15 refs., 14 figs.

49354 **/sup 208/Pb+n reaction and the mean nuclear field near threshold.** Horen, D.J.; Johnson, C.H.; Fowler, J.L.; MacKellar, A.D.; Castel, B. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **34**: No. 2, 429-442(Aug 1986). Contract AC05-84OR21400.

Measurement of the total and differential elastic cross sections for the /sup 208/Pb+n reaction are reported for the neutron energy range E-italic = 50—1005 keV. The data have been analyzed in terms of partial waves using the R-italic-matrix formalism. The results were used to deduce optical model potentials near threshold. When the real part is expressed solely in terms of an "effective" volume and surface spin-orbit components, it is found that the depth of the "effective" volume potential exhibits an l-italicJ-italic dependence. It is noted that because of differences in the continuum wave functions in the surface region, such an effect could arise if the actual potential contained a real surface term. Relevance to the "Fermi surface anomaly" is mentioned. The observed reduced neutron strengths are compared with predictions from three microscopic models and good agreement is found.

49355 **Expanding pion emitting source in Ar on Pb collisions.** Beavis, D.; Chu, S.Y.; Fung, S.Y.; Keane, D.; Liu, Y.M.; VanDalen, G.; Vient, M. (Department of Physics, University of California, Riverside, California 92521). **34**: No. 2, 757-760(Aug 1986).

We report results of a pion interferometry analysis for central collisions of 1.8 GeV/nucleon Ar on Pb at the Bevalac streamer chamber. The statistics are sufficient to allow a detailed study of the spatial structure of the pion emitting source. The dependence of the size of the source on the average magnitude of the momenta of the emitted pion pairs is consistent with the picture of an expanding

pion source. There are also indications that the Ar nucleus is completely stopped by the Pb target in the most central collisions.

49356 **Giant resonance structure in /sup 208/Pb measured using the (p,p/sup '/) reaction at 334 MeV.** Bertrand, F.E.; Gross, E.E.; Horen, D.J.; Sayer, R.O.; Sjoreen, T.P.; McDaniels, D.K.; Lisantti, J.; Tinsley, J.R.; Swenson, L.W.; McClelland, J.B. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **34**: No. 1, 45-59(Jul 1986). Contract AC05-84OR21400.

The structure of giant resonances in /sup 208/Pb has been studied using inelastic scattering of 334-MeV polarized protons. Data were obtained with 70-keV energy resolution over an angular range from 2—13 deg and the spectra were measured over an excitation energy range from 0—25 MeV. The results show that the quadrupole resonance strength is divided into two main components, one centered at 10.6 MeV containing 70% of the energy-weighted sum rule in a 2-MeV wide peak and a second component composed of several discrete peaks located between 7 and 9 MeV which deplete a total of approximately 20% of the energy-weighted sum rule. The giant monopole and dipole resonances as well as a hexadecapole resonance are observed. Measurements of differential cross sections for elastic scattering and inelastic scattering to low-lying 3^-, 2^+, and 4^+ levels are presented. Comparison of these data with collective model direct reaction calculations shows the calculations to correctly describe the shape and magnitude of the cross sections when normalized to the known transition rates for each level.

49357 **/sup 218/Ra α reduced width and its consequences for α clustering in the heavy elements.** Toth, K.S.; Kim, H.J.; Rao, M.N.; Mlekodaj, R.L. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **56**: No. 22, 2360-2363(2 Jun 1986). Contract AC05-84OR21400;AC05-76OR00033.

Nuclei of /sup 218/Ra were produced in the reaction /sup 208/Pb(/sup 13/C,3n-italic). After being separated from the beam by a velocity filter, they were implanted in a Si(Au) surface-barrier detector and their α-particle decays were observed in the same detector. From these α-decay events the half-life of /sup 218/Ra was measured to be 25.6 +- 1.1 μs, almost a factor of 2 greater than the previously reported value of 14 +- 2 μs. The resultant α width fits well into the overall picture of α-decay-rate systematics and weakens one piece of evidence quoted for the existence of α clusters in heavy elements.

49358 (ANL—85-22, pp 39) **Beta spectra following the spontaneous fission of ^{252}Cf.** Wark, D.; Garvey, G.; Boehm, F.; Camp, J. (California Institute of Technology, Pasadena). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Neutrino-oscillation studies using reactor sources can be made much more sensitive if the nu spectrum from the reactor is known. The fission of a heavy nucleus such as Cf or U creates neutron-rich nuclei so far from the valley of stability that their beta-decay spectra are not known. Thus a model must be employed to predict the overall beta-decay spectrum and the attendant nu spectrum. In order to test the reliability of the procedure in use the beta spectrum of the fission fragments following ^{252}Cf fission is being measured to an accuracy of 3% in shape and 5% in total yield. An actively-collimated, flat-field beta spectrometer is used.

49359 (ANL—85-22, pp 101-103) **Spontaneous emission of ^{14}C from ^{223}Ra.** Kutschera, W.; Ahmad, I.; Armatto, S.G. III; Friedman, A.M.; Gindler, J.E.; Henning, W.; Ishii, T.; Paul, M.; Rehm, K.E. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Rose and Jones recently discovered in an ingeniously simple experiment that ^{223}Ra, an α emitter with a half-life of 11.4 days, occasionally emits ^{14}C nuclei of 29.8 MeV energy. The branching ratio relative to α decay was measured to be (8.5 +/- 2.5) x 10^{-10}. ^{223}Ra occurs in the natural decay chain of ^{235}U, with ^{227}Ac being a convenient precursor and source material. In the present study the authors have confirmed the spontaneous emission of ^{14}C from ^{223}Ra and unambiguously identified the mass of the emitted particles.

49360 **(DOE/ER/40165—1) Measurement of the fission cross section of ^{238}Pu.** Alam, B.; Block, R.C.; Slovacek, R.E.; Hoff, R.W. (Rensselaer Polytechnic Inst., Troy, NY (USA). Gaerttner LINAC Lab.; Knolls Atomic Power Lab., Schenectady, NY (USA); Lawrence Livermore National Lab., CA (USA)). 1986. Contract FG02-84ER40165. 6p. (CONF-860906—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE86007603.

From Advances in reactor physics and safety meeting; Saratoga Springs, NY, USA (17 Sep 1986).

A measurement of the neutron-induced fission cross section of ^{238}Pu from 0.1 eV through 100 keV is described. The technique employed was to use the large neutron flux from the Rensselaer Intense Neutron Spectrometer to obtain an adequate ratio of the neutron-induced fission signal to the spontaneous fission background signal. A special fission chamber design employing multiple pairs of hemispherical electrodes coupled with fast electronics combine to suppress the alpha pile-up effects. The counting data were corrected for dead time losses, spontaneous fission background and flux shape variations. The corrected ^{238}Pu data were then normalized with the resolution-broadened ^{238}Pu ENDF/B-V library cross-section at the peaks of the 9.6 eV and 18.3 eV resonances.

49361 **(DOE/ER/40165—4) Fission cross section measurement of ^{242}Cm and ^{243}Pu. Final report, June 1, 1984-June 30, 1986.** Block, R.C. (Rensselaer Polytechnic Inst., Troy, NY (USA)). Jul 1986. Contract FG02-84ER40165. 6p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86013663.

The neutron fission cross sections of microgram quantities of Cm-242 and Pu-238 have been measured at the RPI Gaerttner LINAC Laboratory with the Rensselaer Intense Neutron Spectrometer (RINS) system over the energy range from 0.1 eV to 100 keV. A fission chamber with hemispherical electrodes was constructed for these measurements which, along with high-speed electronics, enabled fission signals to be clearly separated from alpha pileup signals. 2 refs., 1 fig.

49362 **(INIS-mf—10410) Decay of the giant monopole resonance in heavy nuclei.** Brandenburg, S. (Rijksuniversiteit Groningen (Netherlands)). 30 Aug 1985. 107p. NTIS (US Sales Only), PC A06/MF A01. File Number DE86703152.

In this thesis an experimental study of the properties of the giant monopole resonance (GMR) in nuclei is described. The main subject is the study of the neutron decay of the GMR in ^{208}Pb, and the fission decay of the GMR in ^{238}U. Furthermore the strength distribution and decay properties of the monopole strength in ^{24}Mg and ^{40}Ca were studied. The strength distribution of the isoscalar monopole (and also of the isoscalar dipole) strength as obtained from the angular distribution of the excited strength at small scattering angles are discussed. For the excitation of the GMR inelastic scattering at very small scattering angles, including 0°, of 120 MeV α-particles was employed. The experimental technique for performing this type of measurement at the KVI was developed in the course of this study and is the subject of a separate chapter. Includes Dutch summary; 310 refs.; 55 figs.; 9 tabs.

49363 **(NEANDC(J)—121/U) Evaluation of neutron nuclear data for ^{250}Cf and ^{251}Cf.** Nakagawa, Tsueno. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Jun 1986. 35p. (JAERI-M—86-086; INDC(JPN)—107/L). Japan Atomic Energy Research Institute, Dept. of Technical Information, Tokaimura, NaKagun, Japan. File Number TI86901539.

Nuclear data of ^{250}Cf and ^{251}Cf have been evaluated in the energy range from 10^{-5} eV to 20 MeV. There exist only a few experimental data for the cross sections of both the isotopes, that is, the cross sections at the thermal neutron energy and the resonance

integrals. Therefore, the present evaluation was based on systematic trends of the data and the claculations with the optical, statistical and evaporation models. Cross sections evaluated in this work are the total, elastic and inelastic scattering, fission, radiative capture, (n,2n), (n,3n) and (n,4n) reaction cross sections. In the energy range below 150 eV, hypothetical resonance levels were generated so as to reproduce the measured thermal cross sections and resonance integrals. Other evaluated quantities are the angular distributions of elastically and inelastically scattered neutrons and those of neutrons emitted from the (n,2n), (n,3n), (n,4n) and fission reactions, their energy distributions, and average numbers of neutrons emitted per fission. The results were compiled in the ENDF/B-V format. 28 refs., 16 figs., 1 tab.

49364 **(NFL—42) Yields of products from thermal-neutron induced fission of ^{235}U.** Rudstam, G.; Aagaard, P.; Zwicky, H.U. (Studsvik Science Research Lab., Nykoeping (Sweden)). 1985. 146p. NTIS (US Sales Only), PC A07/MF A01. File Number DE86703244.

Methods for fission yield determinations at an ISOL-system connected to a nuclear reactor have been developed. The present report contains detailed descriptions both of the experimental techniques and of the method used to correct the experimental yields for the decay of short-lived nuclear species in the delay between production and measurement. The methods have been applied to the determination of the fission yields of 40 fission products including 2 isometric pairs in the light mass region and those of 99 fission products including 25 isometric pairs or triplets in the heavy mass region. For 64 cases this is the first determination published. With 113 refs.

49365 **Fragment angular distributions for neutron fission of /sup 232/Th.** Becker, J.A.; Bauer, R.W. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). **34**: No. 2, 594-600(Aug 1986). Contract W-7405-ENG-48.

Fission fragment angular distributions were measured for the neutron-induced fission of /sup 232/Th at incident energies from threshold to 6 MeV, using a white source of neutrons, time-of-flight techniques, and position-sensitive multiwire counters subtending a solid angle of nearly 2π sr. The experimental data were analyzed in incident neutron energy bins of 40 keV and angular bins of 9 deg, and compared with previous results which were available for only partial energy ranges covered by this experiment. A channel analysis yielded relative strengths for the K-italic transition states with K-italic = (1/2), (3/2), and (5/2) from threshold to E-italic/sub n/ = 4.5 MeV.

49366 **Multilevel analysis of the low-energy ^{239}Pu cross sections.** Perez, R.B.; deSaussure, G.; Larson, N.M.; Macklin, R.L. (Oak Ridge National Lab., P.O. Box X, Oak Ridge, TN 37831). **93**: No. 1, 31-42(May 1986). Contract AC05-84OR21400;FG05-85ER40188.

Several sets of ^{239}Pu neutron cross-section data have been analyzed with the R-matrix Bayesian program SAMMY up to 30 eV. The cross sections computed with the multilevel parameters are consistent with recent fission and transmission measurements, as well as with older capture and alpha measurements. The Reich-Moore-type-R-matrix resonance parameters were converted into equivalent Adler-Adler-type parameters using the computer program POLLA.

49367 **Subthreshold fission cross section of ^{240}Pu and the fission cross sections of ^{235}U and ^{239}Pu.** Weston, L.W.; Todd, J.H. (Oak Ridge National Lab., TN). **88**: 567-578(1984).

The subthreshold fission cross section of 240 Pu was measured relative to the ^{10}B(n,α) or the ^{6}Li(n,α) cross sections from 20 eV to 100 keV. Resonance parameter fits to the data were derived from 20 to 5700 eV. Many more resonances and more resonance structure were observed than in previous measurements. During the course of this measurement, the fission cross sections of ^{235}U and ^{239}Pu were also measured and are compared to the ENDF/B-V evaluation. The ^{235}U experiment is in good agreement with ENDF/B-V; however, the ^{239}Pu measurement is lower than ENDF/B-V and many of the previous measurements, particularly above 25 KeV. 16 references, 12 figures, 8 tables.

REFER ALSO TO CITATION(S) 49171, 49188

49368 **(AD-A—167490/2/XAB) Hartree-Fock theory in nuclear physics. Technical summary report.** Goyny, D.; Lions, P.L. (Wisconsin Univ., Madison (USA). Mathematics Research Center). Feb 1986. 75p. (MRC-TSR—2914). NTIS, PC A04/MF A01.

This document investigates the so-called Hartree-Fock theory arising in the study of the structure of nuclei. The Hartree-Fock theory is an approximation method of many-body problems modelling the interaction of nucleons (neutrons and protrons), which lead to nonlinear variational systems of elliptic equations (the Hartree-Fock equations). These equations pertain to questions related to spin dependence and spin-orbit forces, symmetries of the nucleus and symmetry breakings, and time-dependent Hartree-Fock equations. One of the main features of these problems is the translation invariance, which creates compactness difficulties that are overcome by the use of the concentration-compactness method.

49369 (ANL—85-22, pp 121-122) **Relativistic nucleon-nucleon potentials.** Lee, T.S.H.; Wiringa, R.B. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

A method for fitting relativistic nucleon-nucleon (NN) potentials to phase-shift data has been developed and is being used to construct a relativistic version of the Argonne v_{14} potential. This has been achieved by combining existing momentum-space (MS) and configuration-space (CS) computer codes for NN scattering. The MS code is required to solve the relativistic Schroedinger equation, while the CS code is much more efficient in searching for potential parameters to fit the data.

49370 (ANL—85-22, pp 126-127) **Coupled cluster and variational calculations of nuclear matter.** Day, B.D.; Wiringa, R.B. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Coupled-cluster and variational calculations of nuclear matter have been performed for the Argonne v_{14} potential. This potential can be written as the sum of central, isospin, spin, tensor, L.S, L^2, and $(L.S)^2$ operators, and gives a good fit to NN scattering data. The most realistic potential for which both methods had previously been used is the L-independent v_8 model of the Reid soft-core potential. The solution of the coupled-cluster equations, including both two- and three-body correlations, requires as input the matrix elements of the two-body potential in momentum space. Until now, this has restricted use of the method to potentials that can be analytically transformed to momentum space. The authors have now developed a satisfactorily fast and accurate numerical method for transforming coordinate-space potentials, such as Argonne v_{14}, to momentum space. This enlarges the class of NN potentials for which the coupled-cluster equations can be solved.

49371 (ANL—85-22, pp 128) **Further calculations of meson excess in nuclei.** Wiringa, R.B. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Calculations of pion excess in nuclei by Friman, Pandharipande and Wiringa (FRP) reported last year have been extended to study several interesting points. The pion excess results from the presence in a nucleus of an enhanced (over the nucleon's own pion cloud) pion number due to the long-range attractive pion exchange interactions. This pion excess can be calculated by taking expectation values with nuclear matter wave functions of an appropriate number operator. The pion excess for large nuclei is then estimated by using a local density approximation, and the resulting excess pion number densities, n/sub π/(k), have been used as model input

for the study of deep-inelastic lepton scattering (the EMC effect) described elsewhere.

49372 (ANL—85-22, pp 129-130) **Nuclear effects in deep-inelastic lepton scattering.** Berger, E.L.; Coester, F. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In the interpretation of deep-inelastic lepton scattering it was, until recently, taken for granted that the momentum distribution of the quarks in the nucleons are not affected by the nuclear medium, and that nucleons are the only relevant constituents of nuclei. The authors have been investigating in detail models based on the assumptions that quarks are always confined to individual hadrons and that nuclei are multi-hadron bound states. Such models, in which the role of quantum chromodynamics is confined to the description of the structure of single hadrons, are natural extensions of successful nuclear theory.

49373 (ANL—85-22, pp 131) **Quark models of hadron interactions.** Coester, F.; Polyzou, W.N. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

Quark models of single hadrons have been successful in accounting for hadron spectroscopy. They are not automatically applicable to multi-hadron dynamics. The authors are investigating quark models of multi-hadron dynamics which emphasize the following features: (1) spatial confinement of quarks is tied to color confinement (gauge invariance), (2) absence of long-range Van der Waals forces, (3) Poincare invariance. Starting from ideas due to Greenberg and Hietarinta the authors realize these requirements in zeroth order by models which feature quarks confined to noninteracting hadrons, each of which has infinitely many stable excited states. The authors have investigated in detail the mathematical properties of models consisting of quark-antiquark systems coupled to two-quark-two-antiquark states, and developed a particular implementation suitable for numerical studies. Preliminary results are encouraging.

49374 (ANL—85-22, pp 134-135) **Meson-exchange Hamiltonian for N, π, Δ and N*(1470 MeV) isobars.** Lee, T.S.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The main feature of intermediate energy nuclear reactions induced by pions, nucleons and electrons is the production or absorption of on-mass-shell pions through the excitation of the Δ and higher mass nucleon resonances. In order to develop a many-body approach to the problem, the authors have been constructing a model Hamiltonian for π, N, Δ and N*(1470). This is done by carrying out an extensive study of NN scattering up to 2 GeV and πd scattering up to about 400 MeV. The authors are investigating a meson-exchange model based on the following mechanisms: (a) vertex interactions for $\pi N \rightleftharpoons \Delta$ or N*, $\pi\Delta \rightleftharpoons \Delta$ or N* are determined from πN scattering up to 1 GeV, (b) transition interactions between NN to NΔ, $\Delta\Delta$, NN* and N*N* are determined by the one-pion and one-rho exchange, (c) NN $\rightarrow$ NN interaction is derived from the Paris potential.

49375 (ANL—85-22, pp 135-136) **Theory of mesonic and dibaryonic excitation in the πNN system.** Lee, T.S.H.; Matsuyama, A. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have extended their meson-exchange Hamiltonian for π,N and Δ to include a vertex interaction BB $\rightleftharpoons$ D, where D is a dibaryon state with its mass and quantum numbers predicted by the Bag model. To investigate the influence of this dibaryon state on NN and πd scattering, the authors first have developed a scattering formalism in which the coupling of the dibaryon state D to the meson-exchange processes is treated exactly within the constraints imposed by the 2- and 3-body unitarity relations. In the same derivation, the authors also include the nonresonant meson production process which is also known to play an important role in describing the NN and πd spin observables. A paper describing this unitary formulation of the problem is being prepared for publication. In a first calculation, they have explored the effect of the 2^+ dibaryon state predicted by the MIT Bag model on the NN and πd scattering.

49376 (ANL—85-22, pp 140) **Microscopic study of D-nucleus dynamics.** Lee, T.S.H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The purpose of this work is to explore the dynamical origin of the Δ-nucleus interaction which has been treated phenomenologically in the study of intermediate energy pion nucleus scattering. In the one-hole-line approximation the Δ-nucleus potential can be calculated from the NΔ G matrix by imposing the Brueckner-Hartree-Fock self-consistent condition. The authors first calculation was done in 1982, by using the separable model Hamiltonian of Betz and Lee. Extensive calculations with their newly developed meson-exchange theory have been performed recently. It is found that the calculated absorptive part of the Δ-nucleus potential is much less than the phenomenological value, ranging from only 20% (from the Bonn potential) to about 60% (from the Paris potential) of phenomenological values. These results suggest that more than one nucleon in a nuclear medium are active in annihilating the incoming pion.

49377 (ANL—85-22, pp 140-141) **Electromagnetic interaction with nuclei at energy above the pion production threshold.** Lee, T.S.H.; Ohta, K. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The starting point in this study is to develop a systematic theoretical method to include the electromagnetic interaction in a nuclear theory with π, N and Δ degrees of freedom. The method is to assume that the nuclear many-body Hamiltonian can be deduced from a relativistic quantum field theory by a three-dimensional reduction. In order to study high-energy and high-momentum transfer processes, one does not make the conventional ($1/c^2$) nonrelativistic expansion in constructing current operators. The method has been applied to construct a model of the one-body current for the $\gamma N \rightarrow N$ and $\gamma N \rightleftharpoons \Delta$ transitions.

49378 (ANL—85-22, pp 141-142) **Study of weak neutral-current effects in (e,e'X) reactions.** Kleppinger, W.E. Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

In electron scattering from nuclei, in addition to the usual electromagnetic interaction, unified models of the electromagnetic and weak interactions predict an additional weak neutral-current interaction. When this additional interaction is included, a parity-violating contribution to the cross section due to the interference of the electromagnetic and neutral-weak currents, is present. The purpose of this work was to examine how these effects can be explored in (e,e'X) reactions with polarized incident electrons, where in addition to detecting the scattered electron, a decay particle X, emitted by the excited target nucleus, is also detected. It is found that new interference terms appear in the cross section that are not present in inelastic (e,e') scattering. A model calculation that assumed that the target was excited to a single, intermediate resonance indicates that the angular distribution of X is sensitive to these new terms. Results of this work have been published.

49379 (ANL—85-22, pp 143) **Calculation of Landau parameters of Δ-h interaction.** Lee, T.S.H.; Ohta, K.; Sagawa, H. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

By applying meson-exchange Hamiltonian for π, N, and Δ, the authors have carried out a Bruckner G matrix calculation for

the coupled NN and NΔ interaction in nuclear matter. The calculated G matrix for NN ⇌ NΔ transition is used to calculate the effect of Δ-hole coupling on the Landau parameters. The results show that the NΔ interaction in p-waves plays the most important role which clearly shows the importance of the use of a model Hamiltonian which can describe the NN ⇌ NΔ transition in each partial wave. This approach is therefore more realistic than all previous work since this model Hamiltonian can describe the NN phase shifts in the regions where the inelastic process NN → NΔ → NNπ takes place. These results disagree with the calculation by Arima and Schimizu who used the simple-one-pion and one-rho exchange.

49380 (ANL—85-22, pp 151-153) **Pair-distribution function and energy-density functionals for ^{4}He droplets.** Pieper, S.C.; Wiringa, R.B.; Pandharipande, V.R. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

A detailed study of pair distributions in droplets containing 8 to 240 ^{4}He atoms has been made, and the results used to test the validity of the local density approximation and construct energy-density functionals. The pair-distribution function in a droplet can, in general, depend on the positions of both atoms, their separation, and the number of atoms in the droplet (a total of four non-trivial variables).

49381 (ANL—85-22, pp 153-154) **Excited states of atomic ^{4}He droplets.** Wiringa, R.B.; Pieper, S.C.; Pandharipande, V.R. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

The authors have made microscopic calculations of the excited-state energies and transition densities of droplets containing 20-240 atoms using the random walk tapes. The excited-state wave function is taken as a sum of single-particle excitation operators acting on the variational ground state. The operators include two or three variational parameters and are constructed with the appropriate angular momentum and parity of the excitation. The excited state energy is computed in the Feynman-Cohen approximation, which would be exact if the authors had the exact ground state. Although the authors variationally-determined ground state is not the true ground state, the Feynman-Cohen approximation is believed to give a good measure of the energy required for one quantum of excitation.

49382 (ANL—85-22, pp 154-155) **Variational Monte-Carlo calculations of ^{3}He droplets.** Pieper, S.C.; Wiringa, R.B.; Pandharipande, V.R. (Argonne National Lab., IL). Sep 1985. NTIS, PC A13/MF A01. File Number DE86002650.

In Physics Division annual review, 1 April 1984-31 March 1985.

During 1984 the Feynman-Cohen backflow correlation was included in the authors variational Monte Carlo program for Fermion droplets. With this correlation every element of the Slater determinant is changed when just one atom is moved. This makes the evaluation of the modified wavefunction and of the kinetic energy much more time-consuming. The authors attempted to reduce the computational requirements by omitting the backflow from the random walk and by using the simpler Clark-Westhaus form for the backflow kinetic energy; in both cases the resulting increase in the variance was unacceptably large. Therefore this program now controls the random walk with the backflow correlation and uses the Pandharipande-Bethe kinetic energy.

(CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Aug 1985. 3p. (CONF-850807—13; DPh-N—2268). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750876.

From 6. international symposium on polarization phenomena in nuclear physics; Osaka, Japan (26 Aug 1985).

Published in summary form only.

49384 (CONF-8505189—5) **Pair production at GeV/u energies.** Bottcher, C.; Strayer, M.R. (Oak Ridge National Lab., TN (USA). Physics Div.). 1985. Contract AC05-84OR21400. 32p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86008986.

From Atomic theory workshop on relativistic and QED effects in heavy atoms; Gaithersburg, MD, USA (23 May 1985).

Electron and positron production in relativistic ion-atom collisions is discussed within the context of the time-dependent Dirac-Hartree approximation to a fully relativistic field theory of the collision. The time-dependent fields are treated classically, and the numerical methods employing basis splines are discussed in detail and contrasted with results obtained from the case of non-relativistic velocities. The results of a one-dimensional model are presented and show a moderately large probability for pair production followed by electron capture. 8 refs., 16 figs.

49385 (CONF-8606183—1) **Possibility of new particle production in heavy-ion collisions.** Balantekin, A.B. (Oak Ridge National Lab., TN (USA). Physics Div.). 1986. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014220.

From NATO international advanced course on physics of strong fields; Maratea, Italy (1 Jun 1986).

Two-body decay of a particle is hypothesized in order to explain the lack of strong Z dependence of positron emission spectra in low-energy heavy ion collisions. The consequences of such a hypothesis are discussed, as well as recent theoretical and experimental work motivated by it. 50 refs. (LEW)

49386 (CONF-8606183—2) **μ- and tau-pair production from relativistic heavy-ion collisions.** Bottcher, C.; Strayer, M.R. (Oak Ridge National Lab., TN (USA). Physics Div.). 1986. Contract AC05-84OR21400. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014221.

From NATO international advanced course on physics of strong fields; Maratea, Italy (1 Jun 1986).

The question is addressed of μ- and tau-pair production from the motional Coulomb fields available at the new relativistic heavy-ion accelerators. A semiclassical field theory is developed which is appropriate for families of leptons which are coupled electromagnetically. The field equations are mapped on to a lattice of collocation points using basis spline methods, and techniques for solving the resulting lattice equations are outlined. The properties of the transverse electromagnetic field near the heavy-ion beam are examined and physical arguments are given as to the feasibility of pair creation under a variety of circumstances. Using the Dirac-Hartree equations developed in part one, we shall dynamically evolve the vacuum, using the appropriate fields, and compute μ-pair and tau-pair production cross sections. 16 refs., 10 figs.

49387 (DOE/ER/02853—29) **Non-mesonic decay of hypernuclei.** Dubach, J. (Massachusetts Univ., Amherst (USA)). 1986. Contract AC02-76ER02853. 7p. (CONF-860575—18). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013356.

From 2. conference on particle and nuclear physics; Lake Louise, Canada (26 May 1986).

The ΛN → NN non-mesonic decay mode of hypernuclei is examined in a model that employs a weak, strangeness-changing meson exchange potential in a Fermi gas model of the hypernucleus. Results are in good agreement with recent experiments for A = 11 and A = 12 hypernuclei. The calculations suggest that the ratio of proton-stimulated to neutron-stimulated decays and the ratio of parity-violating to parity-conserving decays are particularly sensitive to the details of the model. Finally, preliminary results using a more sophisticated shell model of the hypernucleus are discussed. 13 refs., 2 tabs.

49388 **(DOE/ER/02853—30) Theoretical aspects of the weak decay of hypernuclei.** Dubach, J. (Massachusetts Univ., Amherst (USA). Dept. of Physics and Astronomy). 1986. Contract AC02-76ER02853. 9p. (CONF-860741—8). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013355.

From International symposium on weak and electromagnetic interactions in nuclei; Heidelberg, F.R. Germany (1 Jul 1986).

The present status of theoretical descriptions of mesonic ($\Lambda \rightarrow N\pi$) and non-mesonic ($\Lambda N \rightarrow NN$) decay modes of hypernuclei is reviewed. Calculations for the non-mesonic mode are discussed in some detail within the context of a model which describes the strangeness-changing, parity-violating, $\Lambda N \rightarrow NN$ "transition potential" in terms of π, rho, ω, eta, K, K*, and "σ" exchanges. Results are presented for the total decay rate, the ratio of proton- to neutron-stimulated decay rates, and the as yet unmeasured ratio of parity-violating to parity-conserving decay rates. Calculations for nuclear matter, which are in reasonable agreement with experiment, suggest that these rates (particularly the two ratios) can provide important tests of the form of the transition potential. Considerations of finite hypernuclei are also discussed. Finally, other theoretical approaches and the present experimental situation are briefly summarized. 17 refs., 3 figs., 3 tabs.

49389 **(DOE/ER/13001—18) Research in theoretical nuclear physics. Annual progress report No. 18.** (State Univ. of New York, Stony Brook (USA). Dept. of Physics). 1986. Contract AC02-76ER13001. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014254.

Research programs in four major areas are described: the structure of the nucleon and the nucleon-nucleon interaction, strangeness, and strange baryons; the equation of state of dense matter with specific concern both for the problems of stellar collapse and supernova explosions and of relativistic heavy-ion collisions, nuclear structure physics; and relativistic effects in nuclear particularly heavy ion reactions and quark matter physics. New research efforts in many-body theory are also described.

49390 **(DOE/ER/40068—1) Intermediate/high-energy reactions and the quark structure of nuclei. Technical progress report.** (Iowa State Univ. of Science and Technology, Ames (USA)). 1986. Contract AC02-82ER40068. 25p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014311.

During this past year a quark cluster model of nuclei has been improved and additional experimental signatures proposed that will distinguish it from other models which also successfully explain the EMC effect. In addition, an initial investigation has been completed of the statistical mechanical properties of finite nuclei within the finite temperature Hartree-Fock approximation using realistic microscopic effective Hamiltonians. Development of a new microscopic non-perturbative calculational scheme for QCD in light-cone coordinates is proposed that will eventually provide a practical framework to evaluate the quark and gluon structure of nuclei.

49391 **(IFUSP-P—518) Symmetries of the vacuum.** Fleming, H. (Sao Paulo Univ. (Brazil). Inst. de Fisica). 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703111.

The vacuum equation of state required by cosmological inflation is taken seriously as a general property of the cosmological vacuum. This correctly restricts the class of theories which admit inflation. A model of such a vacuum is presented that leads naturally to the cosmological principle.

49407 (INIS-mf—10199) **U(3) principle as base of a microscopical U(3) model for the clarification of the phenomenon of nuclear molecules. Development of an analytical concept describing nucleus-nucleus collisions in the framework of the Composite Particle Theory in the Bargmann space.** Bader, R. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 18 Jul 1985. 180p. (In German). NTIS (US Sales Only), PC A09/MF A01. File Number DE86752601.

The tenor of this thesis is the regarding of the U(3) symmetry in the study of nuclear reactions. By the description of the two colliding fragments and their relative motion by means of U(3) quantum numbers U(3) channels and U(3) channel sets are defined. It is shown that in certain collisions the U(3) symmetry of U(3) channels is incompatible with the U(3) symmetry of the compound nucleus. For these U(3) channels the formation of the compound nucleus is forbidden. In this framework a microscopical U(3) model for the phenomenon of the nuclear molecule resonances is developed. U(3) barriers which play an important role in this model are responsible for the repulsion between the two fragments. By microscopical calculations it is confirmed that by the U(3) channels allowed above the U(3) barriers an attraction between the two fragments arises. This interchange of attraction and repulsion leads to the formation of nuclear molecules. Furthermore it is shown that this incompatibility and by this the phenomenon of nuclear molecule resonances can be reduced to an U(3) principle in which the Pauli principle is contained. Basing on this U(3) principle selection rules are formulated which predict candidates for nuclear molecule resonances. This explains why only some binary systems tend to the molecule formation.

49408 (INR—1930/IA/PL/A) **Nuclear deformation energies.** Blocki, J. (Institute of Nuclear Research, Warsaw (Poland)). 1982. 12p. Energetics and Atomic Energy Information Centre, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

A foreword of the atlas of nuclear deformation energies is presented. Formulas for the shape parametrization together with an example of the applications of the maps are also given.

49409 (INS—534) **Origin of nuclear mass number dependence in EMC-effect.** Kurihara, Y.; Date, S.; Nakamura, A.; Sato, H.; Sumiyoshi, H.; Yoshinada, K. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Mar 1985. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703147.

The origin of the mass number dependence of the nucleon structure functions extracted from the deep inelastic lepton-nucleus scattering is investigated by factorizing the structure function into A and x dependent parts. It is found that the mass number dependence is determined by the probability of exotic components in multi-nucleon overlap. This suggests that the deformation of the nucleon structure function is caused by the interaction among nucleons during their overlap.

49410 (INS—535) **Nuclear stopping power at high energies.** Date, S.; Gyulassy, M.; Sumiyoshi, H. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Mar 1985. 48p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703148.

Recent $p + A \rightarrow p + X$ data are analyzed within the context of the multi-chain and additive quark models. We deduce the average energy loss of a baryon as a function of distance traversed in nuclear matter. Consistency of the multi-chain model is checked by comparing the predictions for $p + A \rightarrow \pi^{+-} + X$ with data. We discuss the space-time development of baryon stopping and show how longitudinal growth limits the energy deposition per unit length. Predictions are made for the proton spectra to be measured in nucleus-nucleus collisions at CERN and BNL. Finally, we conclude that the stopping domain for central collisions of heavy ions extends up to center of mass kinetic energies KEsub(em) asymptotically equals 3 +- 1 AGev.

49411 (INS—538) **EMC effect and breaking of additivity of nucleons in the high-energy hadron-nucleus interactions.** Nikolaev, N.N. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Apr 1985. 48p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703149.

The EMC effect implies a strong violation of additivity of nucleons in the absorption of virtual photons by atomic nuclei. In this paper we analyze the experimental data on the hadron-nuclei interaction cross sections in search for similar effects in the scattering of hadrons on nuclei. Specifically, we look for deviations from predictions of the multiple scattering theory. We formulate, and make extensive use of the Glauber-Gribov universality of the hadron-nucleus interaction cross sections, which makes it possible to check in a unique way a consistency of the experimental data on the total, inelastic and absorption cross sections for all the incident hadrons. We find evidence for the effective cross section of interaction with bound nucleons being 5-15 % larger than with free nucleons. We comment on implications of this observation for models of the EMC effect.

49412 (LBL—21462) **Nucleon exchange in damped nuclear reactions.** Randrup, J. (Lawrence Berkeley Lab., CA (USA)). Apr 1986. Contract AC03-76SF00098. 20p. (CONF-8604165—9). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013203.

From International conference on heavy ion physics; Rochester, NY, USA (21 Apr 1986).

Starting from the general context of one-body nuclear dynamics, the nucleon-exchange mechanism in damped nuclear reactions is discussed. Some of its characteristic effects on various dinuclear observables are highlighted and a few recent advances are described.

49413 **(SLAC-PUB—3973) Minimal relativistic model for the three nucleon system.** Noyes, H.P. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). May 1986. Contract AC03-76SF00515. 4p. (CONF-8604194—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE86012961.

From International symposium on three-body force in the three-nucleon system; Washington, DC, USA (24 Apr 1986).

A start is made on disentangling relativistic kinematic effects from "three body forces" by presenting a minimal relativistic model in which the internal mesonic degree of freedom is treated on the same footing as the nucleonic degrees of freedom. The meson is not allowed to appear asymptotically, specifying the two-nucleon "off shell" amplitudes which can be used to calculate the three nucleon problem. The results are identical to those obtained from the same model starting from three nucleons and one meson. In effect we have discovered a "relativistic potential model" which does not generate "three body forces". 14 refs.

49414 **Ground state energy of a hard-sphere Fermi fluid.** Baker G.A. Jr.; Benofy, L.P.; Fortes, M.; de Llano, M. (Theoretical Division, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). **34**: No. 2, 678-685(Aug 1986).

A new method of computing the ground state energy of a Fermi fluid is developed and applied to the hard-sphere Fermi fluids of two and four components. We find the results to be highly accurate for low densities. In this paper we compute and report the perturbation series for the ground state energy for the soft, repulsive, square-well problem at a number of densities for a four-component Fermi system as well as the ladder approximation energies for a hard-sphere potential at the same densities.

49415 **Resolution of the magnetic moment problem in relativistic theories.** McNeil, J.A.; Amado, R.D.; Horowitz, C.J.; Oka, M.; Shepard, J.R.; Sparrow, D.A. (Department of Physics and Atmospheric Science, Drexel University, Philadelphia, Pennsylvania 19104). **34**: No. 2, 746-749(Aug 1986).

A Landau-Migdal approach to relativistic mean field theory of nuclear matter is used to define the single particle isoscalar current. By virtue of the near cancellation of scalar and vector potentials, this current is very close to the standard nonrelativistic isoscalar current; and hence the single particle isoscalar magnetic moment operator gives results in agreement with the nonrelativistic shell model. Calculations of magnetic moments for closed shell plus (or minus) one nucleon using this effective current operator recover the Schmidt values, thus resolving a longstanding problem with relativistic models of nuclear structure.

49416 **Direct E-italic2 neutron capture in light nuclei.** Castel, B.; Ho, Y.K. (Physics Department, Queen's University, Kingston, Canada). **34**: No. 2, 408-412(Aug 1986).

We present an analysis of the E-italic2 strength data recently available from thermal radiative neutron capture within the context of direct capture theory. The radiative capture data require a neutron E-italic2 effective charge identical to the one used in bound state shell model calculations, in marked contrast to the E-italic1 situation. We suggest that this difference has its origin in the nature of the coupling governing the particle-core interaction in E-italic2 and E-italic1 radiative capture processes.

49417 **Exotic states in QED.** Celenza, L.S.; Mishra, V.K.; Shakin, C.M.; Liu, K.F. (Department of Physics and Center for Nuclear Theory, Brooklyn College of the City University of New York, Brooklyn, New York 11210). **57**: No. 1, 55-57(7 Jul 1986).

We suggest that electron and positron peaks seen in large-Z-italic heavy-ion collisions originate in the decay of nontopological solitons consisting of a quasielectron and quasipositron which are formed in a new vacuum phase.

49418 **Monte Carlo studies of nuclear many-particle systems.** Negele, J.W. (Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). **43**: No. 3, 991-1016(Jun 1986).

Stochastic evaluation of path integrals provides a useful tool for the study of a variety of nuclear systems which are otherwise not amenable to definitive analysis through perturbative, variational, or stationary-phase approximations. Ground state properties of potential models, such as quantum fluctuations in the density, are examined. Tunneling problems in quantum many-particle systems, such as spontaneous fission and the ground state structure of systems with degenerate vacuua are treated by incorporating one's physical understanding of the essential collective degrees of freedom i the stochastic algorithm. The role of subnuclear degrees of freedom is studied by comparing the exact solution of a simple confining quark model with the solution to a phase-shift equivalent hadronic potential model.

49419 **NN and πD reduced widths of dibaryon resonances.** Duck, I.; Umland, E. (Rice Univ., Houston, TX). **96B**: No. 3-4, 230-232(3 Nov 1980).

The reduced widths of the conjectured $J = 2^+$ (2180) and $J = 3\pi$ (2220) dibaryon resonances in NN and D channels are calculated. The dibaryon resonances show up in proton-proton elastic scattering channels as very inelastic resonances with partial widths in the NN channel about 1/5 of the total width. Dibaryon resonance contributions to differential cross sections and polarization parameters were investigated using the coupling constants as adjustable parameters.

49420 **(INDC(BUL)—011/L) Legendre-series development of the anisotropy density of neutron elastic scattering by means of cubic splines.** Voykov, G.; Gadjokov, V.; Ilieva, K. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee; Bylgarska Akademiya na Naukite, Sofia. Inst. za Yadrena Izsledvaniya i Yadrena Energetika). Feb 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703141.

The Legendre-series coefficients of the anisotropy density of neutron elastic scattering are computed starting from tabulated data and using the basis of natural cubic splines. The method is implemented and incorporated in the SUPERTOG package. Processing results are reported and compared with previous ones. 3 refs, 4 tabs.

49421 **(INDC(CCP)—253/L) Evaluation of resonance self-shielding factors for ^{238}U in the unresolved resonance region.** Komarov, A.V.; Luk'yanov, A.A. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Jan 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703142.

On the basis of a theoretical model of identical equidistant resonances for the energy dependence of cross-sections in the unresolved resonance region, the authors have parametrized the values of the resonance self-shielding factors and their Doppler increments for ^{238}U. They have proposed a method by which the Doppler increments of the self-shielding factors can be calculated from simple analytical formulae by redetermination of the model parameters. Analysing the experimental data on direct and capture transmissions in the unresolved resonance region, they demonstrate the possibility of describing those data as a whole and of deriving from them the cross-section group functionals. Translated from Russian. 20 refs, 2 figs, 4 tabs.

49422 **(INDC(CCP)—254/L) Group cross-sections and resonance self-shielding factors for ^{239}Pu in the unresolved resonance region.** Van'kov, A.A.; Toshkov, S.; Ukraintsev, V.F.; Yaneva, N. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Jan 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703143.

The authors analyse experimental data on the transmission and fission self-indication functions for ^{239}Pu in the unresolved resonance region. Use is made of the method of generating a cross-

section structure based on the multi-level R-matrix formalism (stochastic K-matrix method). Evaluations of the average resonance parameters and group constants for ^{239}Pu are made. Translated from Russian. 15 refs, 3 figs.

49423 (INIS-BR—492, pp 242-253) **Calculation of spatial distribution of the EURACOS II converter source.** Santo, A.C.F. de. (Instituto de Engenharia Nuclear, Rio de Janeiro, Brazil). 1985. (In Portuguese). NTIS (US Sales Only), PC A99/MF A01. File Number DE86703268. (CONF-8504255—).

From 5. national meeting of reactor physics; Rio de Janeiro, RJ, Brazil (10 Apr 1985).

It is obtained the neutron spatial flux from the EURACOS (Enriched Uranium Converter Source) device, adjusted to experimental measures. The EURACOS device is a converter source which is constituted a circle plate of highly enriched uranium (90%). The converter provides an intense source of fast neutrons which has the energetic spectrum near to the fission spectrum.

49424 (INIS-BR—492, pp 663-676) **Nuclear reactor shielding calculation using the ANISN and SABINE-3 nuclear codes.** Otto, A.C.; Pontedeiro, E.M.B.D.; Silva, R.C.O. da. (Instituto Militar de Engenharia, Rio de Janeiro, Brazil; Centro de Informacoes Nucleares, Rio de Janeiro, Brazil). 1985. (In Portuguese). NTIS (US Sales Only), PC A99/MF A01. File Number DE86703268. (CONF-8504255—).

From 5. national meeting of reactor physics; Rio de Janeiro, RJ, Brazil (10 Apr 1985).

The solution of coupled neutron and photon problems in shielding projects using two different methods are compared. The ANISN code, which solves the one-dimensional transport equation by the Sn method is compared with the SABINE-3 code which uses the removal - diffusion method (Spinney) in one dimension. The two codes were applied to typical reactor shielding calculation such as the German HTR (AVR), the Gas-Graphite power reactor (CALDER HALL) and the swimming-pool type research reactor (IEAR-1).

49425 (INIS-BR—492, pp 677-690) **Alternative technique for simulating volumetric cylindrical sources in the Morse code utilization.** Vieira, W.J.; Mendonca, A.G. From 5. national meeting of reactor physics; Rio de Janeiro, RJ, Brazil (10 Apr 1985).

In the solution of deep-penetration problems using the Monte Carlo method, calculation techniques and strategies are used in order to increase the particle population in the regions of interest. A common procedure is the coupling of bidimensional calculations, with (r,z) discrete ordinates transformed into source data, and tridimensional Monte Carlo calculations. An alternative technique for this procedure is presented. This alternative proved effective when applied to a sample problem.

49426 (INIS-mf—10173, pp 53) **Drift properties of electrons in gases.** Schmidt, B. (Heidelberg Univ., Germany, F.R. Physikalisches Inst.). Feb 1986. NTIS (US Sales Only), PC A05/MF A01. File Number DE86703196. (CONF-860272—Absts.).

From Wire chamber conference; Vienna, Austria (25 Feb 1986).

49428 (INIS-mf—10178) **Study of the hyperfine augmented nuclear polarization by elastic neutron scattering.** Scheer, U. (Technische Univ. Berlin (Germany, F.R.). Fachbereich Physik). 20 Nov 1984. 49p. (In German). NTIS (US Sales Only), PC A03/MF A01. File Number DE86752584.

The unpaired electrons of the transition metals produce high magnetic fields at the nucleus position (Co^{++}:18 Tesla). The splitting of the nuclear spin levels effected by this lies in the mK range (^{59}Co:ΔE/ksub(B)=8.7 mK). By cooling of the nuclear spin system to temperatures in the order of magnitude ΔE/ksub(B) nuclear polarization arises in the direction of the hyperfine field. Because the scattering length for neutron scattering depends on the relative orientation of the neutron spin to the nuclear spin (a^+ parallel, a^- antiparallel) at suited choice of the scattering geometry in an antiferromagnetic crystal (CoF_2:Tsub(N)=38 K) for unpolarized neutrons a new Bragg-reflex arises (CoF_2:001 reflex) the intensity of which is proportional to $(a^+-a^-)^2.I^2$ (with I=degree of polarization). By a demixing cryostat with a cooling power of 100 μW at 100 mK we could in about 900 hours cool the ^{59}Co nuclei in CoF_2 to 9.5 mK nuclear temperature. This corresponds to a degree of polarization of 37%. The long cooling time can be explained by the Schottky anomaly of the specific heat of the nuclear spin system. On a $DyPO_4$ crystal with natural isotope mixture of the dysprosium a value of $a^+-a^- = 2.07.10^{-12}$ cm was found. This lets for ^{161}Dy or ^{163}Dy an about equally large difference to be expected like it is present at hydrogen. This value is compared with all other known isotopes extremely large.

49429 (INIS-mf—10412) **Slowing down and straggling of protons and heavy ions in matter.** Aernsbergen, L.M. van. (Rijksuniversiteit Groningen (Netherlands)). 17 Jan 1986. 150p. NTIS (US Sales Only), PC A07/MF A01. File Number DE86703116.

The Doppler Shift Attenuation (DSA) method is widely used to measure lifetimes of nuclear states. However, many of the lifetimes resulting from DSA measurements display large variations which are caused by an insufficient knowledge of slowing down processes of nucleus recoils. The measurement of 'ranges' is an often used method to study these slowing down processes. In this kind of measurement the distributions of implanted ions are determined for example by the method of Rutherford backscattering or from the yield curve of a resonant nuclear reaction. In this thesis, research on energy-loss processes of protons and Si ions in aluminium is presented. The so-called Resonance Shift method has been improved for the measurements on the protons themselves. This method has only been used occasionally before. A new method has been developed, which is called the Transmission Doppler Shift Attenuation (TDSA) method, for the measurement on Si ions. Includes Dutch summary; 145 refs.; 49 figs.; 10 tabs.

49430 (JAERI-M—84-244) **PALLAS-2DCY-FX: a code for direct integration of transport equation in two-dimensional (R, Z) geometry.** Takeuchi, Kiyoshi; Sasamoto, Nobuo; Kanai, Yasuji. (Japan Atomic Energy Research Inst., Tokyo; Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Feb 1985. 101p. NTIS (US Sales Only), PC A06/MF A01. File Number DE86703220.

The PALLAS-2DCY-FX program is the revised version of the PALLAS-2DCY code, which was designed in 1973 and revised in 1980, based on a method of direct integration of the Boltzmann transport equation to describe the radiation transport in (r,z) two-dimensional geometry. It has been developed for shielding problems involving the transport of neutrons and photons. A special feature of the present code is inclusion of the routine for analytical calculation of uncollided flux for accurate calculation of duct and void streaming or skyshine. The document gives a full description of input and output data, as well as code implementation information and a description of several demonstration problems.

49431 **(RAL—85-017) Monte Carlo evaluation of analytical multiple scattering corrections for unpolarised neutron scattering and polarisation analysis data.** Mayers, J.; Cywinski, R. (Rutherford Appleton Lab., Chilton (UK)). Mar 1985. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86703144.

Some of the approximations commonly used for the analytical estimation of multiple scattering corrections to thermal neutron elastic scattering data from cylindrical and plane slab samples have been tested using a Monte Carlo program. It is shown that the approximations are accurate for a wide range of sample geometries and scattering cross-sections. Neutron polarisation analysis provides the most stringent test of multiple scattering calculations as multiply scattered neutrons may be redistributed not only geometrically but also between the spin flip and non spin flip scattering channels. A very simple analytical technique for correcting for multiple scattering in neutron polarisation analysis has been tested using the Monte Carlo program and has been shown to work remarkably well in most circumstances.

49432 **(ZfK—562) Proceedings of the 14. International Symposium on the Interaction of Fast Neutrons with Nuclei - Neutron Generators and Application - organized by the Technical University of Dresden.** Seeliger, D.; Jahn, U. (eds.). (Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden (German Democratic Republic)). Jul 1985. 131p. (In English and Russian). (CONF-8411262—). NTIS (US Sales Only), PC A07/MF A01. File Number DE86703145.

From 14. international symposium on the interaction of fast neutrons with nuclei; Gaussig, German D.R. (19 Nov 1984).

The symposium was devoted to current problems of intense fast neutron sources, especially 14 MeV DT-neutron generators, and their broad spectrum of application in nuclear physics. 56 participants from 12 countries and the IAEA demonstrate the high interest on this selected topic. The submitted contributions can be divided into two general parts. The first one gives a review about the different possibilities of the technical and technological solution in development, the present status of operation and also the problems connected with the use of intense neutron sources. Various experimental arrangements for neutron spectroscopy, determination of nuclear data and theoretical aspects are the content of the second part. The participation in this meeting of designer and operators on the one hand and users of neutron sources on the other hand was a good choice and stimulated productive discussions during the conference.

49433 **(DOE/EV/03333—T8) Compton scatter correction for the MGH analog ring positron camera.** Wolfson, D.R. (Massachusetts Inst. of Tech., Cambridge (USA)). 1986. Contract AC02-76EV03333. 50p. Massachusetts Institute of Technology, 77 Massachusetts Ave., Cambridge, MA 02139. File Number TI86012566.

Thesis.

A technique for reducing Compton scatter effects in positron tomographs is demonstrated. A cylindrical container of water is used to approximate the properties of the brain. The contribution of scattered radiation to point source images is observed. The dependency of this contribution on point source location is quantified. By regarding an arbitrary image as an aggregation of point sources, the total scatter distribution may be calculated as a weighed superposition of the measured contributions. A Monte Carlo simulation is used to investigate the dependence of scatter effects on cylinder radius and on activity outside the image plane. The correction scheme is tested with several phantoms. 9 refs., 14 figs.

49434 **(GSF—26/85) Occupational exposure to ionizing radiation. A survey and its results.** Drexler, G.; Eckerl, H. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz). Oct 1985. 65p. (In German). NTIS (US Sales Only), PC A04/MF A01. File Number DE86752612.

There are at present about 220,000 persons in the Federal Republic of Germany who are regularly monitored for radiation safety at the place of work in accordance with the Radiation Protection Ordinance. The great majority (more than 70%) are working in the medical field. Other occupations include the craft business, physical technical laboratory personnel, and physicists and chemists. Therefore, strategies and methods of radiation protection form an important part of the measures to provide on-the-job safety. The activities in this field range from the definition of suitable monitoring schemes in general to sepcific means and methods of measuring whole-body dose, local dose, personal dose, internal exposure due to incorporation. Another important aspect is quality assurance of the measures taken.

49435 **(INIS-mf—9900) Data compiled by a study group of the managing board on the association's attitude towards issues of radiation protection. Discussion paper.** (Fachverband fuer Strahlenschutz e.V., Karlsruhe (Germany, F.R.)). Nov 1984. 55p. (In German). NTIS (US Sales Only), PC A04/MF A01. File Number DE86752572.

The study group concentrated on general aspects of radiation protection. The data compilation is subdivided into general regulations, principles of radiation protection, radiation protection measures for occupationally exposed personnel, protection of the environment and of the population. A description of the association's attitude towards a certain aspect is followed in each case by an exhaustive discussion.

49436 (INIS-mf—10402, pp 15) **Evolution of radiation protection standards.** Swindon, T.N. (Australian Radiation Lab., Melbourne). Aug 1985. NTIS (US Sales Only), PC A04/MF A01. File Number DE86780480. (CONF-8508179—).

From 10. AINSE radiation biology conference; Lucas Heights, Australia (22 Aug 1985).

49437 **(ORNL—6296) Eleventh ORNL personnel dosimetry intercomparison study, May 22-23, 1985.** Swaja, R.E.; Oyan, R.; Sims, C.S. (Oak Ridge National Lab., TN (USA)). Jul 1986. Contract AC05-84OR21400. 63p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86013815.

The Eleventh Personnel Dosimetry Intercomparison Study was conducted at the Oak Ridge National Laboratory (ORNL) during May 22-23, 1985. Dosimeter badges from 44 participating organizations were mounted on Lucite block phantoms and exposed to four mixed-radiation fields with neutron dose equivalents around 5 mSv and gamma dose equivalents between 0.1 and 0.7 mSv. Results of this study indicated that no participants had difficulty obtaining measurable indication of neutron exposure at the provided dose equivalent levels, and very few had difficulty obtaining indication of gamma exposure at dose equivalents as low as 0.10 mSv. Average neutron results for all dosimeter types were within 20% of reference values with no obvious spectrum dependence. Different dosimeter types (albedo, direct interaction TLD, film, recoil track, and combination albedo-track) with 10 or more reported measurements provided average results within 35% of reference values for all spectra. With regard to precision, about 80% of the reported neutron results had single standard deviations within 10% at the means which indicates that precision is not a problem relative to accuracy for most participants. Average gamma results were greater than reference values by factors of 1.07 to 1.52 for the four exposures with TLD systems being more accurate than film. About 80% of all neutron results and 67% of all gamma results met regulatory standards for measurement accuracy and approximately 70% of all neutron data satisfied national dosimetry accreditation criteria for accuracy plus precision. In general, neutron dosimeter performance observed in this intercomparison was much improved compared to that observed in the prior studies while gamma dosimeter performance was about the same.

49438 (DOE/ER/45079—T1) Theoretical studies of sliding charge density waves, rigid layer modes of layered compounds and states of incommensurate structures. Final technical report, February 14, 1984-October 14, 1985. Sokoloff, J.B. (Northeastern Univ., Boston, MA (USA)). 1985. Contract FG02-84ER45079. 9p. NTIS, PC A02. File Number DE86014642.

The studies were conducted on the following topics: dynamical threshold behavior of a sliding charge density wave; domain motion and threshold behavior of charge-density waves; anomalous rigid-layer modes in layered compounds (such as graphite); and unusual band structure, wave functions and electrical conductance in crystals with incommensurate periodic potentials. (DLC)

49439 (DOE/ER/45189—1) Growth and dynamics of scale invariant matter. Progress report and continuation request. Savit, R.; Sander, L.M. (Michigan Univ., Ann Arbor (USA). Dept. of Physics). 8 Aug 1986. Contract FG02-85ER45189. 19p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014478.

Research concentrates on the growth of crystals. Solutions are sought for problems in growth velocity and the modeling of nonequilibrium and disorderly irreversible growth. A list of publications resulting from this work is included. (DWL)

49440 (IFUSP-P—549) On the equivalence of dilute antiferromagnets and ferromagnets in random external fields: Curie-Weiss models. Perez, J.F.; Pontin, L.F.; Segundo, J.A.B. (Sao Paulo Univ. (Brazil). Inst. de Fisica; Escola Federal de Engenharia de Itajuba, Minas Gerais (Brazil). Inst. Basico). 1985. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703115.

Using a method proposed by van Hemmen the free energy of the Curie-Weiss version of the site-dilute antiferromagnetic Ising model is computed, in the presence of an uniform magnetic field. The solution displays an exact correspondence between this model and the Curie-Weiss version of the Ising model in the presence of a random magnetic field. The phase diagrams are discussed and a tricritical point is shown to exist.

49441 (LA-UR—86-2528) Model of cohesive properties and structural phase transitions in non-metallic solids. Majewski, J.A.; Vogl, P. (Los Alamos National Lab., NM (USA). Center for Nonlinear Studies; Polska Akademia Nauk, Warsaw. Inst. Fizyki; Graz Univ. (Austria). Inst. fuer Theoretische Physik). 1986. Contract W-7405-ENG-36. 5p. (CONF-860892—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013832.

From 18. international conference on physics of semiconductors; Stockholm, Sweden (11 Aug 1986).

We have developed a simple, yet microscopic and universal model for cohesive properties of solids. This model explains the physical mechanisms determining the chemical and predicts semiquantitatively static and dynamic cohesive properties. It predicts a substantial softening of the long-wavelength transverse optical phonons across the pressure induced phase transition from the zincblenda to rocksalt structure in II-VI compounds. The origin of this softening is shown to be closely related to ferroelectricity.

49442 Monte Carlo simulation of continuous-space crystal growth. Dodson, B.W.; Taylor, P.A. (Sandia National Laboratories, P.O. Box 5800, Albuquerque, New Mexico 87185). **34**: No. 4, 2112-2115(15 Aug 1986). Contract AC04-76DP00789.

We describe a method, based on Monte Carlo techniques, of simulating the atomic growth of crystals without the discrete lattice space assumed by conventional Monte Carlo growth simulations. Since no lattice space is assumed, problems involving epitaxial growth, heteroepitaxy, phonon-driven mechanisms, surface reconstruction, and many other phenomena incompatible with the lattice-space approximation can be studied. Also, use of the Monte Carlo method circumvents to some extent the extreme limitations on simulated timescale inherent in crystal-growth techniques which might be proposed using molecular dynamics. The implementation of the new method is illustrated by studying the growth of strained-layer superlattice (SLS) interfaces in two-dimensional Lennard-Jones atomic systems. Despite the extreme simplicity of such systems, the qualitative features of SLS growth seen here are similar to those observed experimentally in real semiconductor systems.

49443 Spin-orbit splitting in semiconductors and insulators from the a-italicb-italic i-italicn-italici-italict-italici-italico-italic pseudopotential. Hybertsen, M.S.; Louie, S.G. (Department of Physics, University of California, Berkeley, California 94720 and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). **34**: No. 4, 2920-2922(15 Aug 1986). Contract AC03-76SF00098.

In this Brief Report, we give the expressions required for using the vector (spin-orbit) part of the a-italicb-italic i-italicn-italici-italict-italici-italico-italic pseudopotential in a crystalline calculation. Inclusion of the spin-orbit interaction using the vector part of the pseudopotential in first order reproduces the measured spin-orbit splittings in Ge as well as the rare-gas solids and agrees with all-electron calculations.

49444 Indirect phase detection of NMR spinor transitions. Suter, D.; Pines, A.; Mehring, M. (Department of Chemistry, University of California, Berkeley, California 94720 and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). **57**: No. 2, 242-244(14 Jul 1986). Contract AC03-76SF00098.

The behavior of quantum mechanical state functions under selective rotations is discussed. If a two-level transition is phase shifted with composite z-italic pulses, the component state function shared with a connected transition can be multiplied by i-italic, thereby shifting the corresponding coherence into an orthogonal channel. Application to the sensitive indirect detection of NMR transitions is demonstrated.

49445 Dissipation due to a "valley wave" channel in the quantum Hall effect of a multivalley semiconductor. Rasolt, M.; Halperin, B.I.; Vanderbilt, D. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **57**: No. 1, 126-129(7 Jul 1986). Contract AC05-84OR21400.

When the quantized Hall effect occurs at a semiconductor surface such as Si(110), where the carriers have a time-reversal valley degeneracy, there should be a spontaneous valley polarization at appropriate values of the filling factor ν. There can then be dissipation at T-italic = 0 due to radiation of Goldstone bosons ("valley waves") at impurity sites, provided that the current density exceeds a critical value j-italic/sub c-italic/ determined by the inter-valley electron-electron scattering or other terms which modify the valley-wave dispersion at long wavelengths. The dissipation above j-italic/sub c-italic/ is described by a constant resistivity rho/sub x-italic//sub x-italic/, which should be small but measureable, and sensitive to the density of neutral impurities.

49446 Anomalous diffusion on and elastic vibrations of two square hierarchical lattices. Liu, S.H.; Liu, A.J. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **34**: No. 1, 343-346(1 Jul 1986). Contract AC05-84OR21400.

Square hierarchical lattices are two-dimensional self-similar space-filling lattices which lack translational symmetry. In this paper, we report our study of the anomalous diffusion and lattice vibration properties of two distinct square hierarchical lattices.

49447 Thermodynamic criteria for grain-boundary melting; A molecular-dynamics study. Broughton, J.Q.; Gilmer, G.H. (Materials Science Department, Statue University of New York at Stony Brook, Stony Brook, New York 11794). **56**: No. 25, 2692-2695(23 Jun 1986).

Interface melting in various tilt boundaries between crystals of Lennard-Jones particles is predicted by a harmonic analysis of

the ground-state configurations. Interface excess free energies obtained in this way are extrapolated to the triple point, and these values are compared with the crystal-melt excess free energy. The validity of the method is confirmed by direct comparisons with high-temperature structures obtained by molecular-dynamics techniques, and with excess free energies obtained from the same simulations. Systems containing boundaries that exhibit interface melting experience disorder at the melting point, whereas the others can be superheated.

49448 **Analysis of the decay of picosecond fluorescence in semiconductors. Criteria for the presumption of electroneutrality during the decay of an exponential electron-hole profile.** Feldberg, S.W.; Evenor, M.; Huppert, D.; Gottesfeld, S. (Brookhaven National Lab., Upton, NY). *Journal of Electroanalytical Chemistry;* **185**: 209-228(1985). Contract AC02-76CH00016.

When an exponential profile of electron-hole pairs is photogenerated (in a semiconductor) with a delta-function light pulse, unequal diffusion coefficients of holes and electrons (i.e. D/sub e/ not equal to D/sub h/) effect deviations from electroneutrality as electrons and holes diffuse into the bulk semiconductor. These deviations will in turn effect errors in the analysis of data (e.g. time resolved fluorescence) when using theory based on the presumption of electroneutrality. The authors deduce here the experimental conditions required for an effective electroneutrality to be maintained during the course of an experiment. Analyses were carried out using computer simulations without the presumption of electroneutrality and the analytic solution with the presumption of electroneutrality. The differences in the measured fluorescences predicted by the two computations are characterized as a function of a variety of experimental parameters and physical properties: intensity (of the excitation pulse), the absorption of the exciting and emitted light, the ratio D/sub h//D/sub e/, bulk dielectric constant of the semiconductor, bulk and surface recombination kinetics. It is shown that a condition of adequate electroneutrality can be effectively attained when a well defined a minimum number of electron-hole pairs is generated; an upper limit of the number of e^--h^+ pairs is also established in order to avoid an intolerable temperature pulse. 12 references, 10 figures, 1 table.

49449 **Recursion method in the k-space representation.** Anlage, S.M.; Smith, D.L. (Department of Applied Physics, California Institute of Technology, Pasadena, California 91125). **34**: No. 4, 2336-2345(15 Aug 1986).

We show that by using a unitary transformation to k space and the special-k-point method for evaluating Brillouin-zone sums, the recursion method can be very effectively applied to translationally invariant systems. We use this approach to perform recursion calculations for realistic tight-binding Hamiltonians which describe diamond- and zinc-blende-structure semiconductors. Projected densities of states for these Hamiltonians have band gaps and internal van Hove singularities. We calculate coefficients for 63 recursion levels exactly and for about 200 recursion levels to a good approximation. Comparisons are made for materials with different magnitude band gaps (diamond, Si, α-Sn). Comparison is also made between materials with one (e.g., diamond) and two (e.g., GaAs) band gaps. The asymptotic behavior of the recursion coefficients is studied by Fourier analysis. Band gaps in the projected density of states dominate the asymptotic behavior. Perturbation analysis describes the asymptotic behavior rather well. Projected densities of states are calculated using a very simple termination scheme. These densities of states compare favorably with the results of Gilat-Raubenheimer integration.

49450 **(BNL—38386) Interpretation of glancing-incidence scattering measurements.** Church, E.L.; Takacs, P.Z. (Army Research and Development Command, Dover, NJ (USA); Brookhaven National Lab., Upton, NY (USA)). Mar 1986. Contract AC02-76CH00016. 9p. (CONF-860366—11). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014177.

From SPIE technical symposium on applications of artificial intelligence; Orlando, FL, USA (31 Mar 1986).

The practical testing and specification of x-ray and uv mirrors requires a scattering theory to link topographic finish errors and functional performance. This paper examines various smooth-surface theories that have been proposed for this purpose, with particular attention to their behavior near the critical angle where the surface reflectivity is a rapid function of angle. Of the various diffraction theories considered, Rayleigh-Rice vector perturbation theory is the most realistic; and predicts scattering distributions that are characteristically different from those of the canonical model. In some cases these differences or anomalies are similar to those observed by Yoneda and by Matsushita et al., which have previously been interpreted using geometrical-optics models. But there are differences. For example, the Rayleigh-Rice theory predicts anomalous scattering near the critical angle above the glancing angle of incidence ("anti-Yoneda effect"). Results are illustrated by calculations for strawman scattering experiments.

49451 **(CNRS-CPT—85-P-1790) Bounds on resolvents of dilated Schroedinger operators with non trapping potentials.** Duclos, P.; Klein, M. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Jun 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86750867.

We provide bounds on resolvents of dilated Schroedinger operators via an exterior scaling. It is done under a non trapping condition on the potential which has a clear interpretation in classical mechanics. These bounds are a powerful tool to prove absence of resonances due to the tail of the potential in the shape resonance problem.

49452 (CONF-8409129—, pp 119-130) **Physical explanation of quasiperiodic motion and the onset of chaos in nonlinear systems.** Taylor, H.S. (Univ. of Southern California, Los Angeles). 1984. NTIS, PC A10/MF A01. File Number DE85007692.

From 3. international conference on multiphoton processes; Iraklion, Crete, Greece (4 Sep 1984).

The reader may have noticed that the subject broadly called classical and quantum nonlinear dynamics has lately gained considerable attention in many fields of physics and chemistry. Of particular interest is the dynamics of systems of many oscillators coupled by nonlinear interactions. Such systems are used to model widely spread phenomena, for example, molecular vibrations, intra-molecular energy transfer, unimolecular reaction, and laser-matter interactions. In the latter case, the laser is viewed, using the classical idea of extended phase space, or quantum field theory, as an oscillator. Hence, multiphoton excitations of atomic, molecular and plasma systems are described using oscillators coupled in a nonlinear manner. In a completely different area we find the motion of galaxies is also modeled by nonlinear oscillators. Recently the physics of light traveling in fibers (fiber optics) has been shown to obey similar equations. Atomic and molecular physics is far from left out. The nature of electronic excited states (e.g., double excited Rydberg states) and the whole question of the ability to assign quantum numbers to states and to corresponding spectra involves nonlinear ideas. The unusual behavior of electronic states in strong external fields is essentially governed by nonlinear equations. 22 references, 8 figures, 1 table.

49453 **(IAE—1965/CYFRONET/PM/A) Simple waves in quasilinear hyperbolic systems. Part 1. Theory of simple waves and simple states. Examples of applications.** Grundland, A.M.; Zelazny, R. (Institute of Atomic Energy, Swierk (Poland)). 1983. 47p. Energetics and Atomic Energy Information Centre, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

A new method of construction of solutions to nonlinear, nonelliptic systems of partial differential equations and especially nonhomogeneous ones is presented. These equations have been considered from the point of view of integral elements. The connections between the structure of the set of integral elements and the possibility of a construction of special classes of solutions have been studied. These classes consist of what is called simple waves and k-waves (for homogeneous systems). They provide us with a possibility for a selection of simple integral elements from the set of all integral elements. Analysis has been performed using differential forms and Cartan theory of system in involution. The problem has been reduced to examining Pfaff forms. The Cauchy problem for Pfaff systems has been formulated and solved using the Riemann function. Some remarks concerning the notion of Baecklund transformations for the case of k-waves have been formulated. It is shown that in contrast to simple wave, the simple state has no gradient catastrophy. The presented technique of constructing the solutions in the form of simple states has been illustrated by the examples of Korteweg de Vries and four-dimensional Klein-Gordon, Sine-Gordon and Liouville equations. It has been shown that the known soliton equations are closely connected with the elliptical functions and especially with the P-Weierstrass functions.

49454 **(ORNL/TM—10034) Vectorized difference schemes for a three dimensional enthalpy formulation for phase change problems.** Williams, M.A.; Wilson, D.G. (Oak Ridge National Lab., TN (USA)). Jul 1986. Contract AC05-84OR21400. 23p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014402.

Fully vectorized codes have been written for the CRAY X-MP implementing explicit and implicit finite difference schemes for enthalpy formulations of three dimensional Stefan-like problems. The implicit scheme is that proposed by C.M. Elliot and J.R. Ockendon. The explicit scheme is intended to provide a comparison for the results from the implicit scheme. Vectorization of the code required some ingenuity since material properties change discontinuously as solidification proceeds. Boolean variables were used to avoid conditional branches in DO loops. Average vector length was greatly increased by unfolding three dimensional arrays and treating them as long vectors. This report documents the development of the code and the vectorization strategies. The investigation of the tradeoffs between the implicit scheme, potentially capable of taking large time steps, and the explicit scheme, whose time step size is limited by the stability criterion, has begun but is not complete. 4 refs., 6 figs.

49455 **(SLAC-PUB—4008) Construction of relativistic quantum theory: a progress report.** Noyes, H.P. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jun 1986. Contract AC03-76SF00515. 66p. (CONF-8506303—1). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86014649.

From 7. annual international meeting of the Alternative Natural Philosophy Association; Cambridge, UK (28 Jun 1985).

We construct the particulate states of quantum physics using a recursive computer program that incorporates non-determinism by means of locally arbitrary choices. Quantum numbers and coupling constants arise from the construction via the unique 4-level combinatorial hierarchy. The construction defines indivisible quantum events with the requisite supraluminal correlations, yet does not allow supraluminal communication. Measurement criteria incorporate c, h-bar and m/sub p/ or (not "and") G, connected to laboratory events via finite particle number scattering theory and the counter paradigm. The resulting theory is discrete throughout, contains no infinities, and, as far as we have developed it, is in agreement with quantum mechanical and cosmological fact.

49456 **(UCID—20846) Aspects of Raman scattering and other effects on laser propagation through the atmosphere. Summary of work for the period, May 5, 1986-June 13, 1986.** Ipser, J.R. (Lawrence Livermore National Lab., CA (USA)). Aug 1986. Contract W-7405-ENG-48. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86015152.

The propagation of laser beams through the atmosphere is discussed. Processes which are pertinent are Raman scattering, self-focusing of beams, and two-photon absorption. Comments on the subroutine PRAMAN are given in the appendix. This subroutine calculates the effect of stimulated Raman scattering in the atmosphere. (WRF)

49457 **Numerical method for unitary systems.** Shipsey, E.J. (Department of Physics, University of Texas, Austin, Austin, Texas 78712). *Journal of Computational Physics;* **66**: No. 1, 218-224(Sep 1986).

A method of constructing probability amplitudes is presented for cases in which the corresponding unitary propagator can be expressed in terms of the Cayley representation. The method is most appropriate when the Hermitian matrix in the Cayley representation is sparse. The algorithm is organized for minimum storage.

49458 **Scattering of a pulse by a cavity in an elastic half-space.** Scandrett, C.L.; Kriegsmann, G.A.; Achenbach, J.D. (Department of Engineering Sciences and Applied Mathematics, Technological Institute, Northwestern University, Evanston, Illinois 60201). *Journal of Computational Physics;* **65**: No. 2, 410-431(Aug 1986).

The finite difference technique is employed to study plane strain scattering of pulses from finite anomalies embedded in an isotropic, homogeneous, elastic half-space. In particular, the scatterer is taken to by a cylindrical cavity. A new transmission boundary condition is developed which transmits energy conveyed by Rayleigh surface waves. This condition is successfully employed in reducing the domain of numerical calculations from a semi-infinite to a finite region. A test of the numerical scheme is given by considering a time harmonic pulse of infinite extent. The numerical technique is marched out in time until transients have radiated away and a steady state solution has been reached which is found to be in good agreement with results produced by a series type solution. Time domain solutions are given in terms of time histories of displacements at the half-space free surface; and by sequences of snapshots, taken of the entire numerical domain, which illustrate the scattering dynamics.

49459 **Closed, analytic, boson realizations for Sp(4).** Klein, A.; Zhang, Q. (Department of Physics, University of Pennsylvania, Philadelphia, Pennsylvania 19104-6396). *Journal of Mathematical Physics (New York);* **27**: No. 8, 1987-1993(Aug 1986).

The problem of determing a boson realization for an arbitrary irrep of the unitary simplectic algebra Sp(2d-italic) [or of the corresponding discrete unitary irreps of the unbounded algebra Sp(2d-italic,R-italic)] has been solved completely in recent papers. This solution is not known in closed analytic form except for d-italic = 1 and for special classes of irreps for d-italic>1. A different method of obtaining a boson realization that solves the full problem for Sp(4) is described. The method utilizes the chain Sp(2d-italic)⊃SU(2) x SU(2) x xxx x SU(2) (d-italic times), which, for d-italic> or =4, does not provide a complete set of quantum numbers. Though a simple solution of the missing label problem can be given, this solution does not help in the construction of a mapping algorithm for general d-italic.

49460 **Tricritical points in three-dimensional X-italicY-italic model with mixed action.** Janke, W.; Kleinert, H. (University of California, San Diego, La Jolla, California 92093). **57**: No. 3, 279-282(21 Jul 1986).

We present theoretical arguments (using mean fields and strong-coupling graphs) for a line of first-order phase transitions in the three-dimensional X-italicY-italic model with the mixed action β cos(del/sub i-italic/theta)+γ cos(2del/sub i-italic/theta) where $\gamma\epsilon(0.35,0.40)$, and verify its existence by a Monte Carlo simulation.

49461 Periodically pulsed spin dynamics: Scaling behavior of semiclassical wave functions. Nakamura, K.; Okazaki, Y.; Bishop, A.R. (Fukuoka Institute of Technology, Higashi-ku, Fukuoka 811-02, Japan). **57**: No. 1, 5-8(7 Jul 1986).

Quantum analogs of Kolmogorov-Arnol'd-Moser tori and chaos in a periodically pulsed single-spin system are studied in the semiclassical regime. Wave functions (quasienergy states) are described in a spin-coherent state representation. Their projected binary-phase patterns are characterized in terms of the fractal dimensions of their perimeters.

49462 Algebraic approach to dissociation from bound states. Alhassid, Y.; Engel, J.; Iachello, F. (A. W. Wright Nuclear Structure Laboratory, New Haven, Connecticut 06511). **57**: No. 1, 9-12(7 Jul 1986).

An algebraic treatment of continuous spectra based on noncompact groups is extended to allow discussion of dissociation from bound states. Transition matrix elements between bound and continuum states can be evaluated algebraically by the construction of transition operators that transform according to the infinite-dimensional unitary representations of the noncompact dynamical group. The method is employed to calculate dissociation rates in the Morse potential, for which the relevant group is SO(2,1).

49463 Approximate theory of Stokes amplification and conversion valid at large gain. Druehl, K.J.; Shakir, S.; Yousaf, M. (Institute for Modern Optics, Center for High Technology Materials, University of New Mexico, Albuquerque, New Mexico 87131). **11**: No. 7, 446-448(Jul 1986).

We predict Stokes-beam divergence, origin, and gain for large-gain Raman amplifiers as functions of pump-beam divergence and pump power in terms of simple analytical expressions. Stokes divergence is found to peak at a pump power twice above threshold. Results are in excellent agreement with exact computer solutions and explain recent experimental observations.

49464 Hypercharge fields and Eoetvoes-type experiments. Thieberger, P. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). **56**: No. 22, 2347-2349(2 Jun 1986).

It is shown that Eoetvoes-type torsion-balance experiments performed in the vicinity of a large cliff may be used as sensitive tests for the recently postulated existence of a medium-range hypercharge force. The residual nonzero effect found in the original Eoetvoes results could be mainly due to terrain irregularities and thus be larger than, but still correlated to, the effects expected from the earth's rotation and the hypercharge hypothesis.

49465 Monte Carlo molecular dynamics simulations for two-dimensional magnets. Kawabata, C.; Takeuchi, M.; Bishop, A.R. (Okayama University Computer Center, Okayama 700, Japan). **43**: No. 3, 869-872(Jun 1986).

A combined Monte Carlo molecular dynamics simulation technique is used to study the d-italicy-italicn-italica-italicm-italici-italicc-italic structure factor on a square lattice for isotropic Heisenberg and planar classical ferromagnetic spin Hamiltonians.

49466 (AD-A—167484/5/XAB) L_4 contraction for systems of conservation laws. Technical summary report. Patino, J.G.S. (Wisconsin Univ., Madison (USA). Mathematics Research Center). Feb 1986. 11p. (MRC-TSR—2917). NTIS, PC A02/MF A01.

The Cauchy problem for a 2 x 2 system of conservation laws in one dimension is u/sub t/ + (f(u))/sub x/ = 0, x epsilon R, t > 0 u(x,0) = u/sub O/ where u = (u_1, u_2), f = (f1 (u), f/sub (u)/). Such systems of equations usually come from the application of the laws of conservation for physical quantities like mass, momentum and energy, and arise in problems of gas dynamics, elasticity, oil-reservoir simulation and other areas of engineering. The questions of decay and continuous dependence with respect to the initial data are central issues in the study of the problem above. The result proved here rules out the use of certain functionals to study the decay of solutions and is relevant to the issue of L_4 continuity with respect to the data.

49467 Simulations: A tool for studying quantum condensed matter systems. Scalapino, D.J. (Department of Physics, University of California, Santa Barbara, California 93106). **43**: No. 3, 757-770(Jun 1986).

Quantum Monte Carlo techniques provide a new method for studying the properties of condensed matter systems. A review of this approach and the type of information which it can provide is given.

49468 Vibrational stabilizability of distributed parameter systems. Meerkov, S.M. (Illinois Institute of Technology, Chicago). *Journal of Mathematical Analysis and Applications;* **98**: No. 2, 408-418(Feb 1984). Contract AC02-80ER10709.

A condition of vibrational stabilizability for a class of linear partial differential equations is given. An example of vibrational stabilization in a nonlinear situation (Benard instability) is described. 12 references.

49469 (AD-A—167804/4/XAB) Current enhancement for hose-unstable electron beams. Memorandum report. Fernsler, R.F.; Hubbard, R.F.; Hui, B.; Joyce, G.; Lampe, M. (Naval Research Lab., Washington, DC (USA)). 24 Apr 1986. 74p. (NRL-MR—5769). NTIS, PC A04/MF A01.

An electron beam injected into a conducting medium produces inductive electric fields. These fields drive conduction currents which, for stable beams, oppose the beam current and thereby reduce the total (net) current. For unstable beams which undergo large transverse displacements, the inductive field can reverse direction and drive conduction current parallel to the beam current. An analytic and numerical treatment of the latter effect is presented to explain current enhancement as observed for electron beams propagating in gases at pressures above 10 torr.

49470 (AD-A—167849/9/XAB) Advanced concepts theory: annual report, 1985. Memorandum report, January-December 1985. (Naval Research Lab., Washington, DC (USA)). 23 Apr 1986. 122p. (NRL-MR—5759). NTIS, PC A06/MF A01.

This report contains the results of theoretical investigations and analyses on issues concerned with the production, interpretation, and understanding of radiation generated from dense hot plasmas. In particular, the radiation from imploding hollow z-pinch plasmas and ion beam-generated plasmas, the influence of radiation on the plasmas morphology, the x-ray conversion efficiency and spectral emission characteristics, dynamics of double gas puff implosions, imploding plasmas as opening switches, and analyses and interpretation of experimental results.

49471 (CEA-N—2430) Slowing of charged particles by particle methods. Mercier, B. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Mar 1985. 23p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750862.

We review some facts about particle methods for solving linear hyperbolic equations. We show how one gets an evaluation of integral quantities like: $\int u(x,t)\,\mathrm{zeta}(x,t)\,dxdt$ where u denotes the solution and zeta an arbitrary weight function. Then, we apply the method to the equation describing charged particle transport in a plasma with emphasis on the evaluation of energy deposition on ions and electrons.

49472 **(CEA-N—2431) Implicit particle methods of order 1. Application to Vlasov-Poisson equation with fixed ions.** Hermeline, F. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Mar 1985. 37p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86750861.

As a numerical example the implicit moment method has been applied to the multi-beam instabilities problem. In introducing implicit time schemes in Vlasov-Poisson equation resolution, low-frequency phenomena can be processed with an equal computing time. Some implicit resolution methods of MHD equations are introduced. The Langdon "direct" method is also presented.

49473 **(CLM-R—250) Calculation of spectral line emission from plasmas. 2. The organisation and use of basic atomic data.** Gordon, H.; Summers, H.P. (UKAEA Culham Lab., Abingdon). Jul 1985. 44p. H.M. Stationery Office, London, price Pound 5.00.

A set of computer codes has been developed for verification display and conversion of atomic cross-section and rate data drawn from the literature. Data for isoelectronic sequence members are prepared as rates in standard forms over standard reduced parameter ranges. Regularities in this 'general z' representative data are exploited to infer rates for arbitrary ions and to generate input for spectral prediction codes. The H, He, Li, Be and Na-like isoelectronic sequences have been incorporated in the database. The operation of the procedures is illustrated.

49474 **(CLM-R—253) FETRAN - a finite element transport modelling package.** Lee-Hsiao; Eastwood, J.W. (UKAEA Culham Lab., Abingdon). Jul 1985. 28p. H.M. Stationery Office, London, price Pound 4.00.

A new moving finite element formulation for equilibrium and transport modelling has been developed. This report describes the implementation of multifluid surface averaged transport using these moving finite elements. The program can be used for axisymmetric toroidal or cylindrical configurations of arbitrary cross section. Test results using INTOR parameters and geometry are presented.

49475 **(CONF-8510266—5) Production of high density plasma by pellet injection in TFTR.** Milora, S.L.; Schmidt, G.L.; Combs, S.K.; Bush, C.E.; Goldston, R.J.; Grek, B.; Hawryluk, R.J.; Johnson, D.; Mansfield, D.; Park, H. (Oak Ridge National Lab., TN (USA); Princeton Univ., NJ (USA). Plasma Physics Lab.). 1985. Contract AC05-84OR21400. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014027.

From International pellet fueling workshop; La Jolla, CA, USA (30 Oct 1985).

High plasma densities have been produced in ohmic and neutral beam heated discharges on TFTR using a repeating pneumatic pellet injector developed at Oak Ridge National Laboratory (ORNL). Line average plasma densities as high as 1 x 10^{14} cm^{-3} have been attained by injection of five 2.7 mm deuterium pellets $\Delta n/sub\ e/ = 2 \times 10^{14}$ cm^{-3} over a one-second interval into a stetched neutral beam pulse. Injection of a single large (4 mm) pellet in ohmic discharge has produced highly peaked profiles with nec(o) = 1.8 x 10^{14} cm^{-3}, n/sub e/(0) tau/sub E/(a) = 6.7 x 10^{13} cm^{-3} and n/sub D/(0)Ti(0)tau/sub E/(a) = 8.8 x 10^{13} cm^{-3} sKeV. Global confinement in these discharges approaches 0.45 seconds with a central density decay time of 2 seconds. Based on a neoclassical resistivity model and x-ray pulse-height analysis, zeff is <2 in both ohmic and beam-heated plasmas. The energy confinement properties of intermediate density (n/sub e/ (0) = 1 x 10^{14} cm^{-3}) full beam power (5.7 MW, 80 KVD°) discharge have been studied in detail using the TRANSP code. Although the global energy confinement (≈2 oums at IP = 2.2 MA) is comparable to gas-fueled discharges, the confinement in the central core is considerably longer and electron heat conduction losses are smaller.

49476 **(CONF-8510266—6) Results of pellet injection into ISX-B.** Schuresko, D.D. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014236.

From International pellet fueling workshop; La Jolla, CA, USA (30 Oct 1985).

Improvements in plasma performance with pellet injection have been achieved in several tokamaks in recent experiments. On the Impurity Study Experiment (ISX-B), an increase in plasma energy by as much as 50%, has been observed following pellet injection. With 1.5-mm pellets, the value for tau/sub E/, the gross energy confinement time determined from β/sub equil/, has peaked at 1.7 times ISX-B scaling for n/sub e/ = 6 x 10^{13} cm^{-3} in both well-gettered and ungettered discharges. Following the peak, in the well-gettered shots tau/sub E/ decays to 1.2 times ISX-B scaling within 50 ms after pellet injection. In the ungettered discharges tau/sub E/ follows the Z-mode scaling that is appropriate to the plasma conditions (P/sub B/ = 1.7 MW, I/sub p/ = 180 kA). Thus, pellet injection in ISX-B shows energy confinement better than that for gas puffing in clean discharges and matches the Z-mode improvement obtained in ungettered discharges. Confinement improvement following pellet injection has also been acheived in smaller (a/sub p/ = 20 cm) plasmas with 1.0 mm diameter pellets. Comparisons of pellet shots which do show this improvement against pellet shots which do not show it was present.

49477 **(DOE/ER/53129—T1) Studies of plasma transport relevant to tandem mirrors. Final technical report, March 1, 1982-February 28, 1985.** Malmberg, J.H.; O'Neil, T.M. (California Univ., San Diego, La Jolla (USA). Dept. of Physics). 9 May 1985. Contract AT03-82ER53129. 36p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014714.

Experiments were performed on a pure electron plasma device. These plasmas are exceptionally well confined and their low background loss rate makes them well suited for controlled transport experiments. The confinement of electrons in these devices is similar to the confinement of ions in the central cell of a tandem mirror, i.e., the radial confinement is provided by a solenoidal magnetic field while the axial confinement is provided by electrostatic potentials. In addition, the various scaled parameters which are thought to determine the nature of the radial transport are similar for the two devices. However, the construction, operation, and understanding of the pure electron plasma is relatively simple compared to a tandem mirror machine. These considerations suggest that the pure electron plasma can be effectively employed to study the basic elements of the plasma transport theory used to describe radial particle losses in tandem mirrors.

49478 **(DOE/ER/53222—T1) High-beta plasma research. Task 1: high-beta tokamak research. Task 2: high-beta plasma theory. Annual progress report.** Navratil, G.A.; Chu, C.K. (Columbia Univ., New York (USA)). Jul 1986. Contract FG02-86ER53222. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013666.

A very brief summary of work on high-beta plasma theory and high-beta tokamak research is given. (MOW)

49479 **(DOE/ET/53088—2) Institute for Fusion Studies progress report, September 1, 1985-August 31, 1986.** (Texas Univ., Austin (USA). Inst. for Fusion Studies). Aug 1986. Contract FG05-80ET53088. 47p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014687.

A survey of the year's research reveals drift-wave simulation codes being applied to specific experimental issues, detailed profile effects being inferred from turbulence theory, and tokamak operating regimes being calculated from ballooning mode stability analysis. New theoretical approaches have also been developed, including generalized renormalization group methods, three-dimensional code development and the use of field-theoretic concepts, such as spontaneous symmetry breaking, to nonlinear tokamak dynamics. Studies during the past year concern tokamak edge turbulens, self-consistent magnetic stochasticity, and turbulence driven by the ion temperature gradient.

49480 **(DOE/ET/53088—230) Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas.** Hahm, T.S.; Diamond, P.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1986. Contract FG05-80ET53088. 34p. (IFSR—230). NTIS, PC A03/MF A01; GPO Dep. File Number DE86014389.

The thermal and particle diffusivities driven by resistive fluid turbulence in diverted tokamak edge plasmas are calculated. Diverted tokamak geometry is characterized by increased global shear near the separatrix and the tendency of field lines to linger near the x-point. For resistive fluid turbulence, the dominant effect is increased global shear, which causes a reduction in the effective step-size of the turbulent diffusion process and corresponding improvements in heat and particle confinement close to the separatrix. Stability of resistive kink modes resonant near separatrix is also ensured by the increased global shear. The relevance of these considerations to the L → H transition and to the edge transport barrier in H-mode plasmas is discussed.

49481 (DOE/ET/53088—237) Resonances in area-preserving maps. MacKay, R.S.; Meiss, J.D.; Percival, I.C. (Texas Univ., Austin (USA). Inst. for Fusion Studies). 12 Jun 1986. Contract FG05-80ET53088. 50p. (IFSR—237). NTIS, PC A03/MF A01; GPO Dep. File Number DE86014390.

A resonance for an area-preserving map is a region of the phase space delineated by "partial separatrices", which are curves formed from pieces of stable and unstable manifold of hyperbolic periodic points. Each resonance has a central periodic orbit, which may be elliptic or hyperbolic with reflection. The partial separatrices have turnstiles like the partial barriers formed from cantori. In this paper we show that the areas of the resonances, as well as the turnstile areas, can be obtained from the actions of homoclinic orbits. Numerical results on the scaling of areas of resonances with period and parameter are given. If there are no invariant circles, the resonances appear to fill the phase space completely. Indeed, we prove that the collection of all hyperbolic cantori together with their partial barriers occupies zero area.

49482 (DOE/ET/53088—239) Two- and three-dimensional magnetoinductive particle codes with guiding center electron motion. Geary, J.L.; Tajima, T.; Leboeuf, J.N.; Zaidman, E.G.; Han, J.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1986. Contract FG05-80ET53088. 37p. (IFSR—239). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014391.

A magnetoinductive (Darwin) particle simulation model developed for examining low frequency plasma behavior with large time steps is presented. Electron motion perpendicular to the magnetic field is treated as massless keeping only the guiding center motion. Electron motion parallel to the magnetic field retains full inertial effects as does the ion motion. This model has been implemented in two and three dimensions. Computational tests of the equilibrium properties of the code are compared with linear theory and the fluctuation dissipation theorem. This code has been applied to the problems of Alfven wave resonance heating and twist-kink modes.

49483 (DOE/ET/53088—240) Axisymmetric MHD stable sloshing ion distributions. Berk, H.L.; Dominguez, N.; Roslyakov, G.V. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1986. Contract FG05-80ET53088. 15p. (IFSR—240). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014392.

The MHD stability of a sloshing ion distribution is investigated in a symmetric mirror cell. Fokker-Planck calculations show that stable configurations are possible for ion injection energies that are at least 150 times greater than the electron temperture. Special axial magnetic field profiles are suggested to optimize the favorable MHD properties.

49484 (DOE/ET/53088—244) Limiter effects on scrape-off layer fluctuations and transport. Thayer, D.R.; Diamond, P.H.; Wootton, A.J. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Aug 1986. Contract FG05-80ET53088. 11p. (IFSR—244). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014393.

An analysis is presented of scrape-off layer (SOL) fluctuations using a rippling mode or resistivity gradient driven turbulence (RGDT) calculation which incorporates the essential limiter boundary condition. The line-tying effects caused by a simple conducting poloidal limiter can lead to an order of magnitude reduction of the growth rate in the SOL region when parallel thermal conductivity is neglected. The basic effect of the limiter boundary condition can be understood by exploiting the conjugate relation between the parallel and radial mode widths, a consequence of magnetic shear. A reduction of the connection length, due to the limiter, implies an increase in the radial mode width. Assuming a conducting poloidal limiter with a large radial extent, the increased radial mode width causes an increase in thermal conduction damping which is sufficiently large enough so that the rippling mode is rendered stable for typical parallel thermal conductivities. We have also included the destabilizing effect of impurity radiative cooling in the RGDT analysis which leads to an increase of the growth rate, the saturation potential, and the diffusion coefficient by approximately 30% for typical parameters. Additionally, dissipative density gradient driven turbulence (DDGDT) is reconsidered as a viable model of SOL turbulence since it exhibits shorter toroidal mode widths than RGDT; thus, it is less sensitive to the limiter line-tying effect. Saturation level estimates for DDGDT with limiter effects are presented.

49485 (FRNC-TH—2125) Computation of large scale stochasticity and universality in Hamiltonian systems: application to plasma physics. Mohamed-Benkadda, M.S. (Paris-11 Univ., 91 - Orsay (France)). 1983. 142p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86750852.

A renormalization group method allows to determine the threshold of large scale stochasticity in Hamiltonian systems with two degrees of freedom. A universality behavior is thus determined for these hamiltonian systems. This method is applied to some plasmas physics problems where the intrinsic stochasticity comes about.

49486 (GA-A—18227) Observation of Ti XXI line radiation in ECH plasmas. Lee, P.; Lieber, A.J.; Pradhan, A.K.; Yueming, X. (GA Technologies, Inc., San Diego, CA (USA); Colorado Univ., Boulder (USA)). May 1986. Contract FG02-84ER53189;AC03-84ER51044. 20p. (CONF-8511131—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014034.

From 5. international workshop on electron cyclotron emission and electron cyclotron heating; San Diego, CA, USA (9 Nov 1985).

Helium-like titanium line radiation in the x-ray region from 2.60 to 2.64 A has been measured with a high resolution spectrograph ($\lambda/\Delta\lambda > 19{,}000$) during electron cyclotron heating (ECH) experiments on the Doublet III tokamak. The intensity of the resonance line (i.e., $1s^2\ ^1S_0$ - $1s2p\ ^1P_1$) is found to be much more sensitive to the applied ECH power than the intensities of the satellite lines. A qualitative picture which accounts for the observed line intensities is the presence of non-Maxwellian electrons in the ECH plasma.

49487 (GA-A—18454) Model for divertor function in H-mode onset and proposal for H-mode operation with the island divertor. Ohyabu, N.; deGrassie, J.S.; Evans, T.E. (GA Technologies, Inc., San Diego, CA (USA)). Jul 1986. Contract AC03-84ER53158. 22p. (CONF-860522—20). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014028.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

We propose that the main function of the divertor configuration in the H-mode mechanism is temporary storage of the effluxing particles for a time longer than the edge energy confinement time. This temporary storage enables the edge temperature to transiently increase above a threshold temperature necessary for the H-mode transition. This model qualitatively explains the superior H-mode regime in mechanically closed poloidal divertors and opens the possibility that the same result could be achieved using the resonant island divertor.

49488 **(IPPCZ—245) On the ponderomotive effects at the lower hybrid waves excitation.** Petrzilka, V.A.; Klima, R.; Pavlo, P. (Ceskoslovenska Akademie Ved, Prague. Ustav Fyziky Plazmatu). Jun 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703128.

Due to ponderomotive density modulations at the plasma edge the propagation of the lower hybrid primary wave changes. The third spatial harmonic wave is generated. The nonlinearities in question do not modify the directionality of the primary wave. The directionality of the third harmonic wave inside the plasma approximately equals the directionality of the primary wave. The results are important for the high-frequency current drive in tokamaks.

49489 **(IPPJ—729) Collisional relaxation of electron tail distribution.** Yamagiwa, Mitsuru; Okamoto, Masao. (Nagoya Univ. (Japan). Inst. of Plasma Physics). May 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703120.

Relaxation due to the Coulomb collisions of the electron velocity distribution function with a high energy tail is investigated in detail. In the course of the relaxation, a 'saddle' point can be created in velocity space owing to upsilon^{-3} dependence of the deflection rate and a positive slope or a 'dip' appears in the tail direction. The time evolution of the electron tail is studied analytically. A comparison is made with numerical results by using a Fokker-Planck code. Also discussed is the kinetic instability concerned with the positive slope during the relaxation.

49490 **(IPPJ—733) Computational study on excitation, propagation, and 3Ω sub(D)-heating due to the ion Bernstein wave.** Okada, H.; Abe, H.; Itatani, R.; Ono, M. (Nagoya Univ. (Japan). Inst. of Plasma Physics). May 1985. 61p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86703123.

External excitation, propagation, and ion heating on the ion Bernstein wave (IBW) are studied for single ion and two-ion species plasmas using particle simulation. It is found that the value of ω/Ωsub(i) near the antenna position influences the excitation characteristics of the IBW. The wavelength and the group velocity of the propagating IBW agree well with those calculated from the linear dispersion relation. Corresponding to the experiment done at JIPP T-IIU, 3Ω sub(D) heating process in the plasma composed of deuterium-like and hydrogen-like ions is investigated. The wave energy is deposited into the bulk and tail of the deuterium-like ions due to the third harmonic cyclotron resonance and the bulk of the hydrogen-like ions due to the 3/2 Ω sub(H) cyclotron subharmonic resonance, respectively. Also discussed is the possibility that the heating efficiency may not depend on the concentration of the deuterium-like ion in the 3Ω sub(D) heating in the actual tokamak experiment.

49491 **(JET-R—86-02) Analyses of ICRF waves on JET plasmas.** Itoh, S.I.; Itoh, K.; Fukyama, A. (Commission of the European Communities, Abingdon (UK). JET Joint Undertaking; Hiroshima Univ. (Japan); Kyoto Univ. (Japan); Okayama Univ. (Japan)). 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703232.

Theoretical and computational study of ICRF waves has been carried out for JET plasmas. Present experimental parameters are analysed and some prediction studies for future experiments are carried out by combination use of two kinetic codes. The wave field is solved for obtaining the power deposition profile of each plasma species and the antenna impedance. Two-ion hybrid case is simulated. Strong minority heating in central core region is observed and the direct input to electrons is found at most to be 10% of the total absorption. However, for the higher temperature target plasma, the deposition profile to electrons becomes broader and off-central and its input reaches approx. 30%. Efficient non-central deposition to ions by combined use of NBI is also discussed. Global coupling study is also carried out for cold plasma with dampings.

49492 **(LA-UR—86-2381) Two-dimensional simulations of magnetically-driven instabilities.** Peterson, D.; Bowers, R.; Greene, A.E.; Brownell, J. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 26p. (CONF-860703—14). NTIS, PC A03/MF A01; GPO Dep. File Number DE86013846.

From 4. international conference on megagauss magnetic-field generation and related topics; Santa Fe, NM, USA (14 Jul 1986).

A two-dimensional Eulerian MHD code is used to study the evolution of magnetically-driven instabilities in cylindrical geometry. The code incorporates an equation of state, resistivity, and radiative cooling model appropriate for an aluminum plasma. The simulations explore the effects of initial perturbations, electrical resistivity, and radiative cooling on the growth and saturation of the instabilities. Comparisons are made between the 2-D simulations, previous 1-D simulations, and results from the Pioneer experiments of the Los Alamos foil implosion program.

49493 **(LA-UR—86-2419) Liner compression of magnetically-confined, FRC plasmas.** Armstrong, W.T.; Morgan, J.A. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 10p. (CONF-860703—21). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013837.

From 4. international conference on megagauss magnetic-field generation and related topics; Santa Fe, NM, USA (14 Jul 1986).

A survey of fusion gain is made for a liner-compressed Field-Reversed Configuration (FRC), a closed-field-line magnetically confined plasma. The parameter space of initial liner velocity vs initial plasma density is examined for optimum thermonuclear conditions of the FRC at high compression (5 MG confining fields). The O-D survey model, an extension of a previous model, includes alpha heating, contaminant radiation losses and liner flux loss due to liner melting, in addition to plasma particle, energy and flux loss. The effects of speculated instabilities at high densities are discussed. The primary limits on fusion gain are found to be excessive plasma length changes and plasma/liner contact. Final optimized fusion conditions are density $\sim 10^{19}$ cm^{-3}, total temperature $\sim$ 20 keV and plasma energy $\sim$ 1 MJ. These optimized conditions correspond to higher initial density than in previous FRC/liner studies. Discussion of model constraints, experimental implications and a liner trial test are presented.

49494 **(ORNL/TM—9520) Experimental study of equilibrium in a bumpy torus.** Hiroe, S.; Cobble, J.A.; Colchin, R.J.; Chen, G.L.; Connor, K.A.; Goyer, J.R.; Solensten, L. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.). Jun 1986. Contract AC05-84OR21400. 50p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014415.

Plasma equilibrium in the ELMO Bumpy Torus (EBT) was studied experimentally by measurements of the electrostatic potential structure. Before an electron tail population is formed, the electric field is found, roughly speaking, to be in the vertical direction. The appearance of a high-energy electron tail signals the formation of a negative potential well, and the potential contours start to nest. The potential contours are shifted inward with respect to the center of the conducting wall. The electric field between the plasma and the conducting wall forces the plasma inward, balancing the outward expansion force. This force balance provides a horizontal electric field that cancels the concentric radial electric field locally at the separatrix of the potential contour and leads to convective energy loss.

49495 **(ORNL/TM—9703) Effect of electric fields and fluctuations on confinement in a bumpy torus.** Hiroe, S.; Glowienka, J.C.; Hillis, D.L.; Wilgen, J.B.; Chen, G.L.; Cobble, J.A.; El-Nadi, A.M.; Goyer, J.R.; Solensten, L.; Casson, W.H. (Oak Ridge National Lab., TN (USA)). Jun 1986. Contract AC05-84OR21400. 44p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014413.

In order to understand the relationships between confinement and space potential (electric field) and between confinement and density fluctuations, plasma parameters in the ELMO Bumpy Torus Scale (EBT-S) have been measured systematically for a wide

range of operating conditions. Present EBT plasma parameters do not show a strong dependence on the potential profile, but rather exhibit a correlation with the fluctuations. The plasma pressure profile is found to be consistent with the profile anticipated on the basis of the flute stability criterion for a marginally stable plasma. For a heating power of 100 kW, the stored energy density is found to be restricted to the range between 4.5 x 10^{13} eV-cm^{-3} and 7 x 10^{13} eV-cm^{-3}. The lower limit remains constant regardless of heating power and pertains to plasmas lacking an equilibrium and/or stability. The upper limit increases with heating power and is found to result from the onset of instabilities. In between the two limits is a plasma that is in an equilibrium state and is marginally stable. Operational trajectories exist that take the EBT plasma from one limit to the other.

49496 **(RAL—85-022) Calculation of the opacity of hot dense plasmas.** Rose, S.J. (Rutherford Appleton Lab., Chilton (UK)). Mar 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86703126.

A review of the calculation of the radiative opacity of hot dense material is presented. An attempt is made to describe some of the approximations and assumptions implicit in current calculations and to indicate areas in which improvements may be made.

49497 (UCID—20559-Vol.2, pp B.1-B.14) **MINIMARS interim report appendix halo model and computer code.** Santarius, J.F.; Barr, W.L.; Deng, B.Q.; Emmert, G.A. (Univ. of Wisconsin, Madison). Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

A tenuous, cool plasma called the halo shields the core plasma in a tandem mirror from neutral gas and impurities. The neutral particles are ionized and then pumped by the halo to the end tanks of the device, since flow of plasma along field lines is much faster than radial flow. Plasma reaching the end tank walls recombines, and the resulting neutral gas is vacuum pumped. The basic geometry of the MINIMARS halo is shown. For halo modeling purposes, the core plasma and cold gas regions may be treated as single radial zones leading to halo source and sink terms. The halo itself is differential into two major radial zones: halo scraper and halo dump. The halo scraper zone is defined by the radial distance required for the ion end plugging potential to drop to the central cell value, and thus have no effect on axial confinement; this distance is typically a sloshing plug ion Larmor diameter. The outer edge of the halo dump zone is defined by the last central cell flux tube to pass through the choke coil. This appendix will summarize the halo model that has been developed for MINIMARS and the methodology used in implementing that model as a computer code.

49498 **(UCLA/PPG—917) User's manual for FENAT: a two-dimensional multigroup diffusion theory Finite Element Neutral Atom Transport code.** Hasan, M.Z. (California Univ., Los Angeles (USA). Dept. of Mechanical, Aerospace and Nuclear Engineering). Jul 1986. Contract FG03-86ER52130. 80p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86014407.

FENAT solves the two-dimensional energy dependent diffusion equation in Cartesian (X-Y) and cylindrical/toroidal (R-Z) coordinates. The boundary conditions allowed are: vacuum, reflection, albedo and surface source. The energy variable is treated by multigroup method. The resulting multigroup diffusion equation is solved by finite element Galerkin's method with triangular element discretization of the spatial domain. The algebraic matrix equation is solved by the direct method of Crout variation of Gauss' elimination. Dynamic memory allocation has been used so that the maximum problem size is limited by the size of active core storage of the machine. When necessary, the global matrix is stored in a binary disk file. FENAT is particularly suitable for the transport of neutral atoms in fusion plasmas.

49499 **Inner-shell x-ray line spectra of highly ionized titanium, chromium, iron, and nickel and their application to laboratory plasmas.** Lemen, J.R.; Phillips, K.J.H.; Doschek, G.A.; Cowan, R.D. (Mullard Space Science Laboratory, Holmbury St. Mary, Dorking, England). *Journal of Applied Physics;* 60: No. 6, 1960-1973(15 Sep 1986).

The intensities of x-ray lines due to inner-shell 1s-italic-2p-italic transitions in O I-, N I-, and C I-like ions of Ti XV—XVII, Cr XVII-XIX, Fe XIX-XXI, and Ni XXI-XXIII seen in tokamak plasmas are calculated. The lines are assumed to be formed by dielectronic recombination and inner-shell excitation. The present calculations are an extension of previous work for iron alone. The dielectronic contribution for iron was found to be more important, and this is true for the ions of titanium, chromium, and nickel considered here. The dielectronic rates were calculated using a suite of computer programs developed by one of us. The inner-shell contribution was estimated by van Regemorter's formula. The considered ion stages have two or more fine-structure levels in the ground configuration, which gives rise to a density dependence of both dielectronic and collision excitation mechanisms at densities between 10^{11} and 10^{16} cm^{-3}, a range suitable for tokamak plasmas. A means for determining the density of high-temperature plasmas is presented for when no other density diagnostics are available. Finally, the present calculations were applied to the problem of radial ion diffusion in tokamaks. Spectra were calculated by integrating along various lines of sight to simulate what might be observed by an actual spectrometer viewing a tokamak plasma.

49500 **Coupling of radiation and hydrodynamics in a Z-italic-pinch plasma.** Bailey, J.; Fisher, A.; Rostoker, N. (Department of Physics, University of California, Irvine, California 92717). *Journal of Applied Physics;* 60: No. 6, 1939-1945(15 Sep 1986).

The relationship between hydrodynamics and radiative energy loss from a gas puff Z-italic pinch was studied using helium, krypton, and a helium—krypton mixture. The results show that radiation cooling enables the magnetic field to compress the plasma to a higher electron density and a smaller final radius. The data are consistent with a simple model describing the thermalization of the plasma on the axis of the pinch. The spectrum of the krypton radiation from the mixture was harder than from the pure krypton pinch. This may be important for application of the Z-italic pinch as a radiation source.

49501 **Electrostatic ion probe for tokamak-plasma-edge diagnostic.** da Silva, R.P.; Nascimento, I.C.; da Cruz D.F. Jr.; Hershcovitch, A. (Instituto de Fi-acute-accentsica, Universidade de Sa-tildeo Paulo, C.P. 20516, 01498 Sa-tildeo Paulo, SP, Brazil). 57: No. 9, 2205-2209(Sep 1986).

An electrostatic probe for ion temperature and density measurements was built and tested in the scrape-off region of the TBR-1 small tokamak. The main parameters involved in the design and details of the construction of the probe are presented. The electron discrimination and the probe efficiency for ion detection were checked by measuring the probe current as a function of the collector retraction length for a constant voltage. The results for the ion temperature and density obtained from the characteristic curves are discussed and compared with previous measurements.

49502 **Study of the effects of photoelectron statistics on Thomson scattering data.** Hart, G.W.; Levinton, F.M.; McNeill, D.H. (Princeton Plasma Physics Laboratory, P. O. Box 451, Princeton, New Jersey 08544). 57: No. 9, 2218-2220(Sep 1986). Contract AC02-76CH03073.

A computer code has been developed which simulates a Thomson scattering measurement, from the counting statistics of the input channels through the mathematical analysis of the data. The scattered and background signals in each of the wavelength channels are assumed to obey Poisson statistics, and the spectral data are fitted to a Gaussian curve using a nonlinear least-squares fitting algorithm. This method goes beyond the usual calculation of the signal-to-noise ratio for the hardware and gives a quantitative measure of the effect of the noise on the final measurement. This method is applicable to Thomson scattering measurements in which the signal-to-noise ratio is low due to either low signal or high background. Thomson scattering data from the S-1 spheromak have been compared to this simulation, and they have been found to be in good agreement. This code has proven to be useful in assessing the effects of counting statistics relative to shot-to-shot variability in producing the observed spread in the data. It was also useful for designing improvements for the S-1 Thomson scattering system,

and this method would be applicable to any measurement affected by counting statistics.

49503 **Optical and UV/x-ray imaging diagnostics for imploding plasma experiments.** Lee, P.H.Y.; Price, R.H.; Reay, J.; Pecos, J.; Seagrave, J.; McGurn, J.; Cochrane, B.; Anderson, B. (Los Alamos National Laboratory, E-526, Los Alamos, New Mexico 87545). **57**: No. 9, 2227-2229(Sep 1986).

We report on a fast framing camera designed to image imploding foils driven by inductive storage drivers. The camera has several front ends which are disposable, they allow for imaging in either the visible, UV, or x-ray regions; it also has very large dynamic range which allows it to record sequences of events where the brightness changes by many orders of magnitude.

49504 **Faraday rotation in a multimode optical fiber in a fast rise-time, high magnetic field.** Wessel, F.J.; Wild, N.C.; Fisher, A.; Rahman, H.U.; Ron, A.; Felber, F.S. (JAYCOR, P. O. Box 85154, San Diego, California 92138-9259). **57**: No. 9, 2246-2249(Sep 1986).

A magneto-optic Faraday rotation diagnostic was implemented on a Z-italic-pinch driven flux-compression generator to measure line-averaged, megagauss, axial-magnetic fields up to 1.6 MG with rise times of 30 kG/ns. The axial-magnetic field rotated the plane of polarization of a 2-W argon laser beam in a 0.725-mm-diam, fused silica quartz fiber mounted coaxial with the Z-italic pinch. The rapid rise time and the high radiation environment presented by the Z-italic-pinch plasma caused a high-pressure impulse <100 kbar, to be coupled into the quartz-fiber probe disrupting the polarization-preserving properties of the fiber. The time scale for disruption was characteristic of a shock propagating radially through the fiber to its core. This paper will describe the response of the Faraday diagnostic under these conditions and present a simple model that describes the effects of fiber depolarization that is consistent with previous observations of stress-induced depolarization in optical fibers.

49505 **Comprehensive approach for diagnosing intense single-pulse microwave sources.** Earley, L.M.; Ballard, W.P.; Roose, L.D.; Wharton, C.B. (Microwave Physics Division, Sandia National Laboratories, Albuquerque, New Mexico 87185). **57**: No. 9, 2283-2293(Sep 1986). Contract AC04-76DP00789.

A comprehensive approach to developing intense pulse microwave diagnostics for measuring the performance of a high-power microwave source is presented. Both conventional and new diagnostic techniques were used. Hence all measurements were made in a redundant fashion allowing small error bars in the measured data. The output power was diagnosed using four methods: two transmitting—receiving systems, two circular waveguide directional couplers, calorimetry, and gaseous breakdown. The operating frequency was measured using three methods: bandpass filters, a heterodyne receiver, and a homodyne receiver. The diagnostics were evaluated by using a 12-vane S-band inverted relativistic magnetron operating at 1 MV, 0.31 T, and 5 kA which reliably produced 3.15-GHz microwaves at powers of approximately 100 MW for pulse lengths variable from 5 to 70 ns. The microwave power pulse had a rise time of approximately 2 ns.

49506 **Relativistic multiregion bounce-averaged Fokker—Planck code for mirror plasmas.** Matsuda, Y.; Stewart, J.J. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Journal of Computational Physics;* **66**: No. 1, 197-217(Sep 1986). Contract W-7405-ENG-48.

We have developed a unique Fokker—Planck code to study the physics of plasmas that are trapped in magnetic and potential wells of general shape on a collisional time scale. The code was designed primarily to apply to mirror machines, either a simple mirror or a tandem mirror. A plasma confined in a mirror machine generally consists of various groups of particles trapped magnetically and/or electrostatically depending on their energy, magnetic moment, and axial position. Characteristic features of such a plasma are: first, that the bounce times of trapped particles are much shorter than the collision times; and second, that particles trapped in different axial locations can have the same energy and magnetic moment. The former feature allows us to perform bounce-orbit averaging of the kinetic equation, and the latter feature indicates that the distribution function can be multivalued. The code solves a relativistic Fokker—Planck equation averaged over bounce orbits for all the trapped-particle groups. In addition to the Coulomb collision operator, the code includes a synchrotron radiation term, a quasilinear rf diffusion operator, and source and loss terms. The numerical method consists of a mapping technique and a Galerkin finite-element method. Example results using the code for electron-cyclotron resonant heating and neutral beam injection in a tandem mirror are also presented.

49507 **Time-implicit Monte Carlo Collision algorithm for particle-in-cell electron transport models.** Cranfill, C.W.; Brackbill, J.U.; Goldman, S.R. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Computational Physics;* **66**: No. 1, 239-249(Sep 1986).

A time-implicit Monte Carlo collision algorithm has been developed to allow particle-in-cell electron transport models to be applied to arbitrarily collisional systems. The algorithm is formulated for electrons moving in response to electric and magnetic accelerations and subject to collisional drag and scattering due to a background plasma. The correct fluid or streaming transport results are obtained in the respective limits of strongly or weakly collisional systems, and reasonable behavior is produced even for time-steps greatly exceeding the magnetic-gyration and collisional-scattering times.

49508 **3D nonlinear MHD calculations using implicit and explicit time integration schemes:.** Garcia, L.; Hicks, H.R.; Carreras, B.A.; Charlton, L.A.; Holmes, J.A. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Computational Physics;* **65**: No. 2, 253-272(Aug 1986). Contract AC05-84OR21400.

A computer code (KITE) that solves a reduced set of magnetohydrodynamic (MHD) equations with diamagnetic and thermal force effects included has been constructed. It can use two different time integration schemes. A mostly-explicit time integration scheme is shown to be efficient for the nonlinear phase of tearing mode turbulance where numerical stability demands a small timestep. However, for linear calculations, or nonlinear ones in which the level of turbulence is low, a mostly-implicit approach is seen to be more efficient. The two numerical schemes yield the same solution. Nonlinear MHD calculations in which the solutions are represented by a finite Fourier series allow one to study the dependence of the nonlinear solution on its permitted harmonic content. It is seen that for the 3-dimensional (3D), nonlinear, tearing mode disruption problem, the refinement of the solution by the addition of more modes leads to further destabilization. This contrasts to the rippling mode problem, in which the addition of modes is stabilizing. For the latter, a finite number of modes yields a converged solution that is a saturated state. This contrasting behavior reflects the basic physical mechanism of the nonlinear interaction in each case and not the particular numerical scheme used for the calculations.

49509 **Steady state compact toroidal plasma production.** Turner, W.C. (to Dept. of Energy, Washington, DC). US Patent 4,601,871. 22 Jul 1986. Filed date 17 May 1983. vp.

An apparatus is described for maintaining a field-reversed toroidally shaped plasma in a steady state mode consisting of: at least one magnetized coaxial plasma gun for forming a toroidal plasma the means having cylindrically symmetric solenoidal electrodes for generating a poloidal magnetic field; means for maintaining the radial equilibrium of the toroidal plasmas after formation, the means being operatively coupled to the plasma gun; and means for producing magnetic helicity being operatively connected to the electrodes so as to produce increasing magnetic helicity from magnetic flux between the electrodes.

49510 **Trapping of gun-injected plasma by a tokamak.** Leonard, A.W.; Dexter, R.N.; Sprott, J.C. (Department of Physics, University of Wisconsin, Madison, Wisconsin 53706). **57**: No. 3, 333-336(21 Jul 1986).

It is shown that a plasma produced by a Marshall gun can be injected into and trapped by a tokamak plasma. Gun injection raises the line-averaged density and peaks the density profile. Trapping of the gun-injected plasma is explainable in terms of a depolarization current mechanism.

49511 Self-consistent dynamolike activity in turbulent plasmas. Bhattacharjee, A.; Hameiri, E. (Department of Applied Physics, Columbia University, New York, New York 10027). 57: No. 2, 206-209(14 Jul 1986).

The evolution of turbulent plasmas is investigated within the framework of resistive magnetohydrodynamics. The functional form of the mean electric field is derived for fluctuations generated by tearing and resistive-interchange modes. It is shown that a bath of such local and global modes in pinches causes toroidal field reversal with finite pressure gradients in the plasma.

49512 Operation of a quasioptical electron cyclotron maser. Morse, E.C.; Pyle, R.V. (Lawrence Berkeley Lab., CA). 3: No. 3, 1239-1240(May-Jun 1985). Contract AC03-76SF00098.

The electron cyclotron maser, or gyrotron concept, has been developed to produce sources producing 200 kW at 28 GHz continuously, and higher power outputs and frequencies in pulsed mode. These sources have been useful in electron cyclotron resonance heating (ECRH) in magnetically confined fusion devices. However, high frequencies and higher power levels will be required in reactor-grade fusion plasmas, with likely requirements of 1.0 MW or more per source at 140 GHz.

49513 Renormalization and the breakup of magnetic surfaces. Greene, J.M. (GA Technologies Inc., San Diego, CA). pp 3-19 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Containment of field lines is a fundamental problem for magnetically controlled fusion. Transport along field lines is much faster than transport across field lines, so that containment of field lines is the first step toward containment of plasma in toroidal devices. Thus this problem has been studied for many years. The purpose of this chapter is to gather these results together and to set them into a fusion context. Sections 2 and 3 discuss the magnetic-containment problem. First, magnetic field lines in axisymmetric systems are treated, and then the effect of nonaxisymmetric perturbations is introduced. Period doubling in a magnetic-field-line context is discussed in Section 4, primarily as an introduction to renormalization in such systems. The breakup of magnetic surfaces is treated in Section 5 and Section 6 contains conclusions.

49514 Long-time correlations in stochastic systems. Karney, C.F.F. (Plasma Physics Lab., Princeton Univ., Princeton, NJ). pp 33-42 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

In recent years there has been considerable interest in understanding the motion in Hamiltonian systems when phase space is divided into stochastic and integrable regions. This paper studies one aspect of this problem, namely, the motion of trajectories in the stochastic sea when there is a small island present. The results how that the particle can be stuck close to the island for very long times. For the standard mapping, where accelerator modes are possible, it appears that the mean squared displacement of particles in the stochastic sea may increase faster than linearly with time indicating nondiffusive behavior.

49515 Magnetic field lines, Hamiltonian mechanics, and symmetries and invariants. Littlejohn, R.G. (Dept. of Physics, Univ. of California, Los Angeles, CA). pp 43-50 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

It is clear that the theory of maps is still generating a great deal of interest in the plasma-physics community. It seems that many people got interested in map theory in the first place by tracing magnetic field lines around tokamaks and stellarators, so perhaps it is appropriate here to note more about the connection between magnetic field lines and Hamiltonian mechanics. The author tries to give a kind of unified and general treatment of field-line flow as a Hamiltonian system, which should pull all these threads together. It turns out that the way to do this is to modify somewhat both the usual description of magnetic-field-line flow and that of Hamiltonian mechanics. In the case of Hamiltonian mechanics, the modification consists of using noncanonical coordinates in phase space. From a mathematical standpoint, this is a rather simple thing to do. Mathematicians tend to eschew coordinates anyway. but it is a step with a number of useful consequences for plasma physics. In addition to magnetic-field-line flow, the subject of this chapter, there are also guiding-center theory and the subject of gyrokinetic equations, which are clarified by the use of noncanonical coordinates.

49516 Searching for integrable systems. Cary, J.R. (Inst. for Fusion Studies, Univ. of Texas, Austin, TX). pp 51-56 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Lack of integrability leads to undesirable consequences in a number of physical systems. The lack of integrability of the magnetic field leads to enhanced particle transport in stellarators and tokamaks with tearing-mode turbulence. Limitations of the luminosity of colliding beams may be due to the onset of stochasticity. Enhanced radial transport in mirror machines caused by the lack of integrability and/or the presence of resonances may be a significant problem in future devices. To improve such systems one needs a systematic method for finding integrable systems. Of course, it is easy to find integrable systems if no restrictions are imposed; textbooks are full of such examples. The problem is to find integrable systems given a set of constraints. An example of this type of problem is that of finding integrable vacuum magnetic fields with rotational transform. The solution to this problem is relevant to the magnetic-confinement program.

49517 Resonance behavior of the perturbed Toda lattice. deFainchtein, R.; Reichl, L.E. (Center for Studies in Statistical Mechanics, Univ. of Texas, Austin, TX). pp 65-78 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Numerical data are presented to supplement previous theoretical work on dynamic external-field resonance behavior and chaos in the two-particle Toda lattice.

49518 Hamilton's principle and the splitting of periodic orbits. Schmidt, G. (Stevens Inst. of Tech., Hoboken, NJ). pp 57-64 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

It is shown that bifurcation of periodic orbits, and orbit splitting in general, are closely related to the development of new saddle-point directions of the Lagrangian integral I_1. Critical parameter values for orbit-splitting can be found by looking at zeros of the second variation of I_1 over a suitably chosen function space of periodic functions. I_1 is a minimum for unstable periodic orbits and KAM trajectories. The rapid convergence of this method for finding bifurcations is illustrated with the example of a particle in a standing wave field.

49519 Progress in computing Lyapunov exponents from experimental data. Wolf, A.; Swift, J. (Dept. of Physics, Univ. of Texas, Austin, TX). pp 111-125 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Of the many diagnostics proposed for deterministic chaotic systems, the spectrum of Lyapunov exponents appears to be the most physically relevant. A well-known technique for computing these exponents for systems defined by sets of differential equations may be reformulated for use with experimental data. Here the authors discuss the calculation of the largest positive exponent with his new technique and compare it to the use of an underlying one-dimensional map to compute the same exponent.

49520 Kinetic description of a chaotic motion in a classical conservative system with two degrees of freedom. Petrosky, T.Y. (Center for Studies in Statistical Mechanics, Univ. of Texas, Austin, TX). pp 189-208 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Motion of an elastic pendulum in the vicinity of unperturbed separatrix has been investigated by a kinetic description of nonequilibrium statistical mechanics. New canonical variables of the pendulum, which are well-defined and continuous at the separatrix, have been introduced. A kinetic equation of the Fokker-Planck type for the momentum distribution function has been derived from basic principles in the weak coupling limit. This equation gives the Arnol'd Chirikov diffusion coefficient of the energy of the unperturbed pendulum. In higher-order approximation in a coupling constant, the existence of a logarithmic singularity is pointed out.

49521 Collisional diffusion in a torus with imperfect magnetic surfaces. White, R.B. (Plasma Physics Lab., Princeton Univ., Princeton, NJ). pp 209-224 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

A Hamiltonian formulation of the guiding center drift equations is used to investigate the modification of neoclassical diffusion for low collisionality in a toroidal magnetic field with partially destroyed magnetic surfaces. The magnetic field is assumed to be given by the small perturbation of an axisymmetric system. The results are applicable to particle diffusion in realistic confinement systems, midway between axisymmetric and purely stochastic ones. Significant enhancement of electron diffusion over neoclassical rates is found. This increase can be accounted for by the contributions due to the first few island chains in the Fibonacci sequence generated by the zero-order island and by associated stochastic domains.

49522 Impact of clumps on plasma stability and the nature of turbulence in a saturated state. Terry, P.W.; Diamond, P.H. (Inst. for Fusion Studies, The Univ. of Texas at Austin, Austin, TX). pp 335-351 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Phase-space density granulations (clumps) are studied using the theory of two-point phase-space density correlation. A novel mechanism of extraction of expansion-free energy is described. This mechanism affects questions pertaining to nonlinear stability. Theories for two-point correlation for the universal mode in a slab geometry with shear and trapped electrons in toroidal geometry are discussed. Results are present that show destabilization of the universal mode and enhancement of the trapped electron growth rate. An analytic formula for the width of the frequency spectrum is obtained. By specifying the collective resonance damping mechanism, the wavenumber spectrum is also calculated. A formula for energy flux illustrates the impact of clumps on transport and energy confinement.

49523 Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984). 361p.

This book examines the statistical properties of nonlinear dynamical systems in relation to plasma confinement. Topics considered include magnetic surfaces, stochastic systems, magnetic field lines, Hamiltonian mechanics, resonance, solitons, fractal basin boundaries, kinetic theory, drift wave turbulence, and clumps in plasma physics.

49524 Fractal basin boundaries in nonlinear dynamical systems. Grebogi, C.; McDonald, S.W.; Oh, E. ; Yorke, J.A. (Univ. of Maryland, Coll. Park, MD). pp 127-130 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

The structure of the boundaries separating basins of attraction for different attractors is investigated. To illustrate the possibility of fractal basin boundaries in the simplest possible context, and also to facilitate an analytical calculation, the authors consider a particular two-dimensional noninvertible map. While this example may appear to be somewhat contrived, they emphasize that the phenomena found have also been demonstrated in more-general examples. The fractal basin boundaries described here are nondifferentiable curves.

49525 Kinetic theory of fluctuations in fluids far from equilibrium. Cohen, E.G.D.; Kirkpatrick, T.R. (Inst. for Physical Science and Tech., Univ. of Maryland, Coll. Park, MD). pp 171-187 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

An outline is given of the kinetic theory of a convective instability in a fluid, and the density and velocity fluctuations near it. The first convective instability in the Rayleigh-Benard cell is considered. Results are presented for fluids of arbitrary density. The singular behavior of the fluctuations below and above the instability point and their experimental detection are discussed.

49526 Evolution from coherence to turbulence in plasmas. Wong, A.Y.; Cheung, P.Y.; Tanikawa, T. (Dept. of Physics, Univ. of California, Los Angeles, CA). pp 131-153 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Highly monochromatic plasma waves are observed to evolve into turbulent spectra with spreads in frequencies and wavenumbers. In the weakly turbulent regime parametric decay and mode-coupling processes account for the spreading in frequency and wavenumber spectra. Certain parametric processes satisfying linear dispersion relations exhibit period doubling as a route to turbulence. The turbulent spectra are a result of sharp spatial inhomogeneities (cavitons) and the interactions between waves trapped inside cavitons. The relationship between caviton collapse and the formation of phase-space granulations is described.

49527 Coherence in chaos and the Zakharov model. Doolen, G.D.; DuBois, D.F.; Rose, H.A.; Hafizi, B. (Science Applications Inc., Plasma Research Inst., Boulder, CO). pp 155-167 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

The chaotic nature of "caviton turbulence" is studied in one-dimensional many-Fourier mode numerical simulations of the dissipative Zakharov equations in which the system is driven to modulational instability by energy injection into long-wavelength modes. Just above this instability threshold the system evolves, with hysteresis, into a variety of stable spacetime patterns of cavitons. For stronger driving the system becomes chaotic along various routes; the cavitons remain quite coherent with lifetimes long compared to the shortest Lyapunov time.

49528 Statistical description of drift wave turbulence. Horton, W. Jr. (Inst. for Fusion Studies, Univ. of Texas at Austin, Austin, TX). pp 253-271 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Dissipative drift wave fluctuations are studied with the Terry-Horton nonlinear drift wave model. The $k\omega$ spectral characteristics of the fluctuations are parametrized in terms of the nonlinear frequency ω/subk/ and line width ν/subk/ from computer simulations and the renormalized wave-kinetic equation. The probability distributions of the fluctuations are analyzed to assess the validity of the quasinormal approximation made in the closure of the hierarchy of correlations in statistical turbulence theory.

49529 Solitons in turbulent flow. Meiss, J.D. (Inst. for Fusion Studies, The Univ. of Texas, Austin, TX). pp 273-284 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

In this chapter the author discusses the connection between two seemingly dissimilar concepts: turbulence and coherence. Historically, turbulent flow has been characterized by extreme incoherence or randomness, the most successful theoretical treatments assuming quasi-Gaussianity. At the opposite end of the spectrum of

fluid motion are laminar flows such as isolated vortices, which they refer to as coherent structures. Perhaps the most coherent structure is the soliton, which maintains its integrity as a manifestation of the integrability of the field theory that describes it.

49530 **Topics in the theory of statistical closure approximations for plasma physics.** Krommes, J.A. (Princeton Univ., Plasma Physics Lab., Princeton, NJ). pp 241-252 of Statistical physics and chaos in fusion plasmas. Horton, C.W.; Reichl, L.E. New York, NY; John Wiley & Sons, Inc. (1984).

Recent advances and directions in the theory of statistical descriptions for plasmas are discussed. It would appear that analytical connections are beginning to be made between statistical closures and the impressive body of recent advances in nonlinear dynamics. Furthermore, the state of the art in numerical computation has advanced to the point where nontrivial tests of such closures as the direct-interaction approximation can be undertaken for situations of interest to applications-oriented plasma physics.

49531 **(ANL/FPP/TM—205) Liquid-metal flow in a thin conducting pipe near the end of a region of uniform magnetic field.** Walker, J.S. (Argonne National Lab., IL (USA); Illinois Univ., Urbana (USA). Dept. of Theoretical and Applied Mechanics). Apr 1986. Contract W-31-109-ENG-38. 42p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86015006.

This paper treats the liquid-metal flow in a straight circular pipe with a thin metal wall. A strong magnetic field is applied by a magnet with parallel poles that end abruptly. In the plane midway between the magnet poles: (1) far upstream, the flow is uniform, fully developed flow in a uniform magnetic field; (2) as the flow enters the non-uniform magnetic field near the end of the magnet, the flow moves away from the central part of the pipe and becomes concentrated as two jets near the points where the magnetic field is tangent to the pipe wall; (3) further downstream where the magnetic field strength is 0(c/sup 1/6/) compared to its value upstream, the flow migrates from these jets back toward a uniform flow distributed over the entire pipe cross section. Here, c is the wall conductance ratio, which is assumed to be small. The analysis also applies to flow into the magnetic field, because inertial effects and induced magnetic fields are neglected. There are circulations of electric current in planes parallel to the magnet poles. These currents produce a pressure drop in addition to that for two fully developed flows, one in a uniform magnetic field and one in no magnetic field, joined at the end of the magnet.

49532 **(BNL—38384) Muon sticking factor in muon catalyzed fusion and the other aspect of this fusion process.** Takahashi, H. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 7p. (CONF-860601—7). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014168.

From 4. international conference on emerging nuclear energy systems; Madrid, Spain (30 Jun 1986).

The effect of resonance nuclear fusion reaction on the initial muon sticking factor is formulated. The analysis shows that it is very sensitive to the resonance parameter, and the factor calculated, using the molecular wave function obtained by the Diffusion Monte Carlo method, is 0.1 +- 0.01 for the presently evaluated resonance parameter. The analysis of the multistep excitation effect on the reactivation factor shows that the effect is not so large, and the analysis of muonic x-ray spectra of μ^3He from Pμd and dμd fusions is in good agreement with the values measured by Bossy et al.

49533 **(CLM-R—254) Demo tokamak reactor. Aspects of the conceptual design.** Cooke, P.I.H.; Reynolds, P. (UKAEA Culham Lab., Abingdon). Aug 1985. 266p. H.M. Stationery Office, London, price Pound 12.00.

Some of the more important aspects of the design of a demonstration tokamak reactor are discussed with particular emphasis on the design of the tritium breeding blanket and its associated components. Alternative blanket designs employing ceramic and liquid breeding materials are presented. Both conform to the requirements of a commercial reactor in having a global tritium breeding ratio greater than unity and an outlet coolant temperature high enough for efficient electricity generation. Solutions to the problems of heat loading and plasma erosion of the first wall and divertor plates are proposed.

49534 **(CLM-R—255) Development of austenitic stainless steels as low-activity structural materials for fusion reactors.** Bott, A.H.; Pickering, F.B.; Butterworth, G.J. (Commission of the European Communities, Abingdon (UK). JET Joint Undertaking). Aug 1985. 55p. H.M. Stationery Office, London, price Pound 5.00.

A study based on published information has been performed to examine the feasibility of designing low-activity austenitic stainless steels to replace the conventional steels AISI 316, 320 and 321 and the proprietary steel FV548 for use as first wall and blanket materials in a fusion reactor. The alternative compositions have been chosen subject to the condition that the contact gamma ray dose rate associated with the induced radioactivity does not exceed 2.5 x 10^{-8} Gyh^{-1} after a decay period of 100 years. This limit should permit relatively safe handling of discarded components for subsequent recycling. The approach adopted in designing the alternative alloys involved the replacement of the high-activity elements that occur in conventional stainless steels with elements exhibiting low residual dose rates, while at the same time retaining the fully austenitic structure and equivalent transformation characteristics and mechanical properties. The major replacements suggested were Ni by Mn-N combinations, Mo by W, Tb by Ta.

49535 **(CLM-R—258) Bundle divertor. Compositional control and exhaust in tokamak experiments and the NET reactor.** Harbour, P.J.; Johnson, P.C. (UKAEA Culham Lab., Abingdon). Feb 1985. 63p. H.M. Stationery Office, London price Pound 7.00.

The status of knowledge of tokamak discharges with a bundle divertor is described, in particular concerning the effectiveness of a bundle divertor for compositional control and exhaust, first for tokamak experiments, then for the Next European Torus (NET). Magnetic geometry, results from the DITE tokamak experiment, modelling of bundle divertors; assessment of divertor performance, extrapolation from the DITE experiment and from modelling to NET, and comments on reactor bundle divertor designs, are all discussed.

49538 **(CONF-860551—8) Review of tokamak power reactor and blanket designs in the United States.** Baker, C.; Brooks, J.; Ehst, D.; Gohar, Y.; Smith, D.; Sze, D. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 15p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014593.

From Technical meeting and workshop on fusion reactor design and technology; Yalta, USSR (26 May 1986).

The last major conceptual design study of a tokamak power reactor in the United States was STARFIRE which was carried out in 1979-1980. Since that time US studies have concentrated on engineering test reactors, demonstration reactors, parametric systems studies, scoping studies, and studies of selected critical issues such as pulsed vs. steady-state operation and blanket requirements. During this period, there have been many advancements in tokamak physics and reactor technology, and there has also been a recognition that it is desirable to improve the tokamak concept as a commercial power reactor candidate. During 1984-1985 several organizations participated in the Tokamak Power Systems Study (TPSS) with the objective of developing ideas for improving the tokamak as a power reactor. Also, the US completed a comprehensive Blanket Comparison and Selection Study which formed the basis for further studies on improved blankets for fusion reactors.

49537 (CONF-860652—12) Overview of the Compact Ignition Tokamak. Flanagan, C.A. (Oak Ridge National Lab., TN (USA). Fusion Engineering Design Center). 1986. Contract AC05-84OR21400. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013258.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

The mission of CIT is to realize, study, and optimize fully ignited plasma discharges. The physics requirements have been established to provide reasonable assurance that the mission will be achieved: (1) plasma confinement guidelines consider all present scaling laws; ohmic, auxiliary heated L-mode, auxiliary heated H-mode, (2) figure-of-merit established: $X = aB/q$; this is proportional to ignition margin; X must be >25, (3) burn pulse duration set at ten times tau-E; an additional two times tau-E specified to heat to ignition, and (4) capability to operate both in limiter and divertor mode.

49538 (CONF-860652—20) IPFR: Integrated Pool Fusion Reactor concept. Sze, D.K. (Argonne National Lab., IL (USA). Fusion Power Program). 1986. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014620.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

The IPFR (Integrated Pool Fusion Reactor) concept is to place a fusion reactor into a pool of molten Flibe. The Flibe will serve the multiple functions of breeding, cooling, shielding, and moderating. Therefore, the only structural material between the superconducting magnets and the plasma is the first wall. The first wall is a stand-alone structure with no coolant connection and is cooled by Flibe at the atmospheric pressure. There is also no need of the primary coolant loop. The design is expected to improve the safety, reliability, and maintainability aspects of the fusion system.

49539 (CONF-860652—21) Status of fusion reactor blanket design. Smith, D.L.; Sze, D.K. (Argonne National Lab., IL (USA)). Feb 1986. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014527.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

The recent Blanket Comparison and Selection Study (BCSS), which was a comprehensive evaluation of fusion reactor blanket design and the status of blanket technology, serves as an excellent basis for further development of blanket technology. This study provided an evaluation of over 130 blanket concepts for the reference case of electric power producing, DT fueled reactors in both Tokamak and Tandem Mirror (TMR) configurations. Based on a specific set of reactor operating parameters, the current understanding of materials and blanket technology, and a uniform evaluation methodology developed as part of the study, a limited number of concepts were identified that offer the greatest potential for making fusion an attractive energy source.

49540 (CONF-860652—22) Tritium system for a tokamak reactor with a self-pumped limiter. Hassanein, A.M.; Sze, D.K. (Argonne National Lab., IL (USA). Fusion Power Program). 1986. Contract W-31-109-ENG-38. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014554.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

The self-pumping concept was proposed as a means of simplifying the impurity control system in a fusion reactor. The idea is to remove helium in-situ by trapping in freshly deposited metal surface layers of a limiter or divertor. Trapping material is added to the plasma scrape-off or edge region where it is transported to the wall. Some of the key issues for this concept are the tritium inventory in the trapping material and the permeation of protium and recycling of tritium. These quantities are shown to be acceptable for the reference design. The tritium issues for a helium-cooled solid breeder reactor design with vanadium alloy as a structural material are also examined. Models are presented for tritium permeation and inventory calculation for structure materials with the effect of a thin layer of coating material.

49541 (CONF-860652—23) Fusion blanket inherent safety assessment. Sze, D.K.; Jung, J.; Cheng, E.T. (Argonne National Lab., IL (USA). Fusion Power Program; GA Technologies, Inc., San Diego, CA (USA)). 1986. Contract W-31-109-ENG-38. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014553.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

The inherent safety aspect of TPSS reactor blankets has been investigated. The idea is to design the blanket so safe that cost savings can be realized such as through non-nuclear grading construction. If the blanket materials are carefully selected, inherent safety is feasible for fusion reactor blankets up to 5 to 10 MW/m^2 neutron wall loading.

49542 (CONF-8510266—1) Electron beam rocket pellet accelerator. Foster, C.A.; Menon, M.M. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014230.

From International pellet fueling workshop; La Jolla, CA, USA (30 Oct 1985).

Viewgraphs from the presentation are given. (MOW)

49543 (CONF-8510266—2) Centrifuge injector development at Oak Ridge National Laboratory. Foster, C.A. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014229.

From International pellet fueling workshop; La Jolla, CA, USA (30 Oct 1985).

Viewgraphs from this presentation are given. The centrifugal injector and its use on the Doublet 3 are described. (MOW)

49544 (CONF-8510266—3) Operation of the repeating pneumatic injector on TFTR and design of an 8-shot deuterium pellet injector. Combs, S.K.; Milora, S.L.; Foust, C.R.; Baylor, L.R.; Burris, R.D.; Fisher, P.W.; Lunsford, R.V.; Sparks, D.O.; Stewart, K.A.; Wysor, R.B. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.; Princeton Univ., NJ (USA). Plasma Physics Lab.). 1985. Contract AC05-84OR21400. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014222.

From International pellet fueling workshop; La Jolla, CA, USA (30 Oct 1985).

The repeating pneumatic hydrogen pellet injector, which was developed at the Oak Ridge National Laboratory (ORNL), has been installed and operated on the Tokamak Fusion Test Reactor (TFTR). The injector combines high-speed extruder and pneumatic acceleration technologies to propel frozen hydrogen isotope pellets repetitively at high speeds. The pellets are transported to the plasma in an injection line that also serves to minimize the gas loading on the torus; the injection line incorporates a fast shutter valve and two stages of guide tubes with intermediate vacuum pumping stations. A remote, stand-alone control and data acquisition system is used for injector and vacuum system operation. In early pellet fueling experiments on TFTR, the injector has been used to deliver deuterium pellets at speeds ranging from 1.0 to 1.5 km/s into plasma discharges. First, single large (nominal 4-mm-dia) pellets provided high densities in TFTR (1.8×10^{14} cm^{-3} on axis); after conversion to smaller (nominal 2.7-mm-dia) pellets, up to five pellets were injected at 0.25-s intervals into a plasma discharge, giving a line-averaged density of 1×10^{14} cm^{-3}. Operating characteristics and performance of the injector in initial tests on TFTR are presented.

49545 (CONF-8510266—4) Continuous pellet fueling experiments on D-III. Foster, C.A.; Milora, S.L.; Attenberger, S.E.; Sengolu, S.; Nagami, M.; Stockdale, R.; Schissel, D.; Wojtowicz, S.; Blau, F.; Fairbanks, E. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.; Japan Atomic Energy Research Inst., Tokyo; GA Technologies, Inc., San Diego, CA (USA)). 1985. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014231.

From International pellet fueling workshop; La Jolla, CA, USA (30 Oct 1985).

A centrifuge pellet injector developed at ORNL was used to continuously fuel beam-heated limiter discharges in D-III. This injector was capable of producing and maintaining a high density neutral beam-heated plasma without auxilary gas fueling. Viewgraphs from the presentation are included.

49546 (CONF-8605139—3) Minimars maintenance. Spampinato, P.T. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86011758.

From Minimars review meeting; Toronto, Canada (20 May 1986).

Viewgraphs from the presentation are included. (MOW)

49547 (CONF-8606179—Vol.2) 1986 USSR-US Exchange II.4. Topical meeting: magnetic configurations, plasma equilibrium, and stability of stellarators. Volume II. US presentations. (Oak Ridge National Lab., TN (USA); Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); Wisconsin Univ., Madison (USA)). 1986. Contract AC05-84OR21400. 272p. NTIS, PC A12/MF A01. File Number DE86014483.

From USSR/US exchange II: 4. topical meeting on magnetic configurations, plasma equilibrium and stability of stellarators; Oak Ridge, TN, USA (23 Jun 1986).

Separate abstracts were prepared for each of the included papers. (MOW)

49548 (DOE/ET/52025—T4) 3-D transient eddy current calculations for the Felix cylinder experiments. Davey, K.R. (Georgia Inst. of Tech., Atlanta (USA). Fusion Research Center). Jul 1986. Contract AS05-78ET52025. 56p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86014753.

The three-dimensional eddy current transient field problem is formulated first using the U-V method. This method breaks the vector Helmholtz equation into two scalar Helmholtz equations. Null field integral equations and the appropriate boundary conditions germaine to the problem are used to set up an identification matrix which is independent of null field point locations. Embedded in the identification matrix are the unknown eigenvalues of the problem representing its impulse response in time. These eigenvalues are found by equating the determinant of the identification matrix to zero. The eigenvalues, which can be equated with temporal response, are found to be intimately linked to the initial forcing function which triggers the transient in question. When this initial forcing function is Fourier decomposed into its respective spatial harmonics, it is possible to associate with each Fourier component a unique eigenvalue by this technique. The true transient solution comes through a convolution of the impulse response so obtained with the particular external field decay governing the problem at hand. The technique is applied to the Felix medium cylinder and compared to data. A pseudoanalytic conformation of the eigenvalues so obtained is formulated to validate the procedure.

49549 (DOE/NBM—1053) Designer's guidebook for first wall/blanket/shield assembly, maintenance, and repair. (McDonnell Douglas Astronautics Co., St. Louis, MO (USA); Remote Technology Corp., Oak Ridge, TN (USA)). 30 Dec 1983. Contract W-31-109-ENG-38. 345p. NTIS, PC A15/MF A01; 1; GPO Dep. File Number DE86014786.

This is the initial issue of the guidebook. Since a guidebook of this type must incorporate information concerning a wide range of subjects, much additional data will eventually be included. The guidebook will document, in summary and easily referenceable form, data, designs, design concepts, design guidelines and background information useful to the FWBS and to the Maintenance System designer. In providing guidelines for the AMR of the FWBS, the guidebook must, of necessity, include guidelines for all aspects of maintenance associated with the FWBS. These include most maintenance operations within the reactor room necessary to gain access, identify faults, and handle equipment related to FWBS maintenance. In addition, the guidelines include those required to define facility requirements for handling and repair of FWBS and related reactor components external to the reactor room. Particular emphasis is given to remote maintenance design and operations.

49550 (DOE/NBM—6012187) Magnetic fusion energy. Disaster operation procedures. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 15p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86012187.

In a major disaster such as an earthquake, toxic chemical release, or fire, these Disaster Operations Procedures can be used, in combination with good judgment, to minimize the risk of injury to personnel and of property damage in our laboratory, shop, and office areas. These emergency procedures apply to all personnel working within MFE/Zone-11 area including visitors, program contract personnel, and construction contract personnel.

49551 (EGG-M—01286) Common views of potentially attractive fusion concepts. Piet, S.J. (EG and G Idaho, Inc., Idaho Falls (USA)). 1986. Contract AC07-76ID01570. 7p. (CONF-860652—11). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013489.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

Fusion is viewed through three windows to help determine what constitutes a very attractive fusion concept. These windows are economics, maintenance and reliability, and safety and environment. Achievement of many desired features cannot yet be quantified. Although these differing perspectives can lead to some conflicting desires, five common desired features are apparent - (a) minimum failure rates, (b) minimum failure effects, (c) minimum complexity, (d) minimum short-term radioactivity, and (e) maximum mass power density. Some innovative fusion concepts are briefly examined in the light of these commonalities.

49552 (GA-A—18455) Experiments to test an intra-island scoop limiter on TEXT. Evans, T.E.; deGrassie, J.S.; Jackson, G.L.; Ohyabu, N.; Karger, F.; Haas, G. (GA Technologies, Inc., San Diego, CA (USA); Texas Univ., Austin (USA). Fusion Research Center; Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Jul 1986. Contract AC03-84ER53158. 24p. (CONF-860522—19). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014030.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

An instrumented scoop limiter probe is being operated on TEXT to test the concept of limiter cooling and improved particle removal efficiencies using an externally-applied resonant magnetic field perturbation (the resonant helical divertor concept). Cooling of the limiter face has been demonstrated for limiter positions ranging from γ/sub L/ = 29.0 cm inward to γ/sub L/ = 25.5 cm (the TEXT primary poloidal hoop limiter radius γ/sub a/ = 27.0 cm). Pressure rises in the limiter throat of approximately 40% are observed under optimized conditions. Interchangeable limiter heads with thicknesses of 1.0 cm and 0.3 cm have been used to examine particle ducting into the scoop aperture. Experimental results are discussed along with observations of the limiter floating potential, H/sub α/ recycling emissions, pressure measurements, and edge density and temperature measurements.

49553 (INIS-BR—492, pp 265-277) Neutronic comparative study of some structural materials for fusion reactors. Santos, R. dos; Azevedo, E.M. de; Silva, R.C.O. da. (Centro de Informacoes Nucleares, Rio de Janeiro, Brazil). 1985. (In Portuguese). NTIS (US Sales Only), PC A99/MF A01. File Number DE86703268. (CONF-8504255—).

From 5. national meeting of reactor physics; Rio de Janeiro, RJ, Brazil (10 Apr 1985).

Calculations of tritium regeneration, heat generation and gas production in function of the following structural materials; niobium, vanadium, molybdenum, titanium and zirconium were made for the neutronic design of fusion reactor blankets. ANISN, DLC-37F and MACKLIB-IV were utilized.

49554 **(IPPJ-DT—115) Study meeting on 'criteria for materials of nuclear fusion reactors'.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Oct 1984. 103p. (In Japanese). (CONF-8403241—). NTIS (US Sales Only), PC A06/MF A01. File Number DE86703134.

From Study meeting on criteria for materials of nuclear fusion reactors; Nagoya, Japan (1 Mar 1984).

This study meeting was held on March 1 and 2, 1984, at the Institute of Plasma Physics, Nagoya University. Recently, the problems required for the materials of nuclear fusion reactors have become considerably clear. The problem of the high concentration damage due to 14 MeV neutrons and the problem of surface materials have been well known from the beginning, but moreover, the radioactivation of materials, the problem of safety, and the feasibility of remote operation related to it have become urgent problems. Besides, the plan of large scale facilities as the means of promoting research is one of the important themes. The research on materials must take part in the whole technological problems which enable the construction of actual nuclear fusion devices. This study meeting was held as a part of the R project of the Institute of Plasma Physics, Nagoya University, but it aimed at grasping the present status and discussing the future perspective of the materials of nuclear fusion reactors, and examining the criteria for nuclear fusion materials. The gists of 23 lectures presented at the meeting are collected in this report.

49555 **(Juel—2024) Study of surfaces and surface layers on high temperature materials after short-time thermal loads.** Bolt, H.; Hoven, H.; Koizlik, K.; Linke, J.; Nickel, H.; Wallura, E. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorwerkstoffe; Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Maschinenwesen). Nov 1985. 76p. NTIS (US Sales Only), PC A05/MF A01. File Number DE86752571.

Being part of the plasma-wall interaction during TOKAMAK operation, erosion- and redeposition processes of First Wall materials substantially influence plasma parameters as well as the properties of the First Wall. An important redeposition process of eroded material is the formation of thin films by atomic condensation. Examinations of First Wall components after TOKAMAK operation lead to the assumption that these thin metallic films tend to agglomerate to small particles under subsequent heat load. In laboratory experiments it is shown that thin metallic films on various substrates can agglomerate under short time high heat fluxes and also under longer lasting lower thermal loads, thus verifying the "agglomeration hypothesis".

49556 **(LA-UR—86-2299) COVFILS-2: neutron data and covariances for sensitivity and uncertainty analysis.** Muir, D.W. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 6p. (CONF-860652—19). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013858.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

We have prepared a new, fusion-oriented library of multigroup neutron cross sections, scattering matrices, and covariances (uncertainties and correlations) using modules of the NJOY nuclear data processing system. This 74-group library, called COVFILS-2, was produced specifically for use in the sensitivity and uncertainty analysis of fusion-relevant integral experiments. The 14 materials included in the first version of COVFILS-2 are H, ^{6}Li, ^{7}Li, Be, C, N, O, Na, Al, Si, Cr, Fe, Ni, and Pb.

49557 **(LA-UR—86-2636) Heavy-ion fusion reactor concepts, requirements and attractive features.** Pendergass, J.H. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 10p. (CONF-860510—11). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013821.

From Symposium on heavy ion fusion; Washington, DC, USA (27 May 1986).

Four generic reactor-plant concepts were included in the Heavy Ion Fusion Systems Assessment to provide a wide range of pulse-repetition-rate/target-yield capability - 1 to 20 Hz/150 to 3000 MJ. This permitted exploration of the impact on heavy-ion fusion cost of electricity (COE) of the repetition-rate and efficiency advantages of induction linacs relative to other ICF drivers. Minimum COE results are encouraging - from 55 to 75 mills/kWh for 1000-MWe plants to <45 mills/kWh for 1500 MWe. HIF with induction-linac drivers can compete using more than one reactor plant concept. Minimum COE corresponds to reactor repetition rates < 10 Hz for 1000-MWe, one-reactor plants. Contrary to pre-HIFSA expectations, large pulse repetition rates are optimum only for very large plants. COE's are within 5% of minimum COE over wide ranges of repetition rate and target yield. Cost or technological problems is one part of plant parameter space need not be fatal for HIF because of the large low-COE parameter space.

49558 **(NBSIR—86-3050) Materials studies for magnetic fusion energy applications at low temperatures - IX.** Reed, R.P. (ed.). (National Bureau of Standards, Boulder, CO (USA). Fracture and Deformation Div.). May 1986. 326p. NTIS, PC A15/MF A01; 1; GPO Dep. File Number DE86014006.

This report contains results of a research program to produce material property data that will facilitate design and development of cryogenic structures for the superconducting magnets of magnetic fusion energy power plants and prototypes. Nineteen technical papers are presented under four headings reflecting the main program areas: Welding, Nonmetallics, Structural Alloys, and Technology Transfer. Abstracts for each of these papers have been prepared.

49559 (NEANDC(J)—117/U, pp 3-14) **Review on nuclear data for fusion reactors.** Kanda, Y. (Kyushu Univ., Kasuga, Japan). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Present status of fusion nuclear data is briefly reviewed taking account of the relation among differential experiment, evaluation, and integral experiment. It is emphasized that covariances should be introduced to the comparison between calculations and experiments and that model calculation should be effectively used in the evaluation of the fusion nuclear data. Preparation of reference data set is proposed to improve model calculation for neutronics.

49560 (NEANDC(J)—117/U, pp 15-31) **Status of JENDL-3PR1 and 3PR2.** Asami, T. (Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

The compilation of JENDL-3PR1 and -3PR2 was made urgently to use their evaluated data for analyses of integral experiments for fusion neutronics. These files include the evaluated data for eight nuclides important for fusion neutronics, i.e., ^{6}Li, ^{7}Li, ^{9}Be, ^{12}C, ^{16}O, Cr, Fe and Ni. The data for these nuclides except for ^{16}O were obtained by revising the JENDL-2 ones temporarily and the ^{16}O data were evaluated newly. The outline and special features of these evaluated data are described briefly.

49561 (NEANDC(J)—117/U, pp 52-56) **Nuclear data and integral experiments required for fusion reactor nuclear design.** Seki, Y. (Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Nuclear data required for the nuclear design of fusion reactors are described very briefly. The ^{7}Li cross sections in the GICX40 library which had been derived from ENDF/B-3 were replaced by those derived from JENDL-3PR1. The effects of the replacement on tritium breeding ratios of two types of blankets are

shown. Integral experiments useful for the validation of the data and methods used in the nuclear design are described.

49562 (NEANDC(J)—117/U, pp 57-67) **High tritium breeding ratio (TRB) blanket concept and requirements for nuclear data relating to TBR.** Maki, K. (Hitachi Ltd., Ibaraki, Japan). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

Significance of developing a blanket having a sufficiently larger tritium breeding ratio (TBR) than 1.0 is discussed. For this purpose, a high TBR blanket with a front breeder zone just before the multiplier is introduced together with conventional blankets. From discussion of TBR characteristics in these blankets, the necessity of improving on nuclear data, i.e. reducing uncertainties is presented as follows; σ/sub s/, σ/sub np/ and σ/sub nα/ of structural and coolant materials, and σ/sub n2n/ of the multiplier at higher energies above several MeV, and σ/sub nγ/ of these materials and σ/sub nαT/ of ^{6}Li at energies from several hundred keV to thermal energy.

49563 (NEANDC(J)—117/U, pp 183-195) **Fusion blanket engineering benchmark experiment.** Nakamura, T. (Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken). Mar 1986. Information Div., Dept. of Technical Information, JAERI, Tokai-mura, Naka-jur, Ibaraki-ken, Japan. File Number TI86901123. (JAERI-M—86-029; INDC(JPN)—103/L; CONF-8507114—).

From Specialists' meeting on nuclear data for fusion neutronics; Tokai, Japan (23 Jul 1985).

In Fusion Blanket Engineering Benchmark Experiments at the FNS, simplified systems of composite configurations are deliberately chosen, experimental data are acquired in parametric way, then, the comparisons are made with various calculation results to point out problems associated with the heterogeneous structure and to assess the overall accuracies of the nuclear calculations. The accumulation of the information thus obtained serves to reduce the uncertainties in interpreting the TBR and other neutronic quantities in the conceptual reactor design, performing a complementary role to the basic benchmark experiments. This program has been selected as one of the joint activities between JAERI and US DOE.

49564 (ORNL/FEDC—86/3) **Multiplex tokamak power plant.** Dabiri, A.E. (Oak Ridge National Lab., TN (USA). Fusion Engineering Design Center). Jul 1986. Contract AC05-84OR21400. 38p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014400.

The concept of multiplexing for a fusion power core as an option for producing power is explored. Superconducting, as well as normal magnet, coils in either first or second stability regimes are considered. The results show that multiplex plants with superconducting magnets operating in the second stability regime could be competitive with the single-unit plants in some unit sizes. The key issues that impact the expected benefits of multiplexing must be investigated further. These are factory fabrication, economy of scale, the extent of equipment sharing, inherent safety, maintainability, and utility load management.

49565 (ORNL/FEDC—86/4) **Tokamak System Code Version II.** Reid, R.L. (Oak Ridge National Lab., TN (USA). Fusion Engineering Design Center). Aug 1986. Contract AC05-84OR21400. 84p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86014399.

The Tokamak System Code has been revised to more accurately model the plasma physics, the poloidal field coil/magnetohydrodynamic (MHD) systems, and the toroidal field (TF) coil system. The plasma physics model now uses a two-fluid representation of the electron-ion power balance and has a wide selection of confinement scalings. The poloidal field coil subroutine was upgraded by incorporating a version of the Fusion Engineering Design Center MHD code. The TF coil subroutine was revised to more accurately model copper TF coil versions of tokamaks.

49566 (ORNL/TM—9992) **Helium mass flow measurement in the International Fusion Superconducting Magnet Test Facility.** Baylor, L.R. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.). Aug 1986. Contract AC05-84OR21400. 32p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86014409.

The measurement of helium mass flow in the International Fusion Superconducting Magnet Test Facility (IFSMTF) is an important aspect in the operation of the facility's cryogenic system. Data interpretation methods that lead to inaccurate results can cause severe difficulty in controlling the experimental superconducting coils being tested in the facility. This technical memorandum documents the methods of helium mass flow measurement used in the IFSMTF for all participants of the Large Coil Program and for other cryogenic experimentalists needing information on mass flow measurements. Examples of experimental data taken and calculations made are included to illustrate the applicability of the methods used.

49567 (PPLK—4) **Annual review of Plasma Physics Laboratory, Kyoto University, April, 1983.** (Kyoto Univ., Uji (Japan). Plasma Physics Lab.). Apr 1983. 130p. NTIS (US Sales Only), PC A07/MF A01. File Number DE86703133.

The devices for additionally heating joule-heated plasma in the Heliotron E, such as electron cyclotron resonance heating and neutral beam injection, were in operation in 1982. In the ECRH experiment the microwaves of 200 kW at 28 GHz were generated by a gyrotron, but the pulse width was extended from 10 ms to 40 ms this year. By this, a currentless plasma of Te-1 keV was achieved. In the NB1 experiment the neutral beam of about 1.5 MW was injected into joule-heated plasma, and the plasma of Ti(O)-950 eV, Te(O)-800 eV and Ne = 3×10^{19}/m^3 was attained. The first experiment to inject neutral beam into ECRH currentless plasma was carried out. By this method the density of the plasma increased as well as the ion temperature and electron temperature. As to the theory, a critical beta was calculated by using stellarator expansion, which should be 3 to 7% in the Heliotron E. Two gyrotrons of 200 kW at 53 GHz each and an ion cyclotron resonance heating equipment of 1.5 MW at 26.7 MHz are prepared. As to the reactor study, the design of Heliotron H in the first phase was completed. The location of impurity sources in NB1 ion sources and beam lines was found.

49568 (SAND—86-1706C) **Progress in light ion beam fusion research on PBFA II.** Cook, D.L.; Allshouse, G.O.; Bailey, J.; Barr, G.W.; Boyes, J.D.; Burgess, E.L.; Boyer, W.B.; Cap, J.S.; Coats, R.S.; Dreike, P.L.;. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 10p. (CONF-860710—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014370.

From 13. annual plasma physics conference; Oxford, UK (2 Jul 1986).

We are conducting pulsed power characterization experiments on PBFA II aimed at bringing the accelerator to a fully operational state. During this period we are acquiring substantial amounts of data on accelerator performance and initial data on ion diode performance. Next year, we will begin to concentrate on ion beam generation and focusing, with the goal of reaching the levels of beam energy, power, and intensity needed for ignition scaling experiments. Once the beam has been focused, initial target experiments will begin. The far term plans for PBFA II now include development and demonstration of the pulse-shaping techniques which are necessary for high-gain target compressions. Following a modification of the accelerator which will probably include an "extraction" ion diode, a 4- to 5-meter plasma channel for beam bunching during propagation, and a target chamber located beneath the accelerator, temporally-shaped ion beam pulses will be available for pulse-shaped target experiments.

49569 (UCID—20234) **Flibe/He concept.** Moir, R. (Lawrence Livermore National Lab., CA (USA)). Oct 1984. Contract W-7405-ENG-48. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014403.

As in all fusion blankets many physics and engineering parameters influence material temperature and heat transfer to the

coolant. In performing thermal-hydraulics calculations for the Flibe/He concept, the first wall was assumed to be 5 MW/m². The coolant is helium with a nominal pressure of 50 atmospheres. To eliminate "pinch-point" steam generator problems a helium inlet temperature of 275°C was specified. Helium outlet temperature was limited to 500°C in order to not have structural HT-9 steel above 550°C. That limit for HT-9 has been imposed due to neutron damage effects which seriously detract from its ductility and strength above that temperature. Volumetric heating calculations at various blanket locations are given.

49570 (UCID—20559-Vol.2, pp A.1-A.164) **Fusion engineering design center appendix to the MINIMARS interim report.** Nelson, W.D.; Blackfield, D.T.; Bussell, G.T.; Gorker, G.E.; Keeton, D.C.; Lousteau, D.C.; Spampinato, P.T.; Taylor, G.E.; Yugo, J.J. (Oak Ridge National Lab., TN). Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

Personnel at the Fusion Engineering Design Center (FEDC) have been contributing partners in the mirror program for the past four years. These years have involved work on machines such as the Technology Demonstration Facility (TDF), the MFTF-Alpha+T (an upgrade of the MFTF-B), and the Fusion Power Demonstration (FPD) device. This year, the effort was directed toward the MINIMARS design. The principle role for the FEDC has been to integrate the various concepts into an overall, integrated engineering design. The present design is not, at this time in the study effort, a self-consistent design, but it will be by the end of the study. In addition to integrating the design, FEDC has played a major innovation and design role in electrical systems, plasma heating systems, maintenance, availability, fueling, facilities, and reactor components. FEDC has also played a major role in developing an optimization code for tandem mirrors, which has been used to establish baseline MINIMARS physics and engineering parameters and to perform many physics and engineering trade studies. In addition, the Design Center has supplied cost estimates for the MINIMARS reactor. This appendix contains two kinds of material. The first is an expansion of the material found in the FY 1985 MINIMARS summary report and the second is a description of background studies performed during the year that led to the concepts and conclusions described in the summary report.

49571 (UCID—20559-Vol.2, pp C.1-C.14) **Appendix C: safety design rationale.** Ghose, S. (Bechtel Group Inc., San Francisco, CA). Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

A brief discussion of the rationale for safety design of fusion plants is presented in the main text. Further detail safety considerations are presented in this appendix in the form of charts and tables. The author present some of the major safety criteria and other criteria used in blanket selection here.

49572 (UCID—20559-Vol.2, pp D.1-D.14) **Appendix for blanket - University of Wisconsin: tritium issues.** Wittenberg, L.J. (Univ. of Wisconsin, Madison). Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

The selection of the liquid metal alloys, $Li_{17}Pb_{83}$, as the tritium breeder with helium serving as the heat transfer fluid suggests two alternative techniques for the removal of tritium from the breeder. The low solubility of tritium in this liquid breeder requires only a simple vacuum degassing technique for tritium removal. Because of this high tritium partial pressure, tritium removal in the present design could potentially be achieved by either (a) slow circulation of the liquid LiPb alloy to an external degassing system, or (b) noncirculation of the liquid breeder so that the tritium permeates through the walls of the coolant tubes into the circulating helium for subsequent recovery. Both of these techniques were investigated with special attention given to the resultant tritium inventories in the liquid breeder and the helium system, and the potential for tritium permeation at the steam generator (SG).

49573 (UCID—20559-Vol.2, pp E.1-E.30) **Activation product transport in a FLiBe-vanadium alloy-HT9 system.** Klein, A.C.; Sze, D.K. (Oregon State Univ., Corvallis). Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

An assessment is made of the gamma radiation hazards likely to be found around a fusion reactor heat transfer and tritium breeding loop which employs a vanadium alloy for the blanket and first wall structure and the ferritic-steel HT9 for the remainder of the loop. The coolant/tritium breeding fluid is the molten metallic salt FliBe. Since the radiation levels near the primary loop components are found to be less than 100 mR/hr 3-5 days after shutdown after three years of continuous full power operation, limited hands-on maintenance could be allowed. The very short half-lives of the predominant corrosion products make this result possible and make such a system very attractive.

49574 (UCID—20559-Vol.2, pp F.1-F.36) **Halo scraper/direct converter system study.** Luzzi, T.; Clarkson, I.; Barr, W.; Neef, W. Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

During the first year of the LLNL Minimars program, a system study was undertaken to determine the most efficient method for recovery of the end cell thermal energy. The goal of the study was to recovery energy at the highest possible coolant temperature and therefore at the highest thermal efficiency. Two types of coolant were considered, water and gaseous helium. In a system study where the goal is to recover maximum thermal power in an economically designed device, it is necessary to place constraints on the design. The four constraints for the direct converter are somewhat conflicting in that a particularly design solution satisfying one may lead to an unacceptable solution for another. The final design choice must be a compromise that satisfies all the constraints.

49575 (UCID—20559-Vol.2, pp G.1-G.12) **Appendix G. Heat transport and power conversion.** Ghose, S. (Bechtel Group Inc., San Francisco, CA). Dec 1985. NTIS, PC A13/MF A01. File Number DE86006102.

In MINIMARS conceptual design: Report I. Volume 2.

A brief description of the heat transport system is given in the main text. The following aspects of heat transport are discussed in this appendix: after heat removal, integrated primary-coolant piping, and number of steam generators.

49576 (UCRL—52000-86-4/5) **Energy and Technology Review, April-May 1986.** Cabayan, H.S.; Coleman, L.W.; Adye, P.; Clements, W.; de Vore, L.; Hendry, D.P.; Kirvel, R.D.; O'Neal, E.M.; Taft, S.O. (Lawrence Livermore National Lab., CA (USA)). 1986. Contract W-7405-ENG-48. 62p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86014244.

Some technical challenges were solved to construct the large-aperture frequency-conversion arrays for NOVA. Among these are precision machining of potassium dihydrogen phosphate crystals, precise crystal orientation, and reflection coatings. New glass-melting techniques are reported that can produce the inclusion-free glass that will be used to replace the glass disks now in the NOVA laser amplifiers. A system for detecting microscopic inclusions in optical glass is described. A second target chamber has been added that uses two beams of the NOVA laser. Recent achievements in soft x-ray lasing are discussed. The Laser Experiments Analysis Facility (LEAF) is described briefly. The Cascade reactor, a concept for producing electricity from inertial confinement fusion, is discussed. (LEW)

49577 (UCRL—53750) **Preparation and properties of polyvinyl alcohol microspheres.** Campbell, J.H.; Grens, J.Z.; Poco, J.F.; Ives, B.H. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 45p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86015111.

Polyvinyl alcohol (PVA) microspheres, having a size range of ~150- to 250-μm diameter with 1- to 5-μm wall thickness, have

been fabricated using a solution droplet technique. The spheres were developed for possible use on the Lawrence Livermore National Laboratory (LLNL) Inertial Confinement Fusion (ICF) Program. PVA, a polymer chosen based on earlier survey work carried out at KMS Fusion, Inc., has good strength, low hydrogen permeability, is optically transparent, and water soluble. The latter property makes it safe and easy to use in our droplet generator system. A unique dual-orifice droplet generator was used to prepare the spheres. The droplet generator operating conditions and the column processing parameters were chosen using results from our 1-D model calculations as a guide. The polymer microsphere model is an extension of the model we developed to support the glass sphere production. After preparation, the spheres were physically characterized for surface quality, sphericity, wall thickness (and uniformity), and size. We also determined the buckling pressure for both uncoated and CH-coated spheres. Radiation stability to beta decay (from tritium) was evaluated by exposing the spheres to a 7-keV electron beam. The results from these and other physical property measurements are presented in this report.

49578 **(UCRL—94084) Helium-cooled, FLiBe-breeder, beryllium-multiplier blanket for MINIMARS.** Moir, R.W.; Lee, J.D. (Lawrence Livermore National Lab., CA (USA)). Jun 1986. Contract W-7405-ENG-48. 7p. (CONF-860652—16). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013898.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

We adapted the helium-cooled, FLiBe-breeder blanket to the commercial tandem-mirror fusion-reactor design, MINIMARS. Vanadium was used to achieve high performance from the high-energy-release neutron-capture reactions and from the high-temperature operation permitted by the refractory property of the material, which increases the conversion efficiency and decreases the helium-pumping power. Although this blanket had the highest performance among the MINIMARS blankets designs, measured by Mn/sub th/ (blanket energy multiplication times thermal conversion efficiency), it had a cost of electricity (COE) 18% higher than the University of Wisconsin (UW) blanket design (42.5 vs 35.9 mills/kW.h). This increased cost was due to using higher-cost blanket materials (beryllium and vanadium) and a thicker blanket, which resulted in higher-cost central-cell magnets and the need for more blanket materials. Apparently, the high efficiency does not substantially affect the COE. Therefore, in the future, we recommend lowering the helium temperature so that ferritic steel can be used. This will result in a lower-cost blanket, which may compensate for the lower performance resulting from lower efficiency.

49579 **(UCRL—94115) TIBER II: an upgraded tokamak igntion/burn experimental reactor.** Henning, C.D.; Logan, B.G.; Perkins, L.J.; Barr, W.L.; Bulmer, R.H.; Devoto, R.S.; Doggett, J.N.; Fenslermacher, M.; Johnson, B.M.; Lee, J.D. (Lawrence Livermore National Lab., CA (USA); TRW, Inc., Redondo Beach, CA (USA); Wisconsin Univ., Madison (USA)). 5 Jun 1986. Contract W-7405-ENG-48. 10p. (CONF-860652—15). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013899.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

We are disIgning a minimum-size Tokamak ignition/Burn Reactor (TIBER II). This design incorporates physics requirements, neutron wall loading and fluence parameters that will make it compatible with a nuclear testing mission. Reactor relevant physics will be tested by using current drive and steady-state operation. Although the design accommodates several current drive options, including neutral beams, the base case uses a combination of lower hybrid and electron-cyclotron radio frequency power. Minimum neutron shielding, compact structures, high magnet-current densities, and remotely maintainable vacuum seals, all contribute to the compact size.

49580 **(UCRL—94693) In-situ MHD energy conversion for fusion.** Campbell, R.B.; Logan, B.G.; Hoffman, M.A. (TRW, Inc., Redondo Beach, CA (USA); Lawrence Livermore National Lab., CA (USA); California Univ., Davis (USA)). Jun 1986. Contract W-7405-ENG-48. 11p. (CONF-860652—18). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013901.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

An advanced concept, in-situ MHD conversion, is described for converting fusion energy to electricity. Considerable cost savings can be realized because of the conversion of thermal energy to electricity achieved in the blanket by means of magnetohydrodynamic (MHD) generators. The external disk generator, also described, is another application of the MHD idea, which may have certain advantages over the in-situ scheme for advanced-fuel tokamaks. The feature that makes these schemes fusion-specific is the novel use of the electro-magnetic radiation naturally emitted by the plasma. The synchrotron radiation can be used either to heat the nonequilibrium MHD plasma, or possibly improve its stability. A Rankine cycle with cesium-seeded mercury as a working fluid is used in either case. Performance predictions by a quasi-one-dimensional model are presented. An experiment to determine the effect of microwave radiation on channel performance is planned.

49581 **(UCRL—94815) Numerical study of the mode selection in response spectrum analysis-condensed version.** Ng, D.S. (Lawrence Livermore National Lab., CA (USA)). 1 Sep 1986. Contract W-7405-ENG-48. 18p. (CONF-8609119—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86013023.

From Building design and construction conference; Beijing, China (1 Sep 1986).

For quality assurance of the dynamic response spectrum analysis, the Nuclear Regulatory Commission (NRC) recommends retaining all modes below the cutoff frequency at which the spectral acceleration (S/sub a/) returns to the peak zero period acceleration (ZPA). It also suggests that modes accounting for at least 90 percent of the structural masses be included in the analysis. A simple frame-type structure is generated as a baseline frame. Then groups of oscillators representing substructure are added onto the frame to study substructure behavior. A base case is established for each frame by including the specific number of modes used. The tests are conducted by incrementing the number of modes in the response spectrum analyses starting with one mode. The structural response of each modal increment is compared with the base case to identify the efficiency of mode selection method. All three methods are then applied to the MFTF-B Axicell Vacuum Vessel. The responses in critical components of the vessel, such as hangers and foundations, will be analyzed to confirm the accuracy of the selected method.

49582 **Fast-opening magnetic valve for high-pressure gas injection and applications to hydrogen pellet fueling systems.** Milora, S.L.; Combs, S.K.; Foust, C.R. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). **57**: No. 9, 2356-2358(Sep 1986). Contract AC05-84OR21400.

A fast, magnetically driven gas valve and its application to pneumatic-based solid hydrogen pellet injectors are described. The valve, which is equipped with a polyimide stem tip (hard seal) and a 5-mm-diam orifice, can open against working pressures up to 140 bar (2000 psi). Other unique features of this design include temperature- and radiation-resistant seals, a programmable output pressure pulse, and repetitive operation in excess of 20 Hz. A prototype valve has been used to propel frozen hydrogen isotope pellets to speeds of up to 1900 m/s.

49583 **Options for commercial tokamaks.** Dabiri, A.E.; Keeton, D.C.; Thomson, S.L. (Fusion Engineering Design Center/SAIC, Oak Ridge National Lab., P.O. Box Y, Oak Ridge, TN 37831). *Fusion Technology;* **10**: No. 1, 49-57(Jul 1986).

Systems studies have been performed at the Fusion Engineering Design Center (FEDC) to assess commercial tokamak options. One study investigates the economics of high-beta operation

and determines an optimum operating range of 10 to 20% beta, with a corresponding neutron wall loading of 6 to 8 MW/m². A second study determines conditions under which small, low-power tokamaks can be economically combined into a 1200-MW(electric) multiplex power plant. The results of these studies have directed future efforts at the FEDC toward a high-beta, tokamak design using a modular maintenance configuration.

49584 **Design concept of cryogenic falling liquid film helium separator.** Kinoshita, M.; Yamanishi, T.; Bartlit, J.R.; Sherman, R.H. (Japan Atomic Energy Research Institute, Dept. of Thermonuclear Fusion Research, Tokai-mura, Ibaraki-ken 319-11). *Fusion Technology;* **10**: No. 1, 137-148(Jul 1986).

A design concept is developed for a cryogenic falling liquid film helium separator by clarifying the differences between this process and a cryogenic distillation column. The process characteristics are greatly improved by the idea of adding an H_3 gas flow to a point near the upper end of the packed section. The flow rate of tritium lost from the top is kept extremely low with an adequately short packed section, and the column pressure is reduced to 1 atm. The addition causes no appreciable increase in the protium percentage ($\approx$1%) in the bottom liquid flow. A design procedure applying the Colburn-Hougen method is proposed for determining specifications of the refrigerated section. It is shown that the presence of noncondensible helium requires a significantly larger heat transfer area mainly because the mass transfer resistance increases enormously as the condensation of hydrogen isotopes proceeds. Control schemes are also proposed: The tritium concentration in the top gas is controlled by the H_3 gas flow rate. The pressure rise caused by an increase of the helium percentage within the refrigerated section, which cannot readily be eliminated by changing input specifications of the refrigerant gas, is avoided by increasing the top gas flow rate to release more helium from the top.

49585 **Vacuum vessel eddy current modeling for tokamak fusion test reactor adiabatic compression experiments.** DeLucia, J.; Bell, M.; Wong, K.L. (Plasma Physics Lab., Princeton Univ., P.O. Box 451, Princeton, NJ 08544). *Fusion Technology;* **10**: No. 1, 124-136(Jul 1986).

A relatively simple current filament model of the Tokamak Fusion Test Reactor (TFTR) vacuum vessel is described. It is used to estimate the three-dimensional structure of magnetic field perturbations in the vicinity of the plasma that arise from vacuum vessel eddy currents induced during adiabatic compression. Eddy currents are calculated self-consistently with the plasma motion. The Shafranov formula and adiabatic scaling laws are used to model the plasma. Although the specific application is to TFTR, the present model is of general applicability.

49586 **Measurement and analysis of near-classical thermal transport in one-micron laser-irradiated spherical plasmas.** Hauer, A.; Mead, W.C.; Willi, O.; Kilkenny, J.D.; Bradley, D.K.; Tabatabaei, S.D.; Hooker, C. (Los Alamos National Lab., NM). **53**: No. 27, 2563-2566(31 Dec 1984).

Solid spherical layered targets have been uniformly illuminated at irradiances of 10^{14} to 10^{15} W/cm². Extensive diagnostics including time-resolved x-ray emission and optical probing were used to determine the plasma ablation rate and the plasma blowoff conditions. Comparisons with hydrodynamic simulations show that the thermal conduction is well characterized by a flux limit f/sub e/ = 0.08 +/- 0.02, with a steep temperature gradient. The steepness of the heat front was confirmed with time-resolved spectroscopy. 13 references, 5 figures.

49587 **Long-pulse beamlines for the mirror fusion test facility.** Stone, R.R.; Goldner, A.I.; Poulsen, P. (Lawrence Livermore National Lab., CA, USA). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

Recently obtained test results indicate that a beam of pure full-energy deuterium particles can be delivered to the plasma targets in MFTF-B. A close-coupled separator magnet is used with the ion source to separate the impurities from the full-energy deuterium particles. The completed studies show that the usual iron-core sweep magnet and shielding used in neutral beamlines can be eliminated and the gas flow out of the beamline decreased. This design also reduces beam losses. Smooth-bore OFHC tube arrays brazed to manifolds will be used for the active heat transfer surfaces. Tests indicate that both burnout and life requirements are met by this design. Test results are presented and the MFTF-B long-pulse beamline configuration is discussed.

49588 **Challenge of handling long-pulse neutral beams - the NBETF experience.** Berkner, K.H.; Jacobson, V.L.; Paterson, J.A.; Pincosy, P.A.; Owren, H.M.; Kilgore, R.L. (Lawrence Berkeley Lab., CA, USA). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

The Neutral Beam Engineering Test Facility (NBETF) is a state-of-the-art facility for testing advanced-design neutral-beam system components for the U.S. Fusion Program. The commissioning of this facility with 80-kV, 40-A, 30-sec beams at a 10% duty cycle is described, as are some of the problems that were encountered: fatigue failure of bellows, electrical interference with calorimetry signals, and thermal damage by backscattered beam.

49589 **Neutral beam heating systems for TFTR - initial operating results.** Prichard, B.A. Jr.; Eubank, H.P.; Grisham, L.R.; Kamperschroer, J.H.; Kugel, H.W.; Martin, G.D.; Prechter, R.E.; Williams, M.D.; Winje, R.A.; Wright, K.E. (Princeton Univ., NJ, USA. Plasma Physics Lab.). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

The first few weeks of attempted operation have resulted in the injection of <=1.5 MW of hydrogen into TFTR from a single beamline, and a second beamline is scheduled to begin operation this fall. The status of the TFTR Neutral Beam System is described and future plans are presented. Various problems encountered during commissioning and their solutions are also discussed.

49590 **Progress in fusion technology in the U.S. Magnetic Fusion Program.** Dowling, R.J.; Beard, D.S.; Haas, G.M.; Stone, P.M.; George, T.V. (Department of Energy, Washington, DC, USA. Office of Fusion Energy). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

A review is presented of some of the recent progress and the future plans of fusion technology in the U.S. Magnetic Fusion Program.

49591 **TFCX - mechanical design.** Citrolo, J.C. (Princeton Univ., NJ, USA. Plasma Physics Lab.). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

Ignition and long pulse equilibrium burn have been identified as the mission for the next device to be built in the U.S. fusion program. This device, the Tokamak Fusion Core Experiment (TCFX), has recently been the subject of pre-conceptual design studies which were performed by a design team composed of members from most of the major U.S. fusion laboratories. These studies produced four versions of the TFCX design. Two version included su-

perconducting toroidal field (TF) coils and two used copper TF coils. These categories were then subdivided into two further options: a normal and a high performance design which are described.

49592 **Overview of the modification to the Poloidal Divertor Experiment (PDX) to produce the Princeton Beta Experiment (PBX).** Knutson, D. (Princeton Univ., NJ, USA. Plasma Physics Lab.). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

The Poloidal Divertor Experiment at the Princeton Plasma Physics Laboratory has been recently transformed into the Princeton Beta Experiment. The purpose of the modification is to produce a bean-shaped plasma with beta values in excess of 10%, which is substantially above those achieved with more conventional plasma shapes.

49593 **Mechanical design of a high-beta TFCX tokamak with a demountable TF coil.** Puhn, F.; Blevins, R.; Doll, D.; Engholm, B.; Ho, M.; Leuer, J.; Sevier, L.; Wesley, J. (GA Technologies, Inc., San Diego, CA, USA). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

A TFCX tokamak concept developed by GA Technologies is described. Removal of the poloidal field coils and plasma chamber can be accomplished by simple vertical lifts, after demounting the TF coil upper section. A unique electrical joint allows demounting of the TF coil. Combined-function poloidal field coils located close to the plasma provide versatility in plasma-shaping experiments. Shield modules allow contact maintenance above and below the tokamak, and support the PF coils and plasma chamber. Major penetrations and system interfaces are located at the outboard region for remote maintenance equipment access.

49594 **Electromagnetic forces distribution and mechanical analysis in the first wall structure for INTOR/NET.** Coccorese, E.; Martone, R.; Rubinacci, G.; Biggio, M.; Inzaghi, A.; Deleanu, L.; Turri, M. (Naples Univ., Italy; Commission of the European Communities, Ispra, Italy. Joint Research Centre; Oak Ridge National Lab., TN, USA; MATEC s.r.l., Milan, Italy). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

In the context of the studies performed at JRC-Ispra for NET/INTOR, a modular stainless steel first wall, and separated from the blanket which it envelops has been proposed. During plasma disruption the metallic structure of the first wall is inevitably subject to appreciable electromagnetic forces caused by induced eddy current-magnetic field interactions. The deformation and stress distributions in the first wall were quantified at various instants of time by three-dimensional calculations using the ICES-STRUDL code.

49595 **Fusion nuclear technology development: issues and strategy.** Abdou, M.A. (California Univ., Los Angeles, USA. School of Engineering and Applied Science). pp vp of Fusion technology 1984. Proceedings of the thirteenth symposium. Conference centre of Villa Ponti, Varese, Italy, 24-28 September 1984. Volume 1 of 2 . Oxford, England; Pergamon Press (1984). (CONF-840915—; EUR—9183-EN).

From 13. symposium on fusion technology; Varese, Italy (24 Sep 1984).

The technical and programmatic objectives of fusion nuclear technology development are being addressed in a study called FINESSE. The study is identifying the issues, quantifying the test requirements, developing engineering scaling relationships and evaluating non-fusion and fusion facilities for nuclear testing. The results are found to be of fundamental importance to developing successful scenarios for overall fusion development.

99 GENERAL AND MISCELLANEOUS

49596 **(DOE/MA—0240) Report to Congress on the small business program of the Department of Energy, FY 1985.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Small and Disadvantaged Business Utilization). Jun 1986. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014326.

This Report to Congress covers twenty-seven organizational components of the Department including seven Assistant Secretaries, the eight Operations Offices, the five power administrations, two other administrations and several significant offices. The Act excludes military applications of nuclear energy.

49597 **(LA-UR—86-1481) Can the US afford a lunar base.** Keaton, P.W. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 11p. (CONF-860179—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010207.

From Workshop on astronomical observations from a lunar base; Houston, TX, USA (10 Jan 1986).

Establishing a lunar base will require steady funding for a decade or two. The question addressed here is whether such a large space project is affordable at this time. The relevant facts and methodology are presented so that the reader may formulate independent answers. It is shown that a permanent lunar base can be financed without increasing NASA's historical budgetary trends.

49598 **(N—86-22784) Telecommunications and Data Acquisition Report. Progress report, October-December 1985.** Posner, E.C. (Jet Propulsion Lab., Pasadena, CA (USA)). Feb 1986. 275p. (NASA-CR—176691). NTIS, PC A12/MF A01.

Deep Space Network progress in flight project support, tracking and data acquisition research and technology, network engineering, hardware and software implementation, and operations is documented. In addition, developments in Earth-based radio technology as applied to geodynamics, astrophysics and the radio search for extraterrestrial intelligence are reported.

49599 **(SAND—86-2068) Annual report: technology transfer, Sandia National Laboratories, fiscal year 1985.** (Sandia National Labs., Albuquerque, NM (USA). Technology Transfer and Management Dept.). Jul 1986. Contract AC04-76DP00789. 41p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014945.

Sandia National Laboratories, a national security engineering and science laboratory, strives to place its technology efficiently in the hands of the private sector, government laboratories, other contractors, and universities. The goal of extending technology developments beyond our primary emphasis on national defense is consistent with a wider view in which the needs of national security encompass energy stability, economic competitiveness, environmental preservation, and other areas that maintain our national vitality. This report highlights examples of technology transfer from the past year and summarizes our activities and concerns.

49601 (AD-A—167620/4/XAB) Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix B. Design of the operating system for the PASM parallel-processing system. Final report. Tuomenoksa, D.L. (Purdue Univ., Lafayette, IN (USA)). May 1983. 347p. NTIS, PC A15/MF A01.

As a result of advances in microcomputer technology, it is now feasible to build large-scale parallel-processing systems capable of performing image-processing tasks more rapidly than previously possible. Such parallel-processing systems add levels of complexity for both the operating system and the application software. They impose constraints that make a direct transplantation of conventional (multiprogrammed) operating systems extremely inefficient (Bae80). This thesis considers the design of PASMOS, a distributed operating system for the PASM parallel-processing system. PASM is a reconfigurable multimicrocomputer system which is being designed at Purdue University for image-processing and pattern-recognition applications. The special-purpose nature of PASM has been exploited in the design of PASMOS. PASMOS has a hierarchical structure and is distributed throughout the hardware components of PASM. It utilizes the PASM hardware to create an execution environment (virtual machine) for parallel processing tasks. Facilities provided by PASMOS include those for task management and scheduling, memory management, user interaction, process communication and synchronization, and protection. The general performance of the PASM system was examined both analytically and via simulation.

49602 (AD-A—167621/2/XAB) Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix C. Fault-tolerant interconnection networks and image-processing applications for the PASM parallel processing systems. Final report. Adams, G.B. (Purdue Univ., Lafayette, IN (USA)). Dec 1984. 371p. NTIS, PC A16/MF A01.

The demand for very-high-speed data processing coupled with falling hardware costs has made large-scale parallel and distributed computer systems both desirable and feasible. Two modes of parallel processing are single-instruction stream-multiple data stream (SIMD) and multiple instruction stream - multiple data stream (MIMD). PASM, a partitionable SIMD/MIMD system, is a reconfigurable multimicroprocessor system being designed for image processing and pattern recognition. An important component of these systems is the interconnection network, the mechanism for communication among the computation nodes and memories. Assuring high reliability for such complex systems is a significant task. Thus, a crucial practical aspect of an interconnection network is fault tolerance. In answer to this need, the Extra Stage Cube (ESC), a fault-tolerant, multistage cube-type interconnection network, is defined. The fault tolerance of the ESC is explored for both single and multiple faults, routing tags are defined, and consideration is given to permuting data and partitioning the ESC in the presence of faults. The ESC is compared with other fault-tolerant multistage networks. Finally, reliability of the ESC and an enhanced version of it are investigated.

49603 (AD-A—167622/0/XAB) Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix G. On the design and modeling of special-purpose parallel-processing systems. Final report. Smith, B.W. (Purdue Univ., Lafayette, IN (USA)). May 1985. 317p. NTIS, PC A14/MF A01.

As the capabilities of computing machinery grow, so does the diverse variety of their applications. The feasibility of many approaches to these applications depends solely upon the existence of computing machinery capable of performing these tasks within a given time constraint. Because the majority of the available computing machinery is general-purpose in nature, tasks that do not require purpose facilities, but that do require high throughput, are condemned to execution on expensive general-purpose hardware. This research describes several tasks that require fast computing machinery. These tasks do not require general-purpose facilities in the sense that the computing machinery used will only perform a fixed set of tasks. Some of the tasks are simple in nature, but are required to execute on very-large data sets. Other tasks are computationally intensive in addition to possibly involving large data sets. Both simple and complex algorithms are considered. The discussion includes a description of the tasks. All of the above tasks are useful; however, their value is determined in part by the time required to perform them. This work discusses three architectures for performing remote-sensing tasks. These architectures can execute the described tasks more quickly than conventionally available hardware.

49604 (ANL/MCS-TM—73) Projected gradient methods for linearly constrained problems. Calamai, P.H.; More, J.J. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.; Waterloo Univ., Ontario (Canada). Dept. of Systems Design Engineering). May 1986. Contract W-31-109-ENG-38. 23p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014084.

The aim of this paper is to study the convergence properties of the projected gradient method and to apply these results to algorithms for linearly constrained problems. The main convergence result is obtained by defining a projected gradient, and proving that the gradient projection method forces the sequence of projected gradients to zero. A consequence of this result is that if the projected gradient method converges to a nondegenerate point of a linearly constrained problem, then the active and binding constraints are identified in a finite number of iterations. As an application to the theory, quadratic programming algorithms are developed that iteratively explore a subspace defined by the active constraints. These algorithms are able to drop and add many constraints from the active set, and can either compute an accurate minimizer by a direct method, or an approximate minimizer by an iterative method of the conjugate gradient type. Thus, these algorithms are attractive for large scale problems. It is shown that it is possible to develop a finitely terminating quadratic programming algorithm without nondegeneracy assumptions. 14 refs.

49605 (ANL/MCS-TM—74) Toolpack tools ISTUD, ISTCD, and ISTSB: guide for users and installers. Cowell, W.R. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Jun 1986. Contract W-31109-ENG-38. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86015102.

ISTUD (the DO loop unrolling tool), ISTCD (the DO loop condensing tool), and ISTSB (the substitution/elimination tool) transform certain Fortran structures typically found in basic linear algebra routines. The tools are invoked in various sequences, together with other Toolpack tools, to create transformed Fortran for compilation by a vectorizing compiler. The transformed code makes fewer accesses to memory, thereby significantly improving its performance on machines with a vector architecture.

49606 (ANL/MCS-TM—77) Unix shell scripts to invoke a set of Toolpack/1 tools. Cowell, W.R. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Jul 1986. Contract W-31-109-ENG-38. 15p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86015101.

Unix scripts which call programming tools from the Toolpack/I software are described. These tools will extend the Fortran analyzing and transforming capabilities of Unix. (DWL). 13 refs.

49607 (ANL/MCS-TM—78) ELEFUNT test results under FX/FORTRAN Version 1.0 on the Alliant FX/8. Cody, W.J. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Jul 1986. Contract W-31-109-ENG-38. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86015100.

This paper summarizes and analyzes the results of running various programs designed to test the arithmetic and the Fortran elementary and intrinsic function packages. The programs run in-

clude MACHAR and the ELEFUNT suite of transportable Fortran test programs, from the Software Manual for the Elementary Functions by Cody and Waite, the Fortran version of the arithmetic test program PARANOIA, and the prototype programs from the nascent INTFUNT test suite for intrinsic functions. All tests were run using Release 1.0 of FX/Fortran under Release 1.0 of the Concentrix operating system. 7 refs., 4 tabs.

49608 **(CEA-CONF—7941) Computer algebra as a research tool in physics.** Drouffe, J.M. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Apr 1985. 11p. (CONF-8504175—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750869.

From European conference on computer algebra; Linz, Austria (1 Apr 1985).

The progress of computer algebra observed during these last years has had certainly an impact in physics. I want to make precise the role of these new techniques in this application domain and to analyze their present limitations. In Section 1, I describe briefly the use of algebraic manipulation programs at the elementary level. The numerical and symbolic solutions of problems are compared in Section 2. Section 3 is devoted to a prospective about the use of computer algebra at the highest level, as an "intelligent" system. I recall in Section 4 what is required from a system to be used in physics.

49609 **(CERN—86-01) VMEbus in physics conference. Proceedings.** (European Organization for Nuclear Research, Geneva (Switzerland)). 30 Jan 1986. 372p. (CONF-8510319—). NTIS (US Sales Only), PC A16/MF A01. File Number DE86703218.

From VMEbus in physics conference; Geneva, Switzerland (7 Oct 1985).

The first conference "VMEbus in Physics" was held at CERN on 7th and 8th October 1985. The conference surveyed the applications of the VMEbus standards in physics, with special emphasis on particle physics and accelerator control. Developments in the definition of the standards and in the formation of users groups were discussed. Manufacturer's representatives were given the opportunity to appreciate the requirements of the fast-growing VMEbus market in the physics community. These proceedings contain the unedited text of the oral and poster presentations given on that occasion.

49610 **(CONF-860963—1) Programming robotics applications on an advanced hypercube multiprocessor.** Barhen, J. (Oak Ridge National Lab., TN (USA). Center for Engineering Systems Advanced Research). 1986. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86008895.

From International NATO workshop on languages for sensor-based control in robotics; Castelvecchio Pascoli, Italy (1 Sep 1986).

Specialized computer architectures for advanced robotics applications at ORNL/CESAR are based on the hypercube ensemble concept. The current status of algorithm development is summarized and results for robot dynamics and navigation problems are presented. 13 refs., 1 tab.

49611 **(DOE/EIA—0494) EPIC/JANUS user's guide.** (USDOE Energy Information Administration, Washington, DC). 30 Jul 1986. 251p. NTIS, PC A12/MF A01 - GPO; 1; GPO Dep. File Number DE86014116.

EPIC/JANUS, the Energy Information Administration's (EIA) Publication and Interactive Composition System, is a software system the allows text, tables, halftones, and graphics to be combined interactively in a single document. In essence, it automates the entire process of composition and production of camera-ready copy. EPIC is a machine-independent document management and translation system developed by EIA. JANUS is an interactive document composition system which formats and typesets a document. This User's Guide provides complete information on how to use the EPIC/JANUS system. Included in the discussion are sections on getting started, the EPIC system and EIA Standard Text Codes, EPIC interactive commands, graphics in EPIC/JANUS, tables in EPIC/JANUS, EPIC Error messages, MVS and VM listings from EPIC/JANUS, using JANUS interactively, mathematical formula, and producing EPIC/JANUS publications through a displaywriter. Appendices contain a quick reference guide to text codes and text code examples. (DWL)

49612 **(DOE/ER/02383—0120) Automated reference librarians for program libraries and their interaction with language based editors.** Shilling, J.J. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Aug 1986. Contract AC02-76ER02383. 170p. (UIUCDCS-R—86-1268; UILU-ENG—86-1747; COO—2383-0120). NTIS, PC A08/MF A01; GPO Dep. File Number DE86014662.

Thesis.

The design of an automated reference librarian system for computer program libraries is presented and discussed from the point of view of the user, the host, and the system itself. The design is modular and includes 4 components: the managing module, the selection module, the use module, and the database module. A prototype implementation of a reference librarian is presented. (DWL). 62 refs., 6 figs.

49613 **(DOE/ER/25010—T1) Unified approach to parallel computation: performance evaluation and architecturally independent parallel programming. Progress report, September 1, 1985-August 31, 1986.** Browne, J.C. (Texas Univ., Austin (USA). Dept. of Computer Sciences). Jun 1986. Contract FG05-85ER25010. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86014683.

The report includes a summary of research in the area of parallel programming, a list of publications, and new research directions. Research accomplishments in the areas of formulating a universal model of parallel computation, the design of architecturally independent programs, the design of algorithmically specialized parallel architectures, and the generalized mapping of computations to architectures are presented. 4 refs. (DWL)

49614 **(DOE/MC/21377—2154) ASPEN costing manual.** Schwint, K.J. (Scientific Design Co., Inc., New York (USA)). 25 Jul 1986. Contract AC21-84MC21377. 452p. NTIS, PC A20/MF A01; 1; GPO Dep. File Number DE86014074.

The ASPEN program contains within it a Cost Estimation System (CES) which estimates the purchase cost and utility consumption rates for major pieces of equipment in a process flowsheet as well as installed equipment costs. These estimates are "preliminary-study grade" with an accuracy of plus or minus 30%. The ASPEN program also contains within it an Economic Evaluation System (EES) which estimates overall capital investment costs, annual operating expenses and profitability indices for a chemical plant. This ASPEN costing manual has been written as a guide for those inexperienced in the use of ASPEN and unfamiliar with standard cost estimating techniques who want to use the ASPEN CES and EES. The ASPEN Costing Manual is comprised of the following sections: (1) Introduction, (2) ASPEN Input Language, (3) ASPEN Cost Estimation System (CES), (4) ASPEN Cost Blocks; and (5) ASPEN Economic Evaluation System (EES).

49615 **(EGG—10282-1114) Information modeling techniques for scientific applications.** Baltz, D. (EG and G Energy Measurements, Inc., Las Vegas, NV (USA)). 1986. Contract AC08-83NV10282. 27p. (CONF-860889—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014026.

From Structured development forum; Seattle, WA, USA (11 Aug 1986).

A series of transparencies graphically show processes involved in the acquisition, analysis, and processing of experimental data. Topics addressed include data base files, data structures, relationships between data and signal relationships.

49616 **(INS-PT—33) Manual on usage of the Nuclear Reaction Data File (NRDF).** (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Oct 1984. 74p. (In Japanese). NTIS (US Sales Only), PC A04/MF A01. File Number DE86703219.

In the computer in the Institute for Nuclear Study, University of Tokyo, there is set up a Nuclear Reaction Data File (NRDF) which has been built in Hokkaido University. While the data base is growing year after year, its trial usage is for the purpose of joint utilization by educational institutions. In section 1, examples of the retrieval are presented to have the user familiarize with NRDF. In section 2, the terms used in retrieval are given in table. Then, in section 3, as a summary of the examples, structure of the retrieval commands is explained. In section 4, for the retrieval results on a CRT, cautions in reading are given. Finally, in section 5, general cautions in usage of NRDF are given.

49617 (KEK—84-18) E^+ e^- event generator EPOCS. Kato, Kiyoshi; Munehisa, Tomo. (National Lab. for High Energy Physics, Oho, Ibaraki (Japan); Kogakuin Univ., Tokyo (Japan)). Jan 1985. 100p. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE86703221.

We present a Monte Carlo program EPOCS (Electron POsitron Collision Simulator), which generates e^+e^- events in high energy region that will be explored by TRISTAN project. Special emphasis is put on the effect of Z^0 and possible top quark resonances. The user can control the simulation by selecting the energy and other parameters. Also he can easily incorpolate a new process and/or particles into the program. The central part of this report is a detailed description on the structure and the usage of the program. We would like to stress that the hadronization is based on a number of assumptions, which are made as clear as possible here.

49618 (LPC—84-30) Fitting method in a hierarchized parameter problem. Billoir, P. (College de France, 75 - Paris. Lab. de Physique Corpusculaire). 1984. 15p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE86750865.

In some problems one has to perform a least squares fit on a large sample of data, with few general parameters and other ones particular to small data subsets. Examples are given, and a method is proposed to vary all parameters at each iteration (ensuring optimal convergence) while keeping the amount of calculation roughly proportional to the number of parameters.

49619 (PNL-SA—14035) Data analysis management. Cowley, P.J.; Nicholson, W.L.; Carr, D.B. (Pacific Northwest Lab., Richland, WA (USA)). Jul 1986. Contract AC06-76RL01830. 16p. (CONF-860758—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86013593.

From 13. international biometric conference; Seattle, WA, USA (28 Jul 1986).

Data analysis management is a methodology to assist the analyst in tracking the events of data analysis by allowing the analyst to designate milestones of the analysis, which we call "save-states". A prototype data analysis management system, which is described in this paper, includes capabilities to graphically depict the course of the analysis, the ability to return to previous save-states, the ability to use segments of the log that describe the course of the analysis, and the ability to associate both written and spoken documentation with the analysis. 6 refs., 3 figs.

49620 (SAND—85-0866) Loopback Tester: a synchronous communications circuit diagnostic device. Maestas, J.H. (Sandia National Labs., Albuquerque, NM (USA). Computer Communications Design Div.). Jul 1986. Contract AC04-76DP00789. 70p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86014935.

The Loopback Tester is an Intel SBC 86/12A Single Board Computer and an Intel SBC 534 Communications Expansion Board configured and programmed to perform various basic or less. These tests include: (1) Data Communications Equipment (DCE) transmit timing detection (2) data rate measurement (3) instantaneous loopback indication and (4) bit error rate testing. It requires no initial setup after plug in, and can be used to locate the source of communications loss in a circuit. It can also be used to determine when crypto variable mismatch problems are the source of communications loss. This report discusses the functionality of the Loopback Tester as a diagnostic device. It also discusses the hardware and software which implements this simple yet reliable device.

49621 (SAND—85-2346) Sandia software guidelines. Volume 3. Standards, practices, and conventions. (Sandia National Labs., Albuquerque, NM (USA)). Jul 1986. Contract AC04-76DP00789. 107p. NTIS, PC A06/MF A01; GPO Dep. File Number DE86015120.

This volume is one in a series of Sandia Software Guidelines intended for use in producing quality software within Sandia National Laboratories. In consonance with the IEEE Standard for Software Quality Assurance Plans, this volume identifies software standards, conventions, and practices. These guidelines are the result of a collective effort within Sandia National Laboratories to define recommended deliverables and to document standards, practices, and conventions which will help ensure quality software. 66 refs., 5 figs., 6 tabs.

49622 (SAND—86-0811) Standard methods for spectral estimation and prewhitening. Stearns, S.D. (Sandia National Labs., Albuquerque, NM (USA). Ground Motion and Seismic Div.). Jul 1986. Contract AC04-76DP00789. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014952.

A standard FFT periodogram-averaging method for power spectral estimation is described in detail, with examples that the reader can use to verify his own software. The parameters that must be specified in order to repeat a given spectral estimate are listed. A standard technique for prewhitening is also described, again with repeatable examples and a summary of the parameters that must be specified.

49623 (SAND—86-1499C) Practical improvements to SIMPR codes for stiff ODEs. Shampine, L.F. (Sandia National Labs., Albuquerque, NM (USA). Numerical Mathematics Div.). 1986. Contract AC04-76DP00789. 22p. (CONF-860759—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86014140.

From Ordinary differential equations conference (ODE); Albuquerque, NM, USA (28 Jul 1986).

Extrapolation of a semi-implicit midpoint rule (SIMPR) is an effective way to solve stiff initial value problems for a system of ordinary differential equations (ODEs). Two issues peculiar to SIMPR are investigated. It is shown how to improve substantially the robustness and efficiency of SIMPR codes. 16 refs., 4 tabs.

49624 (UCID—19054) Preliminary user's manual for SAPPAC: a multisupport modal time integrator and transfer function plotter for SAP4 models. Goudreau, G.L. (Lawrence Livermore National Lab., CA (USA). Methods Development Group). Jul 1982. Contract W-7405-ENG-48. 32p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86014939.

This computer code is a linear dynamic response routine for SAP4 modal analysis. It is intended for three purposes, (a) to generate plots of the amplitude of the complex transfer function vs frequency for lightly damped structures allowing assessment of spectral sensitivity to modeling complexity, (b) a multi-support excitation capability based on the method of "pseudostatic modes", and (c) efficient modal time integration associated with large modal systems and many response quantities. This latter module (ZIP), is extractable for insertion into the probablistic response code SMACS. Also, this package is simple enough that others might easily extend it. Additional capability now available includes: a vector valued absolute datum acceleration plus relative acceleration multi-support input; rigid base rotation acceleration input (not yet exercised); composite modal damping by element group; inclusion of static response values supplied manually in input; vector magnitude moment response recovery for beams, pipes, and plates; on line spectral acceleration computation without storage of time histories; optional time history dumps for subsequent user supplied plotter; printout of amplitude normalized mode shapes of states too large for SAP4 to print.

49625 (UCRL—53751) Converting scientific software to multiprocessors: a case study. Strout, R.E. II. (Lawrence Livermore National Lab., CA (USA)). 20 Jun 1986. Contract W-7405-ENG-48. 96p. NTIS, PC A05/MF A01; GPO Dep. File Number DE86014751.

This paper examines the process and problems involved in converting an application to make use of these machines. A set of Fortran routines forming an ordinary differential equation solving software package is used as the subject of the work. A set of explicit primitives for concurrent programming, the Cray multitasking primitives, is used as the method for exploiting concurrency on a Cray X-MP/48 supercomputer. Data analysis is discussed as a useful technique in the conversion, and the tools available within the supercomputing environment are examined for their usefulness in performing the data analysis. Two conversions are performed on the software package. First, to allow multiple problems to execute concurrently, and second, to exploit parallelism within each individual problem. The problems involved in each of these conversions are presented with their considered solutions. Performance measurements are presented for each conversion performed. The data analysis procedure was found too complex and time consuming to perform without appropriate tools. More work than expected was required to produce the first conversion. Finally, the largest source of problems is the lack of sufficient support for multiprocessing from the Fortran language. 31 refs., 14 figs.

49626 **(UCRL—92925-Rev.1) Guidelines for the syntactic design of audio cues in computer interfaces. Revision 1.** Sumikawa, D.A.; Blattner, M.M.; Joy, K.I.; Greenberg, R.M. (Lawrence Livermore National Lab., CA (USA); California Univ., Davis (USA)). May 1986. Contract W-7405-ENG-48. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86014429.

Earcons are audio cues used in the computer/user interface to provide information and feedback to the user about computer entities. (Earcons include messages and functions, as well as states and labels.) Design guidelines are presented for the syntax of earcons. Earcons are constructed from pitches, rhythms, and motives, short sequences of notes with a specific rhythm and pitch, embellished by timbre, dynamics, and register. Compound earcons and family earcons are introduced. These are related motives that serve to identify a family of related cues. Examples of earcons are given. 18 refs., 4 figs., 1 tab.

49627 **(UCRL—94377) Interactive wrapper tool for mapping objects to Fortran library functions.** Lawver, B.S. (Lawrence Livermore National Lab., CA (USA)). 1 Apr 1986. Contract W-7405-ENG-48. 11p. (CONF-860967—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009686.

From ACM conference on object oriented programming systems, languages, and applications; Portland, OR, USA (29 Sep 1986).

A wrapper serves as a software interface between non-object-oriented software and software that must be used but exists in a form that is not object-oriented. a tool designed to accomplish the wrapping function for a library of Fortran routines used by the Electrical Engineering Department at Lawrence Livermore National Laboratory is described. 7 refs., 6 figs. (DWL)

49628 **The importance of scaling for the Hermite bicubic collocation equations.** Dyksen, W.R.; Rice, J.R. (Dept. of Computer Sciences, Purdue Univ., West Lafayette, IN 47907). 7: No. 3, 707-719(Jul 1986).

It is well known that improper scaling of linear equations can result in catastrophic loss of accuracy from Gauss elimination. The scaling process is not well understood and the commonly used "scaling rules" can fail. The authors study the scaling problem for the linear equations that arise from solving elliptic partial differential equations by collocation using Hermite bicubics. They present an a priori scaling rule that is effective but not foolproof. They conclude that one should use scaled partial pivoting for such equations. They also explore the relationship between the ordering used during Gauss elimination and the underlying geometry of the elliptic problem and conjecture that this ordering must maintain the geometric integrity of the problem in order to avoid severe round-off problems.

49629 **Numerical solution of nonlinear differential equations with algebraic constraints II: Practical implications.** Petzold, L.; Lotstedt, P. (Computing Research and Development Div., Lawrence Livermore National Lab., Livermore, CA 94550). 7: No. 3, 720-733(Jul 1986).

In this paper the authors investigate the behavior of numerical ODE methods for the solution of systems of differential equations coupled with algebraic constraints. Systems of this form arise frequently in the modelling of problems for physics and engineering; they study some particular examples from fluid dynamics and constrained mechanical systems. They investigate some of the practical difficulties of implementing variable-stepsize backward differentiation formulas for the solution of these equations, showing how to overcome problems of matrix ill-conditioning, and giving convergence tests and error tests which are supported by theory.

49630 **Maintaining solution invariants in the numerical solution of ODEs.** Gear, C.W. (Dept. of Computer Science, Univ. of Illinois at Urbana-Champaign, Urbana, IL 61801). 7: No. 3, 734-743(Jul 1986).

Techniques for maintaining the numerical consistency of equality and inequality invariants known to be obeyed by the true solutions of ODEs are discussed. A general framework is used to justify a particular form of his technique for both one-step and multistep methods in the case of equality invariants. This framework can also be used for inequality invariants, but is not satisfactory for multistep methods. However, in a large class of inequality invariants, typified by those arising in chemical kinetic problems, it is shown that the invariant can be satisfied automatically by the numerical method.

49631 **Generalization of Davidson's method for computing eigenvalues of sparse symmetric matrices.** Morgan, R.B.; Scott, D.S. (Mathematics Dept., Univ. of Texas at Austin, Austin, Texas 78712). 7: No. 3, 817-825(Jul 1986).

This paper analyzes Davidson's method for computing a few eigenpairs of large sparse symmetric matrices. An explanation is given for why Davidson's method often performs well but occasionally performs very badly. Davidson's method is then generalized to a method which offers a powerful way of applying preconditioning techniques developed for solving systems of linear equations to solving eigenvalue problems.

49632 **Linear least squares with bounds and linear constraints.** Hanson, R.J. (Sandia National Labs., Albuquerque, NM 87185). 7: No. 3, 826-834(Jul 1986).

An algorithm is given for solving linear least squares systems of algebraic equations subject to simple bounds on the unknowns and (more general) linear equality and inequality constraints. The method used is a penalty function approach wherein the linear constraints are (effectively) heavily weighted. The resulting system is then solved as an ordinary bounded least squares system except for some important numerical and algorithmic details. This report is a revision of an earlier work. It reflects some hard-won experience gained while using the resulting software to solve nonlinear constrained least squares problems.

49633 **Data structures for adaptive grid generation.** Berger, M.J. (Courant Institute of Mathematical Sciences, New York Univ., New York, NY 10012). 7: No. 3, 904-916(Jul 1986).

This paper describes data structures and algorithms for the automatic generation of adaptive subgrids, a technique used with adaptive mesh refinement for solving partial differential equations. Our algorithms generate a nested sequence of finer and finer grids on an underlying coarse grid. There are two aspects to the data structures. Trees are used to do the grid management for this type of grid structure. Secondly, the automatic grid generation algorithms use data structures with special nearest neighbor properties. Examples of grids from actual adaptive numerical computations are shown.

49634 The numerical calculation of traveling wave solutions of nonlinear parabolic equations. Hagstrom, T.; Keller, H.B. (Dept. of Applied Mathematics and Statistics, State Univ. of New York at Stony Brook, Stony Brook, NY 11794). 7: No. 3, 978-988(Jul 1986).

Traveling wave solutions have been studied for a variety of nonlinear parabolic problems. In the initial value approach to such problems the initial data at infinity determines the wave that propagates. The numerical simulation of such problems is thus quite difficult. If the domain is replaced by a finite one, to facilitate numerical computations, then appropriate boundary conditions on the "artificial" boundaries must depend upon the initial data in the discarded region. In this work the authors derive such boundary conditions, based on the Laplace transform of the linearized problems, and illustrate their utility by presenting a numerical solution of Fisher's equation which has been proposed as a model in genetics.

49635 Scientific uses of the MANIAC. Anderson, H.L. (Los Alamos National Laboratory, Los Alamos, New Mexico). 43: No. 3, 731-748(Jun 1986).

This is the story of how Nick Metropolis came to build the MANIAC and about the scientific uses to which it was put in the early days of electronic computing. Among the illustrious scientists attracted to MANIAC were Fermi, Teller, von Neumann, Bethe, Gamow, and Ulam. Many of the scientific contributions were "firsts" that had a profound influence on subsequent developments over a wide spectrum of scientific activities. These included the pion—proton phase shift analysis, the nonlinear coupled oscillators, the study of the genetic code, importance sampling, two-dimensional hydrodynamics, Monte Carlo calculation of nuclear cascades, universalities of iterative functions and "anticlerical" chess.

49636 Mathematics and computing. Lax, P.D. (Los Alamos National Laboratory, Los Alamos, New Mexico). 43: No. 3, 749-756(Jun 1986).

Examples are given of the effects mathematics & computers have had on each other. The relability of computer calculations is discussed. (AIP)

49637 Method for encryption and transmission of digital keying data. Mniszewski, S.M.; Springer, E.A.; Brenner, D.P. (to Dept. of Energy). US Patent Application 6-730,529. 6 May 1985. 16p. Contract W-7405-ENG-36. DE86013712 NTIS, PC A02/MF A01; GPO Dep. File Number DE86013712.

A method for the encryption, transmission, and subsequent decryption of digital keying data is described. The method utilizes the Data Encryption Standard and is implemented by means of a pair of apparatus, each of which is selectable to operate as either a master unit or remote unit. The method enables frequent change of keys without requiring manual entry or storage of keys at the remote unit. 2 figs.

49638 Improved sample size determination for attributes and variables sampling. Stirpe, D.; Picard, R.R. (Los Alamos National Lab., Los Alamos, NM 87545). 14: No. 3, 454-460(1985). (CONF-850765—).

From 26. annual meeting of the Institute of Nuclear Materials Management; Albuquerque, NM, USA (21 Jul 1985).

Earlier INMM paper have addressed the attributes/variables problem and, under conservative/limiting approximations, have reported analytical solutions for the attributes and variables sample sizes. Through computer simulation of this problem, the authors have calculated attributes and variables sample sizes as a function of falsification, measurement uncertainties, and required detection probability without using approximations. Using realistic assumptions for uncertainty parameters of measurement, the simulation results support the conclusions: (1) previously used conservative approximations can be expensive because they lead to larger sample sizes than needed, and (2) the optimal verification strategy, as well as the falsification strategy, are highly dependent on the underlying uncertainty parameters of the measurement instruments.

49639 Activities and trends in physical protection modeling with microcomputers. Chapman, L.D.; Harlan, C.P. (Sandia National Labs., Albuquerque, NM 87185). 14: No. 3, 251-256(1985). (CONF-850765—).

From 26. annual meeting of the Institute of Nuclear Materials Management; Albuquerque, NM, USA (21 Jul 1985).

Sandia National Laboratories developed several models in the mid to late 1970's including the Safeguards Automated Facility Evaluation (SAFE) method. The Estimate of Adversary Sequence Interruption (EASI), the Safeguards Network Analysis Procedure (SNAP), the Brief Adversary Threat Loss Estimator (BATLE), and others. These models were implemented on large computers such as the VAX 11/780 and the CDC machines. With the recent development and widespread use of the IBM PC and other microcomputers, it has become evident that several physical protection models should be made available for use on these microcomputers. Currently, there are programs under way to convert the EASI, SNAP and BATLE models to the IBM PC. The input and analysis using the EASI model has been designed to be very user friendly through the utilization of menu driven options. The SNAP modeling technique will be converted to an IBM PC/AT with many enhancements to user friendliness. Graphical assistance for entering the model and reviewing traces of the simulated output are planned. The BATLE model is being converted to the IBM PC while preserving its interactive nature. The current status of the these developments is reported in this paper.

9903 Information Handling

49640 (KURRI-TR—248, pp 9-21) Features of INIS data base. Ebinuma, Yukio. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). May 1984. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE86780483. (CONF-8405416—).

From Meetings on nuclear science information and on-line retrieval; Kumatori, Osaka, Japan (10 May 1984).

The on-line service of INIS atomic energy literature file was started by JOIS on January 5, 1984. This service is to be spread in Japan by the cooperation of the Japan Information Center of Science and Technology having the on-line system in Japan and the Japan Atomic Energy Research Institute having the data base. At the time of starting the service, the features of the INIS data base are outlined from the viewpoint of the utilization. The International Nuclear Information System is the information system supported by the member countries of IAEA and international organizations to offer the secondary information covering the literatures on the peaceful use of atomic energy in the world based on English by computer treatment and to distribute the whole text of special literatures by utilizing microfilm techniques. The INIS has continued the full scale operation since 1973, and now, 70 countries and 14 international organizations take part. As of the end of 1983, about 810,000 secondary informations were collected. The object of the service by JOIS is those of January, 1976, or later. The setup of the INIS, the object of the INIS file, the items of the primary retrieval and the secondary retrieval, answer output, and the experience in JAERI-INIS on-line retrieval system are described.

49641 (KURRI-TR—248, pp 22-26) On INIS atomic energy literature file of JOIS. Kurosawa, Shinji. (Japan Information Center of Science and Technology, Tokyo). May 1984. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE86780483. (CONF-8405416—).

From Meetings on nuclear science information and on-line retrieval; Kumatori, Osaka, Japan (10 May 1984).

The International Nuclear Information System (INIS) atomic energy literature file is the file made under IAEA, and the input related to the atomic energy in Japan into this file is carried out by the Japan Atomic Energy Research Institute. Now, the service of offering the information to the users in Japan was to be made by the Japan Information Center of Science and Technology through the on-line system JOIS. The INIS file is old in the world as the data base with the objective of mechanized retrieval, and the data bases set up thereafter followed its pattern. For example, the thesaurus for the purpose of precise information retrieval and the link connecting the relation of words to words were incorporated in the

data base from the beginning. The JICST on-line information system (JOIS) started the service in April, 1976, and offers the service for 13 files. Now, as the 14th, the INIS file was added. The materials since January, 1976, have been collected, and as of 1983, the total number reached about 590,000. As the features of the INIS file, the literatures, books, reports, patents and so on related to the peaceful use of atomic energy are collected. The retrieval of necessary literatures is made on-line by using key words and others. Also secondary retrieval can be utilized.

40642 (KURRI-TR—248, pp 47-54) **Interim report on construction of data base for atomic energy science documents (concerning Kyoto University Reactor).** Takeuchi, Takayuki. (Kyoto Univ., Kumatori, Osaka, Japan. Research Reactor Inst.). May 1984. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE86780483. (CONF-8405416—).

From Meetings on nuclear science information and on-line retrieval; Kumatori, Osaka, Japan (10 May 1984).

The Kyoto University Research Reactor Institute was established in 1963 as a research institute for all universities in Japan utilizing the facilities in common. The construction of a document data base has been undertaken in commemoration of the 20th anniversary of the institute. The data base concerns the research works performed at the institute and also the publications and reports on the research made by the personnel belonging to the institute. Input data are gathered from concerned researchers. In this interim report, the structure and contents of this data base are briefly described. One of the features of this data base is that it handles data with both Japanese and English at the same time.

9905 Civilian Defense

40643 (AD-A—167447/2/XAB) **Effects of edge restraint on slab behavior. Final report.** Guice, L.K. (Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Structures Lab.). Feb 1986. 283p. NTIS, PC A13/MF A01.

This study was performed in conjunction with a Federal Emergency Management Agency program to plan, design, and construct keyworker blast shelters which would be used in high-risk areas of the country during and after a nuclear attack. The shelters considered in this study were box-type structures in which damage is much more likely to occur in the roof slab than in the walls or floor. In this part of the program, the effect of edge restraint on slab behavior was investigated. The primary objective was to determine the effects of partial rotational restraint on slab strength, ductility, and mechanism of failure. Sixteen one-way, reinforced concrete plate elements were tested in a reaction structure under uniform static water pressure.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Review of tokamak power reactor and blanket designs in the United States, 11:49536 (R;US)
Soudan 2 nucleon decay experiment, 11:49113 (R;US)
Sputtering/redeposition analysis of alkali-based tungsten composites for limiter/divertor applications, 11:47934 (R;US)
SSC physics signatures and trigger requirements, 11:49114 (R;US)
Status of fusion reactor blanket design, 11:49539 (R;US)
Status of the ATLAS PIIECR ion source project, 11:48381 (R;US)
Status of the Soudan 2 nucleon decay experiment, 11:48436 (R;US)
Supported liquid membranes in 1986: new technology or scientific curiosity, 11:48057 (R;US)
$(TMTSF)_2PF_6$: evidence for a unified phase diagram, 11:48017 (R;US)
Transportation energy demand from 1980 to 2010: structure and results of the Transportation Energy and Emissions Modeling System, 11:47867 (R;US)
Weldon Spring historical dose estimate, 11:48824 (R;US)

Argonne National Lab., IL (USA). Chemical Technology Div.
Advanced lithium-aluminum/iron disulfide secondary cell, 11:47750 (R;US)
Failure analysis of lithium-aluminum/iron sulfide cells, 11:47751 (R;US)

Argonne National Lab., IL (USA). Chemistry Div.
Analysis of the spectrum of Dy^{3+}:LaF_3 assuming a C/sub2v/ site summetry, 11:48013 (R;US)
Chemistry of isolated transition metal clusters, 11:48134 (R;US)

Argonne National Lab., IL (USA). Components Technology Div.
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)

Argonne National Lab., IL (USA). Fusion Power Program
Fusion blanket inherent safety assessment, 11:49541 (R;US)
IPFR: Integrated Pool Fusion Reactor concept, 11:49538 (R;US)
Tritium system for a tokamak reactor with a self-pumped limiter, 11:49540 (R;US)

Argonne National Lab., IL (USA). High Energy Physics Div.
Induced second-class form factors in Σ^- β-decay, 11:49149 (R;US)
New evidence from Soudan 1 for underground muons associated with Cygnus X-3, 11:48962 (R;US)

Argonne National Lab., IL (USA). Magnetohydrodynamics Program
Effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 11:47825 (R;US)
Thermal radiation in MHD design applications, 11:47824 (R;US)

Argonne National Lab., IL (USA). Materials Science and Technology Div.
Collapse of defect cascades to dislocation loops during self-ion irradiations of Fe, Ni and Cu at 30, 300 and 600°K, 11:47920 (R;US)
Collapse of defect cascades to dislocation loops in Cu_3Au, 11:47919 (R;US)
Electron microscopy study of sputtered NbN films, 11:47975 (R;US)
Fine scale microstructure in cast and aged duplex stainless steels investigated by small angle neutron scattering, 11:47921 (R;US)
Manipulation of displacive phase transformations, 11:48015 (R;US)
Phase transformations in neutron-irradiated Zircaloys, 11:47917 (R;US)
Precipitation and phase stability of solid Kr in cavities after room-temperature implantation of Al. Revision, 11:47923 (R;US)
Radiation-induced segregation in Cu-Au alloys, 11:47916 (R;US)

Argonne National Lab., IL (USA). Mathematics and Computer Science Div.
ELEFUNT test results under FX/FORTRAN Version 1.0 on the Alliant FX/8, 11:49607 (R;US)
Projected gradient methods for linearly constrained problems, 11:49604 (R;US)
Toolpack tools ISTUD, ISTCD, and ISTSB: guide for users and installers, 11:49605 (R;US)
Unix shell scripts to invoke a set of Toolpack/1 tools, 11:49606 (R;US)

Argonne National Lab., IL (USA). Reactor Analysis and Safety Div.
Prediction of pool void fraction by new drift flux correlation, 11:47735 (R;US)

Arizona State Univ., Tempe (USA)
Heat transfer to two-phase air/water mixtures flowing in small tubes with inlet disequilibrium. Final Report, 11:47893 (R;US)

Arizona State Univ., Tempe (USA). Solar Energy Lab.
Open-cycle absorption solar cooling. Part I. Combined heat and mass transfer on an open flow liquid absorbent solar collector/regenerator. Final report, 11:47418 (R;US)
Open-cycle absorption solar cooling. Part II. Heat and mass transfer analysis for glazed collector/regeneration. Final report, 11:47419 (R;US)
Open-cycle absorption solar cooling. Part III. Evaluation of air-conditioning systems utilizing liquid absorbents regenerated by solar energy. Final report, 11:47420 (R;US)
Phase I, open-cycle absorption solar cooling. Part IV. Executive summary analysis and resolution of critical issues and recommendations for Phase II. Final report, 11:47421 (R;US)

Arizona Univ., Tucson (USA). Lab. of Tree-Ring Research
360 year temperature and precipitation record for the Pasco Basin derived from tree-ring data, 11:48734 (R;US)

Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)
DOD (Department of Defense) nuclear mishaps. Special report, 11:48653 (R;US)

Arms Control and Disarmament Agency, Washington, DC (USA). Strategic Affairs Div.
Finite temperature corrections to the Van der Waals potential, 11:49146 (R;US)
Is there a delta-delta-pi problem, 11:49148 (R;US)

Army Belvoir Research and Development Center, Fort Belvoir, VA (USA)
Workshop report: nuclear techniques for mine detection research, July 22-25, 1985, Lake Luzerne, New York, 11:47350 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Environmental Lab.
Environmental and water-quality operational studies. Initial evaluation of a computer algorithm for simulating anaerobic conditions in reservoirs and lakes. Final report, 11:48742 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Structures Lab.
Effects of edge restraint on slab behavior. Final report, 11:49643 (R;US)

Army Research and Development Command, Dover, NJ (USA)
Interpretation of glancing-incidence scattering measurements, 11:49450 (R;US)
Statistical and signal-processing concepts in surface metrology, 11:48379 (R;US)

Associated Nuclear Services, Epsom (UK)
Calculations of radiation field arising from heat generating radioactive waste emplaced in ocean sediments, 11:47292 (R;GB)

Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)
Experiments to test an intra-island scoop limiter on TEXT, 11:49552 (R;US)

Atmospheric and Environmental Research, Inc., Cambridge, MA (USA)
Investigation of the energy balance of solar active regions using the ACRIM irradiance data. Final Report, 11:49009 (R;US)

Auburn Univ., AL (USA). Dept. of Physics
Mayer-Fermi theory and the long sequences in the periodic table, 11:49067 (R;US)

Australian Atomic Energy Commission Research Establishment, Lucas Heights
[Australian Atomic Energy Commission Research Establishment]. 33rd annual report 1984-1985, 11:47779 (R;AU)

Australian Inst. of Nuclear Science and Engineering, Lucas Heights
10th AINSE radiation biology conference, 22-23 August 1985, Lucas Heights - AINSE Theatre. Conference handbook, 11:48857 (R;AU)

B

Bari Univ. (Italy). Ist. di Fisica
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)

Battelle Columbus Div., OH (USA)
Electroforming of metals: state-of-the-art assessment. Final report, 11:47929 (R;US)
Radionuclide release calculations for selected severe accident scenarios. Volume 1. BWR, Mark 1 design, 11:47730 (R;US)
Radionuclide release calculations for selected severe accident scenarios. PWR, ice condenser design. Volume 2, 11:47731 (R;US)
Radionuclide release calculations for selected severe accident scenarios. PWR, large dry containment design. Volume 5, 11:47734 (R;US)
Radionuclide release calculations for selected severe accident scenarios. Volume 4. BWR, Mark III design, 11:47733 (R;US)
Source Term Code Package: a user's guide (Mod 1), 11:47729 (R;US)
VENT II: a microcomputer program for designing vent systems for high-efficiency gas appliances. Software, 11:47231 (R;US)

Battelle Columbus Labs., OH (USA)
Radionuclide release calculations for selected severe accident scenarios. Volume 3. PWR, subatmospheric containment design, 11:47732 (R;US)

Battelle Memorial Inst., Columbus, OH (USA)
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)

Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation
ERG review of waste package container materials selection and corrosion, 11:47913 (R;US)

Baylor Univ., Houston, TX (USA). Coll. of Medicine
Shellfish depuration by gamma irradiation. Progress report No. 1, October 1, 1985-July 25, 1986, 11:47351 (R;US)

Bechtel Group, Inc., San Francisco, CA (USA)
Capital cost estimates and schedules for coal-fired power plants. Final report, 11:47481 (R;US)
Cost estimates for vertical-axis wind turbines. Final report, 11:47463 (R;US)

Bechtel North American Power, Middletown, PA (USA)
Transporting fuel debris from TMI-2 to INEL, 11:47284 (R;US)

Beck (William), Pullman, WA (USA)
[Wind-powered generators. Final report], 11:47461 (R;US)

Bell Labs., Murray Hill, NJ (USA)
Antiferromagnetic spin fluctuations and the heavy fermion system UPt_3, 11:47914 (R;US)

Bergen Univ. (Norway). Dept. of Physics
Deep-lying vhsub(11/2) hole states in ^{145}Nd, 11:49324 (R;NO)

Bethlehem Steel Corp., PA (USA)
Dual-wavelength light sources. Research report, October 1982-October 1985, 11:47211 (R;US)

Bettis Atomic Power Lab., West Mifflin, PA (USA)
Testing of a production irradiated fuel assay gauge (LWBR development program), 11:47519 (R;US)

Bhabha Atomic Research Centre, Bombay (India)
Environment induced cracking of Zircaloy-2 fuel cladding tube, 11:47628 (R;IN)

Bhabha Atomic Research Centre, Bombay (India). Metallurgy Div.
Environment induced cracking of Zircaloy-2 fuel cladding tube, 11:47628 (R;IN)

Bochum Univ. (Germany, F.R.). Inst. fuer Thermo- und Fluiddynamik
Joint German-Argentine project: Comparative testing of solar flat plate collectors. Final report, 11:47426 (R;DE;In German)

Bochum Univ. (Germany, F.R.). Medizinische Fakultaet
Acne picealis. Cutaneous and visceral effects of exposure to distillation products of coal and crude oil and their valuation for insurance, 11:48909 (R;DE;In German)

Boston Univ., MA (USA). Dept. of Physics
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)

Boyce Engineering International, Inc., Houston, TX (USA)
External combustion steam injected gas turbine for cogeneration, 11:47786 (R;US)

British Geological Survey, Keyworth (UK). Fluid Processes Research Group
Geochemical constraints on the microbial contamination of a hypothetical UK deep geological repository, 11:47312 (R;GB)
Hydrochemistry of the groundwater flow systems in the Harwell region, 11:47311 (R;GB)

British Hydromechanics Research Association, Cranfield
Rotary pump seals in 2000 MW power stations, 11:47482 (R;US)

British Library, Boston Spa. Lending Div.
Enthalpies of formation of liquid three-component iron-cerium-aluminium alloys, 11:47966 (TG;GB)
Estimation of the high temperature low cycle fatigue strength of welded joints. 1. Proposal of fundamental estimation methods, 11:47967 (TJ;GB;British Library Lending Div., Boston Spa, England)
Evalution of low cycle fatigue strength of welded joints at elevated temperature: applicability of methods of evaluation and plastic restraint, 11:47968 (TJ;GB)
Fast reactor status review: mechanical and thermohydraulic core engineering of large breeders, 11:47521 (TJ;GB)

Brookhaven National Lab., Upton, NY (USA)
AGS experiments: 1984, 1985, 1986. Third edition, 11:48335 (R;US)
Antiferromagnetic spin fluctuations and the heavy fermion system UPt_3, 11:47914 (R;US)
Compact nuclear power systems based on particle bed reactors, 11:47505 (R;US)
Conductivity of polybenzimidazole in steam, 11:48008 (R;US)
Correlation of trace elements in hair with colon cancer, 11:48899 (R;US)
District heating and cooling market potential and penetration methodology. Final report, 11:47889 (R;US)
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
Effects of carbon dioxide attack on geothermal cement grouts, 11:47445 (R;US)
Elemental concentrations in bones from an ancient Egyptian mummy and from a recent man, 11:48900 (R;US)
Future dibaryon research at BNL, 11:49232 (R;US)
In vivo monitoring of toxic metals: assessment of neutron activation and x-ray fluorescence techniques, 11:48901 (R;US)
Interpretation of glancing-incidence scattering measurements, 11:49450 (R;US)
Large solid angle tracking of Monte Carlo events of heavy ion collisions in TPC magnetic spectrometers, 11:48437 (R;US)
Laser-Electron-Gamma-Source. Progress report, July 1986, 11:48380 (R;US)
Lattice dynamics of the heavy Fermion compound UBe/sub 13/, 11:49049 (R;US)
Logistic regression analysis of cadmium-induced renal abnormalities, 11:48902 (R;US)
Method for the simultaneous preparation of radon-211, xenon-125, xenon-123, astatine-211, iodine-125 and iodine-123, 11:48812 (P;US)
Muon sticking factor in muon catalyzed fusion and the other aspect of this fusion process, 11:49532 (R;US)
Neutron cross sections for ^{153}Gd and ^{159}Gd, 11:49338 (R;US)
No-carrier-added [^{18}F]-N-methylspiroperidol, 11:48811 (P;US)
Non-invasive techniques for measuring body composition: state of the art and future prospects, 11:48799 (R;US)
Oxygen K-edge absorption spectra of small molecules in the gas phase, 11:49050 (R;US)
Particle production and targeting experience at the Brookhaven AGS, 11:48377 (R;US)
Some uncertainties associated with preparation of standards in organic matrix, 11:48056 (R;US)
Statistical and signal-processing concepts in surface metrology, 11:48379 (R;US)
Use of nuclear energy for bimodal applications in space, 11:47522 (R;US)
Workshop on photon activation therapy: proceedings, 11:48800 (R;US)

Brookhaven National Lab., Upton, NY (USA). AGS Dept.
BNL kaon beams, present and planned, 11:48378 (R;US)
Search for the $\xi(2.2)$ in anti pp formation, 11:49117 (R;US)
Spin effects in exclusive reactions at high P/sub perpendicular/, 11:49116 (R;US)

Brookhaven National Lab., Upton, NY (USA). Applied Science Dept.
Biological processes associated with the pycnocline and surface fronts in the southeastern Bering Sea, 11:48954 (R;US)
EXAFS and reflectivity studies of surfaces and interfaces using glancing angle x-rays, 11:48629 (R;US)
Joint IAEA/UNEP/WHO project on assessing and managing health and environmental risks from energy and other complex industrial systems, 11:47773 (R;US)
Microbial metabolism of aromatic compounds under anaerobic conditions, 11:48813 (R;US)

Brookhaven National Lab., Upton, NY (USA). Nuclear Energy Dept.
Systematic approach to containment performance criteria, 11:47656 (R;US)
Brookhaven National Lab., Upton, NY (USA). Physics Dept.
Antinucleon physics, 11:49115 (R;US)
New force in nature, 11:49183 (R;US)
Review of high energy hadron-nucleus data, 11:49218 (R;US)
Summary of hypernuclear sessions, 11:49217 (R;US)
Brookhaven National Lab., Upton, NY (USA). Technical Support Organization
Zone approaches to international safeguards of a nuclear fuel cycle, 11:47343 (R;US)
Brown Univ., Providence, RI (USA). Dept. of Chemistry
Pulsed EPR studies of small reactive radicals produced by ionizing radiation, 11:48133 (R;US)
Bundesanstalt fuer Gewaesserkunde, Koblenz (Germany, F.R.)
Radionuclides in sediments - a comparative analysis 1983, 11:48758 (R;DE;In German)
Bundesforschungsanstalt fuer Fischerei, Hamburg (Germany, F.R.). Informations- und Dokumentationsstelle
Effects of acid precipitations on aquatic organisms. Bibliographic list No. 8 (Rev. 1) as of August 1985. 2. ed. , 11:48907 (R;DE;In German)
Bundesministerium des Innern, Bonn (Germany, F.R.)
Description of an improvement concept to prevent overpressure containment rupture. Final report, 11:47655 (R;DE;In German)
Increase of local dose rates on the islands in the North Sea, resulting from heavy mineral accumulation. Final report, 11:48710 (R;DE;In German)
Materials analyses for the case of additive creep and fatigue - proposed calculation. Final report, 11:47912 (R;DE;In German)
System of computer-aided tools supplying data for assessment and prognosis to assist operators to comply with the duty of notification in the event of nuclear emergencies. Final report, 11:47630 (R;DE;In German)
Bundesministerium fuer Ernaehrung, Landwirtschaft und Forsten, Bonn (Germany, F.R.)
Ad-hoc Working Group 'Impact of air pollution on forests': Methods and criteria for the assessment and monitoring of air pollution effects on forests, 11:48904 (R;DE;In German, English, French)
Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)
Advanced development of diffusion bonding processes for joining of turbine blades and vanes with complex cooling configuration and other near net-shape components. Final report, 11:47911 (R;DE;In German)
Briquetting of refuse and sewage sludge for energy recovery. Final report, 11:47888 (R;DE;In German)
Ceramic components, gas turbines. Phase 3, 11:47891 (R;DE;In German)
Design, construction and testing of a non-polluting coal fired power station - model power station Voelklingen. Final report, 11:47478 (R;DE;In German)
Development and testing of a low cost screw compressor for the refrigerants R 12 and R 114. Final report, 11:47830 (R;DE;In German)
Development and testing of a washing process for exhaust gas of stationary operated internal combustion engines. Final report, 11:47890 (R;DE;In German)
Development of a dry separation process for the sorting of raw pumice into heat restraining building material. Final report, 11:47831 (R;DE;In German)
Development of a process to gasify biomass based on the principle of a circulating fluidized-bed. Final report, 11:47386 (R;DE;In German)
Development of coating materials and feeding processes for energy-optimized baking of carbon products. Final report, 11:47871 (R;DE;In German)
Development of new solar cells from poly-silicon, silicon powder and new compound semiconductors suitable for thin film cells. Final report, 11:47384 (R;DE;In German)
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
Germano-Korean cooperation for erection and test of industrialized solar technologies. Final report, 11:47403 (R;DE;In German)
Integrated coal-gasification combined-cycle power plant, project definition (Phase I). Final report, 11:47479 (R;DE;In German)
Introduction of a secondary blast process into an unlined hot-blast cupola furnace. Final report, 11:47872 (R;DE;In German)
Investigation of the optical properties of solar cells. Final report, 11:47385 (R;DE;In German)
Joint German-Argentine project: Comparative testing of solar flat plate collectors. Final report, 11:47426 (R;DE;In German)
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
Rapid method for monitoring the sulphur content in moving streams of raw brown coal. Final report, 11:47179 (R;DE;In German)
Simulation of underground coal gasification. Phase I. Final report, 11:47143 (R;DE;In German)
VSI-elements for cover in large heat storage systems. Final report, 11:47748 (R;DE;In German)
Welding on water-filled pipes for drilling and repairing of mains for district heating. Final report, 11:48226 (R;DE;In German)
Bundesministerium fuer Wirtschaft, Bonn (Germany, F.R.)
Data on the development of the West German power electric industry in 1984, 11:47823 (R;DE;In German)
Bureau of Mines, Amarillo, TX (USA). Helium Field Operations
Improved analyzer for determining helium-4 in parts-per-billion range. Report of Investigations/1986, 11:48082 (R;US)
Burns and McDonnell Engineering Co., Kansas City, MO (USA)
Cape Blanco Wind Farm feasibility study. Technical Report No. 5. Communications inteference, 11:47458 (R;US)
Burt-Hill-Kosar-Rittelmann Associates, Washington, DC (USA)
Robie House. Phase II report. Recommendations for cooling and ventilation, restoration of doors and windows, refrigerated cooling retrofit, 11:47854 (R;US)
Bylgarska Akademiya na Naukite, Sofia. Inst. za Yadrena Izsledvaniya i Yadrena Energetika
Legendre-series development of the anisotropy density of neutron elastic scattering by means of cubic splines, 11:49420 (R;XA)

C

California Inst. of Tech., Pasadena (USA). Dept. of Applied Physics
Optoelectronic devices and related physical phenomena in thin-film semiconductor configurations. Final report, 11:48255 (R;US)
California Univ., Berkeley (USA)
Model of gypsum, calcite and silica solubilities for application to geothermal waters over a wide range of temperature, P/sub CO_2/ and ionic strength. Final technical report, October 1, 1983-September 30, 1984, 11:47446 (R;US)
California Univ., Berkeley (USA). Dept. of Chemical Engineering
Conversion of low H_2/CO ratio synthesis gas to hydrocarbons. Progress report, October 1-December 31, 1982, 11:47362 (R;US)
California Univ., Berkeley (USA). Dept. of Forestry and Resource Management
Biomass production and nutrient responses of ponderosa pine to long-term elevated CO_2 concentrations, 11:48912 (R;US)
California Univ., Davis (USA)
Guidelines for the syntactic design of audio cues in computer interfaces. Revision 1, 11:49626 (R;US)
In-situ MHD energy conversion for fusion, 11:49580 (R;US)
California Univ., Irvine (USA)
Cygnus experiment at Los Alamos, 11:48608 (R;US)
California Univ., Los Angeles (USA). Dept. of Mechanical, Aerospace and Nuclear Engineering
User's manual for FENAT: a two-dimensional multigroup diffusion theory Finite Element Neutral Atom Transport code, 11:49498 (R;US)
California Univ., Los Angeles (USA). Dept. of Physics
(p, Vector, π/sup +-/) reactions on Be at 650 MeV, 11:49255 (R;US)
California Univ., Los Angeles (USA). School of Engineering and Applied Science
Fusion nuclear technology development: issues and strategy, 11:49595 (BA;GB)

California Univ., Riverside (USA). Div. of Biomedical Sciences
Tissue interactions with nonionizing electromagnetic fields. Final report, March 1979-February 1986, 11:48928 (R;US)
California Univ., San Diego, La Jolla (USA). Dept. of Physics
Studies of plasma transport relevant to tandem mirrors. Final technical report, March 1, 1982-February 28, 1985, 11:49477 (R;US)
Carbon Resources, Inc., Wheat Ridge, CO (USA)
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Carlsen and Fink Associates, Inc., Fairfax, VA (USA)
Integrated power system analysis package: scoping study. Volume 1. Industry survey. Final report, 11:47821 (R;US)
Integrated power system analysis package: scoping study. Volume 2. Software evaluation and integration. Final report, 11:47822 (R;US)
CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)
Implicit particle methods of order 1. Application to Vlasov-Poisson equation with fixed ions, 11:49472 (R;FR;In French)
Slowing of charged particles by particle methods, 11:49471 (R;FR;In French)
CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)
CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Inst. de Recherche Technologique et de Developpement Industriel (IRDI)
New extractants for nuclear fuels, 11:47275 (R;FR;In French)
RF sputtered Ce^{+3} activated SiO_2 glass films as scintillators for alpha particles detection, 11:48438 (R;FR)

Challenge of handling long-pulse neutral beams - the NBETF experience, 11:49588 (BA;GB)
Diagnostics for the NBETF actively cooled beam dump, 11:49096 (BA;GB)

Electromagnetic forces distribution and mechanical analysis in the first wall structure for INTOR/NET, 11:49594 (BA;GB)
Fusion nuclear technology development: issues and strategy, 11:49595 (BA;GB)
Long-pulse beamlines for the mirror fusion test facility, 11:49587 (BA;GB)
Mechanical design of a high-beta TFCX tokamak with a demountable TF coil, 11:49593 (BA;GB)
Neutral beam heating systems for TFTR - initial operating results, 11:49589 (BA;GB)
Overview of the modification to the Poloidal Divertor Experiment (PDX) to produce the Princeton Beta Experiment (PBX), 11:49592 (BA;GB)
Progress in fusion technology in the U.S. Magnetic Fusion Program, 11:49590 (BA;GB)
TFCX - mechanical design, 11:49591 (BA;GB)

Commission of the European Communities, Luxembourg
Characterization and improvement of coatings protecting concrete against contamination, 11:47626 (R;FR;In French)
Exploitation of the FLK-60 slagging incinerator for different alpha waste streams and study of the feasibility of medium-level alpha-beta-gamma waste incineration in FLK-60, 11:47310 (R;FR)

Commission of the European Communities, Luxembourg. Directorate General Information Market and Innovation
Additional certification of the content (mass fraction) of iodine in two spiked samples of skim milk powder. CRM No. 150-151, 11:48713 (R;DE)
Certification of lead and cadmium in three lyophilized blood materials. CRM No. 194, 195, 196, 11:48060 (R;DE)
Certification of polycyclic aromatic compounds. Pt. 6. CRM Nos. 152, 265, 266, 267, 268, 269, 270, 271, 272, 11:48666 (R;DE)
Certification of the contents (mass fraction) of carbon, hydrogen, nitrogen, chlorine, arsenic, cadmium, manganese, mercury, lead, selenium, vanadium and zinc in three coals. Gas coal CRM No. 180; Coking coal CRM No. 181; Steam coal CRM No. 182, 11:47186 (R;DE)
Certification of the elemental composition of BCR reference material No. 183 containing carbon, hydrogen, fluorine, sulphur, phosphorus and copper, 11:48059 (R;DE)
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)
EXODUS - a program for the economic evaluation of energy exchange opportunities in industrial sites. Final report, 11:47769 (R;DE)
Measurement of precipitation by radar. Cost project 72. Proceedings, 11:48657 (R;DE)
Methane production by anaerobic digestion of algae. Final report, 11:47388 (R;DE)
Methane production by mariculture on land. Final report, 11:47365 (R;DE)
Performance tests on new electrode materials for hydrogen production by water electrolysis. Final report, 11:47359 (R;DE)
Pressurized gasification test facility. Construction. Final report, 11:47390 (R;DE)
Utilization of forest biomass for energy production and industrial purposes. Final report, 11:47389 (R;DE;In Italian)

Connecticut Univ., Storrs (USA). Dept. of Animal Genetics
Embryo culture in teratological surveillance and serum proteins in development. Final technical report, 11:48906 (R;US)

Consultancy Services Wind Energy Developing Countries, Amersfoort (Netherlands)
Cost of windmill irrigation. Cost analysis of wind pumps and diesel pumps used for small scale irrigation, 11:47451 (R;NL)

Copenhagen Univ. (Denmark). H.C. Oersted Inst.
Low-energy heavy-atom impact as a tool for production and classification of doubly excited states, 11:49074 (R;DK)

Corium Industries, Inc., Atlanta, GA (USA)
Sputtering/redeposition analysis of alkali-based tungsten composites for limiter/divertor applications, 11:47934 (R;US)

Cornell Univ., Ithaca, NY (USA). School of Electrical Engineering
Integration methodology for large wind-energy conversion systems. Final report, 11:47462 (R;US)

Council for Mineral Technology, Randburg (South Africa)
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)

Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre
Building of a prototype steering magnet, 11:48397 (R;ZA;In Afrikaans)
Design of a sending magnet for the high energy beamline, 11:48399 (R;ZA;In Afrikaans)
Final magnetic shimming of vacuum chamber suspension holes on the sector magnets, 11:48395 (R;ZA)
Investigation of current setting procedures for sector magnets, 11:48396 (R;ZA)
Optimization of ion source positions in SPS1, 11:48398 (R;ZA;In Afrikaans)
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)

Characterization of process holdup material at the Portsmouth Gaseous Diffusion Plant, 11:47344 (R;US)
Government Industrial Research Inst., Kyushu, Tosu, Saga (Japan)
Preparation of carbon/ceramic composite materials by use of raw coke (v) - carbon/B_4C composite materials, 11:48003 (R;US)
Graham (Reuben L.), Inc., Charleston, WV (USA)
Exploration-production studies in newly drilled Devonian-Shale gas wells. Annual report, February 1, 1985-January 31, 1986, 11:47229 (R;US)
Graz Univ. (Austria). Inst. fuer Theoretische Physik
Model of cohesive properties and structural phase transitions in non-metallic solids, 11:49441 (R;US)
Grenoble-1 Univ., 38 (France)
Contribution to study of laser emission in semiconductors II-VI with wide forbidden band: ZnTe and MgZnTe, 11:48257 (R;FR;In French)
Grenoble-1 Univ., 38 - La Tronche (France)
Uranium magnetism in UGa_x and U(Gasub(1-x)Alsub(x))$_2$ compounds, 11:47933 (R;FR;In French)
Gulf Coast Research Lab., Ocean Springs, MS (USA)
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Gulf of Mexico). Black drum, 11:48739 (R;US)

H

Hagler, Bailly and Co., Washington, DC (USA)
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
Hamburg Univ. (Germany, F.R.). Fachbereich Physik
Construction of a time-of-flight neutron spectrometer for reaction angles $0° U/$theta$< = 180°$ and study of the reaction ^{66}Cu(p,xn) ^{66}Zn for Esub(p)=26.7 MeV, 11:48603 (R;DE;In German)
Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Experimentalphysik
Hamburg University, 2. Institute of Experimental Physics. Annual report 1985, 11:49126 (R;DE;In German)
Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik
Gauss'-law and the infraparticle problem, 11:49145 (R;DE)
Hamilton (William), Santa Barbara, CA (USA)
Ac power trains for electric vehicles. Final report, 11:47900 (R;US)
Hanford Engineering Development Lab., Richland, WA (USA)
In-reactor creep behavior of the fusion heats of HT9 and modified 9Cr-1Mo, 11:47935 (R;US)
Test plan for long-term, low-temperature oxidation of spent fuel, Series 1, 11:47979 (R;US)
Test plan for Series 3 NNWSI spent fuel leaching/dissolution tests, 11:47980 (R;US)
Trend curve data development and testing, 11:47491 (R;US)
Hanford Environmental Health Foundation, Richland, WA (USA)
United States Transuranium Registry annual report, October 1, 1984-September 30, 1985, 11:48833 (R;US)
Harvard-Smithsonian Center for Astrophysics, Cambridge, MA (USA)
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)
Harvard Univ., Cambridge, MA (USA). Dept. of Physics
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)
Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet
Determination of deep water circulation in the East Atlantic Ocean by means of a box-model based evaluation of C-14 measurements and other tracer data, 11:48955 (R;DE;In German)
Hickey (Gene E.) and Associates, Inc., Edina, MN (USA)
Security State Bank of Wells, Minnesota. Final technical report, 11:47417 (R;US)
Hiroshima Univ. (Japan)
Analyses of ICRF waves on JET plasmas, 11:49491 (R;GB)
Hiroshima Univ. (Japan). Dept. of Physics
Phase structure of the SU(3) gauge-Higgs system, 2. Adjoint Higgs, 11:49192 (R;JP)
Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics
Axial weak currents in the Wess-Zumino term, 11:49159 (R;JP)
Geodesic bi-scalars in some isotropic universes, 11:49013 (R;JP)
Higher derivative regularization and chiral anomaly, 11:49193 (R;JP)
Phase structure of the SU(3) gauge-Higgs system, 2. Adjoint Higgs, 11:49192 (R;JP)
Supergravity theories, 11:49191 (R;JP)
Unconstrained multiplet in N=2 conformal supergravity, 11:49130 (R;JP)
Hitachi Ltd., Ibaraki (Japan). Energy Research Lab.
Radiation-induced segregation in Cu-Au alloys, 11:47916 (R;US)
Hitachi Ltd., Ibaraki (Japan). Hitachi Works
Ultrahigh head pump/turbine development program. Volume 1. Technical summary. Final report, 11:47379 (R;US)
Houston Univ., TX (USA). Dept. of Mechanical Engineering
Design of an acousto-optic goniometric specimens mount. Report No. 2 on modeling of acoustic microscopes, 11:48293 (R;US)
Hughes Research Labs., Malibu, CA (USA)
Long life nickel electrodes for a nickel-hydrogen cell: cycle life tests, 11:47754 (R;US)
Hunting Engineering Ltd., Bedford (UK)
Probability of traffic accidents associated with the transport of radioactive wastes, 11:47285 (R;GB)

I

IAP Research, Inc., Dayton, OH (USA)
Rail guns driven by helical flux compression generators, 11:48230 (R;US)
Idaho Falls, City of, ID (USA)
City of Idaho Falls hydroelectric demonstration project. Final operations and maintenance report, 11:47378 (R;US)
Idaho National Engineering Lab., Idaho Falls (USA)
Overview of recent supercritical binary geothermal cycle experiments from the Heat Cycle Research Program, 11:47440 (R;US)
Illinois Inst. of Tech., Chicago (USA). Dept. of Mechanical Engineering
Physical model of gradient zone erosion in thermohaline systems, 11:47428 (R;US)
Illinois Univ., Urbana (USA)
Collapse of defect cascades to dislocation loops during self-ion irradiations of Fe, Ni and Cu at 30, 300 and 600°K, 11:47920 (R;US)
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:47183 (R;US)
Superlattices and NiPi structures in new forms of cascade solar cells. Semiannual Report, 23 October 1985-22 April 1986, 11:47392 (R;US)

Illinois Univ., Urbana (USA). Dept. of Chemical Engineering
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
Illinois Univ., Urbana (USA). Dept. of Computer Science
Automated reference librarians for program libraries and their interaction with language based editors, 11:49612 (R;US)
Illinois Univ., Urbana (USA). Dept. of Theoretical and Applied Mechanics
Liquid-metal flow in a thin conducting pipe near the end of a region of uniform magnetic field, 11:49531 (R;US)
Indian Inst. of Science, Bangalore. Centre for Theoretical Studies
Renormalization of the axial vector current in QCD, 11:49181 (R;US)
Institute of Atomic Energy, Swierk (Poland)
Simple waves in quasilinear hyperbolic systems. Part 1. Theory of simple waves and simple states. Examples of applications, 11:49453 (R;PL)
Institute of Electrical and Electronics Engineers, Inc., New York (USA)
IEEE Transactions on Nuclear Science. 1985 particle accelerator conference: accelerator engineering and technology. Volume NS-32, No. 5. Part 1, 11:48329 (R;US)
Institute of Gas Technology, Chicago, IL (USA)
High-temperature composite thermal energy storage for solar applications. Draft. Final report, 11:47433 (R;US)
Microbial removal of organic sulfur from coal. Third quarterly report, April-June 1986, 11:47169 (R;US)
Institute of Nuclear Physics, Krakow (Poland)
Assessment of the radiation risk following from exploitation of Polish brown coals. Part 1. Brown coal in Polish industry; preparation of the method of determining the concentrations of main natural radioisotopes appearing in brown coal and its combustion products, 11:48697 (R;PL;In Polish)
Some uncertainties associated with preparation of standards in organic matrix, 11:48056 (R;US)
Institute of Nuclear Research, Warsaw (Poland)
Alpha emitters in the region from Ce to Os, 11:49321 (R;PL)
Evaluation of (n, 2n) reaction cross sections for ^{46}Ti, ^{107}Ag and ^{109}Ag, 11:49329 (R;PL)
Nuclear deformation energies, 11:49408 (R;PL)
Quark and gluon jets in proton-antiproton interactions associated with large p perpendicular to photons, 11:49151 (R;PL)
Institut Francais du Petrole (IFP), 92 - Rueil-Malmaison
Behavior during steam cracking of model molecules and of hydrotreated vacuum distillates, 11:47220 (R;FR;In French)
Institut Francais du Petrole 1984. Annual progress report, 11:47213 (R;FR;In French)
Institut fuer Angewandte Oekologie e.V., Freiburg im Breisgau (Germany, F.R.)
Analytic advanced development in the German Risk Study on Nuclear Power Plants. Papers presented at the project committee session of October 17, 1983, at BMFT, 11:47713 (R;DE;In German)
Institut National Polytechnique, 38 - Grenoble (France)
Contribution to study of laser emission in semiconductors II-VI with wide forbidden band: ZnTe and MgZnTe, 11:48257 (R;FR;In French)
Uranium magnetism in UGa$_3$ and U(Gasub(1-x)Alsub(x))$_3$ compounds, 11:47933 (R;FR;In French)
Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)
Study of the α and β phases of quartz by neutron multiple diffraction, 11:48021 (R;BR;In Portuguese)
Synthesis and growth of single crystals of PrCl$_3$, 11:48137 (R;BR;In Portuguese)
Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)
Report of the Central Institute for Isotope and Radiation Research, 11:48139 (R;DD;In German)
International Atomic Energy Agency, Vienna (Austria)
Selected topics in nuclear electronics, 11:48302 (R;XA)
Study of radioactive materials in the Baltic Sea. Report of the final research co-ordination meeting held in Helsinki, Finland 24-28 September 1984, 11:48714 (R;XA)
Vein type uranium deposits. Report of the Working Group on Uranium Geology, 11:47248 (R;XA)
International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee
Evaluation of resonance self-shielding factors for ^{235}U in the unresolved resonance region, 11:49421 (R;XA)
Group cross-sections and resonance self-shielding factors for ^{239}Pu in the unresolved resonance region, 11:49422 (R;XA)
Legendre-series development of the anisotropy density of neutron elastic scattering by means of cubic splines, 11:49420 (R;XA)
Measurement and evaluation of nuclear data for fissile and fertile isotopes: An important task of present-day physics, 11:47512 (R;XA)
Iowa Dept. of Water, Air and Waste Management, Des Moines (USA)
Nashua Impoundment sediment sampling, June 1985, 11:48753 (R;US)
Iowa State Univ. of Science and Technology, Ames (USA)
Analytical applications of ultrasensitive polarization measurements, 11:47189 (D;US)
Hybrid Patterson-superposition/direct-method approach to the x-ray phase problems, and in-lab EXAFS techniques, 11:48165 (D;US)
Intermediate/high-energy reactions and the quark structure of nuclei. Technical progress report, 11:49390 (R;US)
Molecular beam photoionization spectrometry. (1) Photoionization studies of high temperature vapors. (2) State-selected and state-to-state studies of electron transfer reactions, 11:48204 (D;US)
New detection methods and techniques with applications in liquid chromatography, 11:48131 (D;US)
Photoemission study of the adsorption of benzotriazole on copper, 11:48205 (D;US)
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)
Studies of the pyrolysis of hydroaromatic compounds with an emphasis on reactions of ortho-quinodimethanes, 11:47178 (D;US)
Synthesis and characterization of compounds containing discrete tetranuclear clusters and extended arrays of molybdenum atoms, 11:48164 (D;US)
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Vibronic activity probed by laser jet spectroscopy, 11:48192 (D;US)
Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy
Periodic amplitude variations in Jovian continuum radiation. Progress report for period ending February 1986, 11:48959 (R;US)
Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986, 11:48960 (R;US)
Iraq Atomic Energy Commission, Baghdad
[Iraqi Atomic Energy Commission]. Annual report 1982-1983, 11:47778 (R;IQ)

J

Japan Atomic Energy Research Inst., Oarai, Ibaraki. Oarai Research Establishment
Development of the power ramping facility at JMTR. Results of performance test on the boiling water capsule, 11:47649 (R;JP;In Japanese)
Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment
BWR recirculation loop discharge line break LOCA tests with break areas of 50 and 100% assuming HPCS failure at ROSA-III test facility, 11:47722 (R;JP)
Calculation of critical parameters for uranium and/or plutonium nitrate solution, 2. Discussion of basic critical parameters for nitrate solution system, 11:47619 (R;JP;In Japanese)
Collision probability in two-dimensional lattice by ray-trace method and its applications to cell calculations, 11:47620 (R;JP)
Evaluation of neutron nuclear data for ^{250}Cf and ^{251}Cf, 11:49363 (R;JP)
Evaluation report on CCTF core-II reflood test C2-6 (Run 64). Effect of radial power profile, 11:47720 (R;JP)
Inclining test for the bottom-core structure of VHTR, 11:47507 (R;JP;In Japanese)

Influence of heating rate on corrosion behavior of Ni-base heat resistant alloys in simulated VHTR helium environment, 11:47944 (R;JP;In Japanese)
Main Steam Line break experiment at ROSA III - RUN 953. 100% break with an HPCS failure, 11:47721 (R;JP)
Measurements and analyses on reactivity effects of absorber rods in a light-water moderated UO_2 lattices, 11:47638 (R;JP;In Japanese)
PALLAS-2DCY-FX: a code for direct integration of transport equation in two-dimensional (R, Z) geometry, 11:49430 (R;JP)
Proceedings of the 1985 seminar on nuclear data, 11:49223 (R;JP)
Radioactivity measurement of barium carbonate [^{14}C] by liquid scintillation counting, 11:48605 (R;JP;In Japanese)
Study on evaluation methods of explosive proof tests of NSRR capsule, 11:47648 (R;JP;In Japanese)

Japan Atomic Energy Research Inst., Tokyo
BWR recirculation loop discharge line break LOCA tests with break areas of 50 and 100% assuming HPCS failure at ROSA-III test facility, 11:47722 (R;JP)
Calculation of critical parameters for uranium and/or plutonium nitrate solution, 2. Discussion of basic critical parameters for nitrate solution system, 11:47619 (R;JP;In Japanese)
Collision probability in two-dimensional lattice by ray-trace method and its applications to cell calculations, 11:47620 (R;JP)
Continuous pellet fueling experiments on D-III, 11:49545 (R;US)
Development of the power ramping facility at JMTR. Results of performance test on the boiling water capsule, 11:47649 (R;JP;In Japanese)
Evaluation report on CCTF core-II reflood test C2-6 (Run 64). Effect of radial power profile, 11:47720 (R;JP)
Inclining test for the bottom-core structure of VHTR, 11:47507 (R;JP;In Japanese)
Influence of heating rate on corrosion behavior of Ni-base heat resistant alloys in simulated VHTR helium environment, 11:47944 (R;JP;In Japanese)
Main Steam Line break experiment at ROSA III - RUN 953. 100% break with an HPCS failure, 11:47721 (R;JP)
Measurements and analyses on reactivity effects of absorber rods in a light-water moderated UO_2 lattices, 11:47638 (R;JP;In Japanese)
PALLAS-2DCY-FX: a code for direct integration of transport equation in two-dimensional (R, Z) geometry, 11:49430 (R;JP)
Radioactivity measurement of barium carbonate [^{14}C] by liquid scintillation counting, 11:48605 (R;JP;In Japanese)
ROSA-IV large scale test facility (LSTF) system description, 11:47719 (R;JP)
Study on evaluation methods of explosive proof tests of NSRR capsule, 11:47648 (R;JP;In Japanese)

Japan Chemical Analysis Center, Chiba
Radioactivity survey data in Japan, 11:48723 (R;JP)

Jerry L. Pettis Memorial Veterans Administration Medical Center, Loma Linda, CA (USA)
Tissue interactions with nonionizing electromagnetic fields. Final report, March 1979-February 1986, 11:48928 (R;US)

Microstrip antenna modeling and measurement at high frequencies, 11:48311 (R;US)
Microstructural characterization of diamond-turned aluminum substrates of memory disks: effects of inclusions on the surface finish and tool wear, 11:47905 (R;US)
Misalignment of axial B-field in the advanced test accelerator, 11:48366 (R;US)
Nanosecond two-dimensional imaging using tomographic techniques, 11:48294 (R;US)
New approach for calibration and interpretation of IRAD GAGE vibrating-wire stressmeters, 11:47287 (R;US)
Numerical study of the mode selection in response spectrum analysis-condensed version, 11:49581 (R;US)
PLUS family: a set of computer programs to evaluate analytical solutions of the diffusion equation, 11:48284 (R;US)
Preparation and properties of polyvinyl alcohol microspheres, 11:49577 (R;US)
Sensitivity of uniaxial failure on spatial variations of initial geometry, initial microcrack density, and time dependent material properties, 11:48295 (R;US)
Silicon diffraction gratings for multilayer structures, 11:48224 (R;US)
Solid combustion processes for improved synthesis of non-oxide materials, 11:48216 (R;US)
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Summary of railgun development for ultrahigh-pressure research, 11:48245 (R;US)
TIBER II: an upgraded tokamak igntion/burn experimental reactor, 11:49579 (R;US)
Lawrence Livermore National Lab., CA (USA). Mechanical Engineering Dept.
TOPAZ2D: a two-dimensional finite element code for heat transfer analysis, electrostatics, and magnetostatics problems, 11:48285 (R;US)
Lawrence Livermore National Lab., CA (USA). Methods Development Group
Preliminary user's manual for SAPPAC: a multisupport modal time integrator and transfer function plotter for SAP4 models, 11:49624 (R;US)
Lawrence Livermore National Lab., CA (USA). Nuclear Chemistry Div.
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)
Lawrence Livermore National Lab., CA (USA). Signal and Image Processing Research Group
Robust line width estimation, 11:48223 (R;US)
Leuven Univ. (Belgium). ECHEM Labs.
Electrochemistry and corrosion of alloys in high-temperature water. Final report, 11:47625 (R;US)
Little (Arthur D.), Inc., Cambridge, MA (USA)
Avoiding failure of leachate-collection and cap-drainage systems. Report for September 1983-November 1985, 11:48708 (R;US)
Litton Systems, Inc., Morris Plains, NJ (USA). Airtron Div.
Investigation of single-crystal silicates for blue tunable lasers. Quarterly progress report No. 1, 1 September-30 November 1985, 11:48253 (R;US)

Loma Linda Univ., CA (USA)
Tissue interactions with nonionizing electromagnetic fields. Final report, March 1979-February 1986, 11:48928 (R;US)
Los Alamos National Lab., NM (USA)
Analysis of magnetic refrigerators with external regeneration, 11:48229 (R;US)
Apparatus for reading two-dimensional electrophoretograms containing β-ray-emitting labeled compounds, 11:48621 (P;US)
Attenuation of shock waves in copper and stainless steel, 11:47946 (R;US)
Bumper shield analysis, 11:48222 (R;US)
Can the US afford a lunar base, 11:49597 (R;US)
Conceptual design for a short-pulse explosive-driven generator, 11:48231 (R;US)
Constraints on general SU(2)/sub L/ x SU(2)/sub R/ x U(1) electroweak models from nuclear beta decay, 11:49188 (R;US)
COVFILS-2: neutron data and covariances for sensitivity and uncertainty analysis, 11:49556 (R;US)
Cygnus experiment at Los Alamos, 11:48608 (R;US)
Design of a fast-plate generator driving plasma flow switch, 11:48306 (R;US)
Energy storage transformer power conditioning systems for Megajoule class flux compression generators, 11:48304 (R;US)
Experiments with multi-megampere explosively formed fuses in cylindrical geometry, 11:48232 (R;US)
Fast counting electronics for neutron coincidence counting, 11:48623 (P;US)
Fast, simple dB/dt probe, 11:48607 (R;US)
Finite element analysis of the 2240 MW HTGR PCRV, 11:47508 (R;US)
Fundamental mechanisms of optical damage in short-wavelength high-power lasers, 11:48258 (R;US)
Gas generation and migration studies involving recently generated ^{238}Pu-contaminated waste for the TRU Waste Sampling Program, 11:47315 (R;US)
Geology of the platanares geothermal site, Departamento de Copan, Honduras, Central America. Field report, 11:47434 (R;US;In Spanish and English)
Geothermal initiatives in Central America, 11:47435 (R;US)
0.8-GeV/c kaon channel for LAMPF II, 11:48391 (R;US)
Heavy-ion fusion reactor concepts, requirements and attractive features, 11:49557 (R;US)
Heteromorphism and crystallization paths of katungites, Navajo volcanic field, Arizona, USA, 11:48947 (R;US)
Hydrogeochemistry and preliminary reservoir model of the Platanares Geothermal System, Honduras, Central America, 11:47436 (R;US)
International training course on implementation of state systems of accounting for and control of nuclear materials: proceedings, 11:47345 (R;US)
Lattice dynamics of the heavy Fermion compound UBe/sub 13/, 11:49049 (R;US)
Liner compression of magnetically-confined, FRC plasmas, 11:49493 (R;US)
Los Alamos low-level waste performance assessment status, 11:47338 (R;US)
Magnetic flux compression generator powered electron beam experiments, 11:48307 (R;US)
Mayer-Fermi theory and the long sequences in the periodic table, 11:49067 (R;US)
Method and apparatus for measuring solar radiation in a vegetative canopy, 11:47382 (P;US)
Method for encryption and transmission of digital keying data, 11:49637 (P;US)
Methods for air cleaning system design and accident analysis, 11:48297 (R;US)
Numerical solutions to creeping flow equations. Part 1. Falling ball rheometry, 11:49100 (R;US)
Optically pulsed electron accelerator, 11:48406 (P;US)
(p, Vector, π/sup +-/) reactions on Be at 650 MeV, 11:49255 (R;US)
Preparation of fused chloride salts for use in pyrochemical plutonium recovery operations at Los Alamos, 11:48138 (R;US)
Pulsed magnetic field for PHERMEX-injected circular accelerator, 11:48394 (R;US)
Radiation detector spectrum simulator, 11:48622 (P;US)
Rail guns driven by helical flux compression generators, 11:48230 (R;US)
Remotely readable fiber optic compass, 11:48646 (P;US)
Results from plasma compression opening switch experiments, 11:48305 (R;US)
Smooth particle hydrodynamics: theory and application to the origin of the moon, 11:49004 (R;US)
Test of time reversal symmetry with resonance neutron scattering, 11:49171 (R;US)
Testing of the Mark 101 magnetic flux compression generator, 11:48233 (R;US)
Three-body force in the three-nucleon system, 11:49234 (R;US)
Tube wall thickness measurement apparatus, 11:48645 (P;US)
Two-dimensional simulations of magnetically-driven instabilities, 11:49492 (R;US)
Unusual bond paths in organolithium compounds, 11:48170 (R;US)
Los Alamos National Lab., NM (USA). Applied Theoretical Physics Div.
High spatial resolution in x-ray fluorescence, 11:48631 (R;US)
Recent developments in discrete-ordinates electron transport, 11:47622 (R;US)
Los Alamos National Lab., NM (USA). Center for Noulinear Studies
Model of cohesive properties and structural phase transitions in non-metallic solids, 11:49441 (R;US)
Los Alamos National Lab., NM (USA). Theoretical Div.
Canopy hot-spot as crop identifier, 11:48823 (R;US)
Louisiana State Univ., Baton Rouge (USA). Dept. of Zoology and Physiology
Mutagenic effect of radionuclides incorporated into DNA of Drosophila melanogaster. Technical progress report, December 15, 1985-July 15, 1986, 11:48828 (R;US)
Louvain Univ. (Belgium)
Methane production by anaerobic digestion of algae. Final report, 11:47388 (R;DE)
Louvain Univ., Heverlee (Belgium). Dept. of Chemistry
Analysis of the spectrum of Dy^{3+}:LaF_3 assuming a C/sub2v/ site summetry, 11:48013 (R;US)
Lowell Univ., MA (USA). Radiation Lab.
Shellfish depuration by gamma irradiation. Progress report No. 1, October 1, 1985-July 25, 1986, 11:47351 (R;US)
Lunar and Planetary Inst., Houston, TX (USA)
Workshop on the Tectonic Evolution of Greenstone Belts, 11:48940 (R;US)
Lund Univ. (Sweden). Dept. of Physics
Report to the evaluation committee on Swedish atomic and molecular physics, 11:49076 (R;SE)
Lynette (R.) and Associates, Inc., Redmond, WA (USA)
Utility considerations for wind energy purchase agreements. Final report, 11:47455 (R;US)
Wind power instrumentation directory. Final report, 11:47464 (R;US)
Wind power stations: 1985 performance and reliability. Final report, 11:47467 (R;US)

M

Management and Technical Services Co., Library, PA (USA)
Operation and maintenance of DOE/PETC Combustion Test facilities. Final activity report, April 1978-December 19, 1982, 11:47203 (R;US)
Marburg Univ. (Germany, F.R.). Fachbereich Humanmedizin
Fate of purified radio-labelled alkaline phosphatase from the liver in the organism. An experimental study in dogs, 11:48797 (R;DE;In German)
Marburg Univ. (Germany, F.R.). Fachbereich 13 Physik
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
Marburg Univ. (Germany, F.R.). Fachbereich Physikalische Chemie
Time-of-flight mass spectrometer with ^{252}Cf surface ionisation coupled with high-pressure liquid chromatography for determining pharmaceutical substances in the blood, 11:48075 (R;DE;In German)
Maryland Univ., College Park (USA)
Cygnus experiment at Los Alamos, 11:48608 (R;US)
Spectral studies related to dissociation of HBr, HCl and BrO. Final Technical Report, 11:48669 (R;US)

Maryland Univ., College Park (USA). Dept. of Chemistry
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)
Maryland Univ., College Park (USA). Dept. of Physics
Finite temperature corrections to the Van der Waals potential, 11:49146 (R;US)
Is there a delta-delta-pi problem, 11:49148 (R;US)
Maryland Univ., College Park (USA). Inst. for Physical Science and Technology
Acceleration of ions and electrons by wave-particle interactions. Annual summary report, 1 April-30 November 1985, 11:48350 (R;US)
Acceleration of ions and electrons by wave-particle interactions. Final report for 1 April 1984-31 March 1985, 11:48351 (R;US)
Maschinenfabrik Augsburg-Nuernberg (M.A.N.) A.G., Muenchen (Germany, F.R.). Bereich Neue Technologie
Germano-Korean cooperation for erection and test of industrialized solar technologies. Final report, 11:47403 (R;DE;In German)
Massachusetts Inst. of Tech., Brookhaven, NY (USA). School of Chemical Engineering Practice-Brookhaven Station
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA)
Aging of polyurethane foams, the influence of gas diffusion on thermal conductivity, 11:48010 (R;US)
Azimuthal energy flow in deep inelastic neutrino scattering, 11:49124 (R;US)
Compton scatter correction for the MGH analog ring positron camera, 11:49433 (R;US)
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis. Final technical progress report, 11:47154 (R;US)
Positron emission tomography (PET) analysis of the effects of auditory stimulation on the distribution of ^{11}C-N-methylchlorphentermine in the brain, 11:48801 (R;US)
Thermal-mechanical fatigue behavior of nickel-base superalloys. Final Report, 11:47947 (R;US)
Massachusetts Inst. of Tech., Cambridge (USA). High Voltage Research Lab.
Research on factors that affect the reliability of compressed gas insulated apparatus. Final report, 11:47488 (R;US)
Massachusetts Inst. of Tech., Lexington (USA). Lincoln Lab.
High-efficiency double-heterostructure AlGaAs/GaAs solar cells, 11:47383 (R;US)
Massachusetts Univ., Amherst (USA)
Non-mesonic decay of hypernuclei, 11:49387 (R;US)
Massachusetts Univ., Amherst (USA). Dept. of Physics and Astronomy
Theoretical aspects of the weak decay of hypernuclei, 11:49388 (R;US)
Materials Research Labs., Ascot Vale (Australia)
Chemistry of deposit formation in distillate fuels, 11:47221 (R;US)
Statistical model for laser safety analysis, 11:48254 (R;US)
Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik
Results from a test of a Cu-scintillator calorimeter module with photodiode readout, 11:48610 (R;DE)
Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)
1986 USSR-US Exchange II.4. Topical meeting: magnetic configurations, plasma equilibrium, and stability of stellarators. Volume II. US presentations, 11:49547 (R;US)
Max-Planck-Institut fuer Stroemungsforschung, Goettingen (Germany, F.R.)
Elementary reactions of electronically excited molecules. Pt. 6. Quenching of $O_2(^1\Delta sub(g))$ by amines, furanes, pyrroles and thiophenes, 11:48171 (R;DE)
Maxwell Labs., Inc., Albuquerque, NM (USA)
Energy storage transformer power conditioning systems for Megajoule class flux compression generators, 11:48304 (R;US)
McDonnell Douglas Astronautics Co., St. Louis, MO (USA)
Designer's guidebook for first wall/blanket/shield assembly, maintenance, and repair, 11:49549 (R;US)
Meditsinska Akademiya, Sofia (Bulgaria). Nauchen Inst. po Rentgenologiya I Radiobiologiya
Second national congress on medical biology and genetics with international participation. Abstracts of reports from the plenary meeting, 11:48843 (R;BG;In Bulgarian)
Michigan State Univ., East Lansing (USA)
Azimuthal energy flow in deep inelastic neutrino scattering, 11:49124 (R;US)
Michigan State Univ., East Lansing (USA). Div. of Engineering Research
Advanced power system security analysis concepts. Volume 1. A governor load flow modeling and simulation method. Final report, 11:47475 (R;US)
Advanced power system security analysis concepts. Volume 2. Security and stability assessment methodologies. Final report, 11:47476 (R;US)
Michigan Univ., Ann Arbor (USA)
Beamstrahlung monitor for SLC final focus using gamma ray energies, 11:48615 (R;US)
Michigan Univ., Ann Arbor (USA). Dept. of Electrical Engineering and Computer Science
Cape Blanco Wind Farm feasibility study. Technical Report No. 5. Communications inteference, 11:47458 (R;US)

Activity-composition relationships in silicate melts. Annual progress report, 1985-1986, 11:48945 (R;US)
North Dakota Univ., Grand Forks (USA). Energy Research Center
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Fine coal cleaning. Final report for the period ending March 31, 1986, 11:47197 (R;US)
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Low-rank coal liquefaction mechanisms. Final report for the period ending March 31, 1986, 11:47150 (R;US)
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986, 11:47151 (R;US)
Organic structure. Final report for the period ending March 31, 1986, 11:47180 (R;US)
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
North Dakota Univ., Grand Forks (USA). North Dakota Mining and Mineral Resources Research Inst.
Literature searches on metal recovery by leaching and carbothermic reduction, 11:47193 (R;US)
Northeastern Univ., Boston, MA (USA)
Theoretical studies of sliding charge density waves, rigid layer modes of layered compounds and states of incommensurate structures. Final technical report, February 14, 1984-October 14, 1985, 11:49438 (R;US)
Northwestern Univ., Chicago, IL (USA)
Topics in gauge theories and unification of elementary particle interactions, 11:49185 (R;US)
Northwestern Univ., Evanston, IL (USA)
Decision support for problems in which alternative actions affect downstream decisions, with an energy application, 11:47820 (R;US)
Northwestern Univ., Evanston, IL (USA). Dept. of Materials Science and Engineering
Electron microscopy study of sputtered NbN films, 11:47975 (R;US)
Point defect clusters and electrical behavior in transition metal oxides. Progress report, 11:47977 (R;US)
Northwestern Univ., Evanston, IL (USA). Dept. of Physics and Astronomy
Induced second-class form factors in $\Sigma^- \beta$-decay, 11:49149 (R;US)
Nuclear Metals, Inc., Concord, MA (USA)
Mold and crucible coatings. Final report, April 1984-December 1985, 11:47972 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA)
Instrument accuracy in reactor vessel inventory tracking systems, 11:47665 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Human Factors Technology
Training review criteria and procedures, 11:47639 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Technical Information and Document Control
Title List of Documents Made Publicly Available, June 1-30, 1986. Volume 8, No. 6, 11:47609 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Waste Management
De Minimis waste impacts analysis methodology. IMPACTS - BRC user's guide and methodology for radioactive wastes below regulatory concern. Draft report for comment. Volume 2, 11:47341 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Integrated plant safety assessment, Systematic Evaluation Program. La Crosse Boiling Water Reactor (Docket No. 50-409). Supplement No. 1, 11:47723 (R;US)
Safety Evaluation Report related to the operation of Clinton Power Station, Unit No. 1 (Docket No. 50-461). Supplement No. 6, 11:47724 (R;US)
Safety Evaluation Report related to the operation of Hope Creek Generation Station (Docket No. 50-354). Supplement No. 6, 11:47725 (R;US)
Technical Specifications, Hope Creek Generating Station (Docket No. 50-354). Appendix "A" to License No. NPF-57, 11:47492 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
Transactions of the 8th International Conference on Structure Mechanics in Reactor Technology, 11:47627 (R;US)
NWT Corp., San Jose, CA (USA)
Condensate polishers for brackish water-cooled PWRs, 11:47497 (R;US)
Condenser improvements for PWRs, 11:47498 (R;US)

Port Townsend, City of, OR (USA)
Port Townsend wind energy demonstration project. Project report, 11:47460 (R;US)
Pratt and Whitney Aircraft, East Hartford, CT (USA)
Life prediction and constitutive models for engine hot section anisotropic materials program. Annual Status Report, 11:47896 (R;US)
Thermal barrier coating life prediction model development. Annual Report, 11:47892 (R;US)
Princeton Univ., NJ (USA). Dept. of Chemical Engineering
Numerical solutions to creeping flow equations. Part 1. Falling ball rheometry, 11:49100 (R;US)
Princeton Univ., NJ (USA). Plasma Physics Lab.
Neutral beam heating systems for TFTR - initial operating results, 11:49589 (BA;GB)
Operation of the repeating pneumatic injector on TFTR and design of an 8-shot deuterium pellet injector, 11:49544 (R;US)
Overview of the modification to the Poloidal Divertor Experiment (PDX) to produce the Princeton Beta Experiment (PBX), 11:49592 (BA;GB)
Production of high density plasma by pellet injection in TFTR, 11:49475 (R;US)
TFCX - mechanical design, 11:49591 (BA;GB)
Purdue Univ., Lafayette, IN (USA)
Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix B. Design of the operating system for the PASM parallel-processing system. Final report, 11:49601 (R;US)
Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix G. On the design and modeling of special-purpose parallel-processing systems. Final report, 11:49603 (R;US)
Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix C. Fault-tolerant interconnection networks and image-processing applications for the PASM parallel processing systems. Final report, 11:49602 (R;US)
Purdue Univ., Lafayette, IN (USA). Dept. of Chemistry
Studies in chemical and electrochemical coal conversion. Technical progress report, February 1-April 30, 1986, 11:47164 (R;US)

Studies in chemical and electrochemical coal conversion. Technical progress report, August 1, 1985-January 31, 1986, 11:47184 (R;US)
Purdue Univ., Lafayette, IN (USA). Dept. of Physics
New force in nature, 11:49183 (R;US)

Q

QLA, Inc., Washington, DC (USA)
Market constraints for residential cool storage systems. Final report, 11:47749 (R;US)

R

Radian Corp., Austin, TX (USA)
Process description of the WyCoalGas gasification project. Topical report, 11:47174 (R;US)
R and D Associates, Alexandria, VA (USA)
Design of a fast-plate generator driving plasma flow switch, 11:48306 (R;US)
RANN, Inc., Palo Alto, CA (USA)
Uncertainties in the aerodynamics and structural dynamics of rotors suitable for reliable and long life operation of small HAWTS, 11:47457 (R;US)
Remote Technology Corp., Oak Ridge, TN (USA)
Designer's guidebook for first wall/blanket/shield assembly, maintenance, and repair, 11:49549 (R;US)
Rensselaer Polytechnic Inst., Troy, NY (USA)
Fission cross section measurement of ^{245}Cm and ^{246}Pu. Final report, June 1, 1984-June 30, 1986, 11:49361 (R;US)
Research on single-crystal CdTe solar cells. Annual subcontract report, 1 February 1985-1 February 1986, 11:47393 (R;US)
Rensselaer Polytechnic Inst., Troy, NY (USA). Gaerttner LINAC Lab.
Measurement of the fission cross section of ^{238}Pu, 11:49360 (R;US)
Republikansko Nauchno-Meditsinsko Druzhestvo po Meditsinska Biologiya i Genetika, Sofia (Bulgaria)
Second national congress on medical biology and genetics with international participation. Abstracts of reports from the plenary meeting, 11:48843 (R;BG;In Bulgarian)
Resource Analysis International, Inc., Los Angeles, CA (USA)
Solar reformer experiment design study, 11:47407 (R;US)
Resource Enterprises, Inc., Grand Junction, CO (USA)
Geologic and reservoir characteristics of the Red Mountain coalbed-methane test site in the Piceance Basin. Topical report, April 15, 1983-January 31, 1986, 11:47235 (R;US)
RE/SPEC, Inc., Albuquerque, NM (USA)
Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites, 11:48951 (R;US)
ResTech Houston, Inc., TX (USA)
Devonian-shale well-log interpretation. Annual report, 1985, 11:47242 (R;US)
Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA)
Radiation safety manual for the Nevada Test Site. Revision 3, 11:48880 (R;US)
Rice Univ., Houston, TX (USA). Dept. of Geology and Geophysics
Structural evolution of the Central Brooks Range, Alaska. Final report, September 1, 1983-November 30, 1985, 11:48930 (R;US)
Rijksuniversiteit Groningen (Netherlands)
Decay of the giant monopole resonance in heavy nuclei, 11:49362 (R;NL)
Inner shell ionization by fast protons, alpha particles and carbon ions, 11:49070 (R;NL)
KVI cyclotron: from injection to extraction, 11:48387 (R;NL)
Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions, 11:49320 (R;NL)
Slowing down and straggling of protons and heavy ions in matter, 11:49429 (R;NL)
Rockwell International Corp., Canoga Park, CA (USA). Energy Technology Engineering Center
Performance of the Vanguard Solar Dish-Stirling Engine Module. Final report, 11:47430 (R;US)
Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations
Transporting fuel debris from TMI-2 to INEL, 11:47284 (R;US)
Rollins Coll., Winter Park, FL (USA). Dept. of Physics
Mayer-Fermi theory and the long sequences in the periodic table, 11:49067 (R;US)
Ruhrgas A.G., Essen (Germany, F.R.)
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
Rutherford Appleton Lab., Chilton (UK)
Calculation of the opacity of hot dense plasmas, 11:49496 (R;GB)
Monte Carlo evaluation of analytical multiple scattering corrections for unpolarised neutron scattering and polarisation analysis data, 11:49431 (R;GB)
More seminars on muonium spectroscopy, 11:49079 (R;GB)

S

Salzgitter A.G. (Germany, F.R.)
Introduction of a secondary blast process into an unlined hot-blast cupola furnace. Final report, 11:47872 (R;DE;In German)
San Carlos Univ. of Guatemala, Guatemala City
Quantitative determination of sulfur and chlorine in crude oils by X-ray fluorescence spectrometry, 11:48061 (R;GT;In Spanish)
Sandia National Labs., Albuquerque, NM (USA)
Battery pack/controller for high temperature applications, 11:47438 (R;US)
Catalyst preparation via hydrous metal oxide ion-exchangers, 11:48024 (R;US)
Characterization of accelerometer mountings in shock environments, 11:48635 (R;US)
Chemical kinetic analysis of pulse combustors, 11:48324 (R;US)
Consensus on powering and grounding sensitive electronic equipment, 11:48310 (R;US)
Development of downhole instruments for use in the Salton Sea Scientific Drilling Project, 11:47439 (R;US)
Development of ultrasonic thermometry for high-temperature high-resolution temperature profiling applications in LMFBR safety research, 11:47738 (R;US)
Downhole radar system for fracture detection, 11:48325 (R;US)
Drilling fluid temperatures in a magma - penetrating wellbore, 11:47443 (R;US)
Evaluating candidate lost circulation materials for geothermal drilling, 11:47442 (R;US)
First polymeric-anion derivatives of BEDT-TTF, 11:48018 (R;US)
Formation of icosahedral Al-Mn and Al-Ru by solid-state processes, 11:47951 (R;US)
Gage for measuring displacements in rock samples, 11:48644 (P;US)
Geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:47444 (R;US)
High energy gas fracture experiments in liquid-filled boreholes: potential geothermal application, 11:47441 (R;US)
Ion focused transport experiments on Sandia's recirculating linac, 11:48358 (R;US)
Modeling WIPS tracking on RADLAC-II, 11:48359 (R;US)
Numerical solutions to creeping flow equations. Part 1. Falling ball rheometry, 11:49100 (R;US)
Overview of electron paramagnetic resonance studies of Si-SiO_2 interface states, 11:48025 (R;US)
Performance of polysilicon gate CMOS devices in space and SDI environments, 11:48309 (R;US)
Progress in light ion beam fusion research on PBFA II, 11:49568 (R;US)
Quantum mechanical and classical mechanical calculations of the dynamics of molecular collisions, 11:49080 (R;US)
Radial transmission line linear accelerators, 11:48344 (R;US)
Sandia software guidelines. Volume 3. Standards, practices, and conventions, 11:49621 (R;US)
Sol-gel derived thin films: critical issues, 11:48027 (R;US)

Streak measurements of the RADLAC-11 relativistic electron beam, 11:48634 (R;US)
Strength improvement in beta" alumina by incorporation of zirconia, 11:47755 (R;US)
$(TMTSF)_2PF_6$: evidence for a unified phase diagram, 11:48017 (R;US)
Use of DSC to determine the structure of sol-gel derived glasses, 11:48026 (R;US)
Vehicle barrier systems, 11:47349 (R;US)

Practical improvements to SIMPR codes for stiff ODEs, 11:49623 (R;US)

Sandia National Labs., Albuquerque, NM (USA). Seabed Programs Div.
In situ heat transfer experiment (ISHTE): Ocean Test Cruise report (Alcyone Cruise, Leg IV) September 1985, 11:48956 (R;US)

Sandia National Labs., Albuquerque, NM (USA). Simulation Theory Div.
Recent developments in discrete-ordinates electron transport, 11:47622 (R;US)

Sandia National Labs., Albuquerque, NM (USA). Technology Transfer and Management Dept.
Annual report: technology transfer, Sandia National Laboratories, fiscal year 1985, 11:49599 (R;US)

Sandia National Labs., Livermore, CA (USA)
Mechanical tests on aluminum alloys AMg6 and 5456-0, 11:47952 (R;US)
Total capital cost data base: 10MWe Solar Thermal Central Receiver Pilot Plant, 11:47408 (R;US)
Utilizing spreadsheets for analyzing solar thermal central receiver power plant designs, 11:47409 (R;US)

Sandia National Labs., Livermore, CA (USA). Electronic Subsystems Div.
Automated data acquisition system for multiple thermal cycling tests, 11:48308 (R;US)

Sao Paulo Univ. (Brazil). Inst. de Fisica
On the equivalence of dilute antiferromagnets and ferromagnets in random external fields: Curie-Weiss models, 11:49440 (R;BR)
Symmetries of the vacuum, 11:49391 (R;BR)

SAS Corp., Sheffield, AL (USA)
FGD maintenance guidelines. Volume 1. FGD maintenance programs. Final report, 11:47192 (R;US)

Saskatchewan Univ., Saskatoon (Canada)
Beam optical design and studies of the SLC arcs, 11:48348 (R;US)

Savannah River Lab., Aiken, SC (USA)
F and H Area Effluent Treatment Facility (F/H ETF): ultrafiltration and hyperfiltration systems testing at Carre, Inc. with simulated F and H area effluents, 11:47309 (R;US)
Radioactive waste spill and cleanup on storage tank at the Savannah River Plant, 11:47308 (R;US)
Savannah River Laboratory monthly report, January 1986, 11:47652 (R;US)
Savannah River Laboratory monthly report, November 1985, 11:47651 (R;US)

School of Aerospace Medicine, Brooks AFB, TX (USA)
Radiation doses from flying through nuclear-debris clouds. Final report, 2-10 January 1985, 11:48654 (R;US)

Science Applications International Corp., McLean, VA (USA)
Approaching maximal performance of longitudinal beam compression in induction accelerator drivers, 11:48367 (R;US)
Ion focused transport experiments on Sandia's recirculating linac, 11:48358 (R;US)

Science Applications International Corp., Oak Ridge, TN (USA)
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)

Scientific Design Co., Inc., New York (USA)
ASPEN costing manual, 11:49614 (R;US)
ASPEN sensitivity study for the Great Plains Gasification Plant gasifier model, documentation and experimental verification, 11:47157 (R;US)
ASPEN sensitivity study for the Great Plains Gasification Plant rectisol section, 11:47159 (R;US)
ASPEN sensitivity study for the Great Plains Gasification Plant Methanation Section, 11:47158 (R;US)

Scripps Institution of Oceanography, La Jolla, CA (USA)
Geochemistry, isotopic composition and origin of fluids emanating from mud volcanoes in the Copper River Basin, Alaska. Final report, 11:48932 (R;US)

Security State Bank, Wells, MN (USA)
Security State Bank of Wells, Minnesota. Final technical report, 11:47417 (R;US)

Service Central de Protection contre les Rayonnements Ionisants, 78 - Le Vesinet (France)
Monthly results of measurements, April 1985, 11:48699 (R;FR;In French)
Monthly results of measurements, June 1985, 11:48701 (R;FR;In French)
Monthly results of measurements, May 1985, 11:48700 (R;FR;In French)

Single-Ply Inst. of America, Inc., Pasadena, MD
Photovoltaic membrane (PVM) roof system. Second quarter technical progress report, 1986, 11:47387 (R;US)

Solar Energy Research Inst., Golden, CO (USA)
Effect of the size of structural bulk inhomogeneities on the specular transmittance of polymer films, 11:47432 (R;US)
Feasibility of using wind power for an aerostat-borne radar system, 11:47473 (R;US)
Fermentation of lignocellulosic feedstocks: product markets and values, 11:47372 (R;US)
Measurement of effective thermal capacitance in buildings, 11:47860 (R;US)
Passive solar manufactured buildings: design, construction, and class B results. Second edition, 11:47859 (R;US)
Potential of proposed open-cycle OTEC experiments to achieve net power, 11:47413 (R;US)
Superlattice photoelectrodes for photoelectrochemical cells, 11:47399 (P;US)
Test results of immersed-coil heat exchangers and liquid storage tanks used in the packaged systems program, 11:47423 (R;US)
Wind energy technical reading list, 11:47471 (R;US)

Southampton Univ. (UK)
Catalytic combustion in a transient high pressure facility. M.S. Thesis, 11:48212 (R;GB)

South Carolina Univ., Columbia (USA). Dept. of Geology
Identification of a northwest trending seismogenic graben near Charleston, South Carolina, 11:48942 (R;US)

South Carolina Univ., Columbia (USA). Dept. of Physics
(p, Vector, π/sup +-/) reactions on Be at 650 MeV, 11:49255 (R;US)
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)

Southwest Research Inst., San Antonio, TX (USA). Dept. of Engine and Vehicle Research
Agglomerating self-cleaning air cleaner. Final report, 11:47901 (R;US)

Southwest Research Inst., San Antonio, TX (USA). Fuels and Lubricants Research Div.
DOE Synthetic Fuel Center monthly progress report No. 9, 1-30 July 1986, 11:47902 (R;US)
SRI International, Menlo Park, CA (USA)
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
Staatliche Materialpruefungsanstalt, Stuttgart (Germany, F.R.)
Materials analyses for the case of additive creep and fatigue - proposed calculation. Final report, 11:47912 (R;DE;In German)
Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic)
Application of IAEA seals to spent-fuel cooling ponds at the Bruno Leuschner NPP, Greifswald, 11:47347 (R;DD)
Automatic image processing as a means of safeguarding nuclear material, 11:47348 (R;DD)
Nuclear energy - overview of development trends. Summary report of a paper presented by Leonard Konstantinov, 11:47783 (R;DD)
Selecting metallic canister materials for disposal of high-level radioactive wastes in rock salt formations, 11:47320 (R;DD;In German)
Stanford Linear Accelerator Center, Menlo Park, CA (USA)
Anomalous dimensions of multiquark bound states, 11:49161 (R;US)
Beam dynamics, efficiency and power of the SLAC lasertron: simulation results, 11:48363 (R;US)

Proceedings of the 14. International Symposium on the Interaction of Fast Neutrons with Nuclei - Neutron Generators and Application - organized by the Technical University of Dresden, 11:49432 (R;DD;In English and Russian)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

Alpha emitters in the region from Ce to Os, 11:49321 (R;PL)

ALPHA DETECTION
Corona Counters
Large area corona counter for low-level alpha-activity measurements, 11:48598 (RA;CS)
Radiation Detectors
Sources of series resistance in the Harwell solid state alpha detector, 11:48411 (R;GB)
Scintillation Counting
RF sputtered Ce^{+3} activated SiO_2 glass films as scintillators for alpha particles detection, 11:48438 (R;FR)

ALPHA PARTICLES
Emitted by nuclei.
Detection
Detection of alpha-particle interactions using the track-etch technique. Master's thesis, 11:48410 (R;US)
Microdosimetry
Proceedings of microdosimetry seminar, 11:48834 (R;CS;In Czech and Slovak)
Use of alpha radiation microdosimetry in differentiating between the effects of cell inactivation and malignant transformation, 11:48839 (RA;CS;In Czech)
Radiobiology
Use of alpha radiation microdosimetry in differentiating between the effects of cell inactivation and malignant transformation, 11:48839 (RA;CS;In Czech)

ALPHA REACTIONS
Nuclear Molecules
U(3) principle as base of a microscopical U(3) model for the clarification of the phenomenon of nuclear molecules. Development of an analytical concept describing nucleus-nucleus collisions in the framework of the Composite Particle Theory in the Bargmann space, 11:49407 (R;DE;In German)

ALPHA SPECTROSCOPY
Ionization Chambers
Impulse ionization chamber for spectrometry of low-level alpha-activities and fission products, 11:48555 (RA;CS)
Laboratory of routine alpha-spectrometry based on gridded ionisation chambers, 11:48554 (RA;CS)
Scintillation Counting
Influence of quenching effects to the scintillation efficiency of alpha- and beta-particles, 11:48577 (RA;CS)

ALPHA-BEARING WASTES
Environmental Transport
Use of a simplified pathways model to improve the environmental surveillance program at the radioactive waste management complex of the Idaho National Engineering Laboratory (INEL), 11:47335 (RA;US)
Flocculation
Magnetic filtration of precipitated magnetite. Review of work to April 1983, 11:47288 (R;GB)
Precipitation
Treatment of alpha-contaminated effluents by magnetite precipitation. Progress report from April to October 1983, 11:47289 (R;GB)
Radioactive Waste Processing
Magnetic filtration of precipitated magnetite. Review of work to April 1983, 11:47288 (R;GB)
Treatment of alpha-contaminated effluents by magnetite precipitation. Progress report from April to October 1983, 11:47289 (R;GB)
Sampling
Gas generation and migration studies involving recently generated ^{238}Pu-contaminated waste for the TRU Waste Sampling Program, 11:47315 (R;US)

ALTERNATE FUELS

AMERICIUM
Chemical Reaction Kinetics
Americium and curium chemistry and technology, 11:48160 (B;US)
Dilution
Robotic sample preparation for radiochemical plutonium and americium analyses, 11:48118 (BA;US)
Extraction
Robotic sample preparation for radiochemical plutonium and americium analyses, 11:48118 (BA;US)
Extraction Chromatography
Reversed phase chromatographic separations with tri-n-octyl phosphine oxide for the isotopic and isotope dilution analysis of mixed U, Pu nuclear fuel materials, 11:48126 (BA;US)
Gamma Spectroscopy
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Mass Spectroscopy
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Reversed phase chromatographic separations with tri-n-octyl phosphine oxide for the isotopic and isotope dilution analysis of mixed U, Pu nuclear fuel materials, 11:48126 (BA;US)
Research Programs
Americium and curium chemistry and technology, 11:48160 (B;US)
Spectrophotometry
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Voltametry
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
AMERICIUM 241
Biological Accumulation
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Biological Localization
United States Transuranium Registry annual report, October 1, 1984-September 30, 1985, 11:48833 (R;US)
Internal Pair Production
Internal pair production in alpha-decaying nuclei, 11:48548 (RA;CS)
Isotope Ratio
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radioecological Concentration
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)
AMINES
See also AET
GUANINE
MEA
METHYLAMINE
Chemical Reaction Kinetics
Elementary reactions of electronically excited molecules. Pt. 6. Quenching of $O_2(^1\Delta sub(g))$ by amines, furanes, pyrroles and thiophenes, 11:48171 (R;DE)
Mutagen Screening
Exploratory research on mutagenic activity of coal-related materials using statistical evaluation (2-aminoanthracene), 11:47210 (R;US)
Photochemical Reactions
Nanosecond transient processes in the triethylamine quenching of benzophenone triplets in aqueous alkaline media. Substituent effect, ketyl radical deprotonation, and secondary photoreduction kinetics, 11:48200 (J;US)
AMINO ACIDS
Organic acids containing both a basic amino group and an acidic carboxyl group.
See also CYSTEINE
METHIONINE
Membrane Transport
Inhibition of Na^+-dependent uptake of hexose and amino acids in LLC-PK1 cells by amiloride and amiloride-derivatives, 11:48915 (J;US)
AMINO ALCOHOLS
See AMINES
AMINO SUGARS
See AMINES
AMINOETHANETHIOL
See MEA
AMINOETHYLISOTHIURONIUM BROMIDE
See AET
AMINOETHYLTHIOPSEUDOUREA
See AET
AMINOGLYCIDES
See AMINES
AMINOHYPOXANTHINE
See GUANINE
AMMINES
Electron Transfer
Solvent reorganization in optical and thermal electron-transfer processes, 11:48184 (J;US)
AMMONIA
Electron Transfer
Comparison of electron-transfer matrix elements for transition-metal complexes: t/sub 2g/ vs. e/sub g/ transfer and NH_3 vs. H_2O ligands, 11:48146 (J;US)
Solvent Properties
Characterization of supercritical fluid solvents using solvatochromic shifts, 11:48154 (J;US)
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
Supercritical State
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
AMNION CELLS
See EMBRYONIC CELLS
AMOEBA
Mutation Frequency
Mutation and radiation resistance in dictyostelium discoideum, 11:48872 (RA;AU)
Radiosensitivity
Mutation and radiation resistance in dictyostelium discoideum, 11:48872 (RA;AU)
AMORPHOUS STATE
Mathematical Models
Derivation of the density of states and distribution functions for two-level systems in glasses, 11:48141 (J;US)
AMPHETAMINES
Prior to April 1981, this concept was indexed to BENZEDRINE.
Tissue Distribution
Positron emission tomography (PET) analysis of the effects of auditory stimulation on the distribution of ^{11}C-N-methylchlorphentermine in the brain, 11:48801 (R;US)

AMPHIBIANS
See also FROGS
Larvae
Chromosomal radiosensitivity of tadpoles of limnodynastes tasmaniensis, 11:48871 (RA;AU)
Radiosensitivity
Chromosomal radiosensitivity of tadpoles of limnodynastes tasmaniensis, 11:48871 (RA;AU)
AMPLIFIERS
Accuracy
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)
ANALYSIS (ACTIVATION)
See ACTIVATION ANALYSIS
ANALYSIS (GAS)
See GAS ANALYSIS
ANALYSIS (QUANTITATIVE CHEMICAL)
See QUANTITATIVE CHEMICAL ANALYSIS
ANALYSIS (STRUCTURAL CHEMICAL)
See STRUCTURAL CHEMICAL ANALYSIS
ANDROSTANES
Electron Transfer
Distance, stereoelectronic effects, and the Marcus inverted region in intramolecular electron transfer in organic radical anions, 11:48185 (J;US)
ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY
ANODES
Corrosion Resistance
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)
Electrochemical Corrosion
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)
ANTENNAS
Mathematical Models
Microstrip antenna modeling and measurement at high frequencies, 11:48311 (R;US)
Performance
Microstrip antenna modeling and measurement at high frequencies, 11:48311 (R;US)
ANTHRACENE
Solubility
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
ANTHRACITE
Hardness
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
ANTICONVULSANTS
Used extensively in suppressing the side effects of radiotherapy involving portions of the central nervous system.
Teratogenesis
Embryo culture in teratological surveillance and serum proteins in development. Final technical report, 11:48906 (R;US)
ANTIFERROMAGNETIC MATERIALS
Neutron Diffraction
Study of the hyperfine augmented nuclear polarization by elastic neutron scattering, 11:49428 (R;DE;In German)
ANTIGENS
See also TOXINS
Chemical Properties
Antigenic mosaic of Methanosarcinaceae: partial characterization of Methanosarcina barkeri 227 surface antigens by monoclonal antibodies, 11:48817 (J;US)
ANTIMONY
Mass Spectroscopy
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
ANTIMONY COMPOUNDS
Carrier Density
Response to "Comment on 'Galvanomagnetic luminescence of indium antimonide' " [Appl. Phys. Lett. 49, 537 (1986)], 11:48031 (J;US)
Galvanomagnetic Effect
Response to "Comment on 'Galvanomagnetic luminescence of indium antimonide' " [Appl. Phys. Lett. 49, 537 (1986)], 11:48031 (J;US)
Luminescence
Response to "Comment on 'Galvanomagnetic luminescence of indium antimonide' " [Appl. Phys. Lett. 49, 537 (1986)], 11:48031 (J;US)
Recombination
Response to "Comment on 'Galvanomagnetic luminescence of indium antimonide' " [Appl. Phys. Lett. 49, 537 (1986)], 11:48031 (J;US)
ANTIMONY IONS
Electron-Ion Collisions
Electron-impact ionization of multicharged metal ions: Ni/sup 3+/, Cu/sup 2+/, Cu/sup 3+/, and Sb/sup 3+/, 11:49092 (J;US)
ANTIMUONS
See MUONS PLUS
ANTINEUTRINO-ELECTRON INTERACTIONS
Neutral-Current Interactions
Determination of the neutrino fluxes in the Brookhaven wide-band beams, 11:49135 (J;US)
ANTINEUTRINO-NUCLEON INTERACTIONS
See also ANTINEUTRINO-PROTON INTERACTIONS
Fragmentation
Study of the quark fragmentation in charged current ν and anti ν interactions of deuterium, 11:49119 (R;FR;In French)
ANTINEUTRINO-PROTON INTERACTIONS
Neutral-Current Interactions
Determination of the neutrino fluxes in the Brookhaven wide-band beams, 11:49135 (J;US)
Quasi-Elastic Scattering
Determination of the neutrino fluxes in the Brookhaven wide-band beams, 11:49135 (J;US)
ANTIPROTON BEAMS
Electron Cooling
Electron cooling for low-energy antiprotons, 11:48390 (R;DE;In German)
ANTIPROTON REACTIONS
Elastic Scattering
Elastic and inelastic scattering of antiprotons, 11:49118 (R;FR)
Inelastic Scattering
Elastic and inelastic scattering of antiprotons, 11:49118 (R;FR)
Reviews
Elastic and inelastic scattering of antiprotons, 11:49118 (R;FR)
ANTIPROTONIC ATOMS
See HADRONIC ATOMS
ANTRIM SHALES
See BLACK SHALES
APPROXIMATION (BOHR)
See NILSSON-MOTTELSON MODEL
AQUEOUS HUMOR
See BODY FLUIDS
AQUEOUS SOLUTIONS
Radiolysis
Pulsed EPR studies of small reactive radicals produced by ionizing radiation, 11:48133 (R;US)
AQUIFERS
Fluid Flow
Application of the finite element groundwater model FEWA to three regional aquifers, 11:48938 (R;US)
Isotope Dating
C-14 and Ar-39 content in a ground water aquifer in the Saarland - comparison of two ground water isotope dating methods, 11:48735 (R;DE;In German)
ARAB REPUBLIC OF EGYPT
See EGYPTIAN ARAB REPUBLIC
ARCHAEOLOGY
Isotope Dating
Early Slavic settlements and navigation at the mouth of Odra river, 11:48934 (RA;CS)
ARCTIC REGIONS
Natural Gas Deposits
Arctic energy opportunities: Perspectives on U.S. resources and development, 11:47814 (BA;US)

Petroleum Deposits
Arctic energy opportunities: Perspectives on U.S. resources and development, 11:47814 (BA;US)
Watersheds
Hydrology and geochemistry of small tundra drainage basins in response to active layer disturbance. Progress report, 11:48733 (R;US)

ARGON
Electron Reactions
Exploratory gas-target experiment at PEP using the TPC/2 γ facility, 11:49235 (R;US)
Electronic Structure
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Emission Spectroscopy
Investigations of fluctuations in instrumental responses by principal components analysis, 11:48122 (BA;US)
Energy Levels
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Excited States
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Fluorescence
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Lattice Parameters
Lattice dynamics and phonon line shapes in /sup 36/Ar at high temperatures, 11:48037 (J;US)
Metastable States
Optical pumping of rare-gas metastable atom beams with a frequency modulated multimode dye laser, 11:49091 (J;US)
Neutron Diffraction
Lattice dynamics and phonon line shapes in /sup 36/Ar at high temperatures, 11:48037 (J;US)
Optical Pumping
Optical pumping of rare-gas metastable atom beams with a frequency modulated multimode dye laser, 11:49091 (J;US)
Phonons
Lattice dynamics and phonon line shapes in /sup 36/Ar at high temperatures, 11:48037 (J;US)
Sorptive Properties
Development of novel lamps for study of enhanced production of resonance radiation by low-density mercury discharges, 11:47865 (BA;US)
Spectra
Pressure effects in the multiphoton ionization of atoms and molecules, 11:49060 (RA;US)

ARGON 36 TARGET
Deuteron Reactions
/sup 36,38/Ar(d-bar,α)/sup 34,36/Cl reactions induced by tensor polarized deuterons, 11:49276 (J;US)

ARGON 37
Low Level Counting
10 years low level counting in the underground laboratory in Bern, Switzerland, 11:48560 (RA;CS)

ARGON 38 TARGET
Deuteron Reactions
/sup 36,38/Ar(d-bar,α)/sup 34,36/Cl reactions induced by tensor polarized deuterons, 11:49276 (J;US)

ARGON 39
Activity Levels
Effects of the Maunder and Spoerer minima in meteorite argon, 11:48581 (RA;CS)
Low Level Counting
10 years low level counting in the underground laboratory in Bern, Switzerland, 11:48560 (RA;CS)

ARGON 40 REACTIONS
Capture
Expanding pion emitting source in Ar on Pb collisions, 11:49355 (J;US)

ARGON IONS
Electronic Structure
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Energy Levels
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Excited States
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)
Fluorescence
Theoretical lifetimes, transition energies, fluorescence yields, and nonradiative branching ratios for highly excited states of lithium-like argon, 11:49095 (J;GB)

ARGON METHOD
See ISOTOPE DATING

ARGONNE SUPERCONDUCTING LINAC
See ATLAS SUPERCONDUCTING LINAC

ARIZONA
Dikes
Heteromorphism and crystallization paths of katungites, Navajo volcanic field, Arizona, USA, 11:48947 (R;US)
Military Facilities
Installation restoration program. Phase II. Confirmation/quantification. Stage I report for Williams Air Force Base, Chandler, Arizona. Final report, September 1984-January 1986, 11:48706 (R;US)

ARMOR
Impact Shock
Bumper shield analysis, 11:48222 (R;US)

ARMS CONTROL
US arms control obligations under the Non-Proliferation Treaty, 11:48655 (R;US)

ARMY PERSONNEL
See MILITARY PERSONNEL

AROMATIC COMPOUNDS
See AROMATICS

AROMATICS
See also BENZENE
BIPHENYL
CONDENSED AROMATICS
PHENOLS
POLYCYCLIC AROMATIC HYDROCARBONS
QUINONES
TETRALIN
Biodegradation
Microbial metabolism of aromatic compounds under anaerobic conditions, 11:48813 (R;US)
Chemical Reactions
Condensation products of methyl chloro silane with dioxybenzenes, 11:48195 (TJ;US)
Genetic Effects
Cytotoxic and mutagenic effects of specific carcinogen-DNA adducts in diploid human fibroblasts, 11:48924 (J;US)
Hydrogen Transfer
Transition metal catalysis of hydrogen shuttling in coal liquefaction (1,4-dihydrobenzene, 1,4-dihydronaphthalene, 9,10-phenanthrene), 11:47163 (R;US)
Mass Spectroscopy
Tandem mass spectrometer for the detection of nitroaromatic compounds and other electronegative species in ambient air, 11:48092 (BA;US)
Pyrolysis
Enhanced coal liquefaction by pyrolysis in supercritical fluids. Quarterly progress report, April-June 1986 (1,3 diphenyl propane, phenethyl phenyl ether), 11:47168 (R;US)
Pyrolysis Products
Enhanced coal liquefaction by pyrolysis in supercritical fluids. Quarterly progress report, April-June 1986 (1,3 diphenyl propane, phenethyl phenyl ether), 11:47168 (R;US)
Toxicity
Cytotoxic and mutagenic effects of specific carcinogen-DNA adducts in diploid human fibroblasts, 11:48924 (J;US)

ARRAY PROCESSORS
Image Processing
Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix B. Design of the operating system for the PASM parallel-processing system. Final report, 11:49601 (R;US)
Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix C. Fault-tolerant interconnection networks and image-processing applications for the PASM parallel processing systems. Final report, 11:49602 (R;US)
Pattern Recognition
Distributed computing for signal processing: modeling of asynchronous parallel computation. Appendix B. Design of the operating system for the PASM parallel-processing system. Final report, 11:49601 (R;US)
Uses
Monte Carlo studies with the ST-100 array processor, 11:49214 (J;US)
ARSENIC
Electronic Structure
Surface and bulk electronic structure of Ge(111) c-italic(2 x 8) and Ge(111):As 1 x 1, 11:47955 (J;US)
Photoelectron Spectroscopy
Surface and bulk electronic structure of Ge(111) c-italic(2 x 8) and Ge(111):As 1 x 1, 11:47955 (J;US)
ARSENIC OXIDES
Synthesis
Synthesis and characterization of compounds containing discrete tetranuclear clusters and extended arrays of molybdenum atoms, 11:48164 (D;US)
ARTHRITIS
See RHEUMATIC DISEASES
ARTIFICIAL INTELLIGENCE
O-theory - a hybrid uncertainty theory, 11:48243 (RA;US)
ASHES
See also FLY ASH
Catalytic Effects
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Chemical Composition
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Deposition
Mechanism of deposition in coal-fired gas turbine systems, October 1, 1985-October 1, 1986, 11:47201 (R;US)
Environmental Effects
Mt. St. Helens ash in lakes in the lower Grand Coulee, Washington State, 11:48927 (J;DE)
ASTATINE 211
Chemical Preparation
Method for the simultaneous preparation of radon-211, xenon-125, xenon-123, astatine-211, iodine-125 and iodine-123, 11:48812 (P;US)
ATLANTIC OCEAN
See also NORTH SEA
Water Currents
Determination of deep water circulation in the East Atlantic Ocean by means of a box-model based evaluation of C-14 measurements and other tracer data, 11:48955 (R;DE;In German)
ATLAS SUPERCONDUCTING LINAC
Argonne Tandem/Linac Accelerator.
Accelerator Facilities
Construction of a gamma-ray facility for ATLAS, 11:48431 (RA;US)
Results from the prototype BGO Compton-Suppression Shields for the γ-ray facility for ATLAS, 11:48432 (RA;US)
Split-pole spectrograph in the new ATLAS target area, 11:48430 (RA;US)
Beam Bending Magnets
Superconducting magnets, 11:48374 (RA;US)
Beam Injection
Superconducting positive-ion injector, 11:48375 (RA;US)
Beam Splitting
Superconducting magnets, 11:48374 (RA;US)
CAMAC System
Data acquisition system DAPHNE, 11:48372 (RA;US)
Cavity Resonators
Investigations of superconducting-linac technology: superconducting accelerating structures, 11:48332 (RA;US)
Construction
Superconducting LINAC: the ATLAS project, 11:48331 (RA;US)
Data Acquisition
Data acquisition system DAPHNE, 11:48372 (RA;US)
Design
Superconducting LINAC: the ATLAS project, 11:48331 (RA;US)
Ion Sources
Status of the ATLAS PIIECR ion source project, 11:48381 (R;US)
Operation
Operation of the tandem-linac accelerator, 11:48333 (RA;US)
Silver 107 Beams
Acceleration of silver beams with the Linac accelerator, 11:48352 (RA;US)
Target Chambers
Design and construction of a scattering chamber facility for ATLAS, 11:48369 (RA;US)
ATMOSPHERIC CIRCULATION
Simulation
Use of a toxic and hazardous aerosol research facility to evaluate fate and effects of army smoke screen materials, 11:48673 (BA;US)
ATMOSPHERIC PRECIPITATIONS
See also RAIN
Mathematical Models
Automatic calibration of conceptual catchment models using derivative-based optimization algorithms, 11:48741 (J;US)
Remote Sensing
Measurement of precipitation by radar. Cost project 72. Proceedings, 11:48657 (R;DE)
ATOMIC ABSORPTION SPECTROSCOPY
See ABSORPTION SPECTROSCOPY
ATOMIC BEAMS
Beam Dumps
Diagnostics for the NBETF actively cooled beam dump, 11:49096 (BA;GB)
ATOMIC BOMBS
See NUCLEAR WEAPONS
ATOMIC ENERGY
See NUCLEAR ENERGY
ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS
ATOMIC FLUORESCENCE SPECTROSCOPY
See FLUORESCENCE SPECTROSCOPY
ATOMIC IONS
Coordinate the above descriptor with a descriptor for the appropriate specific ion.
Energy-Level Transitions
Collision strengths and line strengths for all transitions among the levels of the 1s-italic^{2}2s-italic^{2}2p-italic,1s-italic^{2}2s-italic2p-italic^2, and 1s-italic^{2}2p-italic^3 configurations of boron-like ions, 11:49081 (J;US)
Collision strengths and line strengths for all transitions among the levels of the 1s-italic2l-italic2l-italic' configurations of Li-like ions, 11:49082 (J;US)
ATOMIC PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Evaluation
Report to the evaluation committee on Swedish atomic and molecular physics, 11:49076 (R;SE)
Research Programs
Report to the evaluation committee on Swedish atomic and molecular physics, 11:49076 (R;SE)

ATOMIC WEAPONS
See NUCLEAR WEAPONS
ATOM-MOLECULE COLLISIONS
Mathematical Models
Collision lifetime approach to recombination and a new derivation of RRKM theory, 11:48145 (J;US)
ATOMS
See also HADRONIC ATOMS
Electronic Structure
Monte Carlo calculations of atoms and molecules, 11:49094 (J;US)
Energy Levels
Semi-empirical Sternheimer shielding factors for the atomic 4f and 5d shells, 11:49033 (RA;US)
Semiempirical Sternheimer shielding factors for the atomic 4f and 5d shells, 11:49047 (RA;US)
Monte Carlo Method
Molecular physics and chemistry applications of quantum Monte Carlo, 11:49093 (J;US)
Monte Carlo calculations of atoms and molecules, 11:49094 (J;US)
Photoelectron Spectroscopy
Multiphoton ionization photoelectron spectroscopy for excited-state atoms and molecules, 11:49063 (RA;US)
ATWS
Anticipated transients without scram.
Reactor Operators
ATOG - a status oriented method for dealing with accidents, 11:47637 (RA;DE;In German)
AUDITORY ORGANS
Physiology
Positron emission tomography (PET) analysis of the effects of auditory stimulation on the distribution of ^{11}C-N-methylchlorphentermine in the brain, 11:48801 (R;US)
AUGER ELECTRON SPECTROSCOPY
A Codes
Improved set of Auger data analysis programs for physical electronics Auger spectrometer systems, 11:48606 (R;US)
Data Acquisition Systems
Improved set of Auger data analysis programs for physical electronics Auger spectrometer systems, 11:48606 (R;US)
AURORAE
Emission
Symmetries and rotational line intensities in diatomic molecules, 11:49078 (R;NO)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Intergranular Corrosion
Selected physical and metallurgical characteristics of austenitic stainless steels used in nuclear power engineering, 11:47942 (RA;CS;In Czech)
Uses
Development of austenitic stainless steels as low-activity structural materials for fusion reactors, 11:49534 (R;GB)
AUSTRALIAN ATOMIC ENERGY COMMISSION

DOE Synthetic Fuel Center monthly progress report No. 9, 1-30 July 1986, 11:47902 (R;US)
AUXINS
Biological Effects
Enzymes from auxin-pretreated pea tissue which hydrolyze xyloglucan and a xyloglucan fragment oligosaccharide, 11:48914 (J;US)
AXIAL-VECTOR CURRENTS
Renormalization
Renormalization of the axial vector current in QCD, 11:49181 (R;US)
AXIONS
Double Beta Decay
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)

B

B MESONS
Particle Decay
CP violation in B and D decays, 11:49160 (R;US)
BACKGROUND RADIATION
Levels
Natural neutron background in localities of various altitude, 11:48687 (RA;CS)
BAG MODEL
Chirality
Low momentum penguin contributions in a chiral theory, 11:49156 (R;NO)
Low momentum penguin loop contributions and the $\Delta I = 1/2$ rule, 11:49157 (R;NO)
Scalar Fields
Non-topological soliton bag model, 11:49182 (R;US)
Solitons
Effect of self-consistent treatment of one-gluon exchange in the Freidberg-Leenor-topological soliton model, 11:49175 (J;GB)
Non-topological soliton bag model, 11:49182 (R;US)
BALTIC SEA
Radiation Monitoring
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Radiological investigations in the Baltic Sea, including the Danish Straits and the Kattegat during 1982 and 1983, 11:48765 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)
Results of the radiological Baltic-monitoring programme of the GDR during 1975-1983, 11:48764 (RA;XA)
Study of radioactive materials in the Baltic Sea. Report of the final research co-ordination meeting held in Helsinki, Finland 24-28 September 1984, 11:48714 (R;XA)
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)
Radioactivity
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Radionuclide Migration
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)
BANKS

BARIUM
Diffusion
Evaluation of Synroc-C as a second-generation waste form, 11:47985 (R;US)
Isotope Separation
High-resolution cw resonance ionization mass spectrometry, 11:48158 (BA;US)
Photon-Atom Collisions
Multiphoton excitation of doubly excited states of two-electron atoms, 11:49055 (RA;US)
BARIUM 139
Beta-Minus Decay
Decay of 83-min /sup 139/Ba to levels of /sup 139/La and the decay of 18-min /sup 141/Ba to levels of /sup 141/La, 11:49326 (J;US)

BARIUM 141
Beta-Minus Decay
Decay of 83-min /sup 139/Ba to levels of /sup 139/La and the decay of 18-min /sup 141/Ba to levels of /sup 141/La, 11:49326 (J;US)
BARIUM CARBONATES
Scintillation Counting
Radioactivity measurement of barium carbonate [^{14}C] by liquid scintillation counting, 11:48605 (R;JP;In Japanese)
BARIUM COMPOUNDS
See also BARIUM CARBONATES
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
NMR Spectra
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)
Nuclear Magnetic Resonance
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
BARIUM IONS
Photon-Ion Collisions
Fast ion beam-laser interactions, 11:49043 (RA;US)
BARIUM ISOTOPES
See also BARIUM 139
BARIUM 141
Electron-Atom Collisions
Laser-enhanced electron-impact ionization spectroscopy, 11:48088 (J;US)
Hyperfine Structure
Laser-enhanced electron-impact ionization spectroscopy, 11:48088 (J;US)
Mass Spectroscopy
Laser-enhanced electron-impact ionization spectroscopy, 11:48088 (J;US)
Visible Spectra
Laser-enhanced electron-impact ionization spectroscopy, 11:48088 (J;US)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Capitalized Cost
Total capital cost data base: 10MWe Solar Thermal Central Receiver Pilot Plant, 11:47408 (R;US)
Data Base Management
Total capital cost data base: 10MWe Solar Thermal Central Receiver Pilot Plant, 11:47408 (R;US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BARYON RESONANCES
See also DIBARYON RESONANCES
Anomalous Dimension
Anomalous dimensions of multiquark bound states, 11:49161 (R;US)
BASES
Reaction Heat
Thermochemical comparisons of homogeneous and heterogeneous acids and bases. 1. Sulfonic acid solutions and resins as prototype Broensted acids, 11:48181 (J;US)
BASIC INTERACTIONS
See also STRONG INTERACTIONS
New force in nature, 11:49183 (R;US)
BATTELLE PACIFIC NORTHWEST LABORATORIES
Toxic Materials
Hazard classification method for facilities containing toxic chemicals at the Pacific Northwest Laboratory, 11:48910 (R;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERIES (ISOTOPIC)
See RADIOISOTOPE BATTERIES
BATTERY SEPARATORS
Performance Testing
Performance evaluation of nickel-cadmium cell separator material, 11:47758 (BA;US)
BEAM COOLING
For improving the quality of particle beams.
Possibility of achieving a condensed crystalline state in cooled particle beams, 11:48353 (R;US)
BEAM CURRENTS
Amplifiers
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)
CAMAC System
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)
BEAM DUMPS
Diagnostic Techniques
Diagnostics for the NBETF actively cooled beam dump, 11:49096 (BA;GB)
Performance Testing
Diagnostics for the NBETF actively cooled beam dump, 11:49096 (BA;GB)
BEAM EMITTANCE
Amplifiers
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)
CAMAC System
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)
BEAM INJECTION HEATING
Operation
Neutral beam heating systems for TFTR - initial operating results, 11:49589 (BA;GB)
Performance Testing
Neutral beam heating systems for TFTR - initial operating results, 11:49589 (BA;GB)
BEAM MONITORS
Beam Profiles
Multiwire secondary emission beam profile monitor with 20 μm resolution, 11:48404 (J;NL)
Wiggler Magnets
SLC energy spectrum monitor using synchrotron radiation, 11:48403 (R;US)
BEAM OPTICS
Channeling
Application of channeling in bent crystals to charged particle beams, 11:48354 (R;US)
Particle Tracks
Modeling WIPS tracking on RADLAC-II, 11:48359 (R;US)
BEAM PERVEANCE
See BEAM EMITTANCE
BEAM STRIPPERS
Service Life
Development work on carbon stripper foils made by cracking of ethylene, 11:48169 (RA;BR)
BEAM-PLASMA SYSTEMS
Coulomb Scattering
Collisional relaxation of electron tail distribution, 11:49489 (R;JP)
Electron Collisions
Collisional relaxation of electron tail distribution, 11:49489 (R;JP)
Relaxation
Collisional relaxation of electron tail distribution, 11:49489 (R;JP)

BEAUTY PARTICLES
Particle Decay
Measurement of the average lifetime of hadrons containing bottom quarks, 11:49131 (R;US)
BEDT-TTF
Derivatization
First polymeric-anion derivatives of BEDT-TTF, 11:48018 (R;US)
Electrical Properties
First polymeric-anion derivatives of BEDT-TTF, 11:48018 (R;US)
Electronic Structure
First polymeric-anion derivatives of BEDT-TTF, 11:48018 (R;US)
BENZANTHRACENE
Biological Effects
Application of HPLC to the isolation of molecular targets in dosimetry studies, 11:48923 (J;US)
BENZENE
Chemical Preparation
Preparation and characterization of radical cation salts derived from perfluorobenzene, perfluorotoluene, and perfluorophthalene, 11:48182 (J;US)
Crystal Structure
Preparation and characterization of radical cation salts derived from perfluorobenzene, perfluorotoluene, and perfluorophthalene, 11:48182 (J;US)
Enthalpy
Structural characterization/correlation of calorimetric properties of coal fluids. Third quarterly report, March 1-May 31, 1986, 11:47185 (R;US)
Ignition
Ignition delay times of benzene and toluene with oxygen in argon mixtures, 11:48215 (R;US)
Photolysis
Specroscopic investigations to photochemistry and photophysics of benzene in solution, 11:48197 (R;DE;In German)
Photon-Molecule Collisions
2-step photoionization of benzene: mechanism and spectroscopy, 11:49064 (RA;US)
Pyrolysis
Thermal decomposition of benzene on the Rh(111) crystal surface, 11:48217 (J;US)
BENZOFURANS
Solubility
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
BENZOIC ACID
Chemical Reaction Kinetics
Activity of water mixed with molten salts at 317°C, 11:48153 (J;US)
BENZOPHENONE
Photochemical Reactions
Nanosecond transient processes in the triethylamine quenching of benzophenone triplets in aqueous alkaline media. Substituent effect, ketyl radical deprotonation, and secondary photoreduction kinetics, 11:48200 (J;US)
Radiationless Decay
Nanosecond transient processes in the triethylamine quenching of benzophenone triplets in aqueous alkaline media. Substituent effect, ketyl radical deprotonation, and secondary photoreduction kinetics, 11:48200 (J;US)
BENZOPYRENE
Biological Effects
Application of HPLC to the isolation of molecular targets in dosimetry studies, 11:48923 (J;US)
Fluorescence Spectroscopy
Examination of adduct formation in vivo in the mouse between benzo(a)pyrene and DNA of skin and hemoglobin of red blood cells, 11:48925 (J;US)
Metabolism
Examination of adduct formation in vivo in the mouse between benzo(a)pyrene and DNA of skin and hemoglobin of red blood cells, 11:48925 (J;US)
Mutagen Screening
Classifying mutagens as to their specificity in causing the six possible transitions and transversions: a simple analysis using the Salmonella mutagenicity assay, 11:48921 (J;US)
BENZOTHIAZOLES
Chemisorption
Photoemission study of the adsorption of benzotriazole on copper, 11:48205 (D;US)
BENZOTHIOPHENES
See THIONAPHTHENES
BENZYL RADICALS
Excited States
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
Fluorescence
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
Lifetime
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
Photochemical Reactions
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
BERING SEA
Continental Shelf
Biological processes associated with the pycnocline and surface fronts in the southeastern Bering Sea, 11:48954 (R;US)
BERKELIUM
Chemical Preparation
Chemistry of berkelium, 11:48193 (J;US)
Chemical Properties
Chemistry of berkelium, 11:48193 (J;US)
Nuclear Properties
Chemistry of berkelium, 11:48193 (J;US)
Physical Properties
Chemistry of berkelium, 11:48193 (J;US)
Purification
Chemistry of berkelium, 11:48193 (J;US)
Reviews
Chemistry of berkelium, 11:48193 (J;US)
Uses
Chemistry of berkelium, 11:48193 (J;US)
BERYLLIUM 10
Hypernuclei
Binding energies of Λ Λ hypernuclei and the Λ Λ interaction, 11:49141 (RA;US)
Mass Spectroscopy
^{10}Be in natural archives: information on past solar modulation and climate, 11:48072 (RA;CS)
BERYLLIUM 7
Radioecological Concentration
^{7}Be in the troposphere, 11:48688 (RA;CS)
Comparison of methods for collection and preconcentration of radionuclides in atmospheric precipitations, 11:48689 (RA;CS)
BERYLLIUM 8
Forbidden Transitions
Spin dependence of the isospin-forbidden decay ^{8}Be(E-italic/sub x-italic/ = 27.5 MeV)→d+^{6}Li, 11:49268 (J;US)
BERYLLIUM 9
Hypernuclei
Alpha-cluster calculations of /sub Λ/^{9}Be, 11:49140 (RA;US)
BERYLLIUM 9 TARGET
Neutron Reactions
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Proton Reactions
(p, Vector, π/sup +-/) reactions on Be at 650 MeV, 11:49255 (R;US)
BERYLLIUM ALLOYS
Josephson Effect
Observation of negative s-italic-wave proximity effect in superconducting UBe/sub 13/, 11:47961 (J;US)
Proximity Effect
Observation of negative s-italic-wave proximity effect in superconducting UBe/sub 13/, 11:47961 (J;US)

BESSEL DIFFERENTIAL EQUATION
See FOKKER-PLANCK EQUATION
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DECAY
For neutron and nuclear decay.
Evaluation of β intensity data in nuclear decay schemes: comments on some pitfalls, 11:49300 (R;US)
Form Factors
Induced second-class form factors in $\Sigma^- \beta$-decay, 11:49149 (R;US)
BETA DETECTION
Geiger-Mueller Counters
Low-cost automated counter for laboratory beta-ray assay of rock and mineral samples, 11:48594 (RA;CS)
Needle Chambers
Double needle gas counter arrangement for measurements of low beta radioactivity solid emitters; first measurements, 11:48593 (RA;CS)
BETA SPECTROMETERS
Low background beta-gamma-coincidence spectrometer, 11:48552 (RA;CS)
Some experiences with a beta-gamma coincidence spectrometer, 11:48553 (RA;CS)
Weak magnetism effects in beta spectra, 11:48423 (RA;US)
BETA SPECTROSCOPY
Scintillation Counting
Influence of quenching effects to the scintillation efficiency of alpha- and beta-particles, 11:48577 (RA;CS)
BETATRON OSCILLATIONS
Line Widths
Resonances and resonance widths, 11:48355 (R;US)
Resonance
Resonances and resonance widths, 11:48355 (R;US)
BEVERAGES
Radioactivity
Determination of carbon-14 in Bulgarian wines, 11:48063 (RA;CS)
BGO DETECTORS
Performance
Use of BGO in low level spectroscopy, 11:48579 (RA;CS)
BINARY STARS
Binaries and evolution of globular clusters, 11:48979 (RA;CS)
Age Dependence
Behaviour of brighter binaries and yellow giants in open clusters, 11:48973 (RA;CS)
BINARY-FLUID SYSTEMS
Vapor Condensers
Overview of recent supercritical binary geothermal cycle experiments from the Heat Cycle Research Program, 11:47440 (R;US)
BIOFOULING
See BIOLOGICAL FOULING
BIOGAS
See METHANE
BIOLOGICAL DOSEMETERS
Assays for human genotoxicity monitoring: in vivo dosimeters versus surrogate markers for genotoxic disease, 11:48858 (RA;AU)
BIOLOGICAL EVOLUTION
Radiobiology
Evolutionary rates under environmental stress, 11:48861 (RA;AU)
BIOLOGICAL FLUIDS
See BODY FLUIDS
BIOLOGICAL FOULING
Control
Applied fields for energy conservation, water treatment, and industrial applications. Final report, 11:48321 (R;US)
BIOLOGICAL MATERIALS
See also BODY FLUIDS
Neutron Diffraction
New neutron small-angle diffraction instrument at the Brookhaven High Flux Beam Reactor, 11:48624 (BA;US)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOLOGICAL STRESS
Evolutionary rates under environmental stress, 11:48861 (RA;AU)
BIOMASS
Gasification
Development of a process to gasify biomass based on the principle of a circulating fluidized-bed. Final report, 11:47386 (R;DE;In German)
Pressurized gasification test facility. Construction. Final report, 11:47390 (R;DE)
Harvesting
Utilization of forest biomass for energy production and industrial purposes. Final report, 11:47389 (R;DE;In Italian)
Uses
Utilization of forest biomass for energy production and industrial purposes. Final report, 11:47389 (R;DE;In Italian)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Economic Analysis
Fermentation of lignocellulosic feedstocks: product markets and values, 11:47372 (R;US)
Marketing Research
Fermentation of lignocellulosic feedstocks: product markets and values, 11:47372 (R;US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Meetings
Second national congress on medical biology and genetics with international participation. Abstracts of reports from the plenary meeting, 11:48843 (R;BG;In Bulgarian)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Construction
Full scale experimental anaerobic fermentation facility. Final report for design, construction, and operation, 11:47361 (R;US)
Design
Full scale experimental anaerobic fermentation facility. Final report for design, construction, and operation, 11:47361 (R;US)
Operation
Full scale experimental anaerobic fermentation facility. Final report for design, construction, and operation, 11:47361 (R;US)
BIPHENYL
Electron Transfer
Distance, stereoelectronic effects, and the Marcus inverted region in intramolecular electron transfer in organic radical anions, 11:48185 (J;US)
BIPYRIDINES
Electron Transfer
Solvent reorganization in optical and thermal electron-transfer processes, 11:48184 (J;US)
Photochemistry
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)
Photolysis
Pulsed-laser flash and continuous photolysis of aqueous solutions of methyl viologen, oxalate, and their ion-pair complexes, 11:48199 (J;US)
BIS(ETHYLENEDITHIOLO)TETRATHIAFULVALENE
See BEDT-TTF
BISMUTH
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
BISMUTH COMPOUNDS
See also BISMUTH OXIDES
Phase Transformations
Manipulation of displacive phase transformations (LaNb/sub 1-x/V/sub x/O_4; BiV/sub 1-x/Nb/sub x/O_4), 11:48015 (R;US)

BISMUTH GERMANATE DETECTORS
See BGO DETECTORS
BISMUTH OXIDES
Phase Studies
The system TiO_2-$Bi_2Ti_4O_{11}$, 11:47993 (J;US)
BITUMINOUS COAL
Chemical Composition
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Combustion
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
Fuel Additives
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
Hardness
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Petrography
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
BLACK COAL
See also ANTHRACITE
BITUMINOUS COAL
Lurgi Process
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
BLACK SEA
Background Radiation
Black Sea region with anomalously low gamma-radiation background, 11:48696 (RA;CS)
BLACK SHALES
Natural Gas Wells
Exploration-production studies in newly drilled Devonian-Shale gas wells. Annual report, February 1, 1985-January 31, 1986, 11:47229 (R;US)
Well Logging
Devonian-shale well-log interpretation. Annual report, 1985, 11:47242 (R;US)
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLAST EFFECTS
C Codes
Status of fragmentation modeling development, 11:47243 (R;US)
Forecasting
Status of fragmentation modeling development, 11:47243 (R;US)
BLAST FURNACES
Energy Conservation
Introduction of a secondary blast process into an unlined hot-blast cupola furnace. Final report, 11:47872 (R;DE;In German)
BLASTING
See EXPLOSIVE FRACTURING
BLOCKING
See CHANNELING
BLOOD
See also BLOOD CELLS
Activation Analysis
Certification of lead and cadmium in three lyophilized blood materials. CRM No. 194, 195, 196, 11:48060 (R;DE)
BLOOD CELLS
See also ERYTHROCYTES
Sister Chromatid Exchanges
Sister chromatid exchange induction and persistence in peripheral blood and spleen lymphocytes of mice treated with ethylnitrosourea, 11:48918 (J;US)
BODY COMPOSITION
Activation Analysis
Non-invasive techniques for measuring body composition: state of the art and future prospects, 11:48799 (R;US)
BODY FLUIDS
See also BLOOD
MILK
Dynamic Mass Spectrometers
Time-of-flight mass spectrometer with ^{252}Cf surface ionisation coupled with high-pressure liquid chromatography for determining pharmaceutical substances in the blood, 11:48075 (R;DE;In German)
Mass Spectroscopy
Time-of-flight mass spectrometer with ^{252}Cf surface ionisation coupled with high-pressure liquid chromatography for determining pharmaceutical substances in the blood, 11:48075 (R;DE;In German)

BOHR APPROXIMATION
See NILSSON-MOTTELSON MODEL
BOHR-MOTTELSON MODEL
See NILSSON-MOTTELSON MODEL
BOHUNICE V-1 REACTOR
Trnava, West Slovakia, Czechoslovakia
Background Radiation
Large-volume low-level Ge(Li) spectrometry of nuclear power plants environmental samples, 11:48719 (RA;CS)
BOILERS
See also FLUIDIZED BED BOILERS
WASTE HEAT BOILERS
Combustion Control
In-situ combustion control, 11:47876 (RA;US)
Spectroscopic temperature measurement technique for recovery boilers, 11:47882 (RA;US)
Energy Conservation
Temperature by time of flight of sound waves, 11:47873 (RA;US)
Materials
Remaining-life estimation of boiler pressure parts: crack growth studies. Final report, 11:47927 (R;US)
Performance Testing
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
Operation and maintenance of DOE/PETC Combustion Test facilities. Final activity report, April 1978-December 19, 1982, 11:47203 (R;US)
Temperature Measurement
In-situ combustion control, 11:47876 (RA;US)
Temperature by time of flight of sound waves, 11:47873 (RA;US)
Welded Joints
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report, 11:47926 (R;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BONE MARROW CELLS
Biological Radiation Effects
Chromosome aberrations kinetics in mouse bone marrow cells and embryos after irradiation and cyclophosphamide treatment, 11:48845 (RA;BG;In Bulgarian)
Comparative studies on the proliferation and differentiation of granulocytic progenitor cells CFU-C from the blood and bone marrow of dogs under normal conditions and after 80 R whole-body irradiation, 11:48855 (R;DE;In German)
Cell Differentiation
Comparative studies on the proliferation and differentiation of granulocytic progenitor cells CFU-C from the blood and bone marrow of dogs under normal conditions and after 80 R whole-body irradiation, 11:48855 (R;DE;In German)
Cell Proliferation
Comparative studies on the proliferation and differentiation of granulocytic progenitor cells CFU-C from the blood and

bone marrow of dogs under normal conditions and after 80 R whole-body irradiation, 11:48855 (R;DE;In German)
Genetic Radiation Effects
Study of the influence of incorporated cerium 144 on the genetic structures of rat bone marrow cells, 11:48850 (RA;BG;In Bulgarian)
Radiosensitivity
Thermal neutron radiosensitivity of human leukaemia and bone marrow cell lines, 11:48869 (RA;AU)
BONE TISSUES
Activation Analysis
Trace rare earth element analysis of IAEA hair (HH-1), animal bone (H-5) and other biological standards by radiochemical neutron activation, 11:48911 (R;US)
BONES
See SKELETON
BONNEVILLE POWER ADMINISTRATION
Electric Utilities
Hourly impacts of residential weatherization - the shape of things to come, 11:47845 (RA;US)
Energy Conservation
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 11:47842 (RA;US)
Lessons from a local government technical assistance program, 11:47796 (RA;US)
Use of non-participant evaluation to enhance program design, 11:47804 (RA;US)
Load Management
Hourly impacts of residential weatherization - the shape of things to come, 11:47845 (RA;US)
Weatherization
Process evaluation and program design: two BPA residential weatherization programs, 11:47836 (RA;US)
BOR-60 REACTOR
Dimitrovgrad, USSR
Corrosion
Evaluation of structural materials used for manufacture of BOR-1 steam generator, 11:47513 (RA;CS;In Czech)
Manufacturing
Evaluation of structural materials used for manufacture of BOR-1 steam generator, 11:47513 (RA;CS;In Czech)
Materials Testing
Evaluation of structural materials used for manufacture of BOR-1 steam generator, 11:47513 (RA;CS;In Czech)
Metallography
Evaluation of structural materials used for manufacture of BOR-1 steam generator, 11:47513 (RA;CS;In Czech)
Steam Generators
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)
Evaluation of structural materials used for manufacture of BOR-1 steam generator, 11:47513 (RA;CS;In Czech)
BOREHOLES
Explosive Fracturing
High energy gas fracture experiments in liquid-filled boreholes: potential geothermal application, 11:47441 (R;US)
Well Logging Equipment
Downhole radar system for fracture detection, 11:48325 (R;US)
BORIC ACID
Chemical Reaction Kinetics
Activity of water mixed with molten salts at 317°C, 11:48153 (J;US)
BORON
Electron Microprobe Analysis
Automated electron microprobe, 11:48097 (BA;US)
Emission Spectroscopy
Aluminum, boron, and mercury measurement via ion-exchange direct current argon plasma (DCAP) spectrometry, 11:48096 (BA;US)
Separation Processes
Aluminum, boron, and mercury measurement via ion-exchange direct current argon plasma (DCAP) spectrometry, 11:48096 (BA;US)
BORON 10
E2-Transitions
Measurement of a large B(E2) in ^{10}B, 11:49246 (RA;US)
Energy Levels
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
BORON 10 REACTIONS
Heavy Ion Fusion Reactions
Fusion cross section behavior for $^{10}B + ^{13}C$ and $^{11}B + ^{12}C$, 11:49247 (RA;US)
BORON 10 TARGET
Pion Minus Reactions
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
Pion Plus Reactions
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
Proton Reactions
sup(10, 11)B(p,n)sup(10, 11)C reactions between E sub(p)=13.7 and 14.7 MeV, 11:49258 (RA;BR)
BORON 11
Energy Levels
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
BORON 11 REACTIONS
Heavy Ion Fusion Reactions
Fusion cross section behavior for $^{10}B + ^{13}C$ and $^{11}B + ^{12}C$, 11:49247 (RA;US)
BORON 11 TARGET
Pion Minus Reactions
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
Pion Plus Reactions
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
Proton Reactions
sup(10, 11)B(p,n)sup(10, 11)C reactions between E sub(p)=13.7 and 14.7 MeV, 11:49258 (RA;BR)
BORON CARBIDES
Mechanical Properties
Effect of secondary phases on the properties of B_4C-Al composites, 11:48005 (BA;US)
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Microstructure
Effect of secondary phases on the properties of B_4C-Al composites, 11:48005 (BA;US)
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Phase Studies
Effect of secondary phases on the properties of B_4C-Al composites, 11:48005 (BA;US)
Thermodynamic Properties
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Wettability
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
BORON COMPLEXES
Chemical Preparation
Syntheses and structures of $[HB(pz)_3](CO)_2(CS)W$-$Au(PR_3)$. First examples of a semibridging CS ligand, 11:48172 (J;US)
BORON FLUORIDES
Catalytic Effects
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)
BORON NITRIDES
Chemical Preparation
Synthesis of BN using BPO_4 as the boron source, 11:47991 (J;US)
BOROSILICATE GLASS
Leaching
Evaluation of Synroc-C as a second-generation waste form, 11:47985 (R;US)
Quality Control
Demonstration of an approach to waste form qualification through simulation of liquid-fed ceramic melter process operations, 11:47319 (R;US)
BOROSILICATES
See BOROSILICATE GLASS

BOSON EXPANSION
SP Groups
Closed, analytic, boson realizations for Sp(4), 11:49459 (J;US)
BOSONIZATION
See BOSON EXPANSION
BOSONS
See also GOLDSTONE BOSONS
INTERMEDIATE BOSONS
MESONS
Hadronic Particle Decay
Can the data from the CERN p-italicp-bar collider limit gaugino masses?, 11:49165 (J;US)
Leptonic Decay
Can the data from the CERN p-italicp-bar collider limit gaugino masses?, 11:49165 (J;US)
String Models
Purely cubic action for string field theory, 11:49196 (J;US)
Supersymmetry
Can the data from the CERN p-italicp-bar collider limit gaugino masses?, 11:49165 (J;US)
BOTTOM MESONS
See B MESONS
BOTTOM PARTICLES
See BEAUTY PARTICLES
BOUND STATE
Dissociation
Algebraic approach to dissociation from bound states, 11:49462 (J;US)
BOUNDARIES (GRAIN)
See GRAIN BOUNDARIES
BPA
See BONNEVILLE POWER ADMINISTRATION
BRAIN
Physiology
Positron emission tomography (PET) analysis of the effects of auditory stimulation on the distribution of ^{11}C-N-methylchlorphentermine in the brain, 11:48801 (R;US)
BRAKING RADIATION
See BREMSSTRAHLUNG
BRASSICA
Radioactivity
Strontium-90 and cesium-137 in vegetables (producing districts) from November 1983 to March 1984. Environmental and dietary materials, 11:48728 (RA;JP)
BRAYTON CYCLE POWER SYSTEMS
Computerized Simulation
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Design
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Heat Storage
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Heat Transfer
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Performance Testing
Brayton cycle space power systems, 11:47358 (BA;US)
Technology Assessment
Brayton cycle space power systems, 11:47358 (BA;US)
BREAKERS (CIRCUIT)
See CIRCUIT BREAKERS
BREAKWATERS
See DAMS
BREEDING BLANKETS
Flibe/He concept, 11:49569 (R;US)
Breeding Ratio
Fusion blanket engineering benchmark experiment, 11:49563 (RA;JP)
Nuclear data and integral experiments required for fusion reactor nuclear design, 11:49561 (RA;JP)
Design
Appendix C: safety design rationale, 11:49571 (RA;US)
Helium-cooled, FLiBe-breeder, beryllium-multiplier blanket for MINIMARS, 11:49578 (R;US)
High tritium breeding ratio (TRB) blanket concept and requirements for nuclear data relating to TBR, 11:49562 (RA;JP)
Review of tokamak power reactor and blanket designs in the United States, 11:49536 (R;US)
Status of fusion reactor blanket design, 11:49539 (R;US)
Magnetohydrodynamics
Liquid-metal flow in a thin conducting pipe near the end of a region of uniform magnetic field, 11:49531 (R;US)
Maintenance
Designer's guidebook for first wall/blanket/shield assembly, maintenance, and repair, 11:49549 (R;US)
Neutron Transport Theory
Neutronic comparative study of some structural materials for fusion reactors, 11:49553 (RA;BR;In Portuguese)
Radiation Hazards
Activation product transport in a FLiBe-vanadium alloy-HT9 system, 11:49573 (RA;US)
Reviews
Status of fusion reactor blanket design, 11:49539 (R;US)
Safety
Appendix C: safety design rationale, 11:49571 (RA;US)
Fusion blanket inherent safety assessment, 11:49541 (R;US)
Thermonuclear Reactor Materials
Development of austenitic stainless steels as low-activity structural materials for fusion reactors, 11:49534 (R;GB)
Tritium Recovery
Neutronic comparative study of some structural materials for fusion reactors, 11:49553 (RA;BR;In Portuguese)
BREMSSTRAHLUNG
See also SYNCHROTRON RADIATION
Radiation Monitoring
Beamstrahlung monitor for SLC final focus using gamma ray energies, 11:48615 (R;US)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BROMINE 77
Isotope Production
Radiation-induced redox specification of sup(77)Br in aqueous solution as determined by anion chromatography, 11:48211 (J;CH)
BROMINE 87
Beta Decay
Evaluation of β intensity data in nuclear decay schemes: comments on some pitfalls, 11:49300 (R;US)
Decay Amplitudes
Evaluation of β intensity data in nuclear decay schemes: comments on some pitfalls, 11:49300 (R;US)
BROMINE OXIDES
Absorption Spectra
Spectral studies related to diasociation of HBr, HCl and BrO. Final Technical Report, 11:48669 (R;US)
BRONCHOGENIC CARCINOMA
See RESPIRATORY SYSTEM DISEASES
BROOKHAVEN AGS
Experiment Planning
AGS experiments: 1984, 1985, 1986. Third edition, 11:48335 (R;US)
Kaon Beams
BNL kaon beams, present and planned, 11:48378 (R;US)
Particle Production
Particle production and targeting experience at the Brookhaven AGS, 11:48377 (R;US)
Schedules
AGS experiments: 1984, 1985, 1986. Third edition, 11:48335 (R;US)
Secondary Beams
Particle production and targeting experience at the Brookhaven AGS, 11:48377 (R;US)
BROOKHAVEN HIGH FLUX BEAM REACTOR
See HFBR REACTOR
BROWN COAL
See also LIGNITE

Sulfur Content
Rapid method for monitoring the sulphur content in moving streams of raw brown coal. Final report, 11:47179 (R;DE;In German)

BRUNO LEUSCHNER-1 REACTOR
See GREIFSWALD-1 REACTOR

BRUNO LEUSCHNER-2 REACTOR
See GREIFSWALD-2 REACTOR

BRUNO LEUSCHNER-3 REACTOR

BUBBLE CHAMBERS
Holography
New development of holography in particle detectors: application to bubble chambers and streamer chambers, 11:48443 (R;FR;In French)

BUBBLE GROWTH
Dynamics
Superheated drop nucleation for neutron detection, 11:48625 (J;NL)

BUBBLES
Evaporation
Superheated drop nucleation for neutron detection, 11:48625 (J;NL)
Superheating
Superheated drop nucleation for neutron detection, 11:48625 (J;NL)

BUILDING MATERIALS
See also CEMENTS
CONCRETES
Low Level Counting
Application of low-level gamma spectrometers constructed in CLRP for measurements of environmental samples and building materials, 11:48546 (RA;CS)
Natural Radioactivity
Radioactivity of frequently used building materials in Slovak Socialist Republic, 11:48717 (RA;CS)
Pumice
Development of a dry separation process for the sorting of raw pumice into heat restraining building material. Final report, 11:47831 (R;DE;In German)

BUILDINGS
See also COMMERCIAL BUILDINGS
CONTAINMENT BUILDINGS
OFFICE BUILDINGS
PREFABRICATED BUILDINGS
RESIDENTIAL BUILDINGS
Cooling Systems
Ventilation cooling of residential buildings, 11:47856 (R;US)
Heat Gain
Measurement of effective thermal capacitance in buildings, 11:47860 (R;US)
Passive Solar Cooling Systems
Security State Bank of Wells, Minnesota. Final technical report, 11:47417 (R;US)
Passive Solar Heating Systems
Security State Bank of Wells, Minnesota. Final technical report, 11:47417 (R;US)
Temperature Measurement
Measurement of effective thermal capacitance in buildings, 11:47860 (R;US)
Ventilation Systems
Ventilation cooling of residential buildings, 11:47856 (R;US)
Windows
Defining daylighting from windows in terms of candlepower distribution curves, 11:47864 (BA;US)

BUILDINGS (CONTAINMENT)
See CONTAINMENT BUILDINGS

BUNDLE DIVERTORS
Design
Bundle divertor. Compositional control and exhaust in tokamak experiments and the NET reactor, 11:49535 (R;GB)
Performance
Bundle divertor. Compositional control and exhaust in tokamak experiments and the NET reactor, 11:49535 (R;GB)

BURNABLE POISONS
Gadolinium
Study concerning the calculation of burn-up of gadolinia-bearing PWR fuel elements, 11:47502 (R;DE;In German)

BUSES
Synthetic Fuels
Energy analysis and alternative fuels and vehicles, 11:47870 (R;US)

BUTANE
Permittivity
Pressure dependence of the dielectric strength of SO_2 and n-C_4F_{10}, 11:48196 (J;GB)

BUTANOLS
Chemical Preparation
Method and apparatus for synthesizing hydrocarbons, 11:47375 (P;US)

BUTYL ALCOHOLS
See BUTANOLS

BUTYRIC ALCOHOLS
See BUTANOLS

BWR TYPE REACTORS
See also CLINTON-1 REACTOR
HOPE CREEK-1 REACTOR
HOPE CREEK-2 REACTOR
LACBWR REACTOR
After-Heat Removal
Current status of decay heat measurements, evaluations, and needs, 11:47737 (R;US)
Capitalized Cost
Power plant economy of scale and cost trends: further analyses and review of empirical studies, 11:47616 (R;US)
Containment Systems
Containment pressure response to a meltdown condition of the light water reactor, 11:47703 (RA;US)
Impact of heat-generating debris on containment loading - an overview, 11:47694 (RA;US)
Systematic approach to containment performance criteria, 11:47656 (R;US)
Design Basis Accidents
Annual meeting on nuclear technology 1981. Technical meeting: External impact, 11:47705 (R;DE;In German)
Common practice of component and systems for LWR-type reactors against external impact, 11:47706 (RA;DE;In German)
ECCS
BWR recirculation loop discharge line break LOCA tests with break areas of 50 and 100% assuming HPCS failure at ROSA-III test facility, 11:47722 (R;JP)
Main Steam Line break experiment at ROSA III - RUN 953. 100% break with an HPCS failure, 11:47721 (R;JP)
Engineered Safety Systems
Electronic isolators used in safety systems of US nuclear power plants, 11:47727 (R;US)
Fuel Cans
Phase transformations in neutron-irradiated Zircaloys, 11:47917 (R;US)
Fuel Elements
Annual meeting on nuclear technology 1981. Technical meeting: Fuel elements and fuel element materials, 11:47629 (R;DE;In German)
Fuel Rods
Comparative steady-state and power-ramping performance of annular-coated-pressurized, sphere-pac and reference test rods in the Halden BWR, 11:47496 (J;GB)
Loss of Coolant
BWR recirculation loop discharge line break LOCA tests with break areas of 50 and 100% assuming HPCS failure at ROSA-III test facility, 11:47722 (R;JP)
Main Steam Line break experiment at ROSA III - RUN 953. 100% break with an HPCS failure, 11:47721 (R;JP)
Mechanical Structures
Trend curve data development and testing, 11:47491 (R;US)
Meltdown
Analytic advanced development in the German Risk Study on Nuclear Power Plants. Papers presented at the project committee session of October 17, 1983, at BMFT, 11:47713 (R;DE;In German)

Effects of methodic deficiencies on the quantification of core meltdown frequency, 11:47716 (RA;DE;In German)
Methodological aspects of core meltdown accidents frequency estimates, 11:47715 (RA;DE;In German)
Nuclear Fuels
Comparative steady-state and power-ramping performance of annular-coated-pressurized, sphere-pac and reference test rods in the Halden BWR, 11:47496 (J;GB)
Plutonium Recycle
Present and future use of plutonium in LWR-type reactors, 11:47615 (RA;DE;In German)
Pressure Vessels
ORVIRT.PC (Version 2.0): a 2-D finite-element fracture analysis program for a microcomputer. Revision 1, 11:47493 (R;US)
Primary Coolant Circuits
Natural circulation phenomena and primary system failure in station blackout accidents, 11:47692 (RA;US)
Reactor Accidents
Aerosol release and transport program. Semiannual progress report, October 1985-March 1986. Volume 3, No. 1, 11:47728 (R;US)
Argument about the climatological-meteorological data base of the German Risk Study on Nuclear Power Plants, 11:47718 (RA;DE;In German)
Containment pressure response to a meltdown condition of the light water reactor, 11:47703 (RA;US)
Coolability of UO_2 debris beds in pressurized water pools: DCC-1 and DCC-2 experiment results, 11:47678 (RA;US)
CORCON-MOD1 modelling improvements, 11:47701 (RA;US)
Core melt - concrete interaction: status of the WECHSL code development and present results, 11:47702 (RA;US)
Dryout of a multi-dimensional porous bed, 11:47677 (RA;US)
Experimental studies of dryout during boiling in particle beds at AEE Winfrith (UKAEA), 11:47676 (RA;US)
Extended dryout and rewetting of small-particle core debris, 11:47685 (RA;US)
Flooding in particle beds and its role in dryout heat flux prediction, 11:47671 (RA;US)
Fluidization of a particulate bed during quenching by flooding from bottom, 11:47682 (RA;US)
Geometrical radiation exchange factors for axial radiative transfer in an LWR core filled with absorbing-emitting gases, 11:47679 (RA;US)
Impact of heat-generating debris on containment loading - an overview, 11:47694 (RA;US)
Interfacial heat transfer between bubble agitated immiscible liquid layers, 11:47700 (RA;US)
Model of the consequences of an accident, 11:47717 (RA;DE;In German)
Natural circulation phenomena and primary system failure in station blackout accidents, 11:47692 (RA;US)
Quenching by top flooding of a heat generating particulate bed with gas injection at the bottom, 11:47680 (RA;US)
Radionuclide release calculations for selected severe accident scenarios. Volume 1. BWR, Mark 1 design, 11:47730 (R;US)
Radionuclide release calculations for selected severe accident scenarios. Volume 4. BWR, Mark III design, 11:47733 (R;US)
Refined model for the coolability of core debris with flow entry from the bottom, 11:47672 (RA;US)
Research related to severe reactor accidents, 11:47670 (RA;US)
Review of IDCOR effort, 11:47698 (RA;US)
Scale effects and structure of dryout zone in debris bed coolability experiments, 11:47675 (RA;US)
Severe accident sequence analysis with respect to debris formation and coolsbility, 11:47697 (RA;US)
Transient analysis of debris bed heat transfer, 11:47674 (RA;US)
Transient quenching of superheated debris beds during bottom reflood, 11:47681 (RA;US)
Two-phase flow in stratified porous media, 11:47673 (RA;US)
Reactor Components
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)
Reactor Control Systems
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
Reactor Instrumentation
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
Reactor Materials
Long-term embrittlement of cast duplex stainless steels in LWR systems. Annual report, October 1984-September 1985, 11:47494 (R;US)
Reactor Safety
Nuclear Safety technical progress review, January-March 1986. Volume 27, No. 1, 11:47739 (R;US)
Reactor Safety Experiments
BWR recirculation loop discharge line break LOCA tests with break areas of 50 and 100% assuming HPCS failure at ROSA-III test facility, 11:47722 (R;JP)
Reactor Shutdown
Reactor shutdown experience, 11:47495 (J;US)
Reactor Simulators
Experience gained in the training of nuclear power plant operating personnel with nuclear power plant simulators, 11:47613 (RA;DE;In German)
Risk Assessment
Scientific technical risk analysis and political decision-making processes, 11:47714 (RA;DE;In German)

CADMIUM
Activation Analysis
In vivo monitoring of toxic metals: assessment of neutron activation and x-ray fluorescence techniques, 11:48901 (R;US)
Biological Effects
Cadmium and soil microorganisms, 11:48908 (R;DE;In German)
Biological Localization
In vivo monitoring of toxic metals: assessment of neutron activation and x-ray fluorescence techniques, 11:48901 (R;US)
Body Burden
Logistic regression analysis of cadmium-induced renal abnormalities, 11:48902 (R;US)
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Microorganisms
Cadmium and soil microorganisms, 11:48908 (R;DE;In German)
Quantitative Chemical Analysis
Certification of lead and cadmium in three lyophilized blood materials. CRM No. 194, 195, 196, 11:48060 (R;DE)
Risk Assessment
Logistic regression analysis of cadmium-induced renal abnormalities, 11:48902 (R;US)

CADMIUM 109
Uptake
Relationships between free cadmium ion activity in seawater, cadmium accumulation and subcellular distribution, and growth in polychaetes, 11:48917 (J;US)
CADMIUM COMPOUNDS
See also CADMIUM OXIDES
CADMIUM SELENIDES
CADMIUM SULFIDES
Tissue Distribution
Relationships between free cadmium ion activity in seawater, cadmium accumulation and subcellular distribution, and growth in polychaetes, 11:48917 (J;US)
Uptake
Relationships between free cadmium ion activity in seawater, cadmium accumulation and subcellular distribution, and growth in polychaetes, 11:48917 (J;US)
CADMIUM OXIDES
Sputtering
Sputtered cadmium oxide as a surface pretreatment for graphite solid lubricant films, 11:48022 (R;US)
CADMIUM SELENIDES
Photochemical Reactions
Interaction of thiols with n-type cadmium sulfide and n-type cadmium selenide in aqueous solutions: adsorption of thiolate anion and efficient photoelectrochemical oxidation to disulfides, 11:48201 (J;US)
Sorptive Properties
Interaction of thiols with n-type cadmium sulfide and n-type cadmium selenide in aqueous solutions: adsorption of thiolate anion and efficient photoelectrochemical oxidation to disulfides, 11:48201 (J;US)
CADMIUM SULFIDE SOLAR CELLS
Photocurrents
Voltage and light bias-dependent spectral response of the $CuInSe_2$/Cd(Zn)S thin-film solar cell, 11:47395 (J;US)
Spectral Response
Voltage and light bias-dependent spectral response of the $CuInSe_2$/Cd(Zn)S thin-film solar cell, 11:47395 (J;US)
CADMIUM SULFIDES
Photochemical Reactions
Interaction of thiols with n-type cadmium sulfide and n-type cadmium selenide in aqueous solutions: adsorption of thiolate anion and efficient photoelectrochemical oxidation to disulfides, 11:48201 (J;US)
Sorptive Properties
Interaction of thiols with n-type cadmium sulfide and n-type cadmium selenide in aqueous solutions: adsorption of thiolate anion and efficient photoelectrochemical oxidation to disulfides, 11:48201 (J;US)
CADMIUM TELLURIDE SOLAR CELLS
Efficiency
Potential of thin-film solar cell module technology, 11:47401 (BA;US)
Fabrication
Research on single-crystal CdTe solar cells. Annual subcontract report, 1 February 1985-1 February 1986, 11:47393 (R;US)
Tandem thin-film solar cell using Cd/sub y/Zn/sub 1-y/Te as the wide bandgap component. Annual subcontract report, 1 April 1985-1 April 1986, 11:47394 (R;US)
Technology Assessment
Potential of thin-film solar cell module technology, 11:47401 (BA;US)
Testing
Research on single-crystal CdTe solar cells. Annual subcontract report, 1 February 1985-1 February 1986, 11:47393 (R;US)
Tandem thin-film solar cell using Cd/sub y/Zn/sub 1-y/Te as the wide bandgap component. Annual subcontract report, 1 April 1985-1 April 1986, 11:47394 (R;US)
CALCITE
Solubility
Model of gypsum, calcite and silica solubilities for application to geothermal waters over a wide range of temperature, P/sub CO_2/ and ionic strength. Final technical report, October 1, 1983-September 30, 1984, 11:47446 (R;US)
CALCIUM
Absorption Spectroscopy
Analytical applications of ICP-FTS, 11:48104 (BA;US)
Heavy Ion Reactions
Nuclear collective flow as a function of projectile energy and mass, 11:49294 (J;US)
Photon-Atom Collisions
Multiphoton transitions in the ionization continuum of atoms, 11:49052 (RA;US)
Plages
Solar-Geophysical Data Number 499, March 1986. Part 1 (prompt reports). Data for February 1986, January 1986, and late data, 11:49010 (R;US)
Proton Reactions
Continuum polarization transfer in 500 MeV proton scattering and pionic collectivity in nuclei, 11:49239 (J;US)
Quantitative Chemical Analysis
Analytical applications of ICP-FTS, 11:48104 (BA;US)
CALCIUM 40 REACTIONS
Heavy Ion Fusion Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
CALCIUM 40 TARGET
Electron Reactions
Study of (e,e'X) reaction in the nuclear shell model, 11:49251 (RA;US)
Nitrogen 14 Reactions
Evaporation-residue-velocity measurements for fusion of ^{14}N with light target nuclei, 11:49249 (RA;US)
Oxygen 16 Reactions
Fusion evaporation residues and the distribution of reaction strength in $^{16}O + {}^{40}Ca$ and $^{28}Si + {}^{28}Si$ reactions, 11:49285 (RA;US)
Inelastic scattering and single-nucleon transfer reactions induced by ^{16}O on ^{40}Ca, 11:49283 (RA;US)
Oxygen 17 Reactions
Coincidence measurements between evaporation residues and light particles produced in $^{16}O + {}^{40}Ca$ and $^{28}Si + {}^{40}Ca$ reactions, 11:49286 (RA;US)
Proton Reactions
Reactive content of the proton-nucleus impulse-approximation Dirac optical potential, 11:49287 (RA;BR)
Silicon 28 Reactions
Coincidence measurements between evaporation residues and light particles produced in $^{16}O + {}^{40}Ca$ and $^{28}Si + {}^{40}Ca$ reactions, 11:49286 (RA;US)
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
CALCIUM 41
Mass Spectroscopy
Accelerator mass spectrometry with heavy ions, 11:48073 (RA;CS)
CALCIUM 44
High Spin States
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)
CALCIUM 45
High Spin States
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)
CALCIUM BROMIDES
Hyperfine Structure
Molecular-orbital model of alkaline-earth monohalide electronic structure, 11:49031 (RA;US)
CALCIUM CHLORIDES
Chemical Preparation
Preparation of fused chloride salts for use in pyrochemical plutonium recovery operations at Los Alamos, 11:48138 (R;US)
Hyperfine Structure
Molecular-orbital model of alkaline-earth monohalide electronic structure, 11:49031 (RA;US)

CALCIUM COMPOUNDS
See also CALCIUM OXIDES
Biochemical Reaction Kinetics
Oat tonoplast H^+/Ca^{2+} antiport is a reversible, electrogenic transport system, 11:48821 (J;US)
CALCIUM FLUORIDES
Hyperfine Structure
Molecular-orbital model of alkaline-earth monohalide electronic structure, 11:49031 (RA;US)
Stark Effect
Dependence of CaF electric-dipole moment on vibrational state, 11:49032 (RA;US)
Stimulated Emission
Trivalent cerium doped crystals as tunable laser systems: Two bad apples, 11:48271 (BA;US)
Vibrational States
Dependence of CaF electric-dipole moment on vibrational state, 11:49032 (RA;US)
CALCIUM IODIDES
Hyperfine Structure
Molecular-orbital model of alkaline-earth monohalide electronic structure, 11:49031 (RA;US)
Spin-rotation and hfs constants for the $X\ ^2\Sigma^+$ and $B\ ^+\Sigma^+$ states of CaI, 11:49030 (RA;US)
CALCIUM OXIDES
Chemical Reactions
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS
CALIBRATION STANDARDS
Certification
Certification of the contents (mass fraction) of carbon, hydrogen, nitrogen, chlorine, arsenic, cadmium, manganese, mercury, lead, selenium, vanadium and zinc in three coals. Gas coal CRM No. 180; Coking coal CRM No. 181; Steam coal CRM No. 182, 11:47186 (R;DE)
Certification of polycyclic aromatic compounds. Pt. 6. CRM Nos. 152, 265, 266, 267, 268, 269, 270, 271, 272, 11:48666 (R;DE)
Interlaboratory Comparisons
Certification of the elemental composition of BCR reference material No. 183 containing carbon, hydrogen, fluorine, sulphur, phosphorus and copper, 11:48059 (R;DE)
Quantitative Chemical Analysis
Certification of the elemental composition of BCR reference material No. 183 containing carbon, hydrogen, fluorine, sulphur, phosphorus and copper, 11:48059 (R;DE)
CALIFORNIA
Electric Utilities
Calculation and application of the non-participant test within the cost-benefit analysis of utility load management programs in California, 11:47816 (RA;US)
Measuring conservation cost-effectiveness: a utility perspective, 11:47793 (RA;US)
Energy Audits
Evaluation of an RCS program alternative: the Santa Monica Energy-Fitness Program, 11:47837 (RA;US)
Energy Conservation
Evaluation of an RCS program alternative: the Santa Monica Energy-Fitness Program, 11:47837 (RA;US)
Military Facilities
Installation restoration program: Phase I. Records search, Lawndale Annex, California. Final report, 1 July 1985-31 January 1986, 11:48705 (R;US)
Radiation Monitoring
Off-site environmental monitoring report. Radiation monitoring around United States nuclear test areas, calendar year 1985, 11:48684 (R;US)
CALIFORNIUM 250 TARGET
Neutron Reactions
Evaluation of neutron nuclear data for ^{250}Cf and ^{251}Cf, 11:49363 (R;JP)
CALIFORNIUM 251 TARGET
Neutron Reactions
Evaluation of neutron nuclear data for ^{250}Cf and ^{251}Cf, 11:49363 (R;JP)
CALIFORNIUM 252
Microdosimetry
Determination of microdosimetric quantities using a proportional detector, 11:48841 (RA;CS;In Czech)
Radionuclide Kinetics
Time-of-flight mass spectrometer with ^{252}Cf surface ionisation coupled with high-pressure liquid chromatography for determining pharmaceutical substances in the blood, 11:48075 (R;DE;In German)
Spatial Dose Distributions
Determination of microdosimetric quantities using a proportional detector, 11:48841 (RA;CS;In Czech)
Spontaneous Fission
Beta spectra following the spontaneous fission of ^{252}Cf, 11:49358 (RA;US)
CALORIMETERS
Design
Rectangular waveguide calorimeter for single intense microwave pulses, 11:48637 (J;US)
Operation
Rectangular waveguide calorimeter for single intense microwave pulses, 11:48637 (J;US)
Testing
Rectangular waveguide calorimeter for single intense microwave pulses, 11:48637 (J;US)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CALORIMETRIC DOSEMETERS
Digitizers
Digitizer of the ALEPH electromagnetic calorimeter, 11:48508 (RA;AT)
CAM
See COMPUTER-AIDED MANUFACTURING
CAMAC SYSTEM
Computer Application to Measurement And Control.
Basic principles of CAMAC, 11:48604 (R;FR;In French)
Accuracy
Test results of the signal processing and amplifier unit for the emittance measurement system, 11:48357 (R;ZA)
CAMERAS
See also GAMMA CAMERAS
Design
Optical and UV/x-ray imaging diagnostics for imploding plasma experiments, 11:49503 (J;US)
CAMEROON
Uranium Deposits
Petrographic-geochemical characteristics and genesis of an albitized uraniferous granite in Northern Cameroon, Africa, 11:47256 (RA;XA)
CANISTERS
See CONTAINERS
CANONICAL EQUATIONS
See DIFFERENTIAL EQUATIONS
CANONICAL QUANTUM FIELD THEORY
See LAGRANGIAN FIELD THEORY
CANOPIES
Insolation
Method and apparatus for measuring solar radiation in a vegetative canopy, 11:47382 (P;US)
Optical Reflection
Canopy hot-spot as crop identifier, 11:48823 (R;US)
CAPITAL COSTS
See CAPITALIZED COST
CAPITALIZED COST
Computer Calculations
ASPEN costing manual, 11:49614 (R;US)
CAPSULES (IRRADIATION)
See IRRADIATION CAPSULES

CARBIDES
See also BORON CARBIDES
HAFNIUM CARBIDES
NIOBIUM CARBIDES
SILICON CARBIDES
TITANIUM CARBIDES
Crack Propagation
Characterization of ion-implanted and laser-processed wear surfaces. Final report, 1 December 1984-28 February 1986, 11:48002 (R;US)
Ion Implantation
Characterization of ion-implanted and laser-processed wear surfaces. Final report, 1 December 1984-28 February 1986, 11:48002 (R;US)
CARBINOL
See METHANOL
CARBON
See also ACTIVATED CARBON
GRAPHITE
PYROLYTIC CARBON
Baking
Development of coating materials and feeding processes for energy-optimized baking of carbon products. Final report, 11:47871 (R;DE;In German)
Beam Strippers
Development work on carbon stripper foils made by cracking of ethylene, 11:48169 (RA;BR)
Catalytic Effects
Nitrogen desorption in the reaction of nitric oxide on carbon-supported platinum catalysts, 11:48149 (J;US)
Chemical Bonds
Unusual bond paths in organolithium compounds, 11:48170 (R;US)
Coatings
Development of coating materials and feeding processes for energy-optimized baking of carbon products. Final report, 11:47871 (R;DE;In German)
Diffusion
Thermodynamics of material properties degradation in fast reactor steam generator under effect of liquid sodium, 11:47515 (RA;CS;In Czech)
Electronic Structure
Electronic structure of the (2 x 2)C-italic rho4g-italic carbidic phase on Ni{100}, 11:47986 (J;US)
Ion Collisions
Enhanced electron capture by fast heavy di-clusters exciting solids , 11:49044 (RA;US)
Optical measurements of molecular-ion fragmentation, 11:49037 (RA;US)
Neutron Reactions
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Photoelectron Spectroscopy
Electronic structure of the (2 x 2)C-italic rho4g-italic carbidic phase on Ni{100}, 11:47986 (J;US)
CARBON 10
Beta-Plus Decay
Proposed new measurement of the ^{10}C superallowed beta decay, 11:49245 (RA;US)
CARBON 12 REACTIONS
Elastic Scattering
Forward glory effects in elastic scattering of heavy-ions, 11:49399 (RA;BR)
Heavy Ion Fusion Reactions
Entrance channel limit on the fusion of /sup 28/Si with /sup 12/C at high energy, 11:49278 (J;US)
l-distributions in fusion of ^{64}Ni + ^{92}Zr and ^{12}C + ^{144}Sm measured with the Darmstadt-Heidelberg crystal ball, 11:49315 (RA;US)
Limits to fusion in heavy systems, 11:49314 (RA;US)
Total Cross Sections
Attenuation method for σ sub(R) measurements in heavy ion systems, 11:49350 (RA;BR)
CARBON 12 TARGET
Boron 11 Reactions
Fusion cross section behavior for ^{10}B + ^{13}C and ^{11}B + ^{12}C, 11:49247 (RA;US)
Electron Reactions
Electroproduction of the delta isobar in nuclei, 11:49108 (RA;US)
Study of (e,e'X) reaction in the nuclear shell model, 11:49251 (RA;US)
Magnesium 24 Reactions
3-body final states in peripheral heavy-ion collisions: nuclear clustering structure and projectile excitation revisited, 11:49261 (R;US)
Neutron Reactions
14 MeV integral experiment at OKTAVIAN to check differential data of secondary neutrons, 11:49305 (RA;JP)
Coupled-channel analysis of neutron scattering from ^{12}C between 9 and 15 MeV, 11:49267 (R;US)
CARBON 13
Energy-Level Transitions
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
CARBON 13 REACTIONS
Compound-Nucleus Reactions
/sup 218/Ra α reduced width and its consequences for α clustering in the heavy elements, 11:49357 (J;US)
CARBON 13 TARGET
Boron 10 Reactions
Fusion cross section behavior for ^{10}B + ^{13}C and ^{11}B + ^{12}C, 11:49247 (RA;US)
Pion Plus Reactions
Radiative pion capture on /sup 13/C, 11:49269 (J;US)
Pion Reactions
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
Proton Reactions
Study of the (p,π^-) reaction very close to threshold, 11:49242 (RA;US)
CARBON 14
Air-Water Interactions
Response of hydrological systems to the variations of the ^{14}C activity of the atmosphere, 11:48774 (RA;CS)
Energy-Level Transitions
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
Low Level Counting
10 years low level counting in the underground laboratory in Bern, Switzerland, 11:48560 (RA;CS)
Cosmogenic isotopes and cosmic ray intensity variations, 11:48580 (RA;CS)
Low-level counting facility for ^{14}C dating, 11:48583 (RA;CS)
New low-level laboratory of the "Bundesversuchs- und Forschungsanstalt Arsenal, Wien", 11:48564 (RA;CS)
Quantitative Chemical Analysis
Determination of carbon-14 in Bulgarian wines, 11:48063 (RA;CS)
Radioactive Effluents
Measurement of airborne C-14, 11:48693 (RA;CS)
Radioactivity
Radiation protection measurements and environmental monitoring within the area of the Asse mine shaft. Annual report 1984, 11:47313 (R;DE;In German)
Radioecological Concentration
^{14}C level 25 years after atmospheric test series, 11:48686 (RA;CS)
Anthropogenic radiocarbon in the atmosphere, 11:48690 (RA;CS)
Anthropogenic radionuclides ^{3}H, ^{14}C, ^{85}Kr and ^{133}Xe in the atmosphere, 11:48692 (RA;CS)
Measurement of airborne C-14, 11:48693 (RA;CS)
Response of hydrological systems to the variations of the ^{14}C activity of the atmosphere, 11:48774 (RA;CS)
Scintillation Counting
Accurate absorption technique for liquid scintillation measurement of carbon-14 in natural waters, 11:48576 (RA;CS)
Separation Processes
Determination of carbon-14 in Bulgarian wines, 11:48063 (RA;CS)

CARBON 14 COMPOUNDS
Scintillation Counting
Radioactivity measurement of barium carbonate [^{14}C] by liquid scintillation counting, 11:48605 (R;JP;In Japanese)
CARBON 14 REACTIONS
Heavy Ion Fusion Reactions
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)
CARBON 14 TARGET
Pion Reactions
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
CARBON ADDITIONS
See also HASTELLOY XR
Crystal Structure
Ordering and decomposition in semiconductor alloys, 11:48041 (J;US)
Decomposition
Ordering and decomposition in semiconductor alloys, 11:48041 (J;US)
CARBON DIOXIDE
Absorption Spectra
Oxygen K-edge absorption spectra of small molecules in the gas phase, 11:49050 (R;US)
Adsorption
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Air Pollution Monitoring
Global atmospheric background monitoring for selected environmental parameters: BAPMON data for 1981: Volume 2. Precipitation chemistry, continuous atmospheric carbon dioxide, and suspended particulate matter, 11:48672 (R;US)
Biological Effects
Biomass production and nutrient responses of ponderosa pine to long-term elevated CO_2 concentrations, 11:48912 (R;US)
Seedling tree responses to nutrient stress under atmospheric CO_2 enrichment, 11:48903 (R;US)
Chemical Activation
Studies in chemical and electrochemical coal conversion. Technical progress report, August 1, 1985-January 31, 1986, 11:47184 (R;US)
Chemistry
Studies in chemical and electrochemical coal conversion. Technical progress report, August 1, 1985-January 31, 1986, 11:47184 (R;US)
Corrosive Effects
Effects of carbon dioxide attack on geothermal cement grouts, 11:47445 (R;US)
Environmental Impacts
Detection of CO_2-induced climate change. Progress report, 1 December 1985-15 July 1986, 11:48665 (R;US)
Hydrogenation
Manganese oxide as a promoter for C_2-C_4 olefin production in the hydrogenation of carbon dioxide, 11:47370 (J;US)
Reduction
Studies in chemical and electrochemical coal conversion. Technical progress report, August 1, 1985-January 31, 1986, 11:47184 (R;US)
Separation Processes
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Solvent Properties
Characterization of supercritical fluid solvents using solvatochromic shifts, 11:48154 (J;US)
NMR study of solid naphthalene solubilities in supercritical carbon dioxide near the upper critical end point, 11:48178 (J;US)
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986, 11:47166 (R;US)
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
Supercritical State
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986, 11:47166 (R;US)
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
Viscosity
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1985, 11:47366 (R;US)
CARBON DIOXIDE INJECTION
Additives
Mobility control for CO_2 injection. Final report, May 15, 1981-January 31, 1986, 11:47216 (R;US)
Field Tests
Mobility control for CO_2 injection. Final report, May 15, 1981-January 31, 1986, 11:47216 (R;US)
CARBON FLUORIDES
Electron Attachment
Electron attachment of C_6F_{12} to be used as gas radiator in the BARREL RICH detector of DELPHI, 11:48482 (RA;AT)
CARBON IONS
Electron-Ion Collisions
Experimental apparatus for photon/ion coincidence measurements of dielectronic recombination, 11:49083 (J;US)
Ion-Atom Collisions
Inner shell ionization by fast protons, alpha particles and carbon ions, 11:49070 (R;NL)
CARBON MONOXIDE
Absorption Spectra
Oxygen K-edge absorption spectra of small molecules in the gas phase, 11:49050 (R;US)
Adsorption
CO adsorption on (111) and (100) surfaces of the Pt_3Ti alloy: evidence for parallel binding and strong activation of CO, 11:48150 (J;US)
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Structure and chemisorptive properties of the Pt_3Ti surface, 11:48148 (J;US)
Chemical Reaction Kinetics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
Chemisorption
Studies of alkali metal interactions with chemisorbed CO on Ni(111), 11:48089 (J;US)
The influence of TiO/sub x/ promoters on the chemisorption and hydrogenation of CO on polycrystalline Rh, 11:47371 (J;US)
Emission
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)
Hydrogenation
The influence of TiO/sub x/ promoters on the chemisorption and hydrogenation of CO on polycrystalline Rh, 11:47371 (J;US)
Methanation
Method and apparatus for synthesizing hydrocarbons, 11:47375 (P;US)
The effect of catalyst preparation on catalyst activity, 11:48156 (J;US)
Separation Processes
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Thermodynamics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
CARBON STEELS
Corrosion Resistance
ERG review of waste package container materials selection and corrosion, 11:47913 (R;US)
CARBON SULFIDES
Chemical Preparation
Syntheses and structures of $[HB(pz)_3](CO)_2(CS)W\text{-}Au(PR_3)$. First examples of a semibridging CS ligand, 11:48172 (J;US)

CARBONATE ROCKS
See also LIMESTONE
Isotope Dating
$^{230}Th/^{234}U$ dating of carbonate cave deposits in Poland, 11:48937 (RA;CS)
CARBONATES
See also BARIUM CARBONATES
POTASSIUM CARBONATES
SODIUM CARBONATES
Catalytic Effects
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Chemical Composition
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
CARBONITRIDES
Synthesis
Use of ammonolytic intermediates for the synthesis of nitrides and carbonitrides, 11:47976 (R;US)
CARBONIZATION
Chemical Reaction Kinetics
Studies of carbon deposition and consumption on Ru/TiO_2 during Fischer-Tropsch synthesis, 11:47369 (J;US)
CARBONYLATION
Catalysts
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986 (Potassium methoxide catalyst to prepare methyl formate), 11:47166 (R;US)
CARBONYLS
Only for compounds of metals with carbonyl radicals.
Chemical Preparation
Syntheses and structures of $[HB(pz)_3](CO)_2(CS)W\text{-}Au(PR_3)$. First examples of a semibridging CS ligand, 11:48172 (J;US)
Chemical Reactions
Conversion of the μketene ligand in $[PPN][Os_3(CO)_{10}(\mu\text{-}I)(\mu\text{-}CH_2CO)]$ into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
Molecular Structure
Conversion of the μketene ligand in $[PPN][Os_3(CO)_{10}(\mu\text{-}I)(\mu\text{-}CH_2CO)]$ into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
CARBOXYLIC ACID ESTERS
Chemical Reaction Yield
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986, 11:47166 (R;US)
CARCINOGENESIS
Epidemiology
Review: putative mutagens and carcinogens in foods. VII. Genetic toxicology of the diet, 11:48920 (J;US)
Interlaboratory Comparisons
Interlaboratory comparison of transformation in Syrian hamster embryo cells with model and coded chemicals, 11:48922 (J;US)
Reviews
Review: putative mutagens and carcinogens in foods. VII. Genetic toxicology of the diet, 11:48920 (J;US)
CAROTENOIDS
Chemical Preparation
Charge separation and energy transfer in carotenopyropheophorbide-quinone triads, 11:47396 (J;US)
CARRIER LIFETIME
Measuring Methods
Contactless measurement of bulk free-carrier lifetime in cast polycrystalline silicon ingots, 11:48029 (J;US)
CASCADE REACTORS
Energy and Technology Review, April-May 1986, 11:49576 (R;US)
CASCADE SHOWERS
Monte Carlo Method
Short review of Monte Carlo hadronic cascade calculations in the multi-TeV energy region, 11:48349 (J;NL)
CASCADE THEORY
Computer Codes
Hadron cascade code, FLUKA82: setup and coupling with EGS4 at SLAC, 11:49162 (R;US)
CASTING MOLDS
Protective Coatings
Mold and crucible coatings. Final report, April 1984-December 1985, 11:47972 (R;US)
CATALYSTS

Process Control
Results from uranium deposition studies for development of a limited frequency-unannounced access inspection strategy for gas centrifuge enrichment plants, 11:48251 (J;US)
CERAMIC MELTERS
Control Systems
Electrical service and controls for joule heating of a nuclear waste experimental glass melter, 11:47324 (BA;US)
Joule Heating
Electrical service and controls for joule heating of a nuclear waste experimental glass melter, 11:47324 (BA;US)
CERAMICS
Computerized Tomography
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Creep
Estimating tensile creep data from flexure data, 11:47995 (J;US)
Density
Densification of glass compacts containing a second phase, 11:48049 (BA;US)
Gas Turbines
Ceramic components, gas turbines. Phase 3, 11:47891 (R;DE;In German)
Grain Growth
Origins of planar, concave, and convex boundaries during exaggerated grain growth, 11:47992 (J;US)
Nondestructive Testing
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Multiparameter methods with pulsed eddy currents, 11:48290 (R;US)
Phase Studies
Densification of glass compacts containing a second phase, 11:48049 (BA;US)
Physical Radiation Effects
Effects of temperature and irradiation on piezoelectric acoustic transducers and materials, 11:47974 (R;GB)
Safety
Estimating tensile creep data from flexure data, 11:47995 (J;US)
Temperature Effects
Effects of temperature and irradiation on piezoelectric acoustic transducers and materials, 11:47974 (R;GB)
Tensile Properties
Estimating tensile creep data from flexure data, 11:47995 (J;US)
Tribology
Tribolgy of selected ceramics at temperatures to 900 deg C, 11:47897 (R;US)
CERIUM
Photoemission
Comment on "Low-energy excitations in α- and γ-Ce observed by photoemission", 11:47962 (J;US)
CERIUM 139
Diffusion
Impurity diffusion in NiO grain boundaries, 11:47973 (R;GB)
CERIUM 144
Gamma Spectroscopy
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)
Radiobiology
Study of the influence of incorporated cerium 144 on the genetic structures of rat bone marrow cells, 11:48850 (RA;BG;In Bulgarian)
CERIUM ALLOYS
Phase Diagrams
Enthalpies of formation of liquid three-component iron-cerium-aluminium alloys, 11:47966 (TG;GB)
Phonons
Determination of the acoustical phonon dispersion branches of $CePd_3$ by inelastic neutron diffraction, 11:47945 (R;DE;In German)
CERIUM COMPOUNDS
Fluctuations
Wave-vector— and magnetic-field—dependent spin fluctuations in the heavy-fermion system $CeCu_6$, 11:47964 (J;US)
Kondo Effect

CERMETS
Mechanical Properties
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Microstructure
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Thermodynamic Properties
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
CERN II SYNCHROTRON
See CERN SPS SYNCHROTRON
CERN SPS SYNCHROTRON
Micro vertex detector for experiment UA1 at the CERN P P-bar collider, 11:48520 (RA;AT)
CESIUM
Diffusion
Evaluation of Synroc-C as a second-generation waste form, 11:47985 (R;US)

CESIUM 134
Gamma Spectroscopy
Description of apparatus for determining radiological source terms of nuclear fuels, 11:48127 (BA;US)
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radioecological Concentration
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)
CESIUM 137
Aerial Monitoring
Aerial radiological monitoring survey Savannah River Plant, 11:48680 (RA;US)
Air
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)
Biological Accumulation
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Gamma Spectroscopy
Description of apparatus for determining radiological source terms of nuclear fuels, 11:48127 (BA;US)
Radiation Monitoring
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Strontium-90 and cesium-137 in milk (producing districts for domestic program) from June 1983 to September 1983. Environmental and dietary materials, 11:48725 (RA;JP)
Strontium-90 and cesium-137 in milk (consuming districts) from May 1983 to May 1984. Environmental and dietary materials, 11:48726 (RA;JP)
Strontium-90 and cesium-137 in milk (powderd milk). Environmental and dietary materials, 11:48727 (RA;JP)
Strontium-90 and cesium-137 in vegetables (producing districts) from November 1983 to March 1984. Environmental and dietary materials, 11:48728 (RA;JP)
Strontium-90 and cesium-137 in vegetables (consuming districts) from November 1983 to February 1984. Environmental and dietary materials, 11:48729 (RA;JP)
Strontium-90 and cesium-137 in tea (Japanese tea). Environmental and dietary materials, 11:48730 (RA;JP)
Radioecological Concentration
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
ARAC response to the Chernobyl reactor accident, 11:47740 (R;US)
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Comparison of methods for collection and preconcentration of radionuclides in atmospheric precipitations, 11:48689 (RA;CS)
Fallout of low radioactivities ^{137}Ca, ^{90}Sr and ^{210}Pb on the mountains, 11:48720 (RA;CS)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)
Radiological investigations in the Baltic Sea, including the Danish Straits and the Kattegat during 1982 and 1983, 11:48765 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)
Results of the radiological Baltic-monitoring programme of the GDR during 1975-1983, 11:48764 (RA;XA)
Soil to plant transfer factors for Cs-137 and Pu-239+240 determined by field and glasshouse measurements in Great Britain, 11:48715 (RA;NL)
Strontium-90 and cesium-137 in shellfish from February 1984 to July 1984. Environmental and dietary materials, 11:48778 (RA;JP)
Strontium-90 and cesium-137 in seaweeds from February 1984 to June 1984. Environmental and dietary materials, 11:48779 (RA;JP)
Strontium-90 and cesium-137 in total diet from October 1983 to July 1984. Environmental and dietary materials, 11:48780 (RA;JP)
Strontium-90 and cesium-137 in rice (producing districts) from November 1983 to January 1984. Environmental and dietary materials, 11:48724 (RA;JP)
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)
Rain
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)
Uptake
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)
CESIUM ISOTOPES
See also CESIUM 134
CESIUM 137
Dose Commitments
Radiation doses resulting from incorporated radioactive cesium isotopes, 11:48831 (R;DE;In German)
Radionuclide Kinetics
Radiation doses resulting from incorporated radioactive cesium isotopes, 11:48831 (R;DE;In German)
CHALKS
See LIMESTONE
CHANNELING
Application of channeling in bent crystals to charged particle beams, 11:48354 (R;US)
CHARCOAL
Isotope Dating
Radiocarbon dating and late glacial blown sand movements in NE Hungary, 11:48935 (RA;CS)
CHARGE DENSITY
Theoretical studies of sliding charge density waves, rigid layer modes of layered compounds and states of incommensurate structures. Final technical report, February 14, 1984-October 14, 1985, 11:49438 (R;US)
CHARGE RADIUS (NUCLEAR)
See NUCLEAR RADII
CHARGED PARTICLE DETECTION
See also ALPHA DETECTION
BETA DETECTION
ELECTRON DETECTION
MUON DETECTION
Detection of alpha-particle interactions using the track-etch technique. Master's thesis, 11:48410 (R;US)
Dielectric Track Detectors
Semi-empirical model of neutron and charged particle interactions with CR-39, 11:48611 (R;US)
Drift Chambers
OPAL jet chamber full size prototype, 11:48450 (RA;AT)
Position Sensitive Detectors
Detection of charged particles in amorphous silicon layers, 11:48455 (RA;AT)
CHARGED-CURRENT INTERACTIONS
Fragmentation
Study of the quark fragmentation in charged current ν and anti ν interactions of deuterium, 11:49119 (R;FR;In French)
CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARGED-PARTICLE TRANSPORT THEORY
Algorithms
Time-implicit Monte Carlo Collision algorithm for particle-in-cell electron transport models, 11:49507 (J;US)

Boltzmann-Vlasov Equation
Implicit particle methods of order 1. Application to Vlasov-Poisson equation with fixed ions, 11:49472 (R;FR;In French)

CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS

CHARS
Combustion
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
Oxidation
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, March 1-May 31, 1986, 11:47206 (R;US)

CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
ELECTRON MICROPROBE ANALYSIS
QUANTITATIVE CHEMICAL ANALYSIS
Mass Spectroscopy
Process for measuring degradation of sulfur hexafluoride in high voltage systems, 11:48647 (P;US)

CHEMICAL EXPLOSIVES
See also NITROMETHANE
Ignition
Laser initiation of TiH/sub x//$KClO_4$ (x = 0.2, 0.65, 1.65), 11:48650 (R;US)
Laser Radiation
Laser initiation of TiH/sub x//$KClO_4$ (x = 0.2, 0.65, 1.65), 11:48650 (R;US)

CHEMICAL FEEDSTOCKS
Chemical Composition
Research on the behavior of non-process elements in alkaline pulp mills, 11:47884 (RA;US)

CHEMICAL LASERS
Emission Spectroscopy
Electronic fourier transform spectroscopy: performance and application, 11:48105 (BA;US)

CHEMICAL MUTAGENS
See MUTAGENS

CHEMICAL PLANTS
Capitalized Cost
ASPEN costing manual, 11:49614 (R;US)
Cost Estimation
ASPEN costing manual, 11:49614 (R;US)
Economic Analysis
ASPEN costing manual, 11:49614 (R;US)
Operating Cost
ASPEN costing manual, 11:49614 (R;US)

CHEMICAL PROPERTIES
Mathematical Models
Use of a graph theoretic similarity index in prediction studies of linear discriminants and models, 11:48191 (BA;US)

CHEMICAL REACTION KINETICS
See also COMBUSTION KINETICS
Mathematical Models
New approach to quantum mechanical transition-state theory, 11:48144 (J;US)

CHEMICAL REACTIONS
See also CARBONYLATION
CORROSION
DESULFURIZATION
FISCHER-TROPSCH SYNTHESIS
HYDROGENATION
ISOMERIZATION
METHANATION
OXIDATION
Reaction Heat
Solid combustion processes for improved synthesis of non-oxide materials, 11:48216 (R;US)
Thermodynamics
Thermodynamics of multicomponent, miscible, ionic systems: theory and equations, 11:48151 (J;US)

CHEMICAL REACTORS
Design
Pressurized gasification test facility. Construction. Final report, 11:47390 (R;DE)
Specifications
Pressurized gasification test facility. Construction. Final report, 11:47390 (R;DE)

CHEMICAL VAPOR DEPOSITION
Technology Transfer
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)

CHEMICAL WASTES
Ground Disposal
Investigation of ground water contamination potential at Sandia National Laboratories, Albuquerque, NM, 11:48749 (RA;US)
Infrared Spectra
Use of FTIR for automated identification of organic compounds frequently found on hazardous waste sites, 11:48091 (BA;US)
Organic Compounds
Use of FTIR for automated identification of organic compounds frequently found on hazardous waste sites, 11:48091 (BA;US)
Qualitative Chemical Analysis
Laboratory experience in the analysis of orphan waste, 11:48094 (BA;US)
Use of FTIR for automated identification of organic compounds frequently found on hazardous waste sites, 11:48091 (BA;US)
Quantitative Chemical Analysis
Hazardous waste analysis by direct-linked fused silica capillary column gas chromatography/fourier transform infrared/mass spectrometry, 11:48090 (BA;US)

CHEMICALS
See ADDITIVES
MUTAGENS
SURFACTANTS

CHERENKOV COUNTERS
Design
Beamstrahlung monitor for SLC final focus using gamma ray energies, 11:48615 (R;US)

CHERENKOV DETECTORS
See CHERENKOV COUNTERS

CHERENKOV RADIATION
Drift Chambers
Localization properties of a large current mode chamber for Cherenkov radiation photons detection, 11:48516 (RA;AT)

CHERNOBYLSK-4 REACTOR
Radioactive Effluents
ARAC response to the Chernobyl reactor accident, 11:47740 (R;US)

CHINA
Uranium Deposits
Granite-type uranium deposits of China, 11:47271 (RA;XA)
Vein uranium deposits in granites of Xiazhuang ore field, 11:47270 (RA;XA)

CHLOR-ALKALI INDUSTRY
See CHLORINE
SODIUM CARBONATES
SODIUM HYDROXIDES

CHLORATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
NMR Spectra
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)
Nuclear Magnetic Resonance
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)

CHLORINATED ALIPHATIC HYDROCARBONS
Monitoring
Ground water pollution control, 11:48747 (RA;US)
Solvent Properties
Separation of gas mixtures by supported complexes, 11:47175 (R;US)
Water Pollution Control
Ground water pollution control, 11:48747 (RA;US)

CHLORINATED AROMATIC HYDROCARBONS
Ecological Concentration
Decommissioning of the CMP Pits, 11:48743 (RA;US)

Ground Disposal
Decommissioning of the CMP Pits, 11:48743 (RA;US)
Monitoring
Ground water pollution control, 11:48747 (RA;US)
Water Pollution Control
Ground water pollution control, 11:48747 (RA;US)

CHLORINE
Quantity Ratio
Quantitative determination of sulfur and chlorine in crude oils by X-ray fluorescence spectrometry (Energy dispersive), 11:48061 (R;GT;In Spanish)
X-Ray Fluorescence Analysis
Quantitative determination of sulfur and chlorine in crude oils by X-ray fluorescence spectrometry (Energy dispersive), 11:48061 (R;GT;In Spanish)

CHLORINE 35 REACTIONS
Heavy Ion Fusion Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)

CHLORINE 36
Mass Spectroscopy
Accelerator mass spectrometry with heavy ions, 11:48073 (RA;CS)
Scintillation Counting
Attempt to determine environmental ^{36}Cl in groundwater by liquid scintillation counting, 11:48064 (RA;CS)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE COMPOUNDS
See also CHLORATES
Laser Spectroscopy
Experimental studies of photon-surface interaction dynamics in the alkali halides, 11:49075 (R;US)

CHLOROPHYLL
Spatial Distribution
Biological processes associated with the pycnocline and surface fronts in the southeastern Bering Sea, 11:48954 (R;US)

CHROMATID DELETIONS
See CHROMOSOMAL ABERRATIONS

CHROMIUM
Ecological Concentration
Investigation of ground water contamination potential at Sandia National Laboratories, Albuquerque, NM, 11:48749 (RA;US)
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Titration
Automated analyzer for the determination of free acid, 11:48128 (BA;US)

CHROMIUM 51
Diffusion
Impurity diffusion in NiO grain boundaries, 11:47973 (R;GB)
Uptake
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)

CHROMIUM 52
Energy Levels
Excitation of 8^- states in ^{52}Cr, 11:49282 (RA;US)
Isoscalar quenching in the excitation of 8^- states in ^{52}Cr, 11:49281 (RA;US)

CHROMIUM 52 TARGET
Calcium 40 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
Chlorine 35 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)

CHROMIUM 54 TARGET
Calcium 40 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
Chlorine 35 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)

CHROMIUM ALLOYS
See also CHROMIUM BASE ALLOYS
HASTELLOY XR
NICKEL-CHROMIUM STEELS
STAINLESS STEELS
Creep
In-reactor creep behavior of the fusion heats of HT9 and modified 9Cr-1Mo, 11:47935 (R;US)
Physical Radiation Effects
In-reactor creep behavior of the fusion heats of HT9 and modified 9Cr-1Mo, 11:47935 (R;US)
Self-Diffusion
Thermodynamics and diffusion processes in the Fe-Ni-Cr system, 11:47940 (RA;CS;In Czech)
Thermodynamics
Thermodynamics and diffusion processes in the Fe-Ni-Cr system, 11:47940 (RA;CS;In Czech)

CHROMIUM BASE ALLOYS
Chemical Composition
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report, 11:47926 (R;US)

CHROMIUM IONS
Diffusion
Inner-shell x-ray line spectra of highly ionized titanium, chromium, iron, and nickel and their application to laboratory plasmas, 11:49499 (J;US)
X-Ray Spectra
Inner-shell x-ray line spectra of highly ionized titanium, chromium, iron, and nickel and their application to laboratory plasmas, 11:49499 (J;US)

CHROMIUM OXIDES
Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)

CHROMIUM-MOLYBDENUM STEELS
See also ALLOY-HT-9
Chemical Composition
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report, 11:47926 (R;US)
Corrosion Resistance
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)
Cracks
Properties of long-term operated welded joints, 11:47939 (RA;CS;In Czech)
Creep
Remaining-life estimation of boiler pressure parts: crack growth studies. Final report (1 1/4 Cr-1/2 Mo header material), 11:47927 (R;US)
Reactor Materials
Transfer of modified 9Cr-1Mo steel technology through cooperative programs (1980-1985), 11:47518 (R;US)
Technology Transfer
Transfer of modified 9Cr-1Mo steel technology through cooperative programs (1980-1985), 11:47518 (R;US)

CHROMIUM-NICKEL STEELS
STAINLESS STEEL-304
See also STAINLESS STEEL-304L
STAINLESS STEEL-316
Corrosion Products
Characterisation by Raman spectroscopy of oxide scales formed on a 20%Cr/25%Ni/niobium stabilised stainless steel, 11:47907 (R;GB)
Cracks
Properties of long-term operated welded joints, 11:47939 (RA;CS;In Czech)
Tensile Properties
Static and dynamic tensile tests on wide X 6 CrNi 18 11 steel plates to demonstrate the integrity of the reactor tank for the SNR 300 fast sodium-cooled reactor, 11:47520 (TG;GB)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHROMOSOMAL ABERRATIONS
See also CHROMOSOME BREAKAGE
Biological Indicators
Chromosomal radiosensitivity of tadpoles of limnodynastes tasmaniensis, 11:48871 (RA;AU)
Gamma Radiation
Chromosome aberrations kinetics in mouse bone marrow cells and embryos after irradiation and cyclophosphamide treatment, 11:48845 (RA;BG;In Bulgarian)
Radioinduction
Chromosome aberrations kinetics in mouse bone marrow cells and embryos after irradiation and cyclophosphamide treatment, 11:48845 (RA;BG;In Bulgarian)
Chromosome aberrations induced by H-3-thymidine and H-3-uridine in Rana ridibunda L. , 11:48852 (RA;BG;In Bulgarian)
Cytogenetic and hormonal studies during irradiation, 11:48844 (RA;BG;In Bulgarian)
Radiation-induced chromosome damaged G_2 cells, 11:48874 (RA;AU)
Tritium Compounds
Chromosome aberrations induced by H-3-thymidine and H-3-uridine in Rana ridibunda L. , 11:48852 (RA;BG;In Bulgarian)
CHROMOSOME ABERRATIONS
See CHROMOSOMAL ABERRATIONS
CHROMOSOME BREAKAGE
Microdosimetric characteristics and biological effect of ionizing particles, 11:48837 (RA;CS;In Czech)
CHROMOSOME EXCHANGES
See CHROMOSOMAL ABERRATIONS
CHROMOSOME FRAGMENTS
See CHROMOSOMAL ABERRATIONS
CIRCUIT BREAKERS
Field Tests
Development of an SF_6 high-voltage dc circuit breaker. Final report, 11:47487 (R;US)
CIRCUITS (ELECTRONIC)
See ELECTRONIC CIRCUITS
CIRCULAR POINT COLLECTORS
See PARABOLIC DISH COLLECTORS
CITIES
See URBAN AREAS
CIVIL DEFENSE
Shelters
Effects of edge restraint on slab behavior. Final report, 11:49643 (R;US)
CLAMS
Radiosterilization
Shellfish depuration by gamma irradiation. Progress report No. 1, October 1, 1985-July 25, 1986, 11:47351 (R;US)
CLASSICAL MECHANICS
Motion
Physical explanation of quasiperiodic motion and the onset of chaos in nonlinear systems, 11:49452 (RA;US)
Nonlinear Problems
Physical explanation of quasiperiodic motion and the onset of chaos in nonlinear systems, 11:49452 (RA;US)
CLATHRATES
Chemical Reactions
Charge transfer in rare earth-trichloride graphite intercalation compounds, 11:48168 (J;GB)
Electric Conductivity
Charge transfer in rare earth-trichloride graphite intercalation compounds, 11:48168 (J;GB)
CLEAN WATER ACT
Prior to April 1980, FEDERAL WATER POLLUTION CONTROL ACT was used to index this concept.
Compliance
Clean Water Act and biological studies at the Savannah River Plant, 11:47195 (RA;US)
CLIMATES
Research Programs
Detection of CO_2-induced climate change. Progress report, 1 December 1985-15 July 1986, 11:48665 (R;US)
CLINTON P. ANDERSON MESON PHYSICS FACILIT
See LAMPF LINAC
CLINTON-1 REACTOR
Dewitt, Illinois, USA
Reactor Operation
Safety Evaluation Report related to the operation of Clinton Power Station, Unit No. 1 (Docket No. 50-461). Supplement No. 6, 11:47724 (R;US)
Reactor Safety
Safety Evaluation Report related to the operation of Clinton Power Station, Unit No. 1 (Docket No. 50-461). Supplement No. 6, 11:47724 (R;US)
CLOSE-IN FALLOUT
See LOCAL FALLOUT
CLOTHING
Surface Contamination
Dose factors for contamination of skin and clothing, 11:48832 (R;DE;In German)
CLUSTERS (GALAXY)
See GALAXY CLUSTERS
CLUSTERS (SOLID)
See SOLID CLUSTERS
CLUSTERS (STAR)
See STAR CLUSTERS
CO2 FLOODING

COAL
See also BLACK COAL
BROWN COAL
SUBBITUMINOUS COAL
Chemistry
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Combustion
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, March 1-May 31, 1986, 11:47206 (R;US)
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
Operation and maintenance of DOE/PETC Combustion Test facilities. Final activity report, April 1978-December 19, 1982, 11:47203 (R;US)
Combustion Products
Literature searches on metal recovery by leaching and carbothermic reduction, 11:47193 (R;US)
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 11:47202 (R;US)
Mechanism of deposition in coal-fired gas turbine systems, October 1, 1985-October 1, 1986, 11:47201 (R;US)
Deashing
Coal deashing and desulfurization utilizing microwave irradiation at 2450 MHz, 11:47199 (R;US)
Desulfurization
Coal deashing and desulfurization utilizing microwave irradiation at 2450 MHz, 11:47199 (R;US)
Microbial removal of organic sulfur from coal. Third quarterly report, April-June 1986, 11:47169 (R;US)
Electron Spin Resonance
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:47183 (R;US)
Enthalpy
Structural characterization/correlation of calorimetric properties of coal fluids. Third quarterly report, March 1-May 31, 1986, 11:47185 (R;US)
Fluidized-Bed Combustion
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 11:47202 (R;US)
Impurities
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Liquid Column Chromatography
Analytical applications of ultrasensitive polarization measurements, 11:47189 (D;US)
Market
Use of coal liquid derivatives for preparation and stabilization of coal-water slurries, 11:47200 (B;US)

Microwave Heating
Coal deashing and desulfurization utilizing microwave irradiation at 2450 MHz, 11:47199 (R;US)
Minerals
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Molecular Structure
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:47183 (R;US)
Nondestructive Testing
Structural variations in coal macerals: application of two-dimensional and dipolar dephasing ^{13}C-NMR techniques, 11:47190 (J;US)
Nuclear Magnetic Resonance
Preliminary studies on the aromaticity of Australian coals, 11:47191 (J;GB)
Structural variations in coal macerals: application of two-dimensional and dipolar dephasing ^{13}C-NMR techniques, 11:47190 (J;US)
Occupational Diseases
Acne picealis. Cutaneous and visceral effects of exposure to distillation products of coal and crude oil and their valuation for insurance, 11:48909 (R;DE;In German)
Oxidation
Comparison of a nonionic surfactant and an anionic dispersant as coal water additives, 11:47188 (B;US)
Petrography
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Petrology
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Plasticity
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis. Final technical progress report, 11:47154 (R;US)
Polarization
Analytical applications of ultrasensitive polarization measurements, 11:47189 (D;US)
Pyrolysis
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
Enhanced coal liquefaction by pyrolysis in supercritical fluids. Quarterly progress report, April-June 1986, 11:47168 (R;US)
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis. Final technical progress report, 11:47154 (R;US)
Quantitative Chemical Analysis
Certification of the contents (mass fraction) of carbon, hydrogen, nitrogen, chlorine, arsenic, cadmium, manganese, mercury, lead, selenium, vanadium and zinc in three coals. Gas coal CRM No. 180; Coking coal CRM No. 181; Steam coal CRM No. 182, 11:47186 (R;DE)
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Residues
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
Solvent Extraction
Enhanced coal liquefaction by pyrolysis in supercritical fluids. Quarterly progress report, April-June 1986, 11:47168 (R;US)
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis. Final technical progress report, 11:47154 (R;US)
Structural Chemical Analysis
Preliminary studies on the aromaticity of Australian coals, 11:47191 (J;GB)
Structural variations in coal macerals: application of two-dimensional and dipolar dephasing ^{13}C-NMR techniques, 11:47190 (J;US)
Supercritical Gas Extraction
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
Wettability
Comparison of a nonionic surfactant and an anionic dispersant as coal water additives, 11:47188 (B;US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS
See also COAL SEAMS
Leasing
Assessment of development and production potential of federal coal leases. Volume 2. Working papers. Part E, Vol. 1. Development and production potential of undeveloped federal coal leases and preference-right lease applications in the Powder River Basin and other Wyoming coal basins: Wyoming task force report. Working paper, 11:47208 (R;US)
Assessment of development and production potential of federal coal leases. Volume 2. Working papers. Part 1, Vol. 2. Analysis of federal coal leases in mine plans: detailed summaries of mine plans and lease blocks in Colorado, New Mexico, and Utah, 11:47209 (R;US)
Methane
Geologic and reservoir characteristics of the Red Mountain coalbed-methane test site in the Piceance Basin. Topical report, April 15, 1983-January 31, 1986, 11:47235 (R;US)
Preliminary economic assessment potential for producing coalbed methane for the multiple coal seams completion project at Rock Creek. Topical report, March 1983-May 1986, 11:47234 (R;US)

COAL EXTRACTS
Chromatography
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
Infrared Spectra
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
Liquid Column Chromatography
Exploratory research on mutagenic activity of coal-related materials using statistical evaluation, 11:47210 (R;US)
Mutagen Screening
Exploratory research on mutagenic activity of coal-related materials using statistical evaluation, 11:47210 (R;US)
Nuclear Magnetic Resonance
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)

COAL FINES
Agglomeration
Fine coal cleaning. Final report for the period ending March 31, 1986, 11:47197 (R;US)
Flotation
Fine coal cleaning. Final report for the period ending March 31, 1986, 11:47197 (R;US)
Particle Size
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Washing
Fine coal cleaning. Final report for the period ending March 31, 1986, 11:47197 (R;US)

COAL GASIFICATION
See also LURGI PROCESS
TEXACO GASIFICATION PROCESS
Catalysis
Catalyzed gasification of coal: isotope and XPS studies, May 16-August 15, 1986, 11:47162 (R;US)
Catalysts
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Chemical Reaction Kinetics
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Economics
An overview of DOE/METC coal projects and their application to petrochemicals production, 11:47176 (B;US)

Environmental Impacts
Process description of the WyCoalGas gasification project. Topical report, 11:47174 (R;US)
Fly Ash
Literature searches on metal recovery by leaching and carbothermic reduction, 11:47193 (R;US)
In-Situ Gasification
Simulation of underground coal gasification. Phase I. Final report, 11:47143 (R;DE;In German)
Lurgi Process
Process description of the WyCoalGas gasification project. Topical report, 11:47174 (R;US)
Pressure Dependence
Simulation of underground coal gasification. Phase I. Final report, 11:47143 (R;DE;In German)
Reaction Kinetics
Simulation of underground coal gasification. Phase I. Final report, 11:47143 (R;DE;In German)
Research Programs
An overview of DOE/METC coal projects and their application to petrochemicals production, 11:47176 (B;US)
Texaco Gasification Process
Process description of the WyCoalGas gasification project. Topical report, 11:47174 (R;US)

COAL GASIFICATION PLANTS
Capitalized Cost
Feasibility study for the production of low/medium-Btu gas from coal for Tri-City Regional Port District, 11:47170 (R;US)
Computerized Simulation
ASPEN sensitivity study for the Great Plains Gasification Plant rectisol section, 11:47159 (R;US)
ASPEN sensitivity study for the Great Plains Gasification Plant Methanation Section, 11:47158 (R;US)
ASPEN sensitivity study for the Great Plains Gasification Plant gasifier model, documentation and experimental verification, 11:47157 (R;US)
Construction
The Great Plains Coal Gasification Project status, 11:47177 (BA;US)
Environmental Policy
Health and environmental aspects of the Great Plains Coal Gasification Facility, 11:47194 (RA;US)
Feasibility Studies
Feasibility study for the production of low/medium-Btu gas from coal for Tri-City Regional Port District, 11:47170 (R;US)
Health Hazards
Health and environmental aspects of the Great Plains Coal Gasification Facility, 11:47194 (RA;US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Consolidated bibliography of publications of the advanced research and technology development (AR and TD) Fossil Energy Materials Program, October 1, 1979-April 30, 1986, 11:47172 (R;US)
Materials Testing
Mechanical properties and corrosion behavior of structural ceramics exposed to coal gasification environments, 11:47146 (R;US)
Operation
External combustion steam injected gas turbine for cogeneration, 11:47786 (R;US)
Performance
The Great Plains Coal Gasification Project status, 11:47177 (BA;US)
Planning
The Great Plains Coal Gasification Project status, 11:47177 (BA;US)
Safety Engineering
Safety in entrained coal gasifiers with dry feed, 11:47156 (R;US)

COAL LIQUEFACTION
See also SUPERCRITICAL GAS EXTRACTION
TSL PROCESS
Catalysts
Advanced NMR characterization of zeolite catalysts. Final technical report, 11:48136 (R;US)
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Chemical Reaction Kinetics
Studies of the pyrolysis of hydroaromatic compounds with an emphasis on reactions of ortho-quinodimethanes, 11:47178 (D;US)
Hydrogen Transfer
Low-rank coal liquefaction mechanisms. Final report for the period ending March 31, 1986, 11:47150 (R;US)
International Cooperation
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)
Measuring Instruments
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, April-June 1986, 11:47167 (R;US)
Meetings
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)
Optimization
Enhanced coal liquefaction by pyrolysis in supercritical fluids. Quarterly progress report, April-June 1986, 11:47168 (R;US)
Organic Solvents
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986, 11:47151 (R;US)
Process Development Units
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Research Programs
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)

COAL LIQUEFACTION PLANTS
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Consolidated bibliography of publications of the advanced research and technology development (AR and TD) Fossil Energy Materials Program, October 1, 1979-April 30, 1986, 11:47172 (R;US)
Organic Solvents
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility, 11:47173 (R;US)
Pumps
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility, 11:47173 (R;US)

COAL LIQUIDS
Chemical Composition
Complex mixtures: comparative chemical and toxicological characterization, 11:48905 (R;US)
Denitrification
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Desulfurization
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Gas Chromatography
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986, 11:47151 (R;US)
Hydrogenation
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Thirteenth interim report, processing of 750 degrees end point Illinois ITSL oil:

engineering design studies and estimated processing costs, 11:47147 (R;US)
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)
Liquid Column Chromatography
Analytical applications of ultrasensitive polarization measurements, 11:47189 (D;US)
Mass Spectroscopy
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986, 11:47151 (R;US)
Mutagenesis
Complex mixtures: comparative chemical and toxicological characterization, 11:48905 (R;US)
Neoplasms
Toxicological benchmarks for synfuels characterization, 11:47171 (R;US)
Nuclear Magnetic Resonance
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986, 11:47151 (R;US)
Polarization
Analytical applications of ultrasensitive polarization measurements, 11:47189 (D;US)
Refining
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Thirteenth interim report, processing of 750 degrees end point Illinois ITSL oil: engineering design studies and estimated processing costs, 11:47147 (R;US)
Solvent Extraction
Exploratory research on mutagenic activity of coal-related materials using statistical evaluation, 11:47210 (R;US)
Toxicity
Toxicological benchmarks for synfuels characterization, 11:47171 (R;US)
Viscosity
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986, 11:47151 (R;US)

COAL MINERS
Training
Dragline operator training simulator, 11:47196 (BA;US)

COAL MINES
Methane
Dual-wavelength light sources. Research report, October 1982-October 1985, 11:47211 (R;US)

COAL PREPARATION PLANTS
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Consolidated bibliography of publications of the advanced research and technology development (AR and TD) Fossil Energy Materials Program, October 1, 1979-April 30, 1986, 11:47172 (R;US)

COAL SEAMS
Lithotypes
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)
Variations
Distribution of inorganics. Final report for the period ending March 31, 1986, 11:47181 (R;US)

COAL TAR
Thermal Cracking
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis. Final technical progress report, 11:47154 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COALTEK PROCESS
See FUEL FEEDING SYSTEMS

COASTAL WATERS
Metals
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Particulates
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)

COBALT
Catalytic Effects
Methane suppression from metal-zeolite catalysts in synthesis gas conversion, 11:47368 (J;US)
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
ICP-MS and its application in a nuclear laboratory, 11:48102 (BA;US)
Materials Recovery
Supported liquid membranes in 1986: new technology or scientific curiosity, 11:48057 (R;US)
Solvent Extraction
Supported liquid membranes in 1986: new technology or scientific curiosity, 11:48057 (R;US)

COBALT 58
Radiation Monitoring
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)
Radioecological Concentration
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)

COBALT 59 TARGET
Nitrogen 14 Reactions
Complete fusion and some evidences of incomplete fusion of the $^{14}N + {}^{59}Co$ system, 11:49304 (RA;BR)

COBALT 60
Aerial Monitoring
Aerial radiological monitoring survey Savannah River Plant, 11:48680 (RA;US)
Monitoring
Los Alamos National Laboratory's environmental surveillance and radiological emergency vehicle and the Co-60 incident, 11:48439 (RA;US)
Radiation Monitoring
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radioecological Concentration
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)
Uptake
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)

COBALT COMPLEXES
Electron Transfer
Comparison of electron-transfer matrix elements for transition-metal complexes: t/sub 2g/ vs. e/sub g/ transfer and NH_3 vs. H_2O ligands, 11:48146 (J;US)
Photochemical Reactions
Photochemical separation of metals in aqueous solution, 11:48132 (J;NL)
Photochemistry
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)

Reduction
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)
Separation Processes
Photochemical separation of metals in aqueous solution, 11:48132 (J;NL)

COBALT FLUORIDES
Neutron Diffraction
Study of the hyperfine augmented nuclear polarization by elastic neutron scattering, 11:49428 (R;DE;In German)

COBALT OXIDES
Catalytic Effects
Improved catalysts for liquid hydrocarbon fuels from syngas. Sixth quarterly technical progress report, January-March 1986, 11:47363 (R;US)

COFFEE
See BEVERAGES

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Internal Combustion Engines
Integrated natural-gas-engine cooling-jacket vapor-compressor program. Annual report (Phase 1A), February 1985-October 1985, 11:47240 (R;US)

COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS

COILS (MAGNETIC)
See MAGNET COILS

COINCIDENCE CIRCUITS
Fast counting electronics for neutron coincidence counting, 11:48623 (P;US)

COINCIDENCE SPECTROMETRY
Beta Spectrometers
Low background beta-gamma-coincidence spectrometer, 11:48552 (RA;CS)
Some experiences with a beta-gamma coincidence spectrometer, 11:48553 (RA;CS)
Calibration
Experimental apparatus for photon/ion coincidence measurements of dielectronic recombination, 11:49083 (J;US)
Gamma Spectrometers
Low background beta-gamma-coincidence spectrometer, 11:48552 (RA;CS)
Some experiences with a beta-gamma coincidence spectrometer, 11:48553 (RA;CS)
NaI Detectors
NaI(Tl) triple-coincidence spectrometer for the detection of ^{26}Na in meteorites and some results of the Jilin chondrite, 11:48547 (RA;CS)
Operation
Experimental apparatus for photon/ion coincidence measurements of dielectronic recombination, 11:49083 (J;US)

COLD STORAGE
Meetings
International load management conference: proceedings, 11:47480 (R;US)
Thermal Energy Storage Equipment
Market constraints for residential cool storage systems. Final report, 11:47749 (R;US)

COLLECTOR PROPERTIES
See PERMEABILITY
POROSITY

COLLECTOR PROPERTIES (ROCKS)

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Coal Gasification
Integrated coal-gasification combined-cycle power plant, project definition (Phase I). Final report, 11:47479 (R;DE;In German)
Coal-Fired Gas Turbines
Design, construction and testing of a non-polluting coal fired power station - model power station Voelklingen. Final report, 11:47478 (R;DE;In German)
Fluidized-Bed Combustion
Design, construction and testing of a non-polluting coal fired power station - model power station Voelklingen. Final report, 11:47478 (R;DE;In German)
Natural Draft Cooling Towers
Design, construction and testing of a non-polluting coal fired power station - model power station Voelklingen. Final report, 11:47478 (R;DE;In German)

COMBUSTION
See also IN-SITU COMBUSTION
Catalysis
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
Combustion Kinetics
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, March 1-May 31, 1986, 11:47206 (R;US)
Mathematical Models
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, March 1-May 31, 1986, 11:47206 (R;US)
Meetings
Symposium (International) on Combustion, 20th, University of Michigan, Ann Arbor, MI, August 12-17, 1984, Proceedings, 11:48218 (B;US)
Test Facilities
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)

Operation and maintenance of DOE/PETC Combustion Test facilities. Final activity report, April 1978-December 19, 1982, 11:47203 (R;US)

COMBUSTION CHAMBERS
Configuration
Dilution jet mixing program, supplementary report, 11:48322 (R;US)
Flow Rate
Dilution jet mixing program, supplementary report, 11:48322 (R;US)
Heat Transfer
Burner liner thermal/structural load modeling: TRANCITS program user's manual, 11:48323 (R;US)
Mathematical Models
Dilution jet mixing program, supplementary report, 11:48322 (R;US)
Stress Analysis
Burner liner thermal/structural load modeling: TRANCITS program user's manual, 11:48323 (R;US)
Temperature Distribution
Dilution jet mixing program, supplementary report, 11:48322 (R;US)

COMBUSTION KINETICS
Gas Flow
Mass spectrometric gas composition measurements associated with jet interaction tests in a high-enthalpy wind tunnel, 11:48214 (R;US)
Mathematical Models
Chemical kinetic analysis of pulse combustors, 11:48324 (R;US)

COMBUSTION PRODUCTS
Absorptivity
Thermal radiation in MHD design applications, 11:47824 (R;US)
Emissivity
Thermal radiation in MHD design applications, 11:47824 (R;US)
Filtration
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 11:47202 (R;US)
Hot Gas Cleanup
Gas stream cleanup. Technology status report, 11:47160 (R;US)
Materials Recovery
Literature searches on metal recovery by leaching and carbothermic reduction, 11:47193 (R;US)

COMMERCIAL BUILDINGS
Passive Solar Heating Systems
Total building impacts of south-facing roof apertures, 11:47857 (R;US)

COMMODITIES
Market
Imperfectly competitive equilibria in international commodity markets, 11:47771 (J;US)

COMMUNICATIONS
See also DATA TRANSMISSION
Interference
Cape Blanco Wind Farm feasibility study. Technical Report No. 5. Communications inteference, 11:47458 (R;US)

COMMUNITIES
Energy Conservation
Evaluating potential employment effects of community energy programs, 11:47803 (RA;US)

COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Plasma Production
Steady state compact toroidal plasma production, 11:49509 (P;US)

COMPOSITE MATERIALS
See also CERMETS
Fabrication
Preparation of carbon/ceramic composite materials by use of raw coke (v) - carbon/B_4C composite materials, 11:48003 (R;US)
Mechanical Properties
Effect of secondary phases on the properties of B_4C-Al composites, 11:48005 (BA;US)
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Microstructure
Effect of secondary phases on the properties of B_4C-Al composites, 11:48005 (BA;US)
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Phase Studies
Effect of secondary phases on the properties of B_4C-Al composites, 11:48005 (BA;US)
Protective Coatings
Abrasion and impact resistant coatings, 11:48004 (R;US)
Surfaces
Characterization of ion-implanted and laser-processed wear surfaces. Final report, 1 December 1984-28 February 1986, 11:48002 (R;US)
Thermodynamic Properties
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)

COMPOSITE MODELS
See also PARTON MODEL
QUARK MODEL
Reviews
Composite models of 'elementary' particles and fields, 11:49152 (R;JP)

COMPOUND NUCLEI
Decay
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)

COMPOUNDS (INORGANIC)
See INORGANIC COMPOUNDS

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSIBLE FLOW
Computerized Simulation
Direct computation of wall bounded aerosol turbulent flow interactions, 11:49102 (R;US)

COMPTON EFFECT
Corrections
Compton scatter correction for the MGH analog ring positron camera, 11:49433 (R;US)

COMPTON SCATTERING
See COMPTON EFFECT

COMPTON SPECTROMETERS
Li-Drifted Ge Detectors
Optimization of an anticompton spectrometer for the analysis of biological samples, 11:48557 (RA;CS)
NaI Detectors
Optimization of an anticompton spectrometer for the analysis of biological samples, 11:48557 (RA;CS)
Optimization
Optimization of an anticompton spectrometer for the analysis of biological samples, 11:48557 (RA;CS)

Planning
Oak Ridge Y-12 Plant Computer Integrated Manufacturing Strategic Plan (FY 1986-1992): a working document, 11:48225 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Design
Computer-controlled system for rapid soil analysis of ^{226}Ra, 11:48093 (BA;US)
Electronic Circuits
Implementation of FORPS on a NOVIX Beta Board, 11:48301 (R;US)
Performance
New laboratory robotic system for automated sample preparation and integrated analysis, 11:48095 (BA;US)
Robotic sample preparation for radiochemical plutonium and americium analyses, 11:48118 (BA;US)
Real Time Systems
Implementation of FORPS on a NOVIX Beta Board, 11:48301 (R;US)

COMPUTERIZED SIMULATION
Monte Carlo Method
Simulations: A tool for studying quantum condensed matter systems, 11:49467 (J;US)
W Codes
Core melt - concrete interaction: status of the WECHSL code development and present results, 11:47702 (RA;US)

COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)

COMPUTERS
See also CRAY COMPUTERS
DEC COMPUTERS
IBM COMPUTERS
MANIAC COMPUTERS
Human Factors Engineering
Guidelines for the syntactic design of audio cues in computer interfaces. Revision 1, 11:49626 (R;US)
Operation
Physics Division computer facilities, 11:48371 (RA;US)
Uses
Mathematics and computing, 11:49636 (J;US)

CONCANAVALIN
Receptors
Binding of [^{125}I] Concanavalin A to isolated Langerhans islets of rats, 11:48792 (R;DE;In German)

CONCENTRATIONS (RADIONUCLIDES)
See RADIOACTIVITY

CONCRETES
Chemical Reaction Kinetics
Experimental and theoretical study on the reaction of hot liquid sodium with concretes, 11:47704 (R;DE;In German)
Chemical Reactions
Effects of the presence of core debris on the behavior of sodium-concrete reactions, 11:47690 (RA;US)
Reactor Materials
Characterization and improvement of coatings protecting concrete against contamination, 11:47626 (R;FR;In French)
Surface Coating
Characterization and improvement of coatings protecting concrete against contamination, 11:47626 (R;FR;In French)

CONDENSED AROMATICS
See also ANTHRACENE
BENZANTHRACENE
BENZOPYRENE
NAPHTHALENE
PHENANTHRENE
PYRENE
Formation Heat
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)
Hydrogen Transfer
Transition metal catalysis of hydrogen shuttling in coal liquefaction (1,4-dihydrobenzene, 1,4-dihydronaphthalene, 9,10-phenanthrene), 11:47163 (R;US)
Pyrolysis
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)
Pyrolysis Products
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)
Reaction Kinetics
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)

CONDENSERS (STEAM)
See STEAM CONDENSERS

CONING
See CHANNELING

CONSERVATION (ENERGY)
See ENERGY CONSERVATION

CONSERVATION LAWS
L_1 contraction for systems of conservation laws. Technical summary report, 11:49466 (R;US)

CONTACT RADIOTHERAPY

CONTACTS (ELECTRIC)
See ELECTRIC CONTACTS

CONTAINERS
See also DEWARS
PRESSURE VESSELS
REACTOR VESSELS
TANKS
Corrosion
Selecting metallic canister materials for disposal of high-level radioactive wastes in rock salt formations, 11:47320 (R;DD;In German)
Materials
ERG review of waste package container materials selection and corrosion, 11:47913 (R;US)
Radioactive Waste Disposal
Selecting metallic canister materials for disposal of high-level radioactive wastes in rock salt formations, 11:47320 (R;DD;In German)

CONTAINMENT BUILDINGS
Impact Strength
Annual meeting on nuclear technology 1981. Technical meeting: External impact, 11:47705 (R;DE;In German)

Common practice of component and systems for LWR-type reactors against external impact, 11:47706 (RA;DE;In German)
Presentation of the external impact philosophy, 11:47707 (RA;DE;In German)
Protective design against impact loads in nuclear civil engineering, 11:47708 (RA;DE;In German)
Seismic design in nuclear civil engineering, 11:47709 (RA;DE;In German)
Seismic Effects
Presentation of the external impact philosophy, 11:47707 (RA;DE;In German)
CONTAINMENT SYSTEMS
Concretes
Containment pressure response to a meltdown condition of the light water reactor, 11:47703 (RA;US)
Heat Transfer
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Containment pressure response to a meltdown condition of the light water reactor, 11:47703 (RA;US)
Hydraulics
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Meltdown
Impact of heat-generating debris on containment loading - an overview, 11:47694 (RA;US)
Performance
Systematic approach to containment performance criteria, 11:47656 (R;US)
Reliability
Systematic approach to containment performance criteria, 11:47656 (R;US)
CONTAMINATION (SURFACE)
See SURFACE CONTAMINATION
CONTENT ANALYSIS
See CHEMICAL ANALYSIS
CONTINENTAL SHELF
Baseline Ecology
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 38, 11:47222 (R;US)
Offshore Drilling
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 38, 11:47222 (R;US)
CONTROL ELEMENTS
Reactivity Worths
Measurements and analyses on reactivity effects of absorber rods in a light-water moderated UO_2 lattices, 11:47638 (R;JP;In Japanese)
CONTROL (RADIOACTIVITY)
See RADIATION MONITORING
CONTROL RODS
See CONTROL ELEMENTS
CONTROL ROOMS
Design
Ergonomic design of nuclear power plant central rooms, 11:47612 (RA;DE;In German)
Human Factors Engineering
Ergonomic design of nuclear power plant central rooms, 11:47612 (RA;DE;In German)
CONTROL THEORY (REACTOR)
See REACTOR KINETICS
CONVECTIVE INSTABILITIES
Kinetics
Kinetic theory of fluctuations in fluids far from equilibrium, 11:49525 (BA;US)
COOLANT-FUEL INTERACTIONS
See FUEL-COOLANT INTERACTIONS
COOLANTS
See also specific coolant materials.
Testing
Thawing of lithium in the SP-100 reactor core configuration, 11:47538 (RA;US)
COOLERS
See HEAT EXCHANGERS
COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS
COOLING SYSTEMS
See also REACTOR COOLING SYSTEMS
THERMONUCLEAR REACTOR COOLING SYSTEMS
Radiation Hazards
Activation product transport in a FLiBe-vanadium alloy-HT9 system, 11:49573 (RA;US)
COPPER
Catalytic Effects
Methane suppression from metal-zeolite catalysts in synthesis gas conversion, 11:47368 (J;US)
Physical Radiation Effects
Collapse of defect cascades to dislocation loops during self-ion irradiations of Fe, Ni and Cu at 30, 300 and 600°K, 11:47920 (R;US)
Shock Waves
Attenuation of shock waves in copper and stainless steel, 11:47946 (R;US)
Sorptive Properties
Photoemission study of the adsorption of benzotriazole on copper, 11:48205 (D;US)
Ultrasonic Waves
Angular dependence of ultrasonic wave propagation in a stressed, orthorhombic continuum: Theory and application to the measurement of stress and texture, 11:47953 (J;US)
COPPER 63 TARGET
Oxygen 16 Reactions
Detection of fission like process in the sup(63,65) Cu + ^{16}O systems, 11:49303 (RA;BR)
Fusion cross section measurements for the sup(63,65) Cu + ^{16}O systems, 11:49302 (RA;BR)
Study of heavy ion transfer reactions for ^{16}O + sup(63,65) Cu systems at energies near the Coulomb barrier, 11:49301 (RA;BR)
COPPER 65 TARGET
Oxygen 16 Reactions
Detection of fission like process in the sup(63,65) Cu + ^{16}O systems, 11:49303 (RA;BR)
Fusion cross section measurements for the sup(63,65) Cu + ^{16}O systems, 11:49302 (RA;BR)
Study of heavy ion transfer reactions for ^{16}O + sup(63,65) Cu systems at energies near the Coulomb barrier, 11:49301 (RA;BR)
Proton Reactions
Construction of a time-of-flight neutron spectrometer for reaction angles 0° <= theta <= 180° and study of the reaction ^{65}Cu(p,xn) ^{65}Zn for Esub(p)=26.7 MeV, 11:48603 (R;DE;In German)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Chemical Preparation
Copper-tantalum alloy, 11:47959 (P;US)
Erosion
Sputtering/redeposition analysis of alkali-based tungsten composites for limiter/divertor applications, 11:47934 (R;US)
Physical Radiation Effects
Cascade defect production and irradiation enhanced diffusion in Cu_3Au, 11:47918 (R;US)
Collapse of defect cascades to dislocation loops in Cu_3Au, 11:47919 (R;US)
Sputtering
Sputtering/redeposition analysis of alkali-based tungsten composites for limiter/divertor applications, 11:47934 (R;US)
Tubes
Effects of oxygen, copper and acid chlorides on denting corrosion, 11:47499 (R;US)
COPPER BASE ALLOYS
Physical Radiation Effects
Radiation-induced segregation in Cu-Au alloys (1 at. % Au), 11:47916 (R;US)

COPPER COMPOUNDS
Fluctuations
Wave-vector— and magnetic-field—dependent spin fluctuations in the heavy-fermion system $CeCu_6$, 11:47964 (J;US)
Kondo Effect
Wave-vector— and magnetic-field—dependent spin fluctuations in the heavy-fermion system $CeCu_6$, 11:47964 (J;US)
COPPER IONS
Electron-Ion Collisions
Electron-impact ionization of multicharged metal ions: Ni/sup 3+/, Cu/sup 2+/, Cu/sup 3+/, and Sb/sup 3+/, 11:49092 (J;US)
COPPER SELENIDE SOLAR CELLS
Efficiency
Potential of thin-film solar cell module technology, 11:47401 (BA;US)
Photocurrents
Voltage and light bias-dependent spectral response of the $CuInSe_2$/Cd(Zn)S thin-film solar cell, 11:47395 (J;US)
Spectral Response
Voltage and light bias-dependent spectral response of the $CuInSe_2$/Cd(Zn)S thin-film solar cell, 11:47395 (J;US)
Technology Assessment
Potential of thin-film solar cell module technology, 11:47401 (BA;US)
COPPER VAPOR LASERS
See GAS LASERS
CORE FLOODING SYSTEMS
Computerized Simulation
BERTHA: a programme for the thermal/hydraulic analysis of reflooding experiments, 11:47653 (R;GB)
Validation
BERTHA: a programme for the thermal/hydraulic analysis of reflooding experiments, 11:47653 (R;GB)
CORES (NUCLEAR)
See NUCLEAR CORES
CORES (REACTOR)
See REACTOR CORES
CORIUM
After-Heat Removal
Dryout of a multi-dimensional porous bed, 11:47677 (RA;US)
Flooding in particle beds and its role in dryout heat flux prediction, 11:47671 (RA;US)
Heat Transfer
Boil, a two dimensional model for boiling in an active particles bed, 11:47684 (RA;US)
Coolability of UO_2 debris beds in pressurized water pools: DCC-1 and DCC-2 experiment results, 11:47678 (RA;US)
Coolability of UO_2 with downward heat removal the D10 experiment, 11:47686 (RA;US)
CORCON-MOD1 modelling improvements, 11:47701 (RA;US)
Design features to enhance debris bed coolability, 11:47687 (RA;US)
Experimental studies of dryout during boiling in particle beds at AEE Winfrith (UKAEA), 11:47676 (RA;US)
Extended dryout and rewetting of small-particle core debris, 11:47685 (RA;US)
Fluidization of a particulate bed during quenching by flooding from bottom, 11:47682 (RA;US)
Geometrical radiation exchange factors for axial radiative transfer in an LWR core filled with absorbing-emitting gases, 11:47679 (RA;US)
Interfacial heat transfer between bubble agitated immiscible liquid layers, 11:47700 (RA;US)
Quenching by top flooding of a heat generating particulate bed with gas injection at the bottom, 11:47680 (RA;US)
Refined model for the coolability of core debris with flow entry from the bottom, 11:47672 (RA;US)
Scale effects and structure of dryout zone in debris bed coolability experiments, 11:47675 (RA;US)
Thermal-hydraulic uncertainties affecting severe accident progression, 11:47691 (RA;US)
Transient analysis of debris bed heat transfer, 11:47674 (RA;US)
Transient quenching of superheated debris beds during bottom reflood, 11:47681 (RA;US)
Hydraulics
Boil, a two dimensional model for boiling in an active particles bed, 11:47684 (RA;US)
Coolability of UO_2 debris beds in pressurized water pools: DCC-1 and DCC-2 experiment results, 11:47678 (RA;US)
Coolability of UO_2 with downward heat removal the D10 experiment, 11:47686 (RA;US)
CORCON-MOD1 modelling improvements, 11:47701 (RA;US)
Design features to enhance debris bed coolability, 11:47687 (RA;US)
Experimental studies of dryout during boiling in particle beds at AEE Winfrith (UKAEA), 11:47676 (RA;US)
Extended dryout and rewetting of small-particle core debris, 11:47685 (RA;US)
Fluidization of a particulate bed during quenching by flooding from bottom, 11:47682 (RA;US)
Geometrical radiation exchange factors for axial radiative transfer in an LWR core filled with absorbing-emitting gases, 11:47679 (RA;US)
Interfacial heat transfer between bubble agitated immiscible liquid layers, 11:47700 (RA;US)
Quenching by top flooding of a heat generating particulate bed with gas injection at the bottom, 11:47680 (RA;US)
Refined model for the coolability of core debris with flow entry from the bottom, 11:47672 (RA;US)
Scale effects and structure of dryout zone in debris bed coolability experiments, 11:47675 (RA;US)
Thermal-hydraulic uncertainties affecting severe accident progression, 11:47691 (RA;US)
Transient analysis of debris bed heat transfer, 11:47674 (RA;US)
Transient quenching of superheated debris beds during bottom reflood, 11:47681 (RA;US)
Two-phase flow in stratified porous media, 11:47673 (RA;US)
CORONA COUNTERS
Performance
Contribution to the multiwire corona counters theory, 11:48570 (RA;CS)
Spatial Distribution
Contribution to the multiwire corona counters theory, 11:48570 (RA;CS)
Specifications
Large area corona counter for low-level alpha-activity measurements, 11:48598 (RA;CS)
CORROSION
See also CREVICE CORROSION
PITTING CORROSION
Control
Applied fields for energy conservation, water treatment, and industrial applications. Final report, 11:48321 (R;US)
CORROSION FATIGUE
Reliability
Some theoretical and experimental aspects of assessing corrosion fatigue of metals, 11:47936 (RA;CS;In Czech)
CORROSION RESISTANT ALLOYS
See also STAINLESS STEELS
Materials Testing
Geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:47444 (R;US)
COSMIC DUST
Fragmentation
Fragmentation of molecular clouds and the IMF, 11:48992 (RA;CS;In Russian)
COSMIC MUONS
Prior to July, 1975 information was indexed to MUONS.
New evidence from Soudan 1 for underground muons associated with Cygnus X-3, 11:48962 (R;US)
COSMIC NUCLEI
Prior to July , 1975 information was indexed to NUCLEI.
Cosmic Ray Detection
Detection of high energy cosmic nuclei on the space shuttle, 11:48446 (RA;AT)

Energy Spectra
Detection of high energy cosmic nuclei on the space shuttle, 11:48446 (RA;AT)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
See also COSMIC MUONS
COSMIC NUCLEI
Amplitudes
Amplitude distribution of cosmic ray events in extrinsic IR detectors. Technical report, 11:48958 (R;US)
Daily Variations
North/south asymmetry in solar activity and its effects on the high-energy cosmic-ray diurnal variation, 11:48957 (R;US)
COSMIC RAY DETECTION
Multiwire Proportional Chambers
Detection of high energy cosmic nuclei on the space shuttle, 11:48446 (RA;AT)
Transition Radiation Detectors
Detection of high energy cosmic nuclei on the space shuttle, 11:48446 (RA;AT)
COSMIC RAY FLUX
Variations
Cosmogenic isotopes and cosmic ray intensity variations, 11:48580 (RA;CS)
Long-term cosmic ray variations - present status, 11:48966 (RA;CS)
Time-variations of nuclear reactions rate in the earth's atmosphere and cosmic ray intensity during last 400 years obtained using radiocarbon data, 11:48968 (RA;CS)
COSMIC X-RAY SOURCES
Variable Stars
Search for scattered X-ray halos around variable sources - the X-ray halo of Cygnus X-1, 11:49017 (J;US)
COSMOCHEMISTRY
Element Abundance
Long-lived cosmogenic isotopes and some astrophysical phenomena, 11:48967 (RA;CS)
COSMOGONY
See COSMOLOGY
COSMOLOGICAL MODELS
Fundamental Constants
Direct laboratory determination of the ^{187}Re half-life, 11:49344 (J;GB)
Geodesics
Geodesic bi-scalars in some isotropic universes, 11:49013 (R;JP)
Scalar Fields
Geodesic bi-scalars in some isotropic universes, 11:49013 (R;JP)
COSMOLOGY
Hydrodynamics
Smooth particle hydrodynamics: theory and application to the origin of the moon, 11:49004 (R;US)
Mass Distribution
Statistics of peaks of Gaussian random fields (Cosmological density fluctuations), 11:49016 (J;US)
Vacuum States
Symmetries of the vacuum, 11:49391 (R;BR)
COSTA RICA
Energy Source Development
Geothermal initiatives in Central America, 11:47435 (R;US)
Geothermal Resources
Geothermal initiatives in Central America, 11:47435 (R;US)
COUNTERS (RADIATION)

See ELECTRIC CURRENTS
CURRENTS (WATER)
See WATER CURRENTS
CYCLIC ACCELERATORS
Beam Injection
Pulsed magnetic field for PHERMEX-injected circular accelerator, 11:48394 (R;US)
CYCLOALKENES
Chemical Reactions
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Pyrolysis
Studies of the pyrolysis of hydroaromatic compounds with an emphasis on reactions of ortho-quinodimethanes, 11:47178 (D;US)
CYCLOHEXANE
Electron Transfer
Distance, stereoelectronic effects, and the Marcus inverted region in intramolecular electron transfer in organic radical anions, 11:48185 (J;US)
CYCLOHEXANONE
Absorption Spectroscopy
Matrix isolation versus the light pipe as an interface for gas chromatography/fourier transform infrared spectrometry, 11:48106 (BA;US)
Gas Chromatography
Matrix isolation versus the light pipe as an interface for gas chromatography/fourier transform infrared spectrometry, 11:48106 (BA;US)
CYCLOPHOSPHAMIDE
See ENDOXAN
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Density
Computer modelling for the deposition of spherical particulates in a hollow cylinder medium, 11:48028 (R;US)
Porosity
Computer modelling for the deposition of spherical particulates in a hollow cylinder medium, 11:48028 (R;US)
CYSTEAMINE
See MEA
CYSTEINE
Alpha-polymerase inhibition, cysteine concentrations and chromosome aberrations in x-irradiated G_2 cells, 11:48867 (RA;AU)
CZECHOSLOVAKIA
Uranium Deposits
Contribution to the problems on pre-Variscan precursors of uranium vein deposits in the Bohemian Massif, 11:47268 (RA;XA)
Uranium deposit of Jachymov, Czechoslovakia, 11:47266 (RA;XA)
Uranium deposit of Pribram, Czechoslovakia, 11:47267 (RA;XA)

D

D CODES
ELEFUNT test results under FX/FORTRAN Version 1.0 on the Alliant FX/8, 11:49607 (R;US)
D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Particle Decay
CP violation in B and D decays, 11:49160 (R;US)
D PLUS RESONANCES

DEPLETED URANIUM
Melting
Mold and crucible coatings. Final report, April 1984-December 1985, 11:47972 (R;US)
DEPLETION (ISOTOPIC)
See ISOTOPE SEPARATION
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESIGN BASIS ACCIDENTS
Aircraft
Annual meeting on nuclear technology 1981. Technical meeting: External impact, 11:47705 (R;DE;In German)
Common practice of component and systems for LWR-type reactors against external impact, 11:47706 (RA;DE;In German)
Presentation of the external impact philosophy, 11:47707 (RA;DE;In German)
Protective design against impact loads in nuclear civil engineering, 11:47708 (RA;DE;In German)
Dynamic Loads
Combined experimental-computational method for the verification of cable support systems under dynamic loading, 11:47711 (RA;DE;In German)
Explosions
Presentation of the external impact philosophy, 11:47707 (RA;DE;In German)
Protective design against impact loads in nuclear civil engineering, 11:47708 (RA;DE;In German)
Floods
Presentation of the external impact philosophy, 11:47707 (RA;DE;In German)
Seismic Effects
Annual meeting on nuclear technology 1981. Technical meeting: External impact, 11:47705 (R;DE;In German)
Common practice of component and systems for LWR-type reactors against external impact, 11:47706 (RA;DE;In German)
Seismic design in nuclear civil engineering, 11:47709 (RA;DE;In German)
DESORPTION
Mathematical Models
Influence of surface phase transitions on desorption kinetics: the compensation effect, 11:48142 (J;US)
DESOXYRIBONUCLEIC ACID
See DNA
DESULFURIZATION
Economic Analysis
Sulfur dioxide emission control by furnace injection of a dry sorbent. Phase III. Economic assessment. Final report, 11:47483 (R;US)
Maintenance
FGD maintenance guidelines. Volume 1. FGD maintenance programs. Final report, 11:47192 (R;US)
Manuals
FGD maintenance guidelines. Volume 1. FGD maintenance programs. Final report, 11:47192 (R;US)
DETECTION (RADIATION)
See RADIATION DETECTION
DETECTORS (RADIATION)
See RADIATION DETECTORS
DETONATORS
See also FUSES

Chemical Composition
Assay of ceramic headers for sodium by neutron activation, 11:48079 (R;US)
Contamination
Assay of ceramic headers for sodium by neutron activation, 11:48079 (R;US)
Design
Semiconductor bridge (SCB) primary explosive detonator, 11:48651 (R;US)
Performance Testing
Semiconductor bridge (SCB) primary explosive detonator, 11:48651 (R;US)
Power Supplies
Experiments with small helical flux compression generators, 11:48652 (R;US)

DEUTERIUM
Electromagnetic Form Factors
Determination of the magnetic form factor of the deuteron at a momnetum transfer of $q^2\hbar 0.5$ (GeV/c)^2, 11:49236 (R;DE;In German)
Isotope Effects
[4 + 4] dimerization of 2,3-dimethylene-2,3-dihydrofuran: secondary deuterium kinetic isotope effect evidence of a two-step mechanism, 11:48187 (J;US)
Thermonuclear Reactions
Piezonuclear fusion in isotopic hydrogen molecules, 11:49240 (J;GB)

DEUTERIUM COMPOUNDS
NMR Spectra
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)
Nuclear Magnetic Resonance
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)
Photolysis
Two-frequency CO_2 laser multiple-photon dissociation and dynamics of excited state absorption in CDF_3, 11:48207 (J;NL)
Reduction
Isotope effects in arene C-H bond activation by $[(C_5Me_5)Rh(PMe_3)]$, 11:48179 (J;US)

DEUTERIUM IONS
Beam Extraction
Measuring method and confirmation of H^-, D^- ion current by sheet plasma, 1, 11:49072 (R;JP)
Size effects of vacuum chamber for H^-, D^- ion volume production by sheet plasma, 1, 11:49073 (R;JP)
Some physical differences between sheet plasma and multicusp plasma as volume produced H^- or D^- ion sources, 11:49071 (R;JP)

DEUTERIUM TARGET
Electron Reactions
Determination of the magnetic form factor of the deuteron at a momnetum transfer of $q^2=0.5$ (GeV/c)^2, 11:49236 (R;DE;In German)
Exploratory gas-target experiment at PEP using the TPC/2 γ facility, 11:49235 (R;US)
Neutron Reactions
Radiative neutron capture by deuterium, 11:49238 (J;US)
Pion Reactions
Meson-exchange Hamiltonian for N, π, Δ and N*(1470 MeV) isobars, 11:49374 (RA;US)
Tensor polarization in pion-deuteron elastic scattering, 11:49226 (RA;US)
Theory of mesonic and dibaryonic excitation in the πNN system, 11:49375 (RA;US)
Polarization
Alignment of deuterons by optical pumping, 11:48373 (RA;US)
Proton Reactions
Continuum polarization transfer in 500 MeV proton scattering and pionic collectivity in nuclei, 11:49239 (J;US)
Tensor analyzing power in backward pd elastic scattering and its connection to pp $\rightarrow$ πd at intermediate energies, 11:49233 (R;JP)

DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES

DEUTERON REACTIONS
Deuteron-induced reactions on ^{16}O, 11:49257 (RA;BR)
Pickup Reactions
/sup 36,38/Ar(d-bar,α)/sup 34,36/Cl reactions induced by tensor polarized deuterons, 11:49276 (J;US)
Two-Nucleon Transfer Reactions
Spin dependence of the isospin-forbidden decay ^{8}Be(E-italic/sub x-italic/ = 27.5 MeV)$\rightarrow$d+^{6}Li, 11:49268 (J;US)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEUTERONS
Form Factors
Electromagnetic form factors of the deuteron, 11:49231 (RA;US)

DEVELOPED COUNTRIES
Environmental Policy
Preventive environmental policy: Ecological modernisation and structural policy, 11:48783 (R;DE;In German)

DEVONIAN SHALES
See BLACK SHALES

DEWAR FLASKS

DEWARS
Performance Testing
Thermal performance evaluation of the infrared telescope dewar subsystem, 11:48234 (R;US)

DEXTRIN
Fluorescence
Analytical conditions and data for cyclodextrin induced solid-surface room-temperature luminescence of selected compounds, 11:48190 (J;US)
Phosphorescence
Analytical conditions and data for cyclodextrin induced solid-surface room-temperature luminescence of selected compounds, 11:48190 (J;US)

DIABLO CANYON-1 REACTOR
Avila Beach, California, USA
Reactor Licensing
NRC licensing of Diablo Canyon. Hearing before the Subcommittee on Energy Conservation and Power of the Committee on Energy and Commerce, House of Representatives, Ninety-Ninth Congress, First Session, July 10, 1985, 11:47504 (B;US)

DIAGNOSTIC TECHNIQUES
See also BIOMEDICAL RADIOGRAPHY
Accuracy
Efficacy of clinical diagnostic procedures utilized in nuclear medicine. Final report, August 1977-November 30, 1983, 11:48802 (R;US)

DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS

DIBARYON RESONANCES
Particle Production
Future dibaryon research at BNL, 11:49232 (R;US)

DICHLOROMETHANE
See METHYLENE CHLORIDE

DIELECTRIC MATERIALS
Electric Conductivity
Synthesis of surface reactance using an artificial dielectric, 11:48055 (J;US)

DIELECTRIC TRACK DETECTORS
Comparative Evaluations
CENDOS joint neutron irradiation exercise - results from Berkeley Nuclear Laboratories, 11:48418 (RA;GB)
CENDOS neutron irradiation of Bristol CR-39, 11:48420 (RA;GB)
Intercomparison of neutron irradiations (CR-39 dosemeters), 11:48415 (RA;GB)
Intercomparison data (CR 39 detectors), 11:48421 (RA;GB)
Neutron irradiations of proton-sensitive track detectors: results of a joint irradiation organised by CENDOS, 11:48412 (R;GB)
NRPB neutron personal dosemeter: dependence of response on neutron energy, 11:48413 (RA;GB)

Response of electrochemically etched Kodak CN85 track detector to neutrons, 11:48419 (RA;GB)
Results of CENDOS CR-39 neutron irradiations, 11:48414 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of commercial grade CR-39, 11:48416 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of Bristol University CR-39, 11:48417 (RA;GB)
Dose-Response Relationships
Semi-empirical model of neutron and charged particle interactions with CR-39, 11:48611 (R;US)
Etching
CENDOS joint neutron irradiation exercise - results from Berkeley Nuclear Laboratories, 11:48418 (RA;GB)
CENDOS neutron irradiation of Bristol CR-39, 11:48420 (RA;GB)
Intercomparison of neutron irradiations (CR-39 dosemeters), 11:48415 (RA;GB)
Intercomparison data (CR 39 detectors), 11:48421 (RA;GB)
NRPB neutron personal dosemeter: dependence of response on neutron energy, 11:48413 (RA;GB)
Response of electrochemically etched Kodak CN85 track detector to neutrons, 11:48419 (RA;GB)
Results of CENDOS CR-39 neutron irradiations, 11:48414 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of commercial grade CR-39, 11:48416 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of Bristol University CR-39, 11:48417 (RA;GB)
Sensitivity
CENDOS joint neutron irradiation exercise - results from Berkeley Nuclear Laboratories, 11:48418 (RA;GB)
CENDOS neutron irradiation of Bristol CR-39, 11:48420 (RA;GB)
Intercomparison of neutron irradiations (CR-39 dosemeters), 11:48415 (RA;GB)
Intercomparison data (CR 39 detectors), 11:48421 (RA;GB)
NRPB neutron personal dosemeter: dependence of response on neutron energy, 11:48413 (RA;GB)
Response of electrochemically etched Kodak CN85 track detector to neutrons, 11:48419 (RA;GB)
Results of CENDOS CR-39 neutron irradiations, 11:48414 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of commercial grade CR-39, 11:48416 (RA;GB)

DRIFT CHAMBERS
Alignment
Detector calibration and alignment with lasers, 11:48463 (RA;AT)
Breakdown
Investigation of breakdown conditions in drift chambers, 11:48511 (RA;AT)
Calibration
CDF end plug e,m, calorimeter calibration and monitoring, 11:48528 (RA;AT)
Detector calibration and alignment with lasers, 11:48463 (RA;AT)
Charge Collection
Performance of a vertex drift chamber with controlled charge collection geometry, 11:48539 (RA;AT)
Design
Design and tests of the Z-coordinate drift chamber system for the OPAL detector at LEP, 11:48536 (RA;AT)
Fabrication
Construction and behaviour of a miniature drift chamber, 11:48513 (RA;AT)
Construction of the CLEO II drift chamber, 11:48533 (RA;AT)
Magnetic Fields
Parallel-plate time projection chamber operation in a magnetic field, 11:48618 (J;NL)
Pulse shape analysis for a jet chamber with long drift path in the presence of magnetic fields, 11:48449 (RA;AT)
Performance Testing
ARGUS vertex drift chamber, 11:48495 (RA;AT)
Construction and behaviour of a miniature drift chamber, 11:48513 (RA;AT)
Construction of the CLEO II drift chamber, 11:48533 (RA;AT)
Design and tests of the Z-coordinate drift chamber system for the OPAL detector at LEP, 11:48536 (RA;AT)
Drift chamber for CMD-2 detector at VEPP-2M, 11:48461 (RA;AT)
Drift chambers with delay line readout operated in the limited streamer mode, 11:48479 (RA;AT)
Drift chamber read-out with 100 MHz flash ADCs, 11:48540 (RA;AT)
Drift-pots for small angle elastic scattering at the Fermilab tevatron, 11:48538 (RA;AT)
High accuracy measurments of drift time in the streamer mode, 11:48485 (RA;AT)
High performance imaging drift chamber in a high rate fixed target experiment, 11:48535 (RA;AT)
Identification of the trace impurities responsible for laser induced ionisation in proportional counters, 11:48492 (RA;AT)
Induction drift chamber, 11:48454 (RA;AT)
Investigation of the space-time correlation for inclined tracks in drift chambers, 11:48497 (RA;AT)
Investigation of breakdown conditions in drift chambers, 11:48511 (RA;AT)
L3 high resolution multi-sampling drift chambers, 11:48532 (RA;AT)
Lifetime tests for MAC vertex chamber, 11:48616 (R;US)
Localization properties of a large current mode chamber for Cherenkov radiation photons detection, 11:48516 (RA;AT)
Micro vertex detector for experiment UA1 at the CERN P P-bar collider, 11:48520 (RA;AT)
Microstrip vertex detector for E687 experiment at Tevatron, 11:48476 (RA;AT)
Modular multidrift vertex detector, 11:48453 (RA;AT)
New drift chamber for the Mark II detector at the SLAC linear collider, 11:48452 (RA;AT)
New techniques for drift-chambers, 11:48496 (RA;AT)
Performance of a prototype radial-drift chamber with logarithmic potential-division, 11:48506 (RA;AT)
Performance of the SLD central drift chamber prototype, 11:48518 (RA;AT)
Performance of a vertex drift chamber with controlled charge collection geometry, 11:48539 (RA;AT)
Prototype results of a high resolution vertex drift chamber for the Mark-II SLC upgrade detector, 11:48519 (RA;AT)
Results of a 100 MHz FADC system built in fastbus used by the UA2 vertex detector, 11:48491 (RA;AT)
Spatial resolution of streamer tubes with analog read-out of transverse strips, 11:48494 (RA;AT)
Test of a full scale sector for a 1 m long high resolution vertex chamber, 11:48542 (RA;AT)
Tests of gas mixtures for operating drift chambers in limited streamer mode over drift distances up to 10 cms, 11:48480 (RA;AT)
Time digitizer in fastbus version without interpolator, 11:48502 (RA;AT)
Track finding with the Mark II/SLC drift chamber, 11:48510 (RA;AT)
Tracking systems of the collider detector at Fermilab, 11:48464 (RA;AT)
Photoionization
Identification of the trace impurities responsible for laser induced ionisation in proportional counters, 11:48492 (RA;AT)
Physical Radiation Effects
Laboratory study of radiation damage to drift chambers, 11:48626 (RA;AT)
Readout Systems
Drift chambers with delay line readout operated in the limited streamer mode, 11:48479 (RA;AT)
Drift chamber read-out with 100 MHz flash ADCs, 11:48540 (RA;AT)
Response Functions
Response of streamer tubes to 210 GeV/c hadronic showers, 11:48493 (RA;AT)
Spatial Resolution
Spatial resolution of streamer tubes with analog read-out of transverse strips, 11:48494 (RA;AT)
Specifications
Position sensitive drift chamber, 11:48585 (RA;CS)
DRIFT (ELECTRON)
See ELECTRON DRIFT
DRILL HOLES
See BOREHOLES
DRILLING FLUIDS
Limited to materials used in well drilling.
Evaluation
Evaluating candidate lost circulation materials for geothermal drilling, 11:47442 (R;US)
Temperature Distribution
Drilling fluid temperatures in a magma - penetrating wellbore, 11:47443 (R;US)
DRILLING MUD

Health Hazards
Regional measurement of ventilation and perfusion to detect subtle lung abnormalities in coal miners, 11:47212 (J;US)
DYE LASERS
Efficiency
Alkyl substituted polyphenyls - laser dyes for the augmentation of the efficiency of dye lasers, 11:48260 (R;DE;In German)
DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMITRONS
Operation
Operation of the Dynamitron facility, 11:48334 (RA;US)
DYSPROSIUM
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
DYSPROSIUM 147
Energy-Level Transitions
Shell-model states in N = 81-83 nuclei, 11:49317 (RA;US)
DYSPROSIUM 152
High Spin States
Feeding times of high spin states in /sup 152,154/Dy: probes of nuclear structure above the yrast line, 11:49332 (RA;US)
DYSPROSIUM 154
High Spin States
Feeding times of high spin states in /sup 152,154/Dy: probes of nuclear structure above the yrast line, 11:49332 (RA;US)
DYSPROSIUM 162 TARGET
Helium 3 Reactions
Reaction dependence in the γ-decay of highly excited rare earth nuclei, 11:49343 (R;NO)
DYSPROSIUM 163 TARGET
Helium 3 Reactions
Reaction dependence in the γ-decay of highly excited rare earth nuclei, 11:49343 (R;NO)
DYSPROSIUM PHOSPHATES
Neutron Diffraction
Study of the hyperfine augmented nuclear polarization by elastic neutron scattering, 11:49428 (R;DE;In German)

E

E CODES
Aging of polyurethane foams, the influence of gas diffusion on thermal conductivity (ECVA (AGE) code), 11:48010 (R;US)
EARS
See AUDITORY ORGANS
EARTH ATMOSPHERE

TROPOSPHERE
Ambient Temperature
Decreasing diurnal temperature range in the United States and Canada from 1941 through 1980, 11:48660 (J;US)
Monthly Variations
Decreasing diurnal temperature range in the United States and Canada from 1941 through 1980, 11:48660 (J;US)
Simulation
Use of a toxic and hazardous aerosol research facility to evaluate fate and effects of army smoke screen materials, 11:48673 (BA;US)
EARTH CRUST
Meetings
Workshop on the Tectonic Evolution of Greenstone Belts, 11:48940 (R;US)
EARTH MAGNETOSPHERE
Ion Temperature
Comment on "increase of ion kinetic temperature across a collisionless shock: I. A new concept by L. C. Lee et al." and "Ion acceleration in quasiperpendicular magnetosonic shock waves with subcritical mach number by Y. Ohsawa and J. Sakai", 11:49020 (J;US)
Research Programs
CSSP implementation plan for space plasma physics programs, 11:49018 (J;US)
Shock Waves
Comment on "increase of ion kinetic temperature across a collisionless shock: I. A new concept by L. C. Lee et al." and "Ion acceleration in quasiperpendicular magnetosonic shock waves with subcritical mach number by Y. Ohsawa and J. Sakai", 11:49020 (J;US)
EARTH MANTLE
Flow Rate
Mantle circulation and the lateral migration of subducted slabs, 11:48943 (J;US)
EARTHQUAKES
Emergency Plans
NRC licensing of Diablo Canyon. Hearing before the Subcommittee on Energy Conservation and Power of the Committee on Energy and Commerce, House of Representatives, Ninety-Ninth Congress, First Session, July 10, 1985, 11:47504 (B;US)
EBIC
See SCANNING ELECTRON MICROSCOPY
ECCS
See also CORE FLOODING SYSTEMS
Performance Testing
BWR recirculation loop discharge line break LOCA tests with break areas of 50 and 100% assuming HPCS failure at ROSA-III test facility, 11:47722 (R;JP)
Main Steam Line break experiment at ROSA III - RUN 953. 100% break with an HPCS failure, 11:47721 (R;JP)
ECONOMIC ANALYSIS
Economic analysis and program evaluation, 11:47811 (RA;US)
ECONOMIC GROWTH
Electric Power
Electricity in economic growth, 11:47819 (R;US)
ECR HEATING
Operation of a quasioptical electron cyclotron maser, 11:49512 (J;US)
EDDY CURRENTS
Limited to electric currents.
Helmholtz Theorem
3-D transient eddy current calculations for the Felix cylinder experiments, 11:49548 (R;US)
Mathematical Models
Vacuum vessel eddy current modeling for tokamak fusion test reactor adiabatic compression experiments, 11:49585 (J;US)
EFFLUENTS (GASEOUS)

ELASTIC SCATTERING
See also COMPTON EFFECT
RUTHERFORD SCATTERING
Partial Waves
Role of peripheral partial waves in the anomalous large angle scattering of n-α nuclei, 11:49402 (RA;BR)
Total Cross Sections
Alternative method of obtaining σ sub(SOD) from elastic scattering data, 11:49401 (RA;BR)
ELASTOMERS
Density
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility (Ethylenepropylenediene monomer compounds), 11:47173 (R;US)
Flexibility
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility (Ethylenepropylenediene monomer compounds), 11:47173 (R;US)
Testing
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility (Ethylenepropylenediene monomer compounds), 11:47173 (R;US)
Weight
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility (Ethylenepropylenediene monomer compounds), 11:47173 (R;US)
ELECTRIC ARCS
Fluorescence Spectroscopy
Relative concentration measurements of Mn and Mn^+ in a gas tungsten welding arc using laser-induced fluorescence, 11:47958 (J;US)
ELECTRIC BATTERIES
Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.
See also LEAD-ACID BATTERIES
METAL-METAL BATTERIES
METAL-NONMETAL BATTERIES
Anodes
Polyacetylene batteries, 11:47762 (BA;US)
Cathodes
Polyacetylene batteries, 11:47762 (BA;US)
Design
Polyacetylene batteries, 11:47762 (BA;US)
Manganese Oxides
Characterization of the surfaces of manganese oxides by water adsorption, 11:47767 (BA;US)
Medium Temperature
Characterization of the surfaces of manganese oxides by water adsorption, 11:47767 (BA;US)
Research Programs
Electrochemical energy storage program. Annual progress report, October 1, 1984-September 30, 1985, 11:47752 (R;US)
Mission and status of the U.S. Department of Energy's battery energy storage program, 11:47759 (BA;US)
Solid Electrolytes
Beta"-alumina solid electrolytes, 11:47756 (BA;US)
ELECTRIC CABLES
See also GAS-INSULATED CABLES
Dynamic Loads
Combined experimental-computational method for the verification of cable support systems under dynamic loading, 11:47711 (RA;DE;In German)
ELECTRIC CONTACTORS
See SWITCHES
ELECTRIC CONTACTS
Geometry
Sources of series resistance in the Harwell solid state alpha detector, 11:48411 (R;GB)
ELECTRIC CURRENTS

Calculation and application of the non-participant test within the cost-benefit analysis of utility load management programs in California, 11:47816 (RA;US)
Cost-benefit analysis of utility sponsored energy conservation programs: an economic welfare perspective, 11:47810 (RA;US)
Using soft data to supplement cost-benefit evaluations, 11:47797 (RA;US)
Data Acquisition
Software in the evaluation context: choosing and using the right tools, 11:47807 (RA;US)
Data Analysis
Protecting data quality in weatherization evaluations, 11:47848 (RA;US)
Software in the evaluation context: choosing and using the right tools, 11:47807 (RA;US)
Economic Analysis
Economic analysis and program evaluation, 11:47811 (RA;US)
Economic Impact
Evaluating potential employment effects of community energy programs, 11:47803 (RA;US)
Education
Economic impact of energy education for limited resource households, 11:47849 (RA;US)
Energy Analysis
Measuring the contributions of Austin's Conservation Power Plant, 11:47809 (RA;US)
PRISM: a standardized method for keeping score on energy saved in houses, 11:47834 (RA;US)
Energy Audits
Application of end-use disaggregation models to energy audit program evaluation, 11:47847 (RA;US)
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 11:47842 (RA;US)
Evaluation
Building evaluation into operating programs, 11:47806 (RA;US)
Calculation and application of the non-participant test within the cost-benefit analysis of utility load management programs in California, 11:47816 (RA;US)
Comparing evaluation requirements among institutional conservation programs, 11:47805 (RA;US)
Creating supply through demand side programs: the Austin experience, 11:47794 (RA;US)
Effective residential energy conservation, 11:47840 (RA;US)
Effects of a municipal energy audit program on electricity consumption in single-family residences, 11:47801 (RA;US)
Evaluating the marketing phase of the Hennepin County Residential Shared Savings Demonstration Project, 11:47839 (RA;US)
Evaluation procedures as part of program planning, 11:47795 (RA;US)
Evaluation of the Massachusetts Energy Conservation Service, 11:47800 (RA;US)
Evaluation consideration: confounding variables, 11:47802 (RA;US)
Evaluation of Shawnee County low/fixed income consultation program, 11:47850 (RA;US)
Lessons from a local government technical assistance program, 11:47796 (RA;US)
Measuring conservation cost-effectiveness: a utility perspective, 11:47793 (RA;US)
Measuring the contributions of Austin's Conservation Power Plant, 11:47809 (RA;US)
Practical care and feeding of evaluation, 11:47787 (RA;US)
Residential energy-efficiency program for Burlington Electric Department: research and development of a program design, 11:47838 (RA;US)
Self-selection: are we beating a dead horse?, 11:47851 (RA;US)
Timely evaluations: a method for undertaking and evaluating an energy conservation program in under one year, 11:47798 (RA;US)
Use of non-participant evaluation to enhance program design, 11:47804 (RA;US)
Financial Incentives
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 11:47842 (RA;US)
Residential conservation incentives: a review of loan impacts, 11:47841 (RA;US)
Heat Pumps
Analysis of a cooling and heat pump rebate program, 11:47843 (RA;US)
Institutional Factors
Using soft data to supplement cost-benefit evaluations, 11:47797 (RA;US)
Marketing
Evaluating the marketing phase of the Hennepin County Residential Shared Savings Demonstration Project, 11:47839 (RA;US)
Program Management
Application of end-use disaggregation models to energy audit program evaluation, 11:47847 (RA;US)
Building evaluation into operating programs, 11:47806 (RA;US)
Comparative evaluation of six different energy conservation programs serving low income households in Massachusetts, 11:47788 (RA;US)
Comparing evaluation requirements among institutional conservation programs, 11:47805 (RA;US)
Economic analysis and program evaluation, 11:47811 (RA;US)
Evaluation of the Massachusetts Energy Conservation Service, 11:47800 (RA;US)
Lessons from a local government technical assistance program, 11:47796 (RA;US)
Practical care and feeding of evaluation, 11:47787 (RA;US)
Residential energy-efficiency program for Burlington Electric Department: research and development of a program design, 11:47838 (RA;US)
Timely evaluations: a method for undertaking and evaluating an energy conservation program in under one year, 11:47798 (RA;US)
Use of non-participant evaluation to enhance program design, 11:47804 (RA;US)
Regulations
Evaluating energy conservation regulations, 11:47833 (RA;US)
Retrofitting
Economic impact of energy education for limited resource households, 11:47849 (RA;US)
Standards
Evaluating energy conservation regulations, 11:47833 (RA;US)
Weatherization
Alternative approaches for treatment of self-selection bias in evaluation of energy use impacts of a home weatherization kit program, 11:47852 (RA;US)
Assessing the training and technical-assistance needs of weatherization program subgrantees: a practical methodology which yields policy-maker-useful data, 11:47844 (RA;US)
Taking the con out of conservation program evaluation, 11:47812 (RA;US)
Use of detailed evaluation data to develop a low cost monitoring system: the BPA Residential Weatherization Program, 11:47853 (RA;US)
ENERGY CONSUMPTION
See also FUEL CONSUMPTION
Data Analysis
Data quality considerations in using the PRISM program, 11:47799 (RA;US)

Forecasting
Bonneville Power Administration forecast of electricity consumption in the Pacific Northwest. Executive summary, 11:47817 (R;US)
ENERGY CONVERSION

ENTHALPY
Numerical Solution
Vectorized difference schemes for a three dimensional enthalpy formulation for phase change problems, 11:49454 (R;US)
ENTRY CONTROL SYSTEMS
Accuracy
The status of personnel identity verifiers, 11:48298 (J;US)
Cost
The status of personnel identity verifiers, 11:48298 (J;US)
Evaluation
The status of personnel identity verifiers, 11:48298 (J;US)
Reliability
The status of personnel identity verifiers, 11:48298 (J;US)
ENVIRONMENT
Activity Levels
Technologically enhanced levels of natural radioactivity studied by gamma-ray spectrometry, 11:48718 (RA;CS)
Data Processing
On the data processing related to environmental radioactivity, 11:48722 (RA;JP;In Japanese)
Decontamination
Prevention of biological transport of radioactivity in the Hanford 200 areas, 11:47333 (RA;US)
Gamma Spectroscopy
Technologically enhanced levels of natural radioactivity studied by gamma-ray spectrometry, 11:48718 (RA;CS)
Monitoring
Environmental monitoring program interaction between the West Valley Demonstration Project and New York State agencies, 11:48683 (RA;US)
Health and environmental aspects of the Great Plains Coal Gasification Facility, 11:47194 (RA;US)
Los Alamos National Laboratory's environmental surveillance and radiological emergency vehicle and the Co-60 incident, 11:48439 (RA;US)
Opening address to conference on environmental protection, 11:47325 (RA;US)
Status of the graphic overview system in relation to Department of Energy facilities, 11:48789 (RA;US)
Natural Radioactivity
Technologically enhanced levels of natural radioactivity studied by gamma-ray spectrometry, 11:48718 (RA;CS)
Program Management
Allied Corporation surveillance program (A program design for environmental auditing), 11:48786 (RA;US)
Status of the graphic overview system in relation to Department of Energy facilities, 11:48789 (RA;US)
Quality Assurance
Application of 5700.6B, quality assurance, to ES & H programs: Mound's approach and results, 11:48788 (RA;US)
Radiation Monitoring
Development of environmental monitoring programs at four Formerly Utilized Sites Remedial Action Program (FUSRAP) sites, 11:47331 (RA;US)
Environmental protection in the UMTRA PROJECT, 11:47330 (RA;US)
Environmental survey at the Tun Ismail Atomic Research Centre (PUSPATI), Bangi, Malaysia. Results for 1980-1981, 11:48698 (R;MY)
Outdoor radon monitoring at DOE remedial action sites, 11:47332 (RA;US)
Review of the ICRP document principles of Monitoring for the Radiation Protection of the Population, 11:48827 (RA;US)

Use of a simplified pathways model to improve the environmental surveillance program at the radioactive waste management complex of the Idaho National Engineering Laboratory (INEL), 11:47335 (RA;US)
Radioactivity
On the data processing related to environmental radioactivity, 11:48722 (RA;JP;In Japanese)
Risk Assessment
Environmental risk assessment, 11:48784 (RA;US)
ENVIRONMENTAL EXPOSURE PATHWAY
Mathematical Models
Use of a simplified pathways model to improve the environmental surveillance program at the radioactive waste management complex of the Idaho National Engineering Laboratory (INEL), 11:47335 (RA;US)
ENVIRONMENTAL MATERIALS
Use only for unspecified samples from the environment. See also specific environmental materials.
Activity Levels
Measurement of plutonium-241 in the terrestrial environment, 11:48070 (RA;CS)
Gamma Spectroscopy
Ge(Li)-detector measurements of γ-ray emitting environmental samples with non calibrated geometrically shape, 11:48595 (RA;CS)
Radioactivity
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
ENVIRONMENTAL POLICY
Hazards: technology and fairness. Series on technology and social priorities, 11:47775 (R;US)
Compliance
DOE's Assurance Program for Remedial Action (APRA), 11:47334 (RA;US)
Environmental regulation of federal facilities, 11:48702 (RA;US)
OOS Environmental Program missions and objectives, 11:48703 (RA;US)
Opening address to conference on environmental protection, 11:47325 (RA;US)
Compliance Audits
Allied Corporation surveillance program (A program design for environmental auditing), 11:48786 (RA;US)
Effective environmental auditing on a 200,000 acre plant site, 11:48787 (RA;US)
EPA perspective on environmental auditing, 11:48785 (RA;US)
Mathematical Models
Management and planning of energy/environment systems in the United States of America, 11:47813 (BA;US)
Research Programs

Market
Use of coal liquid derivatives for preparation and stabilization of coal-water slurries, 11:47200 (B;US)
Production
Use of coal liquid derivatives for preparation and stabilization of coal-water slurries, 11:47200 (B;US)
Rheology
Relationship between chemistry and rheology in coal-water slurries, 11:47187 (B;US)
Stabilization
Use of coal liquid derivatives for preparation and stabilization of coal-water slurries, 11:47200 (B;US)
Surface Properties
Relationship between chemistry and rheology in coal-water slurries, 11:47187 (B;US)
Surface Tension
Comparison of a nonionic surfactant and an anionic dispersant as coal water additives, 11:47188 (B;US)
FUEL SUBSTITUTION
Comparative Evaluations
Assessment of coal-fueled locomotives, 11:47869 (R;US)
FUEL SUSPENSIONS
See FUEL SLURRIES
FUEL-COOLANT INTERACTIONS
Mathematical Models
Mathematical model of vapour film destabilisation, 11:47654 (R;GB)
Simulation
Mathematical model of vapour film destabilisation, 11:47654 (R;GB)
FUELS (NUCLEAR)

G

GADOLINIUM
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
GADOLINIUM 146
Mass
Mass of /sup 146/Gd, 11:49325 (J;US)
GADOLINIUM 147
Energy-Level Transitions
Lifetimes of very high spin states in ^{147}Gd, 11:49316 (RA;US)
High Spin States
Lifetimes of very high spin states in ^{147}Gd, 11:49316 (RA;US)
GADOLINIUM 148 TARGET
Proton Reactions
Mass of /sup 146/Gd, 11:49325 (J;US)
GADOLINIUM 152
Neutron Reactions
Neutron cross sections for ^{152}Gd and ^{153}Gd, 11:49338 (R;US)
GADOLINIUM 153
Neutron Reactions
Neutron cross sections for ^{152}Gd and ^{153}Gd, 11:49338 (R;US)
GADOLINIUM COMPOUNDS
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)

Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)

GALACTIC EVOLUTION
Background Radiation
Microwave-background anisotropy and decaying-cold-particle scenarios, 11:49014 (J;US)
Cooling
Highly ionized atoms in cooling gas, 11:49008 (R;US)
Mathematical Models
Highly ionized atoms in cooling gas, 11:49008 (R;US)
Particle Decay
Microwave-background anisotropy and decaying-cold-particle scenarios, 11:49014 (J;US)

GALAXIES
See also MILKY WAY
Spiral Configuration
Excitation of spiral patterns in responsive density wave theory, 11:48996 (RA;CS)
Ultraviolet Spectra
Highly ionized atoms in cooling gas, 11:49008 (R;US)

GALAXY CLUSTERS
Ultraviolet Spectra
Highly ionized atoms in cooling gas, 11:49008 (R;US)

GALLIUM ALLOYS
Magnetic Susceptibility
Uranium magnetism in UGa_3 and U(Gasub(1-x)Alsub(x))$_3$ compounds, 11:47933 (R;FR;In French)
Magnetization
Uranium magnetism in UGa_3 and U(Gasub(1-x)Alsub(x))$_3$ compounds, 11:47933 (R;FR;In French)

GALLIUM ARSENIDE SOLAR CELLS
Fabrication
High-efficiency double-heterostructure AlGaAs/GaAs solar cells, 11:47383 (R;US)
Physical Radiation Effects
Reduction of radiation damage in solar cells. A study of radiation defects in silicon. Final Report, 11:47391 (R;FR)
Technology Assessment
Japan's participation in space station design: feasibility study of GaAs solar cells for space station applications, 11:47398 (TG;US)

GALLIUM ARSENIDES
Light Transmission
Single crystal, epitaxial multilayers of AlAs, GaAs, and Al/sub x-italic/Ga/sub 1-//sub x-italic/As for use as optical interferometric elements, 11:48030 (J;US)

GAMMA CAMERAS
Readout Systems
Improved readout system for multi-crystal gamma cameras, 11:48620 (P;US)
Specifications
Development studies of a new gamma camera for positron emission tomography, 11:48803 (RA;AT)

GAMMA DETECTION
Radiation Detectors
Cygnus experiment at Los Alamos, 11:48608 (R;US)
Solid Scintillation Detectors
Measurements of gamma radiation in some Tatra caves with the portable scintillation counter for TL and ESR dating, 11:48592 (RA;CS)

GAMMA DOSIMETRY
Thermoluminescent Dosemeters
Fading independent measurement of low γ-doses in the environment with TL-dosimeters, 11:48544 (RA;CS)

GAMMA RADIATION
Quality Factor
Determination of the quality factor of mixed neutron-gamma fields using a proportional counter, 11:48842 (RA;CS;In Slovak)

GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS

GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Electron Beams
Laser-Electron-Gamma-Source. Progress report, July 1986, 11:48380 (R;US)
Lasers
Laser-Electron-Gamma-Source. Progress report, July 1986, 11:48380 (R;US)

GAMMA SPECTRA
Data Analysis
Nuclide activities determined from gamma-ray spectra from Ge detectors: a review with GAUSS VIII as the example, 11:48442 (R;US)
S Codes
Sodium Iodide Detector Analysis Software (SIDAS), 11:48613 (R;US)

GAMMA SPECTROMETERS
See also COMPTON SPECTROMETERS
Low background beta-gamma-coincidence spectrometer, 11:48552 (RA;CS)
Some experiences with a beta-gamma coincidence spectrometer, 11:48553 (RA;CS)
Accuracy
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise), 11:48441 (R;NL)
Calibration
Simple and reliable method of calibrating Ge(Li) or GEM high resolution gamma spectrometer, 11:48612 (R;MY)
Comparative Evaluations
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise), 11:48441 (R;NL)
Design
Construction of a gamma-ray facility for ATLAS, 11:48431 (RA;US)
Efficiency
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise), 11:48441 (R;NL)
Reliability
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise), 11:48441 (R;NL)
Sensitivity
Application of low-level gamma spectrometers constructed in CLRP for measurements of environmental samples and building materials, 11:48546 (RA;CS)
Shields
Results from the prototype BGO Compton-Suppression Shields for the γ-ray facility for ATLAS, 11:48432 (RA;US)
Specifications
Characteristics of low-level single and coincidence-anticoincidence gamma-ray spectrometers, 11:48550 (RA;CS)

GAMMA SPECTROSCOPY
BGO Detectors
Use of BGO in low level spectroscopy, 11:48579 (RA;CS)
CAMAC System
Application of CAMAC system with on-line minicomputer in gamma-ray spectrometry, 11:48551 (RA;CS)
Coincidence Methods
Development of a particle-electron coincidence setup, 11:48428 (RA;US)
High-Purity GE Detectors
Shielding material for low-activity gamma-spectrometry, 11:48556 (RA;CS)

Li-Drifted Ge Detectors
Ge(Li)-detector measurements of γ-ray emitting environmental samples with non calibrated geometrically shape, 11:48595 (RA;CS)
Shielding Materials
Shielding material for low-activity gamma-spectrometry, 11:48556 (RA;CS)
Spectra Unfolding
Unfolding program for gamma-ray spectra, 11:48427 (RA;US)
GAMMA TRANSPORT THEORY
Discrete Ordinate Method
Recent developments in discrete-ordinates electron transport, 11:47622 (R;US)
GAS ANALYSIS
Tunnel Effect
Chemoresistive gas sensor, 11:48642 (P;US)
GAS APPLIANCES
Efficiency
VENT II: a microcomputer program for designing vent systems for high-efficiency gas appliances. Software, 11:47231 (R;US)
Vents
VENT II: a microcomputer program for designing vent systems for high-efficiency gas appliances. Software, 11:47231 (R;US)
GAS BLANKETS
For plasma confinement. For other gas blankets see COVER GAS or INERT ATMOSPHERE.
H Codes
MINIMARS interim report appendix halo model and computer code, 11:49497 (RA;US)
Mathematical Models
MINIMARS interim report appendix halo model and computer code, 11:49497 (RA;US)
GAS BURNERS
Performance
Advanced heat-pipe heat exchanger and microprocessor-based modulating burner controls development. Annual report, January 1985-January 1986, 11:47238 (R;US)
GAS CENTRIFUGES
Cleaning
Results from uranium deposition studies for development of a limited frequency-unannounced access inspection strategy for gas centrifuge enrichment plants, 11:48251 (J;US)
Efficiency
Rule of thumb for binary isotope separations in a gas centrifuge, 11:48155 (J;US)
Maintenance
Results from uranium deposition studies for development of a limited frequency-unannounced access inspection strategy for gas centrifuge enrichment plants, 11:48251 (J;US)
Operation
Results from uranium deposition studies for development of a limited frequency-unannounced access inspection strategy for gas centrifuge enrichment plants, 11:48251 (J;US)
Performance
Rule of thumb for binary isotope separations in a gas centrifuge, 11:48155 (J;US)
GAS CHROMATOGRAPHY
Afterglow
Atmospheric pressure helium afterglow discharge detector for gas chromatography, 11:48648 (P;US)
Computerized Control Systems
Design and application of a new data system: DS90, 11:48120 (BA;US)
Data Acquisition
Design and application of a new data system: DS90, 11:48120 (BA;US)
Data Processing
Design and application of a new data system: DS90, 11:48120 (BA;US)
Performance
Hazardous waste analysis by direct-linked fused silica capillary column gas chromatography/fourier transform infrared/mass spectrometry, 11:48090 (BA;US)
GAS COMPRESSORS
Integrated natural-gas-engine cooling-jacket vapor-compressor program. Annual report (Phase 1A), February 1985-October 1985, 11:47240 (R;US)
GAS COOLANTS
See GASES
GAS DISCHARGE TUBES
See also FLASH TUBES
Atmospheric pressure helium afterglow discharge detector for gas chromatography, 11:48648 (P;US)
GAS ENGINES
See INTERNAL COMBUSTION ENGINES
GAS FLOW
Flow Rate
Acoustic cross-correlation flowmeter for solid-gas flow, 11:48288 (P;US)
Mass Spectroscopy
Mass spectrometric gas composition measurements associated with jet interaction tests in a high-enthalpy wind tunnel, 11:48214 (R;US)
Metering
Acoustic cross-correlation flowmeter for solid-gas flow, 11:48288 (P;US)
GAS FURNACES
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
GAS INJECTION
Valves
Fast-opening magnetic valve for high-pressure gas injection and applications to hydrogen pellet fueling systems, 11:49582 (J;US)
GAS LASERS
See also HELIUM-NEON LASERS
METAL VAPOR LASERS
Design
Apparatus and method for generating continuous wave 16 μM laser radiation using gaseous CF, 11:48263 (P;US)
Operation
Apparatus and method for generating continuous wave 16 μM laser radiation using gaseous CF, 11:48263 (P;US)
GAS SCINTILLATION DETECTORS
Performance Testing
Gas scintillation proportional counter for K X-ray experiments at LEAR, 11:48521 (RA;AT)
GAS TRACK DETECTORS
See also BUBBLE CHAMBERS
Calibration
Concentration and microdistribution of U in the cathode of Fe-Cr alloy for the gas counter, 11:48543 (RA;CS)
Performance Testing
Performance of a novel silicon pad detector, 11:48531 (RA;AT)
GAS TUNGSTEN-ARC WELDING
Electric Arcs
Relative concentration measurements of Mn and Mn^+ in a gas tungsten welding arc using laser-induced fluorescence, 11:47958 (J;US)
Heat Affected Zone
Relative concentration measurements of Mn and Mn^+ in a gas tungsten welding arc using laser-induced fluorescence, 11:47958 (J;US)
Heat Transfer
Heat transfer in gas tungsten arc welding, 11:48281 (R;US)
Manganese Ions
Relative concentration measurements of Mn and Mn^+ in a gas tungsten welding arc using laser-induced fluorescence, 11:47958 (J;US)
GAS TURBINE ENGINES
Ceramics
Tribolgy of selected ceramics at temperatures to 900 deg C, 11:47897 (R;US)
GAS TURBINES
Assessment of coal-fueled locomotives, 11:47869 (R;US)
Configuration
Dilution jet mixing program, supplementary report, 11:48322 (R;US)

Cooling
Heat transfer to two-phase air/water mixtures flowing in small tubes with inlet disequilibrium. Final Report, 11:47893 (R;US)
Flow Rate
Dilution jet mixing program, supplementary report, 11:48322 (R;US)
Gas Flow
Dilution jet mixing program, phase 3. Final Report, 11:47895 (R;US)
Statistical prediction of dynamic distortion of inlet flow using minimum dynamic measurement. An application to the Melick statistical method and inlet flow dynamic distortion prediction without RMS measurements. Final Report, 11:47894 (R;US)
Mathematical Models
Dilution jet mixing program, supplementary report, 11:48322 (R;US)
Protective Coatings
Thermal barrier coating life prediction model development. Annual Report, 11:47892 (R;US)
Temperature Distribution
Dilution jet mixing program, supplementary report, 11:48322 (R;US)
Turbine Blades
Advanced development of diffusion bonding processes for joining of turbine blades and vanes with complex cooling configuration and other near net-shape components. Final report, 11:47911 (R;DE;In German)

GAS UTILITIES
Energy Conservation
Alternative approaches for treatment of self-selection bias in evaluation of energy use impacts of a home weatherization kit program, 11:47852 (RA;US)
Cost-benefit analysis of utility sponsored energy conservation programs: an economic welfare perspective, 11:47810 (RA;US)

GAS WELLS
See NATURAL GAS WELLS

GASEOUS EFFLUENTS
See GASEOUS WASTES

GASEOUS WASTES
See also FLUE GAS
Quantitative Chemical Analysis
On-line analyzer for monitoring uranium and technetium in the vent stacks to a gaseous diffusion plant, 11:48114 (BA;US)
Radiation Monitoring
Off-site monitoring for the Mighty Oak nuclear test, 11:48685 (R;US)

GASES
See also AIR
FERMI GAS
FUEL GAS
RARE GASES
SYNTHESIS GAS
VAPORS
Beam Currents
Current enhancement for hose-unstable electron beams. Memorandum report, 11:49469 (R;US)
Separation Processes
Separation of gas mixtures by supported complexes, 11:47175 (R;US)
Thermodynamic Properties
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1985, 11:47366 (R;US)
Viscosity
Measurement of viscosity of gaseous mixtures at atmospheric pressure, 11:47237 (R;US)

GAS-INSULATED CABLES
Reliability
Research on factors that affect the reliability of compressed gas insulated apparatus. Final report, 11:47488 (R;US)

GAS-INSULATED SUBSTATIONS
Equipment Protection Devices
Surge arresters for 1200-kV gas-insulated substation. Final report, 11:47486 (R;US)
Meetings
Bonneville Power Administration's technical career program for professional engineers (TCPPE) gas-insulated substations (GIS) seminar: proceedings, 11:47485 (R;US)
Reliability
Research on factors that affect the reliability of compressed gas insulated apparatus. Final report, 11:47488 (R;US)

GASOLINE
Antiknock Ratings
Effect of weathering on octane quality for winter-grade gasolines, 11:47223 (R;US)
Chemical Composition
Effect of weathering on octane quality for winter-grade gasolines, 11:47223 (R;US)
Distillation
Effect of weathering on octane quality for winter-grade gasolines, 11:47223 (R;US)
Vapor Pressure
Effect of weathering on octane quality for winter-grade gasolines, 11:47223 (R;US)
Weathering
Effect of weathering on octane quality for winter-grade gasolines, 11:47223 (R;US)
Yields
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Thirteenth interim report, processing of 750 degrees end point Illinois ITSL oil: engineering design studies and estimated processing costs, 11:47147 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GE SEMICONDUCTOR DETECTORS
See also HIGH-PURITY GE DETECTORS
LI-DRIFTED GE DETECTORS
Background Radiation
Background components of germanium and NaI(Tl) low level spectrometers, 11:48565 (RA;CS)
Data Analysis
Nuclide activities determined from gamma-ray spectra from Ge detectors: a review with GAUSS VIII as the example, 11:48442 (R;US)
Design
Design considerations of germanium detectors for very low level counting, 11:48578 (RA;CS)
Specifications
Design considerations of germanium detectors for very low level counting, 11:48578 (RA;CS)

GEIGER-MUELLER COUNTERS
Specifications
Low-cost automated counter for laboratory beta-ray assay of rock and mineral samples, 11:48594 (RA;CS)

GE(LI) DETECTORS
See LI-DRIFTED GE DETECTORS

GENERATORS (ELECTRIC)
See ELECTRIC GENERATORS

GENERATORS (RADIOISOTOPE)
See RADIOISOTOPE GENERATORS

GENERATORS (STEAM)
See STEAM GENERATORS

GENETIC RADIATION EFFECTS
Risk Assessment
Evaluation of the genetic risks from radiation in human, 11:48849 (RA;BG;In Bulgarian)

GENETICS
Technology Assessment
Technology development in the field of tension between its intrinsic dynamics and the goals defined in the public discussion. Nuclear energy, microelectronics and genetic engineering: a comparative approach, 11:48790 (R;DE;In German)

GEOMAGNETIC STORMS
See MAGNETIC STORMS

GEOTHERMAL AREAS
See GEOTHERMAL FIELDS

GEOTHERMAL FIELDS
Geochemical Surveys
Hydrogeochemistry and preliminary reservoir model of the Platanares Geothermal System, Honduras, Central America, 11:47436 (R;US)
GEOTHERMAL FLUIDS
Mathematical Models
Model of gypsum, calcite and silica solubilities for application to geothermal waters over a wide range of temperature, P/sub CO_2/ and ionic strength. Final technical report, October 1, 1983-September 30, 1984, 11:47446 (R;US)
Samplers
Battery pack/controller for high temperature applications, 11:47438 (R;US)
GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS
GEOTHERMAL RESOURCES
Resource Assessment
Geology of the platanares geothermal site, Departamento de Copan, Honduras, Central America. Field report, 11:47434 (R;US;In Spanish and English)
GEOTHERMAL SPRINGS
See THERMAL SPRINGS
GEOTHERMAL WELLS
Well Logging Equipment
Development of downhole instruments for use in the Salton Sea Scientific Drilling Project, 11:47439 (R;US)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMAN FR ORGANIZATIONS
See also KERNFORSCHUNGSZENTRUM KARLSRUHE
Work
List of publications of the University of Karlsruhe and the Karlsruhe Nuclear Research Centre. Publications of 1984, 11:49600 (R;DE;In German)
GERMANIUM
Electronic Structure
Surface and bulk electronic structure of Ge(111) c-italic(2 x 8) and Ge(111):As 1 x 1, 11:47955 (J;US)
Photoelectron Spectroscopy
Surface and bulk electronic structure of Ge(111) c-italic(2 x 8) and Ge(111):As 1 x 1, 11:47955 (J;US)
Reflectivity
Time-resolved reflectivity measurements on silicon and germanium using a pulsed excimer KrF laser heating beam, 11:48034 (J;US)
GERMANIUM 76
Charged Particle Detection
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)
Double Beta Decay
Search for the double-β decay of /sup 76/Ge, 11:49307 (J;US)
GERMANIUM ALLOYS
Crystal Structure
Ordering and decomposition in semiconductor alloys, 11:48041 (J;US)
Decomposition
Ordering and decomposition in semiconductor alloys, 11:48041 (J;US)
GERMANIUM DETECTORS
See GE SEMICONDUCTOR DETECTORS
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GERMS (MICROORGANISMS)
See MICROORGANISMS
GIANT RESONANCE
Decay
Decay of the giant monopole resonance in heavy nuclei, 11:49362 (R;NL)
GIANT STARS
Age Dependence
Behaviour of brighter binaries and yellow giants in open clusters, 11:48973 (RA;CS)
Ultraviolet Spectra
Nitrogen content in atmospheres of late giants determined from NH molecular bands in UV spectral range, 11:48994 (RA;CS;In Russian)
GLASS
See also BOROSILICATE GLASS
PHOSPHATE GLASS
Density
Densification of glass compacts containing a second phase, 11:48049 (BA;US)
Deposition
Sol-gel derived thin films: critical issues, 11:48027 (R;US)
Excitation
Optical studies of dynamical processes in disordered materials. Final report, September 1, 1983-February 28, 1986, 11:48019 (R;US)
Neptunium Ions
Photoelectron, nuclear gamma-ray and infrared absorption spectroscopic studies of neptunium in sodium silicate glass, 11:48014 (R;US)
Phase Studies
Densification of glass compacts containing a second phase, 11:48049 (BA;US)
Production
Use of DSC to determine the structure of sol-gel derived glasses, 11:48026 (R;US)
Relaxation
Optical studies of dynamical processes in disordered materials. Final report, September 1, 1983-February 28, 1986, 11:48019 (R;US)
GLASS MELTERS
See CERAMIC MELTERS
GLAUBER'S SALT
See SODIUM SULFATES
GLOBAL FALLOUT
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)
GLUCOSE
Membrane Transport
Interaction of fructose with the glucose permease of the cyanobacterium Synechocystis sp. strain PCC 6803, 11:48793 (J;US)
GLUON MODEL
Particle Production
Cross section for four-gluon production by gluon-gluon fusion, 11:49168 (J;NL)
GOBAR GAS
See INTERMEDIATE BTU GAS
METHANE
GOLD
Binding Energy
Final-state screening of core holes in metals, 11:47957 (J;US)
Electron Microscopy
Observation of two surface-plasmon modes on gold particles, 11:47954 (J;US)
Heavy Ion Reactions
Nuclear collective flow as a function of projectile energy and mass, 11:49294 (J;US)
Light Transmission
Observation of two surface-plasmon modes on gold particles, 11:47954 (J;US)
Photoemission
Experimental investigation of the possibilities of the optical tunnelling of electron from a metal surface induced by strong CO_2 laser pulses, 11:49066 (RA;US)
Photon Collisions
Experimental investigation of the possibilities of the optical tunnelling of electron from a metal surface induced by strong CO_2 laser pulses, 11:49066 (RA;US)
Plasmons
Observation of two surface-plasmon modes on gold particles, 11:47954 (J;US)
GOLD 197 TARGET
Carbon 12 Reactions
Attenuation method for σ sub(R) measurements in heavy ion systems, 11:49350 (RA;BR)
Krypton 84 Reactions
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)

Neon 20 Reactions
3-body final states in peripheral heavy-ion collisions: nuclear clustering structure and projectile excitation revisited, 11:49261 (R;US)
Neutron emission in heavy ion reactions as measure for the excitation energy and the transfer of linear momentum - experiments with a 4π-scintillator tank, 11:49352 (R;DE;In German)
Transfer and breakup reactions at intermediate energies, 11:49353 (R;US)
Oxygen 16 Reactions
Attenuation method for σ sub(R) measurements in heavy ion systems, 11:49350 (RA;BR)
Transfer and breakup reactions at intermediate energies, 11:49353 (R;US)
Proton Reactions
Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions, 11:49320 (R;NL)
GOLD ALLOYS
Physical Radiation Effects
Cascade defect production and irradiation enhanced diffusion in Cu_3Au, 11:47918 (R;US)
Collapse of defect cascades to dislocation loops in Cu_3Au, 11:47919 (R;US)
Radiation-induced segregation in Cu-Au alloys (1 at. % Au), 11:47916 (R;US)
GOLD COMPLEXES
Chemical Preparation
Syntheses and structures of $[HB(pz)_3](CO)_2(CS)W\text{-}Au(PR_3)$. First examples of a semibridging CS ligand, 11:48172 (J;US)
GOLDSTONE BOSONS
See also AXIONS
Mass
Derivation of mass relations for composite W* and Z* from effective Lagrangian approach, 11:49153 (R;JP)
GRAIN ALCOHOL
See ETHANOL
GRAIN BOUNDARIES
Melting
Thermodynamic criteria for grain-boundary melting; A molecular-dynamics study, 11:49447 (J;US)
GRANITES
Geologic Fissures
Retardation of radionuclide transport by fracture flow in granite and argillaceous rocks. Final report (April 1983-April 1985), 11:47290 (R;GB)
Isotope Dating
Using radon as probe for investigating characteristics of fractures in crystalline minerals, 11:48946 (RA;CS)
Stress Analysis
New approach for calibration and interpretation of IRAD GAGE vibrating-wire stressmeters, 11:47287 (R;US)
Stresses
New approach for calibration and interpretation of IRAD GAGE vibrating-wire stressmeters, 11:47287 (R;US)
Tracer Techniques
Using radon as probe for investigating characteristics of fractures in crystalline minerals, 11:48946 (RA;CS)
GRANULAR BED FILTERS
Performance Testing
Measurement of alkali vapor in PFBC flue gas and its control by a fixed granular bed of activated bauxite, 11:47202 (R;US)
GRAPHITE
Clathrates
Charge transfer in rare earth-trichloride graphite intercalation compounds, 11:48168 (J;GB)
Physical and chemical properties of graphite intercalation compounds. Progress report, August 1, 1985-October 31, 1986, 11:48020 (R;US)
Neutron Reactions
Clean benchmark experiments and analyses at FNS, 11:49266 (RA;JP)
Phase Transformations
Time-resolved picosecond optical measurements of laser-excited graphite, 11:48040 (J;US)
Phonons
Theoretical studies of sliding charge density waves, rigid layer modes of layered compounds and states of incommensurate structures. Final technical report, February 14, 1984-October 14, 1985, 11:49438 (R;US)
Physical Radiation Effects
Time-resolved picosecond optical measurements of laser-excited graphite, 11:48040 (J;US)
Vibrational States
Energy-dispersive X-ray diffraction study of mean-square atom displacements in highly oriented pyrolytic graphite, 11:48043 (J;DK)
GRAPHITE MODERATOR
See GRAPHITE
GRATINGS
Design
Reflection grating spectrometer for the x-ray multi-mirror (XMM) space observatory: design and calculated performance, 11:48632 (R;US)
Performance
Reflection grating spectrometer for the x-ray multi-mirror (XMM) space observatory: design and calculated performance, 11:48632 (R;US)
GRAVITATION
Asymmetry
Equivalence of active and passive gravitational mass using the moon, 11:49015 (J;US)
Measuring Methods
Hypercharge fields and Eoetvoes-type experiments, 11:49464 (J;US)
GREENLAND
Uranium Deposits
Vein-type uranium mineral occurrences in South Greenland, 11:47251 (RA;XA)
GREIFSWALD-1 REACTOR
Greifswald, German Democratic Republic
Spent Fuel Storage
Application of IAEA seals to spent-fuel cooling ponds at the Bruno Leuschner NPP, Greifswald, 11:47347 (R;DD)
GREIFSWALD-2 REACTOR
Greifswald, German Democratic Republic
Spent Fuel Storage
Application of IAEA seals to spent-fuel cooling ponds at the Bruno Leuschner NPP, Greifswald, 11:47347 (R;DD)
GREIFSWALD-3 REACTOR
Greifswald, German Democratic Republic
Spent Fuel Storage
Application of IAEA seals to spent-fuel cooling ponds at the Bruno Leuschner NPP, Greifswald, 11:47347 (R;DD)
GREIFSWALD-4 REACTOR
Greifswald, German Democratic Republic
Spent Fuel Storage
Application of IAEA seals to spent-fuel cooling ponds at the Bruno Leuschner NPP, Greifswald, 11:47347 (R;DD)
GRONINGEN (KVI) CYCLOTRON
See KVI CYCLOTRON
GROSS-NEVEU MODEL
See LAGRANGIAN FIELD THEORY
GROUND DISPOSAL
Drainage
Avoiding failure of leachate-collection and cap-drainage systems. Report for September 1983-November 1985, 11:48708 (R;US)
Leachates
Avoiding failure of leachate-collection and cap-drainage systems. Report for September 1983-November 1985, 11:48708 (R;US)
Sanitary Landfills
Installation restoration program. Phase II. Confirmation/quantification. Stage I report for Williams Air Force Base, Chandler, Arizona. Final report, September 1984-January 1986, 11:48706 (R;US)
GROUND WATER
Alpha Spectroscopy
^{222}Rn determination from total alpha-activity time relationship, 11:48775 (RA;CS)

Contamination
Assessment of alternatives for long-term management of uranium ore residues and contaminated soils located at DOE's Niagara Falls Storage Site, 11:48711 (RA;US)
Decommissioning of the CMP Pits, 11:48743 (RA;US)
Development and implementation of a comprehensive ground water protection program at the Savannah River Plant, 11:48746 (RA;US)
Ground water pollution control, 11:48747 (RA;US)
Ground water monitoring and studies at Oak Ridge, 11:48748 (RA;US)
Investigation of ground water contamination potential at Sandia National Laboratories, Albuquerque, NM, 11:48749 (RA;US)
Organics contamination of ground water - an open literature review, 11:48745 (RA;US)
SRP comprehensive ground water protection program. The Savannah River Operations Office's management approach, 11:48782 (RA;US)
Statistical/modeling approach to ground water monitoring at Brookhaven National Laboratory, 11:48760 (RA;US)
Flow Rate
Cumulative release to the accessible environment, 11:47299 (RA;US)
Fractional release from the engineered barrier system, 11:47298 (RA;US)
Ground-water travel time, 11:47297 (RA;US)
Regional ground-water system, 11:47296 (RA;US)
Geochemistry
Hydrochemistry of the groundwater flow systems in the Harwell region, 11:47311 (R;GB)
Isotope Dating
Attempt to determine environmental ^{36}Cl in groundwater by liquid scintillation counting, 11:48064 (RA;CS)
Radiocarbon accelerator mass spectrometry for hydrological investigations, 11:48736 (RA;CS)
Isotope Ratio
Hydrochemistry of the groundwater flow systems in the Harwell region, 11:47311 (R;GB)
Monitoring
Ground water monitoring and studies at Oak Ridge, 11:48748 (RA;US)
Natural Radioactivity
Simultaneous measurement of tritium activity and the background count rate in a proportional counter by Povinec method; three year experience at Ruder Boskovic Institute, 11:48773 (RA;CS)
Pollution Abatement
Avoiding failure of leachate-collection and cap-drainage systems. Report for September 1983-November 1985, 11:48708 (R;US)
Radiation Monitoring
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Radioactivity
Analysis of ^{81}Kr in groundwater using laser resonance ionization spectroscopy, 11:48074 (RA;CS)
Radionuclide Migration
Development of environmental monitoring programs at four Formerly Utilized Sites Remedial Action Program (FUSRAP) sites, 11:47331 (RA;US)
Los Alamos low-level waste performance assessment status, 11:47338 (R;US)
Simultaneous measurement of tritium activity and the background count rate in a proportional counter by Povinec method; three year experience at Ruder Boskovic Institute, 11:48773 (RA;CS)
Sampling
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Water Quality
Development and implementation of a comprehensive ground water protection program at the Savannah River Plant, 11:48746 (RA;US)
Saltstone: cement-based waste form for disposal of Savannah River Plant low-level radioactive salt waste, 11:47304 (RA;US)

GROUND-WATER RESERVES
See AQUIFERS
GROWTH (BUBBLE)
See BUBBLE GROWTH
GROWTH (CRYSTAL)
See CRYSTAL GROWTH
GROWTH (ECONOMIC)
See ECONOMIC GROWTH
GUANINE
Metabolism
Appearance of methylguanine in the DNA of CHO-cells before and after methylnitrosourea therapy, 11:48892 (RA;AT;In German)
GUATEMALA
Energy Source Development
Geothermal initiatives in Central America, 11:47435 (R;US)
Geothermal Resources
Geothermal initiatives in Central America, 11:47435 (R;US)
GULF OF MEXICO
Fishes
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Gulf of Mexico). Black drum (Pogonias cromis), 11:48739 (R;US)
GULF STREAM
Upwelling
Phytoplankton dynamics within Gulf Stream intrusions on the southeastern United States continental shelf during summer 1981, 11:48791 (J;GB)
GUM ACACIA
Genetic Effects
Tests for mutagenic effects of ammoniated glycyrrhizin, butylated hydroxytoluene, and gum arabic in roden germ cells, 11:48919 (J;US)
GUM ARABIC
See GUM ACACIA
GYPSUM
Solubility
Model of gypsum, calcite and silica solubilities for application to geothermal waters over a wide range of temperature, P/sub CO_2/ and ionic strength. Final technical report, October 1, 1983-September 30, 1984, 11:47446 (R;US)

H

HADRON REACTIONS
Inelastic Scattering
EMC effect and breaking of additivity of nucleons in the high-energy hadron-nucleus interactions, 11:49411 (R;JP)
Multiple Scattering
EMC effect and breaking of additivity of nucleons in the high-energy hadron-nucleus interactions, 11:49411 (R;JP)
Quark Model
Quark models of hadron interactions, 11:49373 (RA;US)
Reviews
Review of high energy hadron-nucleus data, 11:49218 (R;US)
HADRON-HADRON INTERACTIONS
Inclusive Interactions
QCD radiative corrections to parton-parton scattering, 11:49169 (J;NL)
Quark Model
Quark confinement and hadronic interactions, 11:49163 (J;US)
HADRONIC ATOMS
Particle Identification
Response of streamer tubes to 210 GeV/c hadronic showers, 11:48493 (RA;AT)
HADRONS
See also MESONS
Bag Model
Effect of self-consistent treatment of one-gluon exchange in the Freidberg-Leenor-topological soliton model, 11:49175 (J;GB)
Mass Spectra
Large-scale calculations for hadron spectroscopy, 11:49212 (J;US)

Multiple Production
Study of the production of hadrons in muon-proton reactions at 280 GeV at the CERN proton synchrotron, 11:49125 (R;DE;In German)
Particle Identification
New high gain thin gap detectors for the OPAL hadron calorimeter, 11:48469 (RA;AT)
Quark Model
Constituent quark model for old and new particles, 11:49143 (RA;US)

HAEMOPHILUS
Biochemistry
Gyrase activity and number of copies of the gyrase B subunit gene in Haemophilus influenzae, 11:48816 (J;US)

HAFNIUM
Mass Spectroscopy
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
ICP-MS and its application in a nuclear laboratory, 11:48102 (BA;US)

HAFNIUM 180
Beta Decay
Search for the beta-decay of ^{180}Lu to ^{180}Hf/sup m/, 11:48965 (R;US)

HAFNIUM CARBIDES
Mechanical Properties
Refractory metal-matrix composites for space nuclear power applications, 11:47582 (RA;US)

HAIR
Activation Analysis
Trace rare earth element analysis of IAEA hair (HH-1), animal bone (H-5) and other biological standards by radiochemical neutron activation, 11:48911 (R;US)
X-Ray Spectroscopy
Correlation of trace elements in hair with colon cancer, 11:48899 (R;US)

HALF-LIFE
Comparative Evaluations
On the statistical evaluation of inconsistent measurement results illustrated on the example of the ^{90}Sr half-life, 11:49318 (R;NL)

HALFTIME
See HALF-LIFE

HALIDES
See also IODIDES
Reduction
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)

HALL GENERATORS
See MHD GENERATORS

HANFORD RESERVATION
Air Pollution
Ambient krypton-85 air sampling at Hanford, 11:48682 (RA;US)
Decontamination
Prevention of biological transport of radioactivity in the Hanford 200 areas, 11:47333 (RA;US)
Radiation Monitoring
Decline of airborne plutonium following decommissioning of a liquid waste disposal ditch in the Hanford Site 200 Area, 11:48677 (RA;US)

HARD COAL
See ANTHRACITE
BLACK COAL

HARTREE APPROXIMATION
See HARTREE-FOCK METHOD

HARTREE-FOCK METHOD
Hartree-Fock theory in nuclear physics. Technical summary report, 11:49368 (R;US)

HASTELLOY XR
Corrosion
Influence of heating rate on corrosion behavior of Ni-base heat resistant alloys in simulated VHTR helium environment, 11:47944 (R;JP;In Japanese)

HAZARDOUS MATERIALS
Not for radioactive materials.
Combustion
Practical guide - trial burns for hazardous-waste incinerators. Final report, 1984-1985, 11:48671 (R;US)
Environmental Transport
Installation restoration program: Phase I. Records search, Lawndale Annex, California. Final report, 1 July 1985-31 January 1986, 11:48705 (R;US)
Installation restoration program. Phase II. Confirmation/quantification. Stage I report for Williams Air Force Base, Chandler, Arizona. Final report, September 1984-January 1986, 11:48706 (R;US)
Ground Disposal
Avoiding failure of leachate-collection and cap-drainage systems. Report for September 1983-November 1985, 11:48708 (R;US)
Decommissioning of the CMP Pits, 11:48743 (RA;US)
Injection Wells
Report to congress on injection of hazardous waste, 11:47776 (R;US)
Pollution Regulations
Environmental regulation of federal facilities, 11:48702 (RA;US)
Qualitative Chemical Analysis
Use of FTIR for automated identification of organic compounds frequently found on hazardous waste sites, 11:48091 (BA;US)
Quantitative Chemical Analysis
Hazardous waste analysis by direct-linked fused silica capillary column gas chromatography/fourier transform infrared/mass spectrometry, 11:48090 (BA;US)
Risk Assessment
Problems of risk balancing for regulating environmental hazards, 11:47326 (RA;US)
Waste Disposal
Development of improved risk assessment tools for prioritizing hazardous and radioactive-mixed waste disposal sites, 11:47301 (RA;US)
Ranking system for mixed radioactive and hazardous waste sites, 11:47300 (RA;US)
Waste Management
Installation restoration program: Phase I. Records search, Lawndale Annex, California. Final report, 1 July 1985-31 January 1986, 11:48705 (R;US)
Water Pollution
Nashua Impoundment sediment sampling, June 1985, 11:48753 (R;US)

HCDA
See REACTOR CORE DISRUPTION

HD 8077
See NICKEL BASE ALLOYS

HDO
See DEUTERIUM COMPOUNDS

HEALTH HAZARDS
See also RADIATION HAZARDS
Classification
Hazard classification method for facilities containing toxic chemicals at the Pacific Northwest Laboratory, 11:48910 (R;US)
Program Management
Hazards: technology and fairness. Series on technology and social priorities, 11:47775 (R;US)

HEALTH PHYSICS
See RADIATION PROTECTION

HEART
Ion Mobility
Control of ion transport in the heart muscle by new antiarrhythmicas, 11:48808 (RA;AT;In German)

HEAT DISSIPATION
See ENVIRONMENTAL TRANSPORT
HEAT TRANSFER
THERMAL EFFLUENTS

HEAT ENGINES
See also INTERNAL COMBUSTION ENGINES
RANKINE CYCLE ENGINES
STIRLING ENGINES

Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Consolidated bibliography of publications of the advanced research and technology development (AR and TD) Fossil Energy Materials Program, October 1, 1979-April 30, 1986, 11:47172 (R;US)

HEAT EXCHANGERS
See also RADIATORS
Design
Liquid droplet heat exchanger studies, 11:47539 (RA;US)
Joints
Evaluation of ceramic construction joints for application to high recuperative heat exchangers. Final report, 11:47887 (R;US)
Performance
Advanced heat-pipe heat exchanger and microprocessor-based modulating burner controls development. Annual report, January 1985-January 1986, 11:47238 (R;US)
Liquid droplet heat exchanger studies, 11:47539 (RA;US)
Thermosyphons
Advanced heat-pipe heat exchanger and microprocessor-based modulating burner controls development. Annual report, January 1985-January 1986, 11:47238 (R;US)

HEAT PIPES
Capillary Flow
Heat pipe entrainment analysis via optical methods, 11:47541 (RA;US)
Fluid Flow
Simulation of heat pipe rapid transient performance using a multi-nodal implicit finite difference scheme, 11:47537 (RA;US)
Numerical Analysis
Analysis of the performance of a vertically oriented, gas-loaded, variable-conductance heat pipe. Master's thesis, 11:48276 (R;US)
Operation
Analysis of the performance of a vertically oriented, gas-loaded, variable-conductance heat pipe. Master's thesis, 11:48276 (R;US)

HEAT PUMPS
Coefficient of Performance
Manipulation of effective vapor pressure curves by thermodynamic cycles, 11:47861 (BA;US)
On the vertical integration of thermally activated heat pumps, 11:47862 (BA;US)
Dehumidifiers
On the vertical integration of thermally activated heat pumps, 11:47862 (BA;US)
Financial Incentives
Analysis of a cooling and heat pump rebate program, 11:47843 (RA;US)
Rankine Cycle
Manipulation of effective vapor pressure curves by thermodynamic cycles, 11:47861 (BA;US)
Refrigerants
Development and testing of a low cost screw compressor for the refrigerants R 12 and R 114. Final report, 11:47830 (R;DE;In German)
Thermal Efficiency
On the vertical integration of thermally activated heat pumps, 11:47862 (BA;US)
Vapor Pressure
Manipulation of effective vapor pressure curves by thermodynamic cycles, 11:47861 (BA;US)

HEAT RECOVERY
Heat Exchangers
Evaluation of ceramic construction joints for application to high recuperative heat exchangers. Final report, 11:47887 (R;US)

HEAT RECOVERY EQUIPMENT
Design
Halo scraper/direct converter system study, 11:49574 (RA;US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Consolidated bibliography of publications of the advanced research and technology development (AR and TD) Fossil Energy Materials Program, October 1, 1979-April 30, 1986, 11:47172 (R;US)
Specifications
Halo scraper/direct converter system study, 11:49574 (RA;US)

HEAT RESISTING ALLOYS
STAINLESS STEEL-304
See also STAINLESS STEEL-304L
STAINLESS STEEL-316
Corrosion
Influence of heating rate on corrosion behavior of Ni-base heat resistant alloys in simulated VHTR helium environment (Developmental alloys, 113MA and KSN, and Hastelloy XR), 11:47944 (R;JP;In Japanese)
Crack Propagation
Thermal-mechanical fatigue behavior of nickel-base superalloys. Final Report, 11:47947 (R;US)
Thermal Fatigue
Thermal-mechanical fatigue behavior of nickel-base superalloys. Final Report, 11:47947 (R;US)

HEAT SOURCES (RADIOISOTOPE)
See RADIOISOTOPE HEAT SOURCES

HEAT STORAGE
Meetings
International load management conference: proceedings, 11:47480 (R;US)
Phase Change Materials
Advanced latent heat of fusion thermal energy storage for solar power systems, 11:47410 (BA;US)

HEAT STORAGE DEVICES
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT STORAGE SYSTEMS
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT TRANSFER
C Codes
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Finite Element Method
TOPAZ2D: a two-dimensional finite element code for heat transfer analysis, electrostatics, and magnetostatics problems, 11:48285 (R;US)
Research Programs
In situ heat transfer experiment (ISHTE): Ocean Test Cruise report (Alcyone Cruise, Leg IV) September 1985, 11:48956 (R;US)
S Codes
Space Marching Inverse Conduction Code, 11:48283 (R;US)
T Codes
TOPAZ2D: a two-dimensional finite element code for heat transfer analysis, electrostatics, and magnetostatics problems, 11:48285 (R;US)

HEAT TRANSMISSION
See HEAT TRANSFER

HEATED EFFLUENTS
See THERMAL EFFLUENTS

HEAVY ION ACCELERATORS
Includes combined accelerator types for heavy ion acceleration.
See also ATLAS SUPERCONDUCTING LINAC
Beam Bunching
Approaching maximal performance of longitudinal beam compression in induction accelerator drivers, 11:48367 (R;US)
Reviews
Relativistic heavy ion facilities: worldwide, 11:48343 (R;US)
Storage Rings
Storage rings for heavy-ion atomic and nuclear physics, 11:48409 (R;US)

HEAVY ION FUSION REACTIONS
Lectures
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)

Linear Momentum Transfer
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)
Nuclear Reaction Kinetics
Heavy ion fusion and fission reactions, 11:49349 (R;US)
Spin Orientation
Dynamic polarization effects on sub-barrier heavy ion fusion cross-sections, 11:49403 (RA;BR)
Total Cross Sections
Dynamic polarization effects on sub-barrier heavy ion fusion cross-sections, 11:49403 (RA;BR)

Decay
Search for a light-scalar boson emitted in nuclear decay, 11:49227 (RA;US)
Hypernuclei
Binding energies of hypernuclei and 3-body Λ NN forces, 11:49138 (RA;US)
Coulomb effects and charge symmetry breaking for the Λ = 4 hypernuclei, 11:49139 (RA;US)
Leak Detectors
Improved analyzer for determining helium-4 in parts-per-billion range. Report of Investigations/1986, 11:48082 (R;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Alpha Reactions
U(3) principle as base of a microscopical U(3) model for the clarification of the phenomenon of nuclear molecules. Development of an analytical concept describing nucleus-nucleus collisions in the framework of the Composite Particle Theory in the Bargmann space, 11:49407 (R;DE;In German)
Pion Reactions
Study of the (π,πp) reaction and quasifree scattering in ^{4}He, 11:49225 (RA;US)
HELIUM 5
Hypernuclei
Binding energies of hypernuclei and 3-body Λ NN forces, 11:49138 (RA;US)
HELIUM 6
Hypernuclei
Binding energies of Λ Λ hypernuclei and the Λ Λ interaction, 11:49141 (RA;US)
HELIUM COMPOUNDS
Predissociation
Bottlenecks to unimolecular reactions and an alternative form for classical RRKM theory, 11:48143 (J;US)
HELIUM II
The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K).
Gas Flow
Helium mass flow measurement in the International Fusion Superconducting Magnet Test Facility, 11:49566 (R;US)
HELIUM IONS
Ion-Atom Collisions
Experimental investigations of electron capture from atomic hydrogen and deuterium by alpha particles. Annual report, 1 October 1984-30 September 1985, 11:49069 (R;US)
Inner shell ionization by fast protons, alpha particles and carbon ions, 11:49070 (R;NL)
HELIUM METHOD
See ISOTOPE DATING
HELIUM-NEON LASERS
Emission Spectroscopy
Electronic fourier transform spectroscopy: performance and application, 11:48105 (BA;US)
Q-Switching
Electro-optical switches with plasma electrodes, 11:48275 (J;US)
HEMOGLOBIN
Configuration Interaction
Examination of adduct formation in vivo in the mouse between benzo(a)pyrene and DNA of skin and hemoglobin of red blood cells, 11:48925 (J;US)
HEMOPHILUS
See HAEMOPHILUS
HERBS
Molecular Biology
Mutants of Arabidopsis as tools for physiology and molecular biology, 11:48820 (J;US)
Physiology
Mutants of Arabidopsis as tools for physiology and molecular biology, 11:48820 (J;US)
HEREDITY
See GENETICS
HEXOSES
See also FRUCTOSE
GLUCOSE
Membrane Transport
Inhibition of Na^+-dependent uptake of hexose and amino acids in LLC-PK1 cells by amiloride and amiloride-derivatives, 11:48915 (J;US)
HFBR REACTOR
Neutron Sources
New neutron small-angle diffraction instrument at the Brookhaven High Flux Beam Reactor, 11:48624 (BA;US)
HFS
See HYPERFINE STRUCTURE
HIGGS BOSONS
Particle Decay
SSC physics signatures and trigger requirements, 11:49114 (R;US)
Particle Identification
Identifying heavy Higgs bosons, 11:49154 (R;US)
Particle Production
Identifying heavy Higgs bosons, 11:49154 (R;US)
Radiative Decay
Two-photon decay widths of Higgs bosons in minimal broken supersymmetry, 11:49174 (J;US)
HIGGS MODEL
Monte Carlo Method
Monte Carlo studies with the ST-100 array processor, 11:49214 (J;US)
Phase Transformations
Monte Carlo studies with the ST-100 array processor, 11:49214 (J;US)
HIGH ALTITUDE (STRATOSPHERE)
See STRATOSPHERE
HIGH BTU GAS
Over 900 Btu/ft^3.
Production
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
The Great Plains Coal Gasification Project status, 11:47177 (BA;US)
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Data Acquisition Systems
Proceedings of the workshop on data acquisition system for high energy physics, 11:48389 (R;JP;In Japanese)
Meetings
Report on the 1985 DPF meeting, 11:49150 (R;US)
Research Programs
[Research in elementary particle physics]. Progress report, August 1, 1985-July 31, 1986, 11:49122 (R;US)
Reviews
Hamburg University, 2. Institute of Experimental Physics. Annual report 1985, 11:49126 (R;DE;In German)
HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY

HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES
HIGH FLUX NEUTRON SOURCE FACILITY
See NEUTRON SOURCE FACILITIES
HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS
HIGH-BETA PLASMA
Beta from 0.1 to 1.
Research Programs
High-beta plasma research. Task 1: high-beta tokamak research. Task 2: high-beta plasma theory. Annual progress report, 11:49478 (R;US)
HIGH-HEAD HYDROELECTRIC POWER PLANTS
Prior to August 1978 HYDROELECTRIC POWER PLANTS was used.
Pump Turbines
Ultrahigh head pump/turbine development program. Volume 1. Technical summary. Final report, 11:47379 (R;US)
HIGH-LEVEL RADIOACTIVE WASTES
Chemical Composition
Composition of high fission product wastes resulting from future reprocessing of commercial nuclear fuels, 11:47318 (R;US)
Emplacement
Construction, emplacement, and retrievability (preclosure), 11:47295 (RA;US)
Radioactive Waste Disposal
Calculations of radiation field arising from heat generating radioactive waste emplaced in ocean sediments, 11:47292 (R;GB)
Cumulative release to the accessible environment, 11:47299 (RA;US)
Disposal of high-level nuclear waste. Hearing before the Committee on Environment and Public Works, United States Senate, Ninety-Ninth Congress, First Session, October 30, 1985, 11:47322 (B;US)
Fractional release from the engineered barrier system, 11:47298 (RA;US)
Geochemical constraints on the microbial contamination of a hypothetical UK deep geological repository, 11:47312 (R;GB)
Ground-water travel time, 11:47297 (RA;US)
Regional ground-water system, 11:47296 (RA;US)
Selecting metallic canister materials for disposal of high-level radioactive wastes in rock salt formations, 11:47320 (R;DD;In German)
Radioactive Waste Storage
Cumulative release to the accessible environment, 11:47299 (RA;US)
Fractional release from the engineered barrier system, 11:47298 (RA;US)
Ground-water travel time, 11:47297 (RA;US)
Licensing information needs for a high-level waste repository, 11:47293 (RA;US)
Regional ground-water system, 11:47296 (RA;US)
Underground Disposal
Geochemical constraints on the microbial contamination of a hypothetical UK deep geological repository, 11:47312 (R;GB)
Selecting metallic canister materials for disposal of high-level radioactive wastes in rock salt formations, 11:47320 (R;DD;In German)
Vitrification
Electrical service and controls for joule heating of a nuclear waste experimental glass melter, 11:47324 (BA;US)
Waste Retrieval
Construction, emplacement, and retrievability (preclosure), 11:47295 (RA;US)
HIGHLY ENRICHED URANIUM
80 - 100 per cent.
Neutron Flux
Calculation of spatial distribution of the EURACOS II converter source, 11:49423 (RA;BR;In Portuguese)
HIGH-PURITY GE DETECTORS
Calibration
Simple and reliable method of calibrating Ge(Li) or GEM high resolution gamma spectrometer, 11:48612 (R;MY)
Sensitivity
Sensitive monitoring of rented radioactive aerosols, 11:48558 (RA;CS)
HIGH-VOLTAGE PULSE GENERATORS
Computerized Simulation
Comparison of numerical helical generator simulations with experimental results, 11:48312 (R;US)
Design
Conceptual design for a short-pulse explosive-driven generator, 11:48231 (R;US)
Magnetic flux compression generator powered electron beam experiments, 11:48307 (R;US)
Helical Configuration
Comparison of numerical helical generator simulations with experimental results, 11:48312 (R;US)
Switches
Design of a fast-plate generator driving plasma flow switch, 11:48306 (R;US)
Transformers
Energy storage transformer power conditioning systems for Megajoule class flux compression generators, 11:48304 (R;US)
HIGHWAYS
See ROADS
HOLMIUM 148
Energy-Level Transitions
Shell-model states in N = 81-83 nuclei, 11:49317 (RA;US)
HOLMIUM 153
Energy-Level Transitions
K X-ray yields, M1 strength and the γ-ray quasicontinuum in ^{153}Ho, 11:49334 (RA;US)
Total γ-spectrum from ^{153}Ho measured with BGO Compton-suppressed spectrometers, 11:49333 (RA;US)
High Spin States
K X-ray yields, M1 strength and the γ-ray quasicontinuum in ^{153}Ho, 11:49334 (RA;US)
Total γ-spectrum from ^{153}Ho measured with BGO Compton-suppressed spectrometers, 11:49333 (RA;US)
HOLMIUM 155
Energy-Level Transitions
Study of high spin states in ^{155}Ho, 11:49335 (RA;US)
High Spin States
Study of high spin states in ^{155}Ho, 11:49335 (RA;US)
HONDURAS
Energy Source Development
Geothermal initiatives in Central America, 11:47435 (R;US)
Geothermal Fields
Hydrogeochemistry and preliminary reservoir model of the Platanares Geothermal System, Honduras, Central America, 11:47436 (R;US)
Geothermal Resources
Geology of the platanares geothermal site, Departamento de Copan, Honduras, Central America. Field report, 11:47434 (R;US;In Spanish and English)
Geothermal initiatives in Central America, 11:47435 (R;US)
HOPE CREEK-1 REACTOR
Salem, New Jersey, USA. Prior to November 1973 known as Newbold Island-1 Reactor, for the initially planned site and older material is so indexed.
Reactor Operation
Technical Specifications, Hope Creek Generating Station (Docket No. 50-354). Appendix "A" to License No. NPF-57, 11:47492 (R;US)
Specifications
Technical Specifications, Hope Creek Generating Station (Docket No. 50-354). Appendix "A" to License No. NPF-57, 11:47492 (R;US)
HOPE CREEK-2 REACTOR
Salem, New Jersey, USA. Prior to November 1973 known as Newbold Island-2 Reactor for the initially planned site, and older material is so indexed.
Reactor Operation
Technical Specifications, Hope Creek Generating Station (Docket No. 50-354). Appendix "A" to License No. NPF-57, 11:47492 (R;US)

Specifications
Technical Specifications, Hope Creek Generating Station (Docket No. 50-354). Appendix "A" to License No. NPF-57, 11:47492 (R;US)

HOT GAS CLEANUP
Reviews
Gas stream cleanup. Technology status report, 11:47160 (R;US)
Technology Assessment
Gas stream cleanup. Technology status report, 11:47160 (R;US)
Hot gas cleanup for electric power generating systems (113 references), 11:47161 (R;US)

HOT PLASMA
Implosions
Advanced concepts theory: annual report, 1985. Memorandum report, January-December 1985, 11:49470 (R;US)
Opacity
Calculation of the opacity of hot dense plasmas, 11:49496 (R;GB)
Pinch Effect
Advanced concepts theory: annual report, 1985. Memorandum report, January-December 1985, 11:49470 (R;US)

HOUSES
Cooling Systems
Robie House. Phase II report. Recommendations for cooling and ventilation, restoration of doors and windows, refrigerated cooling retrofit, 11:47854 (R;US)
Energy Audits
Evaluation of a financial incentive program: the BPA Residential Weatherization Program, 11:47791 (RA;US)
Passive Solar Heating Systems
Passive solar heating systems applied in one-family houses - a study based on the requirements of Santiago de Chile, 11:47422 (R;DE;In German)
Retrofitting
Evaluation of a financial incentive program: the BPA Residential Weatherization Program, 11:47791 (RA;US)
Solar Architecture
Passive solar heating systems applied in one-family houses - a study based on the requirements of Santiago de Chile, 11:47422 (R;DE;In German)
Ventilation Systems
Robie House. Phase II report. Recommendations for cooling and ventilation, restoration of doors and windows, refrigerated cooling retrofit, 11:47854 (R;US)
Weatherization
Real world application: field testing the value of house doctoring as an incremental conservation measure, 11:47835 (RA;US)

HTGR TYPE REACTORS
See also THTR-300 REACTOR
VHTR REACTOR
VRAIN REACTOR
Fuel Cycle
HTGR fuel elements for the U/Pu or Th/U fuel cycle and related problems of waste management, 11:47506 (RA;DE;In German)
Fuel Elements
Annual meeting on nuclear technology 1981. Technical meeting: Fuel elements and fuel element materials, 11:47629 (R;DE;In German)
Reactivity Coefficients
Solution of 2D and 3D hexagonal geometry benchmark problems by using the finite element diffusion code DIFGEN, 11:47501 (R;DE)
Reactor Safety
Nuclear Safety technical progress review, January-March 1986. Volume 27, No. 1, 11:47739 (R;US)
Reactor Vessels
Finite element analysis of the 2240 MW HTGR PCRV, 11:47508 (R;US)

HTO
See TRITIUM COMPOUNDS

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN POPULATIONS
Radiation Doses
ARAC response to the Chernobyl reactor accident, 11:47740 (R;US)
Review of the ICRP document principles of Monitoring for the Radiation Protection of the Population, 11:48827 (RA;US)
Weldon Spring historical dose estimate, 11:48824 (R;US)

HUMANS
See HUMAN POPULATIONS

HUMIC ACIDS
Molecular Weight
Organic structure. Final report for the period ending March 31, 1986, 11:47180 (R;US)
Solvent Extraction
Organic structure. Final report for the period ending March 31, 1986, 11:47180 (R;US)

HUMIDITY
Measuring Instruments
DOE-JPL hygrometer, 11:47881 (RA;US)
Polymeric hygrometer sensor, 11:47874 (RA;US)

HYBRID ELECTRIC-POWERED VEHICLES
Performance Testing
Program Management for the US Department of Energy Electric and Hybrid Vehicles Program. Fifty-first monthly progress report, October 1985, 11:47899 (R;US)

HYDRATES
For chemical compounds or minerals.
NMR Spectra
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)
Nuclear Magnetic Resonance
Zero-field NMR of small-amplitude motions in a polycrystalline solid, 11:48140 (J;US)

HYDRAULIC FRACTURING
Multiple-fracture stimulation using controlled pulse pressurization. Final report, March 1983-December 1985, 11:47233 (R;US)

HYDRAULIC RAMS
See PUMPS

HYDRAULIC TRANSPORT
Test Facilities
Operation and maintenance of DOE/PETC Combustion Test facilities. Final activity report, April 1978-December 19, 1982, 11:47203 (R;US)

HYDRAULICS
C Codes
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)

HYDRIDES
See also NEON HYDRIDES
NITROGEN HYDRIDES
PHOSPHORUS HYDRIDES
SILANES
Chemical Reaction Kinetics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
Thermodynamics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)

HYDROBROMIC ACID
Absorption Spectra
Spectral studies related to dissociation of HBr, HCl and BrO. Final Technical Report, 11:48669 (R;US)

HYDROCARBONS
See also ALKANES
ALKENES
ANTHRACENE
BENZANTHRACENE
BENZENE
BENZOPYRENE
BIPHENYL
CAROTENOIDS
NAPHTHALENE

PHENANTHRENE
POLYCYCLIC AROMATIC HYDROCARBONS
PYRENE
TETRALIN
TOLUENE

Collisions
Optical measurements of molecular-ion fragmentation, 11:49037 (RA;US)
Post-foil interaction in foil-induced molecular dissociation, 11:49045 (RA;US)

Emission
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)

Fischer-Tropsch Synthesis
Studies of carbon deposition and consumption on Ru/TiO_2 during Fischer-Tropsch synthesis, 11:47369 (J;US)

Migration
Hydrocarbon solubility and its migration processes: a look at the present status, 11:47447 (R;US)

Solubility
Hydrocarbon solubility and its migration processes: a look at the present status, 11:47447 (R;US)

HYDROCHLORIC ACID

Absorption Spectra
Spectral studies related to dissociation of HBr, HCl and BrO. Final Technical Report, 11:48669 (R;US)

HYDROFLUORIC ACID

Chemical Reactions
Laser-driven chemical reaction for etching $LiNbO_3$, 11:48032 (J;US)

HYDROFORMYLATION
See CARBONYLATION

HYDROGEN

Adsorption
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Structure and chemisorptive properties of the Pt_3Ti surface, 11:48148 (J;US)

Chemical Reaction Kinetics
Variational transition state theory and tunneling calculations of potential energy surface effects on the reaction of $O(^3P)$ with H_2, 11:48220 (J;US)

Chemical Reaction Yield
Photochemical effects in 205-nm, two-photon-excited fluorescence detection of atomic hydrogen in flames, 11:48086 (J;US)
Quenching-independent fluorescence measurements of atomic hydrogen with photoionization controlled-loss spectroscopy, 11:48087 (J;US)

Combustion Kinetics
Catalytic combustion in a transient high pressure facility. M.S. Thesis, 11:48212 (R;GB)

Diffusion
Gas generation and migration studies involving recently generated ^{238}Pu-contaminated waste for the TRU Waste Sampling Program, 11:47315 (R;US)

Fluorescence Spectroscopy
Photochemical effects in 205-nm, two-photon-excited fluorescence detection of atomic hydrogen in flames, 11:48086 (J;US)
Quenching-independent fluorescence measurements of atomic hydrogen with photoionization controlled-loss spectroscopy, 11:48087 (J;US)

G Value
Gas generation and migration studies involving recently generated ^{238}Pu-contaminated waste for the TRU Waste Sampling Program, 11:47315 (R;US)

Ground States
Molecular physics and chemistry applications of quantum Monte Carlo, 11:49093 (J;US)

Measuring Instruments
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, April-June 1986, 11:47167 (R;US)

Metallurgical Effects
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)

Oxidation
High-temperature oxidation of H_2 on a platinum catalyst, 11:48221 (J;US)

Phase Studies
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1985, 11:47366 (R;US)

Photoionization
Quenching-independent fluorescence measurements of atomic hydrogen with photoionization controlled-loss spectroscopy, 11:48087 (J;US)

Photon-Atom Collisions
Laser-fast ion beam interactions at the Dynamitron, 11:49041 (RA;US)
Resonant two-photon ionization and dissociation of the hydrogen atom and molecule, 11:49062 (RA;US)

Photon-Molecule Collisions
Resonant two-photon ionization and dissociation of the hydrogen atom and molecule, 11:49062 (RA;US)
Theoretical studies of resonantly enhanced multiphoton ionization processes in molecules, 11:49061 (RA;US)

Rydberg Correction
Geometric treatment of the Stark effect in high Rydberg states of hydrogen, 11:49023 (RA;US)

Separation Processes
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)

Solubility
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, April-June 1986, 11:47167 (R;US)

Stark Effect
Geometric treatment of the Stark effect in high Rydberg states of hydrogen, 11:49023 (RA;US)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN BROMIDES
See HYDROBROMIC ACID

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN COMPLEXES

Chemical Preparation
Syntheses and structures of $[HB(pz)_3](CO)_2(CS)W\text{-}Au(PR_3)$. First examples of a semibridging CS ligand, 11:48172 (J;US)

HYDROGEN DONOR REACTIONS
See HYDROGEN TRANSFER

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN FUELS

Combustion Products
Measurements of superequilibrium hydroxyl concentrations in turbulent nonpremixed flames using saturated fluorescence, 11:48219 (BA;US)

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 1 MINUS
For H_1^- ions.

Beam Extraction
Measuring method and confirmation of H^-, D^- ion current by sheet plasma, 1, 11:49072 (R;JP)
Size effects of vacuum chamber for H^-, D^- ion volume production by sheet plasma, 1, 11:49073 (R;JP)
Some physical differences between sheet plasma and multicusp plasma as volume produced H^- or D^- ion sources, 11:49071 (R;JP)

HYDROGEN IONS 1 PLUS
For H_1^+ ions.

Ion-Atom Collisions
Inner shell ionization by fast protons, alpha particles and carbon ions, 11:49070 (R;NL)

HYDROGEN METERS

Design
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, April-June 1986, 11:47167 (R;US)

HYDROGEN PRODUCTION
Feasibility Studies
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
HYDROGEN SULFIDES
Adsorption
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Separation Processes
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
HYDROGEN TRANSFER
Catalysts
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Isotope Effects
Phenomenological manifestations of large-curvature tunneling in hydride-transfer reactions, 11:48147 (J;US)
Mathematical Models
Phenomenological manifestations of large-curvature tunneling in hydride-transfer reactions, 11:48147 (J;US)
Nuclear Magnetic Resonance
Low-rank coal liquefaction mechanisms. Final report for the period ending March 31, 1986, 11:47150 (R;US)
HYDROGENATION
Catalysts
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)
HYDRONIUM IONS
See OXONIUM IONS
HYDRONIUM RADICALS
Infrared Spectra
Lifetimes for spontaneous emission from the X-italic $^3u^-$ (v-italic = 1) and a-italic $^1\Delta$ states of CH^-, 11:49085 (J;US)
HYDROXY COMPOUNDS
For organic compounds only and excluding SACCHARIDES, GLYCOSIDES and HYDROXY ACIDS.
See also GUANINE
PHENOLS
TESTOSTERONE
Modifications
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
Recovery
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
HYDROXYBENZENE
See PHENOL
HYDROXYL RADICALS
Chemical Reaction Kinetics
Investigation of OH dynamics in the argon sensitized pulse radiolysis of water vapor, 11:48208 (J;US)
Chemical Reaction Yield
Investigation of OH dynamics in the argon sensitized pulse radiolysis of water vapor, 11:48208 (J;US)
Measurements of superequilibrium hydroxyl concentrations in turbulent nonpremixed flames using saturated fluorescence, 11:48219 (BA;US)
Photochemical effects in 205-nm, two-photon-excited fluorescence detection of atomic hydrogen in flames, 11:48086 (J;US)
Collisions
Post-foil interaction in foil-induced molecular dissociation, 11:49045 (RA;US)
Fluorescence Spectroscopy
Photochemical effects in 205-nm, two-photon-excited fluorescence detection of atomic hydrogen in flames, 11:48086 (J;US)
Radiobiology
Role of free radicals in the development of radiation injury, 11:48860 (RA;AU)
HYDROXYTOLUENES
See CRESOLS
HYPERFINE STRUCTURE
Research Programs
Very low temperature studies of hyperfine effects in metals, 11:47903 (R;US)
HYPERFRAGMENTS
See HYPERNUCLEI
HYPERNUCLEI
Binding Energy
Binding energies of hypernuclei and 3-body Λ NN forces, 11:49138 (RA;US)
Binding energies of Λ Λ hypernuclei and the Λ Λ interaction, 11:49141 (RA;US)
Coulomb effects and charge symmetry breaking for the Λ = 4 hypernuclei, 11:49139 (RA;US)
Energy Levels
Alpha-cluster calculations of /sub Λ/^{9}Be, 11:49140 (RA;US)
Meetings
Summary of hypernuclear sessions, 11:49217 (R;US)
Particle Decay
Non-mesonic decay of hypernuclei, 11:49387 (R;US)
Weak Particle Decay
Theoretical aspects of the weak decay of hypernuclei, 11:49388 (R;US)
HYPERTENSION
DNA Repair
Poly(ADP-ribose)-synthesis and DNA metabolism in lymphocytes of hypertension patients, 11:48887 (RA;AT;In German)
HYPOXANTHINE PHOSPHORIBOSYLTRANSFERASE
Mutation Frequency
Southern blotting analysis of mutations induced at the HPRT locus in CHO cells by x-rays and ^{125}I Iododeoxyuridine, 11:48866 (RA;AU)
HYPOXANTHINE QUANINE PHOSPHORIBOSYLTRANSF
See HYPOXANTHINE PHOSPHORIBOSYLTRANSFERASE

INTERCONNECTED POWER SYSTEMS
Photovoltaic Power Plants
Germano-Korean cooperation for erection and test of industrialized solar technologies. Final report, 11:47403 (R;DE;In German)
Security
Advanced power system security analysis concepts. Volume 1. A governor load flow modeling and simulation method. Final report, 11:47475 (R;US)

Advanced power system security analysis concepts. Volume 2. Security and stability assessment methodologies. Final report, 11:47476 (R;US)
Stability
Advanced power system security analysis concepts. Volume 2. Security and stability assessment methodologies. Final report, 11:47476 (R;US)
Wind Power Plants
Germano-Korean cooperation for erection and test of industrialized solar technologies. Final report, 11:47403 (R;DE;In German)

INTERFACES
Absorption Spectroscopy
EXAFS and reflectivity studies of surfaces and interfaces using glancing angle x-rays, 11:48629 (R;US)
Velocity
Velocity of propagation of the ^{3}He-A-italic-B-italic interface in hypercooled ^{3}He-A-italic, 11:49105 (J;US)
X-Ray Spectroscopy
EXAFS and reflectivity studies of surfaces and interfaces using glancing angle x-rays, 11:48629 (R;US)

INTERFACES (EQUIPMENT)
See EQUIPMENT INTERFACES

INTERFEROMETRY
Materials
Single crystal, epitaxial multilayers of AlAs, GaAs, and Al/sub x-italic/Ga/sub 1-//sub x-italic/As for use as optical interferometric elements, 11:48030 (J;US)

INTERFERON
Mutagenesis
Modification of mutagenesis and repair processes by human interferons, 11:48889 (RA;AT)

INTERMEDIATE BOSONS
Particle Production
Radiative corrections to the ratio of Z- and W-boson production, 11:49167 (J;US)

INTERMEDIATE BTU GAS
250 to 900 Btu/ft^3.
See also TOWN GAS
Production
Feasibility study for the production of low/medium-Btu gas from coal for Tri-City Regional Port District, 11:47170 (R;US)

INTERMEDIATE MASS NUCLEI
For nuclei with mass 41-180.

Catalytic Effects
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
IRIDIUM 181
High Spin States
Nature of the backbending in the Os-Ir-Pt region, 11:49336 (RA;US)
IRIDIUM 193 TARGET
Proton Reactions
Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions, 11:49320 (R;NL)
IRIDIUM BASE ALLOYS
Laser Welding
Microstructural modifications during laser and electron beam welding, 11:47924 (R;US)
IRIDIUM COMPLEXES
Chemical Reaction Kinetics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
Thermodynamics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
IRON
Absorption Spectroscopy
Analytical applications of ICP-FTS, 11:48104 (BA;US)
Electron Microprobe Analysis
Automated electron microprobe, 11:48097 (BA;US)
Grueneisen Constant
Phase transitions, Grueneisen parameter, and elasticity for shocked iron between 77 GPa and 400 GPa, 11:48950 (J;US)
Neutron Reactions
14 MeV integral experiment at OKTAVIAN to check differential data of secondary neutrons, 11:49305 (RA;JP)
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Update of ENDF/B-V Mod 3 iron: neutron-producing reaction cross sections and energy-angle correlations, 11:49292 (R;US)
Phase Studies
Phase transitions, Grueneisen parameter, and elasticity for shocked iron between 77 GPa and 400 GPa, 11:48950 (J;US)
Physical Radiation Effects
Collapse of defect cascades to dislocation loops during self-ion irradiations of Fe, Ni and Cu at 30, 300 and 600°K, 11:47920 (R;US)
Titration
Automated analyzer for the determination of free acid, 11:48128 (BA;US)
IRON 54
Energy Levels
Excitation of 8^-, particle-hole states in ^{54}Fe, 11:49280 (RA;US)
IRON 54 TARGET
Calcium 40 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
Chlorine 35 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
IRON 56 TARGET
Electron Reactions
Electroproduction of the delta isobar in nuclei, 11:49108 (RA;US)
Neutron Reactions
Update of ENDF/B-V Mod 3 iron: neutron-producing reaction cross sections and energy-angle correlations, 11:49292 (R;US)
IRON 57
Mossbauer Effect
^{57}Fe Mossbauer spectroscopy of U_6Fe, 11:47915 (R;US)
IRON 60
Beta-Minus Decay
Half-life of ^{60}Fe, 11:49298 (RA;US)
IRON ALLOYS
See also INCONEL 600
Chemical Preparation
Preparations of rare earth-iron alloys by thermite reduction, 11:47969 (P;US)
Embrittlement
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Phase Diagrams
Enthalpies of formation of liquid three-component iron-cerium-aluminium alloys, 11:47966 (TG;GB)
Self-Diffusion
Thermodynamics and diffusion processes in the Fe-Ni-Cr system, 11:47940 (RA;CS;In Czech)
Stress Corrosion
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Structural Chemical Analysis
^{57}Fe Mossbauer spectroscopy of U_6Fe, 11:47915 (R;US)
Tensile Properties
Tensile behavior of Fe-40Al alloys with B and Zr additions, 11:47948 (R;US)
Thermodynamics
Thermodynamics and diffusion processes in the Fe-Ni-Cr system, 11:47940 (RA;CS;In Czech)
Vibrational States
^{57}Fe Mossbauer spectroscopy of U_6Fe, 11:47915 (R;US)
IRON COMPLEXES

Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
IRRADIATION CAPSULES
Mechanical Tests
Study on evaluation methods of explosive proof tests of NSRR capsule, 11:47648 (R;JP;In Japanese)
Performance Testing
Development of the power ramping facility at JMTR. Results of performance test on the boiling water capsule, 11:47649 (R;JP;In Japanese)
IRRADIATION REACTORS
For isotope production and irradiation purposes; for producing fissile materials see PRODUCTION REACTORS.
Irradiation facilities at the Idaho National Engineering Laboratory, 11:47647 (R;US)
IRRIGATION
Wind-Powered Pumps
Cost of windmill irrigation. Cost analysis of wind pumps and diesel pumps used for small scale irrigation, 11:47451 (R;NL)
ISING MODEL
Free Energy
On the equivalence of dilute antiferromagnets and ferromagnets in random external fields: Curie-Weiss models, 11:49440 (R;BR)
Phi4-Field Theory
Four-dimensional boson field theory. II. Existence, 11:49194 (J;US)
ISOCYANIC ACID ESTERS
Isomerization
Methyl isocyanide isomerization kinetics: determination of collisional deactivation parameters following C-H overtone excitation, 11:48183 (J;US)
ISOMERIZATION
Mathematical Models
Infrared multiphoton dissociation of three nitroalkanes, 11:48203 (J;US)
ISOTOPE DATING
Early Slavic settlements and navigation at the mouth of Odra river, 11:48934 (RA;CS)
Multiwire Proportional Chambers
Low-level counting facility for ^{14}C dating, 11:48583 (RA;CS)
ISOTOPE ENRICHMENT
See ISOTOPE SEPARATION
ISOTOPE SEPARATION
For separation of isotopes of the same element only.
Efficiency
Rule of thumb for binary isotope separations in a gas centrifuge, 11:48155 (J;US)
ISOTOPES
See also DAUGHTER PRODUCTS
FISSION PRODUCTS
RADIOISOTOPES
TIN ISOTOPES
Emission Spectroscopy
Automated instrument for qualitative analysis of photographically recorded spectra, 11:48098 (BA;US)
ISOTOPIC SEPARATION
See ISOTOPE SEPARATION
ISX TOKAMAK
Confinement Time
Results of pellet injection into ISX-B, 11:49476 (R;US)
Pellet Injection
Results of pellet injection into ISX-B, 11:49476 (R;US)
ITALIAN TRIGA-MARK-II REACTOR
See TRIGA-2-ROME REACTOR

J

J CODES
Data Processing
Processing of the nuclear data file and the problems of JENDL, 11:49221 (RA;JP)
Reviews
Format of JENDL, 11:49220 (RA;JP)
J-3105 RESONANCES
See PSI-3105 RESONANCES
JAPAN
Educational Facilities
Interim report on construction of data base for atomic energy science documents (concerning Kyoto University Reactor), 11:49642 (RA;JP;In Japanese)
Information Systems
Interim report on construction of data base for atomic energy science documents (concerning Kyoto University Reactor), 11:49642 (RA;JP;In Japanese)
Nuclear Energy
Interim report on construction of data base for atomic energy science documents (concerning Kyoto University Reactor), 11:49642 (RA;JP;In Japanese)
Radioactivity
Radioactivity survey data in Japan, 11:48723 (R;JP)
Research Programs
Interim report on construction of data base for atomic energy science documents (concerning Kyoto University Reactor), 11:49642 (RA;JP;In Japanese)
JAPAN MATERIALS TESTING REACTOR
See JMTR REACTOR
JAPANESE ORGANIZATIONS
Research Programs
Annual report of National Institute of Radiological Sciences, April, 1982-March, 1983, 11:47780 (R;JP)
Annual report of National Institute of Radiological Sciences, April, 1983-March, 1984, 11:47781 (R;JP)
JENSEN SARCOMA
See EXPERIMENTAL NEOPLASMS
JET ENGINE FUELS
Yields
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Thirteenth interim report, processing of 750 degrees end point Illinois ITSL oil: engineering design studies and estimated processing costs, 11:47147 (R;US)
JET MODEL
Feynman Path Integral
Wess-Zumino action from the Grammer-Yennie approximation, 11:49197 (J;US)

JET REACTORS
See JET TOKAMAK
JET TOKAMAK
ICR Heating
Analyses of ICRF waves on JET plasmas, 11:49491 (R;GB)
JETS
Expansion
Time-of-flight characterization of pulsed supersonic helium free-jet expansions, 11:48287 (J;US)
Mixing
Dilution jet mixing program, phase 3. Final Report, 11:47895 (R;US)
JMTR REACTOR
Irradiation Capsules
Development of the power ramping facility at JMTR. Results of performance test on the boiling water capsule, 11:47649 (R;JP;In Japanese)
JUICES
See BEVERAGES
JUPITER PLANET
Planetary Magnetospheres
Periodic amplitude variations in Jovian continuum radiation. Progress report for period ending February 1986, 11:48959 (R;US)

K

K-25 PLANT
See ORGDP
KALKAR POWER REACTOR
See SNR REACTOR
KANSAS
Residential Buildings
Evaluation of Shawnee County low/fixed income consultation program, 11:47850 (RA;US)
KAOLINITE
Radioecological Concentration
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)
KAON BEAMS
BNL kaon beams, present and planned, 11:48378 (R;US)
KAONS
See also KAONS MINUS
KAONS PLUS
Chirality
Low momentum penguin contributions in a chiral theory, 11:49156 (R;NO)
Low momentum penguin loop contributions and the $\Delta I = 1/2$ rule, 11:49157 (R;NO)
Weak Particle Decay
New interaction for the enhancement of the ΔI-italic = (1/2) amplitude in weak decays, 11:49164 (J;US)
KAONS MINUS
Chirality
Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory, 11:49158 (R;NO)
Particle Decay
Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory, 11:49158 (R;NO)
Self-Energy
Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory, 11:49158 (R;NO)
KAONS PLUS
Chirality
Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory, 11:49158 (R;NO)
Particle Decay
Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory, 11:49158 (R;NO)
Self-Energy
Meson self-energy effects for $K^{+-} \to \pi^{+-}\gamma\gamma$ in a chiral theory, 11:49158 (R;NO)
KARLSRUHE NUCLEAR RESEARCH CENTER
See KERNFORSCHUNGSZENTRUM KARLSRUHE
KEK PHOTON FACTORY
Accelerator Facilities
Japanese medium energy program, 11:48340 (RA;US)
Research Programs
Japanese medium energy program, 11:48340 (RA;US)
KELP
See SEAWEEDS
KERNFORSCHUNGSZENTRUM KARLSRUHE
Work
List of publications of the University of Karlsruhe and the Karlsruhe Nuclear Research Centre. Publications of 1984, 11:49600 (R;DE;In German)
KETENES
Chemical Reactions
Conversion of the μketene ligand in [PPN][$Os_3(CO)_{10}(\mu$-I)(μ-CH_2CO)] into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
Molecular Structure
Conversion of the μketene ligand in [PPN][$Os_3(CO)_{10}(\mu$-I)(μ-CH_2CO)] into enolate, acyl, and vinyl ligands, 11:48175 (J;US
KETONES
See also BENZOPHENONE
CYCLOHEXANONE
FRUCTOSE
TESTOSTERONE
Mass Spectroscopy
Multi-stage mass spectrometry with a quadruople mass filter interfaced to a high resolution sector mass spectrometer, 11:48112 (BA;US)
KIDNEYS
Pathological Changes
Logistic regression analysis of cadmium-induced renal abnormalities, 11:48902 (R;US)
KILNS
Energy Conservation
Temperature by time of flight of sound waves, 11:47873 (RA;US)
Temperature Measurement
Temperature by time of flight of sound waves, 11:47873 (RA;US)
KLYSTRONS
Computerized Simulation
Beam dynamics, efficiency and power of the SLAC lasertron: simulation results, 11:48363 (R;US)
Photocathodes
Beam dynamics, efficiency and power of the SLAC lasertron: simulation results, 11:48363 (R;US)
KNK-2 REACTOR
Leopoldshafen, Karlsruhe, Federal Republic of Germany
Spent Fuel Elements
Decladding of fast breeder reactor fuel elements with lattice spaces, 11:47279 (RA;DE;In German)
KOREA (SOUTH)
See REPUBLIC OF KOREA
KRYPTON 81
Laser Spectroscopy
Analysis of ^{81}Kr in groundwater using laser resonance ionization spectroscopy, 11:48074 (RA;CS)
Multi-Photon Processes
Detection of single atoms by resonance ionization spectroscopy, 11:49068 (R;US)
KRYPTON 85
Air Pollution Monitoring
Ambient krypton-85 air sampling at Hanford, 11:48682 (RA;US)
Gamma Spectroscopy
Description of apparatus for determining radiological source terms of nuclear fuels, 11:48127 (BA;US)
Low Level Counting
Improved method for the measurement of the atmospheric Kr-85 activity, 11:48695 (RA;CS)
Radiation Monitoring
^{85}Kr as a monitor of global nuclear fuel cycle strategy, 11:48694 (RA;CS)

Radioecological Concentration
Ambient krypton-85 air sampling at Hanford, 11:48682 (RA;US)
Anthropogenic radionuclides ^{3}H, ^{14}C, ^{85}Kr and ^{133}Xe in the atmosphere, 11:48692 (RA;CS)
KRYPTON COMPOUNDS
Photoionization
Molecular beam photoionization spectrometry. (1) Photoionization studies of high temperature vapors. (2) State-selected and state-to-state studies of electron transfer reactions, 11:48204 (D;US)
KRYPTON FLUORIDE LASERS
Design
Subpicosecond KrF excimer-laser source, 11:48261 (J;US)
Performance
Subpicosecond KrF excimer-laser source, 11:48261 (J;US)
KRYPTONATES
See KRYPTON COMPOUNDS
KUR REACTOR
Data Acquisition
Interim report on construction of data base for atomic energy science documents (concerning Kyoto University Reactor), 11:49642 (RA;JP;In Japanese)
KVI CYCLOTRON
Beam Extraction
KVI cyclotron: from injection to extraction, 11:48387 (R;NL)
Ion Beam Injection
KVI cyclotron: from injection to extraction, 11:48387 (R;NL)
Operation
KVI cyclotron: from injection to extraction, 11:48387 (R;NL)
Specifications
KVI cyclotron: from injection to extraction, 11:48387 (R;NL)
KYOTO UNIVERSITY REACTOR
See KUR REACTOR

L

LA CROSSE BOILING WATER REACTOR
See LACBWR REACTOR
LABYRINTH
See AUDITORY ORGANS
LACBWR REACTOR
Legal Aspects
Integrated plant safety assessment, Systematic Evaluation Program. La Crosse Boiling Water Reactor (Docket No. 50-409). Supplement No. 1, 11:47723 (R;US)
Reactor Safety
Integrated plant safety assessment, Systematic Evaluation Program. La Crosse Boiling Water Reactor (Docket No. 50-409). Supplement No. 1, 11:47723 (R;US)
LAGRANGE FIELD EQUATIONS
See LAGRANGIAN FIELD THEORY
LAGRANGIAN FIELD THEORY
Chiral Symmetry
Higher derivative regularization and chiral anomaly, 11:49193 (R;JP)
LAKES
Water Pollution
Mt. St. Helens ash in lakes in the lower Grand Coulee, Washington State, 11:48927 (J;DE)
Water Quality
Environmental and water-quality operational studies. Initial evaluation of a computer algorithm for simulating anaerobic conditions in reservoirs and lakes. Final report, 11:48742 (R;US)
LAMPF II SYNCHROTRON
Status of LAMPF, 11:48337 (RA;US)
Experiment Planning
Future directions, 11:48338 (RA;US)
Kaon Beams
0.8-GeV/c kaon channel for LAMPF II, 11:48391 (R;US)
LAMPF LINAC
Accelerator Facilities
Future directions, 11:48338 (RA;US)
NPL upgrade, 11:48392 (RA;US)
Status of LAMPF, 11:48337 (RA;US)
Experiment Planning
Future directions, 11:48338 (RA;US)
NPL upgrade, 11:48392 (RA;US)
Neutron Source Facilities
WNR neutron source, 11:48393 (RA;US)
Operation
Operation's report 1985 users meeting, 11:48339 (RA;US)
Status of LAMPF, 11:48337 (RA;US)
Research Programs
Future directions, 11:48338 (RA;US)
Status of LAMPF, 11:48337 (RA;US)
LAMPROPHYRES
Chemical Composition
Heteromorphism and crystallization paths of katungites, Navajo volcanic field, Arizona, USA, 11:48947 (R;US)
Petrology
Heteromorphism and crystallization paths of katungites, Navajo volcanic field, Arizona, USA, 11:48947 (R;US)
LAMPS

LANTHANIDES
See RARE EARTHS
LANTHANUM 139
Energy Levels
Decay of 83-min /sup 139/Ba to levels of /sup 139/La and the decay of 18-min /sup 141/Ba to levels of /sup 141/La, 11:49326 (J;US)
LANTHANUM 141
Energy Levels
Decay of 83-min /sup 139/Ba to levels of /sup 139/La and the decay of 18-min /sup 141/Ba to levels of /sup 141/La, 11:49326 (J;US)
LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM COMPOUNDS
See also LANTHANUM FLUORIDES
LANTHANUM SILICATES
Crystal-Phase Transformations
Effect of microstructure and surface characteristics on phase stability (LaNb/sub 1-x/V/sub x/O_4), 11:48016 (R;US)
Phase Transformations
Manipulation of displacive phase transformations (LaNb/sub 1-x/V/sub x/O_4; BiV/sub 1-x/Nb/sub x/O_4), 11:48015 (R;US)
LANTHANUM FLUORIDES
Absorption Spectra
Analysis of the spectrum of Dy^{3+}:LaF_3 assuming a C/sub2v/ site summetry, 11:48013 (R;US)
Crystal Models
Analysis of the spectrum of Dy^{3+}:LaF_3 assuming a C/sub2v/ site summetry, 11:48013 (R;US)
LANTHANUM SILICATES
Crystal Growth
Investigation of single-crystal silicates for blue tunable lasers. Quarterly progress report No. 1, 1 September-30 November 1985, 11:48253 (R;US)
LARGE COIL PROGRAM
Cryogenics
Helium mass flow measurement in the International Fusion Superconducting Magnet Test Facility, 11:49566 (R;US)
LASER GUIDANCE
Empirical considerations for laser guided electron beams in the advanced test accelerator, 11:48365 (R;US)
LASER MATERIALS
Crystal Doping
New harmonic materials: index engineering, 11:48273 (J;US)
Crystal Growth
Investigation of single-crystal silicates for blue tunable lasers. Quarterly progress report No. 1, 1 September-30 November 1985, 11:48253 (R;US)

Optical Properties
New harmonic materials: index engineering, 11:48273 (J;US)
Theoretical methods for the study of transition metals in crystals, 11:48272 (BA;US)
Performance
Trivalent cerium doped crystals as tunable laser systems: Two bad apples, 11:48271 (BA;US)
Research Programs
Chinese Journal of Lasers (selected articles), 11:48265 (TJ;US)

LASER RADIATION
Laser initiation of TiH/sub x//$KClO_4$ (x = 0.2, 0.65, 1.65) (Argon laser), 11:48650 (R;US)
Amplification
Approximate theory of Stokes amplification and conversion valid at large gain, 11:49463 (J;US)
Beam Monitoring
Real-time, low-cost laser diagnostic system, 11:48268 (BA;US)
Beam Profiles
Real-time, low-cost laser diagnostic system, 11:48268 (BA;US)
Electrons
Electron scattering in the presence of laser radiation, 11:49178 (RA;US)
Raman Effect
Approximate theory of Stokes amplification and conversion valid at large gain, 11:49463 (J;US)
Therapeutic Uses
Medium power YAG laser treatment of rheumatoid arthritis, 11:48809 (RA;AT)
Wave Propagation
Aspects of Raman scattering and other effects on laser propagation through the atmosphere. Summary of work for the period, May 5, 1986-June 13, 1986, 11:49456 (R;US)

LASER SPECTROSCOPY
Laser spectroscopy of radioactive atoms, 11:48628 (RA;US)

LASER TARGETS
Fabrication
Preparation and properties of polyvinyl alcohol microspheres, 11:49577 (R;US)
Thermal Conduction
Measurement and analysis of near-classical thermal transport in one-micron laser-irradiated spherical plasmas, 11:49586 (J;US)

LASER WELDING
Microstructure
Microstructural modifications during laser and electron beam welding, 11:47924 (R;US)

LASERS
Light Amplification by Stimulated Emission of Radiation.
See also CHEMICAL LASERS
FREE ELECTRON LASERS
GAS LASERS
SEMICONDUCTOR LASERS
SOLID STATE LASERS
X-RAY LASERS
Beam Monitoring
Real-time, low-cost laser diagnostic system, 11:48268 (BA;US)
Damage
Fundamental mechanisms of optical damage in short-wavelength high-power lasers, 11:48258 (R;US)
Design
Exploding conducting film laser pumping apparatus, 11:48262 (P;US)
Raman laser with controllable suppression of parasitics, 11:48264 (P;US)
Electrical Pumping
Exploding conducting film laser pumping apparatus, 11:48262 (P;US)
Raman Effect
Raman laser with controllable suppression of parasitics, 11:48264 (P;US)
Safety
Statistical model for laser safety analysis, 11:48254 (R;US)

LASL
Low-Level Radioactive Wastes
Los Alamos low-level waste performance assessment status, 11:47338 (R;US)

LATTICE FIELD THEORY
Computerized Simulation
Molecular dynamics algorithm for simulation of field theories in the canonical ensemble, 11:49215 (J;NL)
Higgs Model
Phase structure of the SU(3) gauge-Higgs system, 2. Adjoint Higgs, 11:49192 (R;JP)
Mass Spectra
Lattice QCD: Going beyond the mass spectrum, 11:49213 (J;US)
Theoretical derivation of mass spectra in lattice gauge theories, 11:49176 (R;FR)
Monte Carlo Method
Monte Carlo studies with the ST-100 array processor, 11:49214 (J;US)
Phase Transformations
Lattice gauge theory with a fast highly parallel computer, 11:49209 (J;US)
Monte Carlo studies with the ST-100 array processor, 11:49214 (J;US)
Tricritical points in three-dimensional X-italicY-italic model with mixed action, 11:49460 (J;US)
Renormalization
Renormalization group analyses of an SU(2) lattice guage theory, 11:49179 (R;US)
Scaling Laws
β function, scaling, and improved action for S-italicU-italic(3) lattice gauge theory, 11:49210 (J;US)
SU-3 Groups
β function, scaling, and improved action for S-italicU-italic(3) lattice gauge theory, 11:49210 (J;US)
Lattice gauge theory with a fast highly parallel computer, 11:49209 (J;US)
Monte Carlo studies with the ST-100 array processor, 11:49214 (J;US)
Numerical determination of the QCD β function, 11:49202 (J;US)
Phase structure of the SU(3) gauge-Higgs system, 2. Adjoint Higgs, 11:49192 (R;JP)
Thermodynamics
On the fermion mass and lattice size dependence of SU(2) gauge theory thermodynamics, 11:49206 (J;NL)
U-1 Groups
Testing two versions of lattice gauge theory: Creutz ratios in U-italic(1)$_6$, 11:49208 (J;US)
Wilson Loop
Testing two versions of lattice gauge theory: Creutz ratios in U-italic(1)$_6$, 11:49208 (J;US)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LAWRENCE LIVERMORE LABORATORY
Emergency Plans
Magnetic fusion energy. Disaster operation procedures, 11:49550 (R;US)
Evacuation
Magnetic fusion energy. Disaster operation procedures, 11:49550 (R;US)

LEACHATES
Chemical Composition
Extraction of inorganic chemical constituents from retorted oil shale by complexometric agents, 11:47247 (R;US)
Electric Conductivity
Extraction of inorganic chemical constituents from retorted oil shale by complexometric agents, 11:47247 (R;US)
PH Value
Extraction of inorganic chemical constituents from retorted oil shale by complexometric agents, 11:47247 (R;US)

LEAD
Argon 40 Reactions
Expanding pion emitting source in Ar on Pb collisions, 11:49355 (J;US)
Biological Localization
In vivo monitoring of toxic metals: assessment of neutron activation and x-ray fluorescence techniques, 11:48901 (R;US)

Environmental Transport
Geochemistry of lead in rivers, estuaries and the continental shelf of the southeastern US, 11:48953 (J;NL)
Geochemistry
Geochemistry of lead in rivers, estuaries and the continental shelf of the southeastern US, 11:48953 (J;NL)
Ion-Atom Collisions
Inner shell ionization by fast protons, alpha particles and carbon ions, 11:49070 (R;NL)
Mineral Cycling
Geochemistry of lead in rivers, estuaries and the continental shelf of the southeastern US, 11:48953 (J;NL)
Neutron Reactions
14 MeV integral experiment at OKTAVIAN to check differential data of secondary neutrons, 11:49305 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Proton Reactions
Continuum polarization transfer in 500 MeV proton scattering and pionic collectivity in nuclei, 11:49239 (J;US)
Quantitative Chemical Analysis
Certification of lead and cadmium in three lyophilized blood materials. CRM No. 194, 195, 196, 11:48060 (R;DE)
X-Ray Fluorescence Analysis
In vivo monitoring of toxic metals: assessment of neutron activation and x-ray fluorescence techniques, 11:48901 (R;US)

LEAD 205
Mass Spectroscopy
Accelerator mass spectrometry with heavy ions, 11:48073 (RA;CS)
Neutrino Reactions
Feasibility studies of accelerator mass spectrometry of ^{205}Pb and its application to solar neutrino detection, 11:48961 (RA;US)

LEAD 206 TARGET
Silicon 28 Reactions
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Silicon 30 Reactions
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)

LEAD 208
Giant Resonance
Decay of the giant monopole resonance in heavy nuclei, 11:49362 (R;NL)
Giant resonance structure in /sup 208/Pb measured using the (p,p/sup '/) reaction at 334 MeV, 11:49356 (J;US)
Nuclear Temperature
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)

LEAD 208 TARGET
Carbon 13 Reactions
/sup 218/Ra α reduced width and its consequences for α clustering in the heavy elements, 11:49357 (J;US)
Neutron Reactions
/sup 208/Pb+n reaction and the mean nuclear field near threshold, 11:49354 (J;US)
Nickel 58 Reactions
Energy dependence of quasi-elastic heavy ion reactions, 11:49346 (RA;US)
Nickel 64 Reactions
Energy dependence of quasi-elastic heavy ion reactions, 11:49346 (RA;US)
Oxygen 16 Reactions
^{16}O + ^{208}Pb near the Coulomb barrier, 11:49347 (RA;US)
Heavy ion fusion and fission reactions, 11:49349 (R;US)
Proton Reactions
Giant resonance structure in /sup 208/Pb measured using the (p,p/sup '/) reaction at 334 MeV, 11:49356 (J;US)
Reactive content of the proton-nucleus impulse-approximation Dirac optical potential, 11:49287 (RA;BR)
Silicon 28 Reactions
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Silicon 30 Reactions
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Sulfur 32 Reactions
Evaporation residue cross-sections in fusion of ^{64}Ni + ^{92}Zr and ^{12}C + ^{144}Sm, 11:49331 (RA;US)
Sulfur 36 Reactions
Evaporation residue cross-sections in fusion of ^{64}Ni + ^{92}Zr and ^{12}C + ^{144}Sm, 11:49331 (RA;US)

LEAD 210
Radioecological Concentration
Fallout of low radioactivities ^{137}Cs, ^{90}Sr and ^{210}Pb on the mountains, 11:48720 (RA;CS)

LEAD COMPOUNDS
See also LEAD OXIDES
LEAD PHOSPHATES
PZT
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)

LEAD METHOD
See ISOTOPE DATING

LEAD OXIDES
Chemical Properties
Research on lead dioxide: Recent results, 11:47765 (BA;US)
Microstructure
Research on lead dioxide: Recent results, 11:47765 (BA;US)
Morphology
Research on lead dioxide: Recent results, 11:47765 (BA;US)

LEAD PHOSPHATES
Crystal Structure
Structure of dichromate-type lead pyrophosphate, $Pb_2P_2O_7$, 11:47996 (J;US)

LEAD ZIRCONITE TITANATE
See PZT

LEAD-ACID BATTERIES
Battery Charging
Methods of electrolyte agitation and effects on the discharge and charge behavior of lead-acid batteries, 11:47768 (BA;US)
Cathodes
Research on lead dioxide: Recent results, 11:47765 (BA;US)
Design
Advanced lead-acid batteries, 11:47763 (BA;US)
Electrodes
Lead-acid battery negative: A review, 11:47766 (BA;US)
Electrolytes
Advanced lead-acid batteries, 11:47763 (BA;US)
Methods of electrolyte agitation and effects on the discharge and charge behavior of lead-acid batteries, 11:47768 (BA;US)
Performance
Methods of electrolyte agitation and effects on the discharge and charge behavior of lead-acid batteries, 11:47768 (BA;US)
Research Programs
Advanced lead-acid batteries, 11:47763 (BA;US)
Service Life
Advanced lead-acid batteries, 11:47763 (BA;US)

LEAK DETECTORS
Sensitivity
Improved analyzer for determining helium-4 in parts-per-billion range. Report of Investigations/1986, 11:48082 (R;US)

LEAR
Low Energy Antiproton Storage Ring at CERN.
Electron Cooling
Electron cooling for low-energy antiprotons, 11:48390 (R;DE;In German)
LEAST SQUARE FIT
Algorithms
Linear least squares with bounds and linear constraints, 11:49632 (J;US)
LEAVES
See also TEA LEAVES
Activation Analysis
Trace rare earth element analysis of IAEA hair (HH-1), animal bone (H-5) and other biological standards by radiochemical neutron activation, 11:48911 (R;US)
LEP STORAGE RINGS
European Large Electron-Positron storage rings.
Fastbus System
Fastbus time digiti .er for LEP detectors, 11:48483 (RA;AT)
LEPTON REACTIONS
See also ELECTRON REACTIONS
Deep Inelastic Scattering
Nuclear effects in deep-inelastic lepton scattering, 11:49372 (RA;US)
LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
LEPTON REACTIONS
LEPTONS
See also MUONS
Particle Production
Direct lepton production in hadronic and nuclear collisions at low p/sub t/ and low pair mass, 11:49129 (R;US)
LEVEL DENSITY

LEVEL SCHEMES
See ENERGY LEVELS
LEVULOSE
See FRUCTOSE
LH
Blood Chemistry
Cytogenetic and hormonal studies during irradiation, 11:48844 (RA;BG;In Bulgarian)
LI-DRIFTED GE DETECTORS
Calibration
Simple and reliable method of calibrating Ge(Li) or GEM high resolution gamma spectrometer, 11:48612 (R;MY)
LIGANDS
Chemical Reactions
Conversion of the μketene ligand in [PPN][$Os_3(CO)_{10}(\mu$-I)(μ-CH_2CO)] into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
Molecular Structure
Conversion of the μketene ligand in [PPN][$Os_3(CO)_{10}(\mu$-I)(μ-CH_2CO)] into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
LIGASES
Code number 6.
Enzyme Activity
Gyrase activity and number of copies of the gyrase B subunit gene in Haemophilus influenzae, 11:48816 (J;US)
Role of glutamine synthetase adenylylation in the self-protection of Pseudomonas syringae subsp. tabaci from its toxin, tabtoxinine-β-lactam, 11:48794 (J;US)
LIGHT
See VISIBLE RADIATION
LIGHT BULBS
See also FLUORESCENT LAMPS
Chemical Reaction Kinetics
Development of novel lamps for study of enhanced production of resonance radiation by low-density mercury discharges, 11:47865 (BA;US)
Design
Development of novel lamps for study of enhanced production of resonance radiation by low-density mercury discharges, 11:47865 (BA;US)
Operation
Development of novel lamps for study of enhanced production of resonance radiation by low-density mercury discharges, 11:47865 (BA;US)
LIGHT GUIDES

Data Compilation
Lightning flash characteristics, 11:47477 (R;US)

LIGNIN
Refining
Apparatus for converting biomass to a pumpable slurry, 11:47397 (P;US)
LIGNITE
Ashes
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Biodegradation
Microbial screening test for lignite degradation. Quarterly progress report No. 6, April-June 1986, 11:47364 (R;US)
Calorific Value
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Chemical Composition
ChemCoal Process CPU recycle development program with Indian Head lignite. Final report for the period ending March 31, 1986, 11:47152 (R;US)
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Crushing
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Moisture
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Molecular Weight
Organic structure. Final report for the period ending March 31, 1986, 11:47180 (R;US)
Nitration
Microbial screening test for lignite degradation. Quarterly progress report No. 6, April-June 1986, 11:47364 (R;US)
Oxidation
Organic structure. Final report for the period ending March 31, 1986, 11:47180 (R;US)
Radiation Hazards
Assessment of the radiation risk following from exploitation of Polish brown coals. Part 1. Brown coal in Polish industry; preparation of the method of determining the concentrations of main natural radioisotopes appearing in brown coal and its combustion products, 11:48697 (R;PL;In Polish)
Shear Properties
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Solvent Extraction
Microbial screening test for lignite degradation. Quarterly progress report No. 6, April-June 1986, 11:47364 (R;US)
Structural Chemical Analysis
Organic structure. Final report for the period ending March 31, 1986, 11:47180 (R;US)
Surface Area
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
LIMESTONE
Chemical Properties
Carbonate stone in acid media of wet flue gas desulfurization, 11:48326 (R;DE;In German)
Physical Properties
Carbonate stone in acid media of wet flue gas desulfurization, 11:48326 (R;DE;In German)
LIMITERS
Cooling
Experiments to test an intra-island scoop limiter on TEXT, 11:49552 (R;US)
Plasma Scrape-Off Layer
Limiter effects on scrape-off layer fluctuations and transport, 11:49484 (R;US)
LINACS

LIQUID METALS
Electronic Structure
Vacuum ultraviolet electronic properties of liquids. Eighteen year progress report, November 1, 1968-January 31, 1987, 11:49099 (R;US)
Numerical Solution
Numerical solutions to creeping flow equations. Part 1. Falling ball rheometry, 11:49100 (R;US)
Optical Properties
Vacuum ultraviolet electronic properties of liquids. Eighteen year progress report, November 1, 1968-January 31, 1987, 11:49099 (R;US)
Velocity
Numerical solutions to creeping flow equations. Part 1. Falling ball rheometry, 11:49100 (R;US)
LITEK LAMP
See FLUORESCENT LAMPS
LITHIUM
Chemical Bonds
Unusual bond paths in organolithium compounds, 11:48170 (R;US)
Corrosive Effects
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Metallurgical Effects
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
LITHIUM 6 TARGET
Deuteron Reactions
Spin dependence of the isospin-forbidden decay ^{8}Be(E-italic/sub x-italic/ = 27.5 MeV)→d+^{6}Li, 11:49268 (J;US)
Neutron Reactions
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)
LITHIUM 7
E2-Transitions
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
Quadrupole Moments
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
LITHIUM 7 REACTIONS
Coulomb Scattering
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
Inelastic Scattering
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
LITHIUM 7 TARGET
Neutron Reactions
14 MeV integral experiment at OKTAVIAN to check differential data of secondary neutrons, 11:49305 (RA;JP)
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Nuclear data and integral experiments required for fusion reactor nuclear design, 11:49561 (RA;JP)
Nuclear data testing on integral experiments of lithium spheres, 11:49264 (RA;JP)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)
LITHIUM 8
Beta Decay
Beta decay of polarized nuclei and the decay asymmetry of ^{8}Li, 11:49244 (RA;US)
LITHIUM COMPOUNDS
See also LITHIUM NITRATES
LITHIUM OXIDES
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)

Chemical Reactions
Laser-driven chemical reaction for etching $LiNbO_3$, 11:48032 (J;US)
Etching
Laser-driven chemical reaction for etching $LiNbO_3$, 11:48032 (J;US)
Fabrication
Ceramic life prediction methodology. Final report, 11:47978 (R;US)
Fractures
Ceramic life prediction methodology. Final report, 11:47978 (R;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Stresses
Ceramic life prediction methodology. Final report, 11:47978 (R;US)

LITHIUM FLUORIDES
Laser Spectroscopy
Experimental studies of photon-surface interaction dynamics in the alkali halides, 11:49075 (R;US)

LITHIUM IONS
Ion-Atom Collisions
Autoionization of helium following excitation by fast, multiply charged ions, 11:49042 (RA;US)

LITHIUM NITRATES
Thermodynamic Properties
Thermodynamics of multicomponent, miscible, ionic systems: the system $LiNO_3$-KNO_3-H_2O, 11:48152 (J;US)

LITHIUM OXIDES
Neutron Reactions
Clean benchmark experiments and analyses at FNS, 11:49266 (RA;JP)

LITHIUM-CHLORINE BATTERIES
Performance
High rate performance of a reserve lithium thionyl chloride multicell battery, 11:47764 (BA;US)
Service Life
High rate performance of a reserve lithium thionyl chloride multicell battery, 11:47764 (BA;US)
Uses
High rate performance of a reserve lithium thionyl chloride multicell battery, 11:47764 (BA;US)

LITHIUM-SULFUR BATTERIES
Performance
High rate performance of a reserve lithium thionyl chloride multicell battery, 11:47764 (BA;US)
Technology Assessment
Mission and status of the U.S. Department of Energy's battery energy storage program, 11:47759 (BA;US)
Uses
High rate performance of a reserve lithium thionyl chloride multicell battery, 11:47764 (BA;US)

LIVER
Activation Analysis
Trace rare earth element analysis of IAEA hair (HH-1), animal bone (H-5) and other biological standards by radiochemical neutron activation, 11:48911 (R;US)

LMFBR TYPE REACTORS
See also BOR-60 REACTOR
SNR REACTOR
Fire Hazards
Summary of the Knoxville International Topical Meeting on Fast Reactor Safety, 11:47741 (J;US)
Fuel Elements
Annual meeting on nuclear technology 1981. Technical meeting: Fuel elements and fuel element materials, 11:47629 (R;DE;In German)
FPIN2 code: an application of the finite element method to the analysis of the transient response of oxide and metal fuel elements, 11:47510 (R;US)
Fuel Pins
FPIN2 code: an application of the finite element method to the analysis of the transient response of oxide and metal fuel elements, 11:47510 (R;US)
Fuel-Coolant Interactions
New interpretation on formation of UO_2 Post-Accident Heat Removal particulate in sodium, 11:47683 (RA;US)
Meltdown
Bubble-induced mixing of two horizontal liquid layers with non-uniform gas injection at the bottom, 11:47699 (RA;US)
Development of ultrasonic thermometry for high-temperature high-resolution temperature profiling applications in LMFBR safety research, 11:47738 (R;US)
Reactor Accidents
Bubble-induced mixing of two horizontal liquid layers with non-uniform gas injection at the bottom, 11:47699 (RA;US)
Dryout of a multi-dimensional porous bed, 11:47677 (RA;US)
Effects of the presence of core debris on the behavior of sodium-concrete reactions, 11:47690 (RA;US)

LOW BTU GAS
150 to 250 Btu/ft³
Production
Feasibility study for the production of low/medium-Btu gas from coal for Tri-City Regional Port District, 11:47170 (R;US)
LOW INCOME GROUPS
Energy Conservation
Comparative evaluation of six different energy conservation programs serving low income households in Massachusetts, 11:47788 (RA;US)
Economic impact of energy education for limited resource households, 11:47849 (RA;US)
Evaluation of Shawnee County low/fixed income consultation program, 11:47850 (RA;US)
Weatherization
Evaluating weatherization options: a comparison of three service alternatives, 11:47790 (RA;US)
Evaluation of Wisconsin's Low-Income Weatherization Program, 11:47789 (RA;US)
Tale of two programs: an application of the Princeton Scorekeeping Method to evaluate energy savings of two weatherization programs, 11:47792 (RA;US)
LOW LEVEL COUNTING
Low radioactivities '85. (The 7th Nuclear Science Colloquium). Program and abstracts, 11:48559 (R;CS)
Beta Spectrometers
Low background beta-gamma-coincidence spectrometer, 11:48552 (RA;CS)
Some experiences with a beta-gamma coincidence spectrometer, 11:48553 (RA;CS)
Counting Techniques
New frontiers in low-radioactivity physics, 11:48563 (RA;CS)
Gamma Spectrometers
Application of low-level gamma spectrometers constructed in CLRP for measurements of environmental samples and building materials, 11:48546 (RA;CS)
Characteristics of low-level single and coincidence-anticoincidence gamma-ray spectrometers, 11:48550 (RA;CS)
Low background beta-gamma-coincidence spectrometer, 11:48552 (RA;CS)
Some experiences with a beta-gamma coincidence spectrometer, 11:48553 (RA;CS)
Ge Semiconductor Detectors
Background components of germanium and NaI(Tl) low level spectrometers, 11:48565 (RA;CS)
Design considerations of germanium detectors for very low level counting, 11:48578 (RA;CS)
Interlaboratory Comparisons
Low level tritium counting facilities: a survey, 11:48584 (RA;CS)
Mathematical Models
Outliers rejection as a method of long-term stability of short-term instabilities inspection in low radioactivities measurements, 11:48567 (RA;CS)
Multiparticle Spectrometers
Method of measurement of mixtures of radon and thoron decay products, 11:48590 (RA;CS)
NaI Detectors
Determination of the radon concentration in the atmosphere using NaI(Tl) spectrometer, 11:48591 (RA;CS)
Proportional Counters
Parametrization of gas gain in proportional counter for low radioactivities measurements, 11:48572 (RA;CS)
Sensitivity
Statistical estimations for predicting the detection limit of low activities, 11:48568 (RA;CS)
Statistical Models
Statistical estimations for predicting the detection limit of low activities, 11:48568 (RA;CS)
LOWER HYBRID HEATING
Wave Propagation
On the ponderomotive effects at the lower hybrid waves excitation, 11:49488 (R;CS)
LOWER HYBRID RESONANCE HEATING
See LOWER HYBRID HEATING
LOW-HEAD HYDROELECTRIC POWER PLANTS
Prior to August 1978 HYDROELECTRIC POWER PLANTS was used.
Demonstration Programs
Schneider hydrodynamic power generator prototype installation, test and evaluation. Volume 1. Final report, 11:47376 (R;US)
Schneider hydrodynamic power generator prototype installation, test and evaluation. Volume 2. Appendix. Final report, 11:47377 (R;US)
Performance
City of Idaho Falls hydroelectric demonstration project. Final operations and maintenance report, 11:47378 (R;US)
LOW-LEVEL RADIOACTIVE WASTES
Environmental Transport
Use of a simplified pathways model to improve the environmental surveillance program at the radioactive waste management complex of the Idaho National Engineering Laboratory (INEL), 11:47335 (RA;US)
Radiation Hazards
De Minimis waste impacts analysis methodology. IMPACTS - BRC user's guide and methodology for radioactive wastes below regulatory concern. Draft report for comment. Volume 2, 11:47341 (R;US)

Radioactive Waste Disposal
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Saltstone: cement-based waste form for disposal of Savannah River Plant low-level radioactive salt waste, 11:47304 (RA;US)
Subsurface disposal of liquid low-level radioactive wastes at Oak Ridge, Tennessee, 11:47306 (R;US)
Radionuclide Migration
Los Alamos low-level waste performance assessment status, 11:47338 (R;US)
Underground Disposal
Subsurface disposal of liquid low-level radioactive wastes at Oak Ridge, Tennessee, 11:47306 (R;US)
LUBRICATING OILS
Surface Tension
Use of laser light to measure surface tension, 11:47224 (BA;US)
LUNGS
Dynamic Function Studies
Frequency content of forced exhalations of normal rats, 11:48822 (J;US)
Scintiscanning
Efficacy of clinical diagnostic procedures utilized in nuclear medicine. Final report, August 1977-November 30, 1983, 11:48802 (R;US)
Efficiency index: a new parameter to define breathing patterns during dynamic Xe-127 ventilation studies, 11:48810 (J;US)
Regional measurement of ventilation and perfusion to detect subtle lung abnormalities in coal miners, 11:47212 (J;US)
LURGI PROCESS
Process description of the WyCoalGas gasification project. Topical report, 11:47174 (R;US)
Packed Bed
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
Performance Testing
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
Pilot Plants
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
LUTEINIZING HORMONE
See LH
LUTETIUM 168
Gamma Spectroscopy
Spectroscopy of doubly odd deformed nuclei (sup(168, 170) Lu), 11:49342 (RA;BR)
LUTETIUM 170
Gamma Spectroscopy
Spectroscopy of doubly odd deformed nuclei (sup(168, 170) Lu), 11:49342 (RA;BR)
LUTETIUM SILICATES
Crystal Growth
Investigation of single-crystal silicates for blue tunable lasers. Quarterly progress report No. 1, 1 September-30 November 1985, 11:48253 (R;US)
LWBR TYPE REACTORS
Fuel Rods
Testing of a production irradiated fuel assay gauge (LWBR development program), 11:47519 (R;US)
LYMPHOCYTES
Biological Radiation Effects
Effect of gamma radiation on transcription in ataxia-telangiectasia lymphoblastoid cells, 11:48873 (RA;AU)
DNA Repair
Open questions in reaction mechanism of radontherapy, 11:48806 (RA;AT)
Labelled Compounds
Effect of free radical scavengers on lymphocyte blast transformation, 11:48891 (RA;AT)
Radiotherapy
Open questions in reaction mechanism of radontherapy, 11:48806 (RA;AT)
Sister Chromatid Exchanges
Sister chromatid exchange induction and persistence in peripheral blood and spleen lymphocytes of mice treated with ethylnitrosourea, 11:48918 (J;US)
Whole-Body Irradiation
Lymphocytic subsets of C57Bl mice after whole body irradiation and application of par-polymerase modifying factors, 11:48888 (RA;AT)
LYMPHOID CELLS
See LYMPHOCYTES

M

M CODES
ELEFUNT test results under FX/FORTRAN Version 1.0 on the Alliant FX/8, 11:49607 (R;US)
Manuals
Source Term Code Package: a user's guide (Mod 1), 11:47729 (R;US)
MA 754
See NICKEL BASE ALLOYS
MACERALS
Nondestructive Testing
Structural variations in coal macerals: application of two-dimensional and dipolar dephasing ^{13}C-NMR techniques, 11:47190 (J;US)
Nuclear Magnetic Resonance
Structural variations in coal macerals: application of two-dimensional and dipolar dephasing ^{13}C-NMR techniques, 11:47190 (J;US)
Separation Processes
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Structural Chemical Analysis
Structural variations in coal macerals: application of two-dimensional and dipolar dephasing ^{13}C-NMR techniques, 11:47190 (J;US)
Supercritical Gas Extraction
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
MACHINE TOOLS
Wear
Microstructural characterization of diamond-turned aluminum substrates of memory disks: effects of inclusions on the surface finish and tool wear, 11:47905 (R;US)
MAGMA
Crystallization
Heteromorphism and crystallization paths of katungites, Navajo volcanic field, Arizona, USA, 11:48947 (R;US)
Geothermal Wells
Drilling fluid temperatures in a magma - penetrating wellbore, 11:47443 (R;US)
Phase Transformations
Activity-composition relationships in silicate melts. Annual progress report, 1985-1986, 11:48945 (R;US)
MAGMA SYSTEMS
Corrosive Effects
Geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:47444 (R;US)
MAGMAMAX PROCESS
See BINARY-FLUID SYSTEMS
MAGNESIUM
Electron Microprobe Analysis
Automated electron microprobe, 11:48097 (BA;US)
Embrittlement
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)

Excited States
Multiply-excited states of the sodium isoelectronic sequence, 11:49040 (RA;US)
Segregation
Segregation of Mg to the (0001) surface of single-crystal alumina: Quantification of AES results, 11:47994 (J;US)
Stress Corrosion
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
X-Ray Spectra
A TEM study of Ti induced grain growth and precipitation in hot pressed alumina, 11:47999 (BA;US)

MAGNESIUM 24
Decay
3-body final states in peripheral heavy-ion collisions: nuclear clustering structure and projectile excitation revisited, 11:49261 (R;US)

MAGNESIUM 24 REACTIONS
Heavy Ion Fusion Reactions
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Incomplete Fusion Reactions
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Inelastic Scattering
3-body final states in peripheral heavy-ion collisions: nuclear clustering structure and projectile excitation revisited, 11:49261 (R;US)

MAGNESIUM 24 TARGET
Oxygen 16 Reactions
Study of the α-transfer reaction $^{24}Mg(^{16}O, ^{20}Ne)^{20}Ne$ at E sub(CM)=27.8 MeV, 11:49274 (RA;BR)
Sulfur 32 Reactions
Time-of-flight measurements of evaporation residues from $^{32}S + ^{24}Mg$, 11:49272 (RA;US)

MAGNESIUM 26
Energy Levels
Polarized proton scattering from ^{26}Mg, 11:49270 (RA;US)
Transverse electron scattering by ^{26}Mg, 11:49271 (RA;US)

MAGNESIUM 26 TARGET
Electron Reactions
Transverse electron scattering by ^{26}Mg, 11:49271 (RA;US)
Proton Reactions
Polarized proton scattering from ^{26}Mg, 11:49270 (RA;US)

MAGNESIUM ALLOYS
Mechanical Properties
Mechanical tests on aluminum alloys AMg6 and 5456-0, 11:47952 (R;US)

MAGNESIUM CHLORIDES
Chemical Preparation
Preparation of fused chloride salts for use in pyrochemical plutonium recovery operations at Los Alamos, 11:48138 (R;US)

MAGNESIUM OXIDES
See also SPINELS
Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)

MAGNET COILS
Computer Codes
Tokamak System Code Version II, 11:49565 (R;US)

MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION

MAGNETIC COILS
See MAGNET COILS

MAGNETIC FIELDS
See also INTERPLANETARY MAGNETIC FIELDS
Uses
Applied fields for energy conservation, water treatment, and industrial applications. Final report, 11:48321 (R;US)

MAGNETIC FLUX
Compression
Experiments with small helical flux compression generators, 11:48652 (R;US)

MAGNETIC MIRROR CONFIGURATIONS
Electron Drift
Studies of plasma transport relevant to tandem mirrors. Final technical report, March 1, 1982-February 28, 1985, 11:49477 (R;US)
Ion Density
Axisymmetric MHD stable sloshing ion distributions, 11:49483 (R;US)
Transport Theory
Studies of plasma transport relevant to tandem mirrors. Final technical report, March 1, 1982-February 28, 1985, 11:49477 (R;US)

MAGNETIC MIRROR TYPE REACTORS
See also MINIMARS REACTOR
Breeding Blankets
Activation product transport in a FLiBe-vanadium alloy-HT9 system, 11:49573 (RA;US)
Appendix C: safety design rationale, 11:49571 (RA;US)
Cooling Systems
Activation product transport in a FLiBe-vanadium alloy-HT9 system, 11:49573 (RA;US)
Design
Appendix C: safety design rationale, 11:49571 (RA;US)
Fusion engineering design center appendix to the MINIMARS interim report, 11:49570 (RA;US)
Energy Conversion
Appendix G. Heat transport and power conversion, 11:49575 (RA;US)
Gas Blankets
MINIMARS interim report appendix halo model and computer code, 11:49497 (RA;US)
Heat Recovery Equipment
Halo scraper/direct converter system study, 11:49574 (RA;US)
MHD Generators
In-situ MHD energy conversion for fusion, 11:49580 (R;US)
Safety
Appendix C: safety design rationale, 11:49571 (RA;US)
Thermonuclear Reactor Cooling Systems
Appendix G. Heat transport and power conversion, 11:49575 (RA;US)
Tritium Recovery
Appendix for blanket - University of Wisconsin: tritium issues, 11:49572 (RA;US)

MAGNETIC MIRRORS
Including systems with minimum-B configuration.
See also MFTF DEVICES
TANDEM MIRRORS
ECR Heating
Relativistic multiregion bounce-averaged Fokker—Planck code for mirror plasmas, 11:49506 (J;US)
Kinetic Equations
Relativistic multiregion bounce-averaged Fokker—Planck code for mirror plasmas, 11:49506 (J;US)
Neutral Atom Beam Injection
Relativistic multiregion bounce-averaged Fokker—Planck code for mirror plasmas, 11:49506 (J;US)

MAGNETIC MONOPOLES
Basic physics with magnetic monopoles, 11:49142 (RA;US)
Radiation Detection
Search for super-heavy particles in cosmic rays, 11:49111 (RA;US)

MAGNETIC REFRIGERATORS
Brayton Cycle
Analysis of magnetic refrigerators with external regeneration, 11:48229 (R;US)
Systems Analysis
Analysis of magnetic refrigerators with external regeneration, 11:48229 (R;US)

MAGNETIC SPECTROMETERS
Computerized Simulation
Large solid angle tracking of Monte Carlo events of heavy ion collisions in TPC magnetic spectrometers, 11:48437 (R;US)
Installation
Split-pole spectrograph in the new ATLAS target area, 11:48430 (RA;US)

Particle Tracks
Large solid angle tracking of Monte Carlo events of heavy ion collisions in TPC magnetic spectrometers, 11:48437 (R;US)
Performance
Development and testing of an air-core superconducting solenoid for measurements on the linac, 11:48429 (RA;US)
Spectrometer ARES, 11:48602 (RA;CS)
Projection Spark Chambers
Large solid angle tracking of Monte Carlo events of heavy ion collisions in TPC magnetic spectrometers, 11:48437 (R;US)
Timing Properties
Development of a timing detector for the split-pole magnetic spectrograph, 11:48425 (RA;US)

MAGNETIC STORMS
Solar-Geophysical Data Number 499, March 1986. Part 1 (prompt reports). Data for February 1986, January 1986, and late data, 11:49010 (R;US)
Solar-Geophysical Data Number 499, March 1986. Supplement, 11:49012 (R;US)

MAGNETIC SURFACES
Renormalization
Renormalization and the breakup of magnetic surfaces, 11:49513 (BA;US)

MAGNETIC VORTICES
See MAGNETIC FLUX

MAGNETITE
Flocculation
Magnetic filtration of precipitated magnetite. Review of work to April 1983, 11:47288 (R;GB)

MAGNETOHYDRODYNAMIC GENERATORS

MAGNETOHYDRODYNAMICS
Computerized Simulation
2D Lagrange MHD code, 11:49101 (R;US)
K Codes
3D nonlinear MHD calculations using implicit and explicit time integration schemes:, 11:49508 (J;US)

MAGNETOMETERS
Probes
Fast, simple dB/dt probe, 11:48607 (R;US)

MAGNETOSPHERE
See EARTH MAGNETOSPHERE

MAGNETS
Beams
Design of a sending magnet for the high energy beamline, 11:48399 (R;ZA;In Afrikaans)
Design
Design of a sending magnet for the high energy beamline, 11:48399 (R;ZA;In Afrikaans)
Fabrication
Building of a prototype steering magnet, 11:48397 (R;ZA;In Afrikaans)
Holes
Final magnetic shimming of vacuum chamber suspension holes on the sector magnets, 11:48395 (R;ZA)
Magnetic Fields
Final magnetic shimming of vacuum chamber suspension holes on the sector magnets, 11:48395 (R;ZA)
Investigation of current setting procedures for sector magnets, 11:48396 (R;ZA)
Magnetization
Investigation of current setting procedures for sector magnets, 11:48396 (R;ZA)
Specifications
Design of a sending magnet for the high energy beamline, 11:48399 (R;ZA;In Afrikaans)
Test Facilities
Fundamentals of magnetic measurements with illustrations from Fermilab experience, 11:48383 (R;US)
Testing
Magnetic measurements of the correction and adjustment magnets of the main ring, 11:48386 (R;US)
Vacuum Systems
Final magnetic shimming of vacuum chamber suspension holes on the sector magnets, 11:48395 (R;ZA)

MAHOGANY TREES
See TREES

MANGANESE 54
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Uptake
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)

MANGANESE ALLOYS
Crystal Structure
Structure and magnetism of quasicrystalline and crystalline Al/sub 1-//sub x-italic/Mn/sub x-italic/ alloys, 11:47956 (J;US)
Magnetic Susceptibility
Structure and magnetism of quasicrystalline and crystalline Al/sub 1-//sub x-italic/Mn/sub x-italic/ alloys, 11:47956 (J;US)
Production
Formation of icosahedral Al-Mn and Al-Ru by solid-state processes (By ion beam mixing), 11:47951 (R;US)

MANGANESE NODULES
See MANGANESE ORES

MANGANESE ORES
Chemical Composition
Distributions of trace elements, secondary elements and main elements on sediments and manganese nodules in the Central Pacific south east of Hawaii, 11:48952 (R;DE;In German)

MANGANESE OXIDES
Catalytic Effects
Manganese oxide as a promoter for C_2-C_4 olefin production in the hydrogenation of carbon dioxide, 11:47370 (J;US)
Medium Temperature
Characterization of the surfaces of manganese oxides by water adsorption, 11:47767 (BA;US)
Sorptive Properties
Characterization of the surfaces of manganese oxides by water adsorption, 11:47767 (BA;US)

MANIAC COMPUTERS
Uses
Scientific uses of the MANIAC, 11:49635 (J;US)

MANNOMUSTINE
See ALKYLATING AGENTS

MANUFACTURED BUILDINGS
See PREFABRICATED BUILDINGS

MANURES
Anaerobic Digestion
Full scale experimental anaerobic fermentation facility. Final report for design, construction, and operation, 11:47361 (R;US)
Electrolysis
Hydrogen production with the electrocatalytic oxidation system. Final report, 11:47360 (R;US)

MANY-BODY PROBLEM
See also THREE-BODY PROBLEM
Variational Methods
Excited states of atomic ^{4}He droplets, 11:49381 (RA;US)
Pair-distribution function and energy-density functionals for ^{4}He droplets, 11:49380 (RA;US)
Variational Monte-Carlo calculations of ^{3}He droplets, 11:49382 (RA;US)

MARINE VEHICLE ACCIDENTS
See ACCIDENTS

MARYLAND
Power Plants
Estimated average annual alkalinity of six streams entering Deep Creek Lake, Garrett County, Maryland. Final report, May 1983-June 1984, 11:48754 (R;US)
Streams
Estimated average annual alkalinity of six streams entering Deep Creek Lake, Garrett County, Maryland. Final report, May 1983-June 1984, 11:48754 (R;US)

MASERS
Microwave Amplification by Stimulated Emission of Radiation.

Design
Operation of a quasioptical electron cyclotron maser, 11:49512 (J;US)
Performance
Operation of a quasioptical electron cyclotron maser, 11:49512 (J;US)
MASKS
See RESPIRATORS
MASS
Conservation Laws
L_A contraction for systems of conservation laws. Technical summary report, 11:49466 (R;US)
MASS RADIUS (NUCLEAR)
See NUCLEAR RADII
MASS SPECTROMETERS
Process for measuring degradation of sulfur hexafluoride in high voltage systems, 11:48647 (P;US)
Performance
Hazardous waste analysis by direct-linked fused silica capillary column gas chromatography/fourier transform infrared/mass spectrometry, 11:48090 (BA;US)
Multi-stage mass spectrometry with a quadruople mass filter interfaced to a high resolution sector mass spectrometer, 11:48112 (BA;US)
Tandem mass spectrometer for the detection of nitroaromatic compounds and other electronegative species in ambient air, 11:48092 (BA;US)
MASS SPECTROSCOPY
See also RESONANCE IONIZATION MASS SPECTROSCOPY
Low-rank coal liquefaction solvent effects. Final report for the period ending March 31, 1986 (Chemical ionization-proton exchange (CIPE)), 11:47151 (R;US)
Computerized Control Systems
Design and application of a new data system: DS90, 11:48120 (BA;US)
Data Acquisition
Design and application of a new data system: DS90, 11:48120 (BA;US)
Data Processing
Design and application of a new data system: DS90, 11:48120 (BA;US)
MASSACHUSETTS
Residential Buildings
Comparative evaluation of six different energy conservation programs serving low income households in Massachusetts, 11:47788 (RA;US)
Evaluation of the Massachusetts Energy Conservation Service, 11:47800 (RA;US)

METAL INDUSTRY
Gas Furnaces
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
Natural Gas
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
Steels
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
METAL VAPOR LASERS
Bibliographies
Elementary processes and modelling in metallic vapor lasers, 11:48256 (R;FR;In French)
Electron Collisions
Elementary processes and modelling in metallic vapor lasers, 11:48256 (R;FR;In French)
METAL-INSULATOR-SEMICONDUCTOR SOLAR CELLS
See MIS SOLAR CELLS
METALLOPROTEINS
See also FERRITIN
Biochemistry
Mercury-binding proteins from the marine mussel, Mytilus edulis, 11:48916 (J;US)
Relationships between free cadmium ion activity in seawater, cadmium accumulation and subcellular distribution, and growth in polychaetes, 11:48917 (J;US)
Ion Exchange Chromatography
Mercury-binding proteins from the marine mussel, Mytilus edulis, 11:48916 (J;US)

METAL-METAL BATTERIES
Design
Lithium/metal sulfide molten salt batteries: Present status and future potential, 11:47761 (BA;US)
Performance
Lithium/metal sulfide molten salt batteries: Present status and future potential, 11:47761 (BA;US)
Service Life
Lithium/metal sulfide molten salt batteries: Present status and future potential, 11:47761 (BA;US)
METAL-NONMETAL BATTERIES
See also LITHIUM-SULFUR BATTERIES
SODIUM-SULFUR BATTERIES
ZINC-BROMINE BATTERIES
Design
Lithium/metal sulfide molten salt batteries: Present status and future potential, 11:47761 (BA;US)
Failure Mode Analysis
Failure analysis of lithium-aluminum/iron sulfide cells, 11:47751 (R;US)
Performance
Advanced lithium-aluminum/iron disulfide secondary cell, 11:47750 (R;US)
Lithium/metal sulfide molten salt batteries: Present status and future potential, 11:47761 (BA;US)
Service Life
Lithium/metal sulfide molten salt batteries: Present status and future potential, 11:47761 (BA;US)

TRANSITION ELEMENTS
ZINC
Adsorption
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Corrosion
Surface attack on metals in the presence of liquid metals. Final report, 11:47906 (R;US)
Creep
Materials analyses for the case of additive creep and fatigue - proposed calculation. Final report, 11:47912 (R;DE;In German)
Ecological Concentration
In-situ denitrification of ponds, 11:48744 (RA;US)
Environmental Transport
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Fabrication
Electroforming of metals: state-of-the-art assessment. Final report, 11:47929 (R;US)
Fatigue
Materials analyses for the case of additive creep and fatigue - proposed calculation. Final report, 11:47912 (R;DE;In German)
Magnetic Forming
Electroforming of metals: state-of-the-art assessment. Final report, 11:47929 (R;US)
Nondestructive Testing
Multiparameter methods with pulsed eddy currents, 11:48290 (R;US)
Phase Diagrams
Metal-oxygen systems, 11:48166 (J;US)
Precipitation
Sulfide precipitation of nickel and other heavy metals from single- and multi-metal systems. Final report, 11:48751 (R;US)
Radiation Effects
Metal-oxygen systems, 11:48166 (J;US)
Water Pollution Control
Sulfide precipitation of nickel and other heavy metals from single- and multi-metal systems. Final report, 11:48751 (R;US)
METER WAVE RADIATION
See RADIOWAVE RADIATION
METHANATION
Computerized Simulation
ASPEN sensitivity study for the Great Plains Gasification Plant Methanation Section, 11:47158 (R;US)
METHANE
Adsorption
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Biosynthesis
Methane production by anaerobic digestion of algae. Final report, 11:47388 (R;DE)
Chemical Preparation
Methane suppression from metal-zeolite catalysts in synthesis gas conversion, 11:47368 (J;US)
Combustion
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
Combustion Kinetics
Catalytic combustion in a transient high pressure facility. M.S. Thesis, 11:48212 (R;GB)
Contamination
Contamination of methane prepared for radiocarbon dating by using commercial hydrogen containing tritium, 11:48601 (RA;CS)
Monitors
Dual-wavelength light sources. Research report, October 1982-October 1985, 11:47211 (R;US)
Oxidation
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
Production
Full scale experimental anaerobic fermentation facility. Final report for design, construction, and operation, 11:47361 (R;US)
Methane production by mariculture on land. Final report, 11:47365 (R;DE)
Recovery
Geologic and reservoir characteristics of the Red Mountain coalbed-methane test site in the Piceance Basin. Topical report, April 15, 1983-January 31, 1986, 11:47235 (R;US)
Preliminary economic assessment potential for producing coalbed methane for the multiple coal seams completion project at Rock Creek. Topical report, March 1983-May 1986, 11:47234 (R;US)
Separation Processes
Low-energy process for separating coal gasification products. Final report, 11:47155 (R;US)
Viscosity
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1985, 11:47366 (R;US)
METHANOGENIC BACTERIA
Immunology
Antigenic mosaic of Methanosarcinaceae: partial characterization of Methanosarcina barkeri 227 surface antigens by monoclonal antibodies, 11:48817 (J;US)
METHANOL
Carbonylation
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986, 11:47166 (R;US)
Chemical Preparation
Method and apparatus for synthesizing hydrocarbons, 11:47375 (P;US)
Chemical Reaction Yield
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986, 11:47166 (R;US)

Metabolism
Isolation and complementation analysis of 10 methanol oxidation mutant classes and identification of the methanol dehydrogenase structural gene of Methylobacterium sp. strain AM1, 11:48815 (J;US)
Phenotypic characterization of 10 methanol oxidation mutant classes in Methylobacterium sp. strain AM1, 11:48814 (J;US)
Solvent Properties
Characterization of supercritical fluid solvents using solvatochromic shifts, 11:48154 (J;US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Chemical Preparation
Progress in the Laporte LPMEOH PDU project, 11:47374 (B;US)
Combustion Products
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)
Density
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)
Fuel Additives
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)
Performance Testing
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)
Research Programs
Progress in the Laporte LPMEOH PDU project, 11:47374 (B;US)
Vapor Pressure
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)

METHANOTROPHIC BACTERIA
Growth
Isolation and complementation analysis of 10 methanol oxidation mutant classes and identification of the methanol dehydrogenase structural gene of Methylobacterium sp. strain AM1, 11:48815 (J;US)
Phenotype
Phenotypic characterization of 10 methanol oxidation mutant classes in Methylobacterium sp. strain AM1, 11:48814 (J;US)

METHIONINE
Teratogenesis
Embryo culture in teratological surveillance and serum proteins in development. Final technical report, 11:48906 (R;US)

METHYL ALCOHOL
See METHANOL

METHYL PHENOLS
See CRESOLS

METHYL RADICALS
Excited States
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
Fluorescence
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
Lifetime
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)
Photochemical Reactions
Temperature dependence of the lifetime of excited benzyl and other arymethyl radicals, 11:48202 (J;US)

METHYL VIOLOGEN
See BIPYRIDINES

METHYLAMINE
Metabolism
Isolation and complementation analysis of 10 methanol oxidation mutant classes and identification of the methanol dehydrogenase structural gene of Methylobacterium sp. strain AM1, 11:48815 (J;US)

METHYLBENZENE
See TOLUENE

METHYLENE CHLORIDE
Nuclear Magnetic Resonance
Indirect phase detection of NMR spinor transitions, 11:49444 (J;US)

METHYL-FUEL
See METHANOL

METHYLMERCAPTOAMINOBUTYRIC ACID
See METHIONINE

METHYLTHIOAMINOBUTYRIC ACID
See METHIONINE

METROPOLITAN AREAS
See URBAN AREAS

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Mechanical Structures
Numerical study of the mode selection in response spectrum analysis-condensed version, 11:49581 (R;US)
Neutral Atom Beam Injection
Long-pulse beamlines for the mirror fusion test facility, 11:49587 (BA;GB)
Pulses
Long-pulse beamlines for the mirror fusion test facility, 11:49587 (BA;GB)

MHD GENERATORS
In-situ MHD energy conversion for fusion, 11:49580 (R;US)
Bottoming Cycles
Effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 11:47825 (R;US)
Design
Thermal radiation in MHD design applications, 11:47824 (R;US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Consolidated bibliography of publications of the advanced research and technology development (AR and TD) Fossil Energy Materials Program, October 1, 1979-April 30, 1986, 11:47172 (R;US)
Materials Testing
[Mountain States Energy Division, Inc.] Quarterly technical progress report, April 1-June 30, 1986, 11:47826 (R;US)
Performance Testing
[Mountain States Energy Division, Inc.] Quarterly technical progress report, April 1-June 30, 1986, 11:47826 (R;US)
Test Facilities
[Mountain States Energy Division, Inc.] Quarterly technical progress report, April 1-June 30, 1986, 11:47826 (R;US)
Thermal Radiation
Thermal radiation in MHD design applications, 11:47824 (R;US)
Waste Heat Boilers
Effects of impinging particle-laden gas jets on the potential for burnout in an MHD radiant boiler, 11:47825 (R;US)

MICHIGAN
Residential Buildings
Evaluating weatherization options: a comparison of three service alternatives, 11:47790 (RA;US)

MICROBIAL FLORA
See MICROORGANISMS

MICRODOSIMETRY
Determination of microdosimetric quantities using a proportional detector, 11:48841 (RA;CS;In Czech)
Microdosimetric characteristics and biological effect of ionizing particles, 11:48837 (RA;CS;In Czech)
Calculation Methods
Basic terms of microdosimetry, 11:48835 (RA;CS;In Slovak)
Carcinogenesis
Use of alpha radiation microdosimetry in differentiating between the effects of cell inactivation and malignant transformation, 11:48839 (RA;CS;In Czech)
Radiobiology
Prospects of applying microdosimetry in radiobiology, 11:48836 (RA;CS;In Slovak)

Uses
Proceedings of microdosimetry seminar, 11:48834 (R;CS;In Czech and Slovak)
MICROELECTRONIC CIRCUITS
See also INTEGRATED CIRCUITS
Physical Radiation Effects
Radiation damage analysis for state of the art microelectronics, 11:47528 (RA;US)
MICROELECTRONICS
Technology Assessment
Technology development in the field of tension between its intrinsic dynamics and the goals defined in the public discussion. Nuclear energy, microelectronics and genetic engineering: a comparative approach, 11:48790 (R;DE;In German)
MICROFLORA
See MICROORGANISMS
MICROORGANISMS
Metabolism
Microbial metabolism of aromatic compounds under anaerobic conditions, 11:48813 (R;US)
MICROSPHERES
Fabrication
Preparation and properties of polyvinyl alcohol microspheres, 11:49577 (R;US)
MICROWAVE EQUIPMENT
See also MICROWAVE TUBES
Coal deashing and desulfurization utilizing microwave irradiation at 2450 MHz, 11:47199 (R;US)
MICROWAVE RADIATION
Calorimetry
Rectangular waveguide calorimeter for single intense microwave pulses, 11:48637 (J;US)
MICROWAVE TUBES
See also KLYSTRONS
Diagnostic Techniques
Comprehensive approach for diagnosing intense single-pulse microwave sources, 11:49505 (J;US)
Performance
Comprehensive approach for diagnosing intense single-pulse microwave sources, 11:49505 (J;US)
Power
Comprehensive approach for diagnosing intense single-pulse microwave sources, 11:49505 (J;US)
MID-ATLANTIC REGION

MILITARY FACILITIES
Hazardous Materials
Installation restoration program: Phase I. Records search, Lawndale Annex, California. Final report, 1 July 1985-31 January 1986, 11:48705 (R;US)
Waste Disposal
Installation restoration program. Phase II. Confirmation/quantification. Stage I report for Williams Air Force Base, Chandler, Arizona. Final report, September 1984-January 1986, 11:48706 (R;US)
MILITARY PERSONNEL
Radiation Doses
Radiation doses from flying through nuclear-debris clouds. Final report, 2-10 January 1985, 11:48654 (R;US)
MILK
Powders
Additional certification of the content (mass fraction) of iodine in two spiked samples of skim milk powder. CRM No. 150-151, 11:48713 (R;DE)
Radioactivity
Strontium-90 and cesium-137 in milk (producing districts for domestic program) from June 1983 to September 1983. Environmental and dietary materials, 11:48725 (RA;JP)
Strontium-90 and cesium-137 in milk (consuming districts) from May 1983 to May 1984. Environmental and dietary materials, 11:48726 (RA;JP)
MILK PRODUCTS
Radioactivity
Strontium-90 and cesium-137 in milk (powderd milk). Environmental and dietary materials, 11:48727 (RA;JP)
MILKY WAY
Angular Velocity
Galactic distribution of open clusters of different ages and the angular velocity of the spiral structure, 11:49000 (RA;CS)
Dimensions
Galactic distribution of open clusters of different ages and the angular velocity of the spiral structure, 11:49000 (RA;CS)
On the scale of distances of the Galaxy based on the study of the open star-cluster subsystem, 11:48999 (RA;CS;In Russian)
Expansion
Local galactic kinematics, 11:49003 (RA;CS)
Stability
Stability of stellar disk and ratio of halo to disk masses in the Galaxy, 11:49002 (RA;CS)
Star Clusters
Open star clusters and the structure of the galactic disk, 11:48998 (RA;CS)
MILL TAILINGS
Radioactive Waste Management
Outdoor radon monitoring at DOE remedial action sites, 11:47332 (RA;US)
Remedial Action
Environmental protection in the UMTRA PROJECT, 11:47330 (RA;US)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERALS
See also PYROCHLORE
ZEOLITES
Beta Detection
Low-cost automated counter for laboratory beta-ray assay of rock and mineral samples, 11:48594 (RA;CS)
Dissolution
Literature review on agents to inhibit mineral dissolution. Project BE4B, Milestone 2, Task 5D, 11:47218 (R;US)
MINIMARS REACTOR
Breeding Blankets
Helium-cooled, FLiBe-breeder, beryllium-multiplier blanket for MINIMARS, 11:49578 (R;US)
Maintenance
Minimars maintenance, 11:49546 (R;US)
MINING
See also SURFACE MINING
Space Power Reactors
Application of nuclear power to the mining of the Martian moons, 11:47526 (RA;US)
MINNESOTA
Residential Buildings
Evaluating the marketing phase of the Hennepin County Residential Shared Savings Demonstration Project, 11:47839 (RA;US)
Residential Sector
Effective residential energy conservation, 11:47840 (RA;US)
MIRROR FUSION TEST FACILITY
See MFTF DEVICES
MIRRORS
Roughness
Statistical and signal-processing concepts in surface metrology, 11:48379 (R;US)
Surface Properties
Interpretation of glancing-incidence scattering measurements, 11:49450 (R;US)
MIRRORS (MAGNETIC)
See MAGNETIC MIRRORS
MIS SOLAR CELLS
Semiconductor Materials
Development of new solar cells from poly-silicon, silicon powder and new compound semiconductors suitable for thin film cells. Final report, 11:47384 (R;DE;In German)
MISCIBLE FLOODING
See MISCIBLE-PHASE DISPLACEMENT

MISCIBLE-PHASE DISPLACEMENT
See also CARBON DIOXIDE INJECTION
Mathematical Models
Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
MISGURNUS
See FISHES
MISSOURI
Residential Buildings
Effects of a municipal energy audit program on electricity consumption in single-family residences, 11:47801 (RA;US)
Evaluation consideration: confounding variables, 11:47802 (RA;US)
MIXED OXIDE FUELS
Uranium dioxide mixed with other oxides.
Fabrication
Improved fabrication methods for fuels containing plutonium, 11:47273 (RA;DE;In German)
Research Programs
Progress and future plans in the PFR/TREAT safety testing programs, 11:47666 (R;US)
Testing
Progress and future plans in the PFR/TREAT safety testing programs, 11:47666 (R;US)
MOBILITY
Not for material movement; see also TRANSPORT.
Control
Mobility control for CO_2 injection. Final report, May 15, 1981-January 31, 1986, 11:47216 (R;US)
MOCHOVCE-1 REACTOR
Background Radiation
Large-volume low-level Ge(Li) spectrometry of nuclear power plants environmental samples, 11:48719 (RA;CS)
MODELS (COSMOLOGICAL)

PHOTON-MOLECULE COLLISIONS
Energy Transfer
Quantum mechanical and classical mechanical calculations of the dynamics of molecular collisions, 11:49080 (R;US)
Quantum Mechanics
Quantum mechanical and classical mechanical calculations of the dynamics of molecular collisions, 11:49080 (R;US)
MOLECULES
Electric Dipole Moments
Symmetries and rotational line intensities in diatomic molecules, 11:49078 (R;NO)
Electronic Structure
Monte Carlo calculations of atoms and molecules, 11:49094 (J;US)
Emission Spectra
Symmetries and rotational line intensities in diatomic molecules, 11:49078 (R;NO)
Excited States
Elementary reactions of electronically excited molecules. Pt. 6. Quenching of $O_2(^1\Delta sub(g))$ by amines, furanes, pyrroles and thiophenes, 11:48171 (R;DE)
Monte Carlo Method
Molecular physics and chemistry applications of quantum Monte Carlo, 11:49093 (J;US)
Monte Carlo calculations of atoms and molecules, 11:49094 (J;US)
Photoelectron Spectroscopy
Multiphoton ionization photoelectron spectroscopy for excited-state atoms and molecules, 11:49063 (RA;US)
MOLYBDENUM
Catalytic Effects
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Surface chemistry of sulfur containing heterocylcic molecules on Mo (110), 11:48157 (J;US)
Diffusion
Evaluation of Synroc-C as a second-generation waste form, 11:47985 (R;US)
Electron Microprobe Analysis
Automated electron microprobe, 11:48097 (BA;US)
Mass Spectroscopy
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
Mechanical Properties
Current state of the art in molybdenum and tungsten mill products, 11:47579 (RA;US)
Physical Radiation Effects
Radiation effects on molybdenum and molybdenum alloys, 11:47588 (RA;US)
MOLYBDENUM 92 TARGET
Krypton 84 Reactions
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)
MOLYBDENUM 95 TARGET
Neutron Reactions
Gas proportional telescope used to investigate rare reactions induced by 3 MeV neutrons, 11:49319 (RA;CS)
MOLYBDENUM 98 TARGET
Krypton 84 Reactions
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)
MOLYBDENUM ALLOYS
See also MOLYBDENUM BASE ALLOYS
STAINLESS STEEL-316
Creep
In-reactor creep behavior of the fusion heats of HT9 and modified 9Cr-1Mo, 11:47935 (R;US)
Mechanical Properties
Current state of the art in molybdenum and tungsten mill products, 11:47579 (RA;US)
Physical Radiation Effects
In-reactor creep behavior of the fusion heats of HT9 and modified 9Cr-1Mo, 11:47935 (R;US)
Radiation effects on molybdenum and molybdenum alloys, 11:47588 (RA;US)
MOLYBDENUM BASE ALLOYS
Ductile-Brittle Transitions
Observations on the as-welded (GTAW) bend ductility of Mo-13 Re alloy, 11:47584 (RA;US)

Mechanical Properties
Molybdenum-rhenium alloy development for space nuclear power applications, 11:47583 (RA;US)
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Physical Radiation Effects
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
MOLYBDENUM COMPOUNDS
See also MOLYBDENUM OXIDES
Synthesis
Synthesis and characterization of compounds containing discrete tetranuclear clusters and extended arrays of molybdenum atoms, 11:48164 (D;US)
MOLYBDENUM OXIDES
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
MONGOLISM

Design
Development of a multiparticle imaging detector, 11:48434 (RA;US)
Performance
Development of a multiparticle imaging detector, 11:48434 (RA;US)
Performance Testing
Possible application of low-pressure multistep detectors to dE/dX measurements via single cluster counting, 11:48473 (RA;AT)
Two-step parallel plate counter with a germanium anode and a two-dimensional read-out for the detection of MIP, 11:48474 (RA;AT)
Readout Systems
Two-step parallel plate counter with a germanium anode and a two-dimensional read-out for the detection of MIP, 11:48474 (RA;AT)
MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
Monitor for continuous measurement of tritium and noble gases in nuclear power station, 11:48600 (RA;CS)
Design
Design and tests of the DELPHI inner detector, 11:48500 (RA;AT)
Performance Testing
Application of wire chambers in Moessbauer spectroscopy, 11:48515 (RA;AT)
Derandomizing buffer and microcomputer memory make a fast MWPC image memory, 11:48514 (RA;AT)
Design and tests of the DELPHI inner detector, 11:48500 (RA;AT)
Development of calorimeters using thin chambers operating in a high gain mode, 11:48468 (RA;AT)
Electron identification up to 100 GeV by means of transition radiation, 11:48460 (RA;AT)
Gas scintillation proportional counter for K X-ray experiments at LEAR, 11:48521 (RA;AT)

Influence of the cathode on the neutralization of complex ions in proportional counters and MWPC's, 11:48507 (RA;AT)
Multielement proportional chamber for ^{136}Xe $\beta\beta$ decay, 11:48530 (RA;AT)
Multiwire proportional chamber based system for digitizing electrophoretic gels, 11:48486 (RA;AT)
New high gain thin gap detectors for the OPAL hadron calorimeter, 11:48469 (RA;AT)
Operation of RICH single-photon detectors, with optically shielded wires, in transverse magnetic fields, 11:48503 (RA;AT)
Production and tests of gas tube chambers for the endcaps of the L3 uranium hadron calorimeter, 11:48499 (RA;AT)
Pulse shape analysis in multiwire proportional chamber, 11:48571 (RA;CS)
Ring imaging Cherenkov technique and the MWPC as a photoelectron detector, 11:48478 (RA;AT)
Signal propagation in multiwire chambers, 11:48505 (RA;AT)
Simple amplifier shaper-combination with tail suppression for analog MWPC signal processing, 11:48501 (RA;AT)
Stack of bidimentional MWPCs using analogue read-out as a part of an electromagnetic calorimeter, 11:48498 (RA;AT)
Use of laser soldering for the construction of thin chambers, 11:48470 (RA;AT)
X-ray position detection in the region of 5 microns RMS with wire proportional chambers, 11:48472 (RA;AT)

Preamplifiers
Simple amplifier shaper-combination with tail suppression for analog MWPC signal processing, 11:48501 (RA;AT)

Signals
Signal propagation in multiwire chambers, 11:48505 (RA;AT)

Soldering
Use of laser soldering for the construction of thin chambers, 11:48470 (RA;AT)

Specifications
Low matter density cylindrical proportional chambers, 11:48573 (RA;CS)

Time Resolution
Multiwire detectors for use in time-resolved experiments from muscle, 11:48804 (RA;AT)

Uses
Apparatus for reading two-dimensional electrophoretograms containing β-ray-emitting labeled compounds, 11:48621 (P;US)
Application of wire chambers in Moessbauer spectroscopy, 11:48515 (RA;AT)
Multiwire detectors for use in time-resolved experiments from muscle, 11:48804 (RA;AT)

MUNICIPAL WASTES

Aerobic Digestion
Briquetting of refuse and sewage sludge for energy recovery. Final report, 11:47888 (R;DE;In German)

Briquetting
Briquetting of refuse and sewage sludge for energy recovery. Final report, 11:47888 (R;DE;In German)

Energy Source Development
Briquetting of refuse and sewage sludge for energy recovery. Final report, 11:47888 (R;DE;In German)

MUON DETECTION

Radiation Detectors
Cygnus experiment at Los Alamos, 11:48608 (R;US)

MUON-CATALYZED FUSION
Muon sticking factor in muon catalyzed fusion and the other aspect of this fusion process, 11:49532 (R;US)

MUONIUM

Spectroscopy
More seminars on muonium spectroscopy, 11:49079 (R;GB)

MUON-PROTON INTERACTIONS

Multiple Production
Study of the production of hadrons in muon-proton reactions at 280 GeV at the CERN proton synchrotron, 11:49125 (R;DE;In German)

MUONS
See also COSMIC MUONS
MUONS PLUS

Pair Production
μ- and tau-pair production from relativistic heavy-ion collisions, 11:49386 (R;US)

MUONS PLUS

Radiative Decay
Searching for muon number violating at LAMPF: current results and future prospects, 11:49128 (RA;US)

MUSTARD
See BRASSICA

MUTAGENS
See also EMS

Classification
Classifying mutagens as to their specificity in causing the six possible transitions and transversions: a simple analysis using the Salmonella mutagenicity assay, 11:48921 (J;US)

MUTATION FREQUENCY
Evolutionary rates under environmental stress, 11:48861 (RA;AU)

MUTATIONS
See also CHROMOSOMAL ABERRATIONS

Radioinduction
Mechanisms of radiation-induced mutational damage in eukaryotes, 11:48859 (RA;AU)

MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS

MX DEVICES
See MFTF DEVICES

N

N CODES

Manuals
Source Term Code Package: a user's guide (Mod 1), 11:47729 (R;US)

NAHCOLITE

Catalytic Effects
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)

Chemical Composition
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)

NAI DETECTORS

Background Radiation
Background components of germanium and NaI(Tl) low level spectrometers, 11:48565 (RA;CS)

S Codes
Sodium Iodide Detector Analysis Software (SIDAS), 11:48613 (R;US)

Sensitivity
Determination of the radon concentration in the atmosphere using NaI(Tl) spectrometer, 11:48591 (RA;CS)

Specifications
NaI(Tl) triple-coincidence spectrometer for the detection of ^{26}Na in meteorites and some results of the Jilin chondrite, 11:48547 (RA;CS)

NAL SYNCHROTRON
See FERMILAB ACCELERATOR

NAPHTHALENE

Chemical Preparation
Preparation and characterization of radical cation salts derived from perfluorobenzene, perfluorotoluene, and perfluorophthalene, 11:48182 (J;US)

Crystal Structure
Preparation and characterization of radical cation salts derived from perfluorobenzene, perfluorotoluene, and perfluorophthalene, 11:48182 (J;US)

Solubility
NMR study of solid naphthalene solubilities in supercritical carbon dioxide near the upper critical end point, 11:48178 (J;US)
Novel experimental studies for coal liquefaction. Quarterly progress report, April 1-June 30, 1986, 11:47166 (R;US)

Vibrational States
Vibronic activity probed by laser jet spectroscopy, 11:48192 (D;US)
NATIONAL ACCELERATOR LABORATORY
See FERMILAB ACCELERATOR
NATIONAL REACTOR TESTING STATION
See IDAHO NATIONAL ENGINEERING LABORATORY
NATIONAL SYNCHROTRON LIGHT SOURCE
See NSLS
NATURAL ACTIVITY
See NATURAL RADIOACTIVITY
NATURAL GAS
Combustion
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
Reduction of NOsub(x)-emission of gas-fired furnaces, 11:48663 (R;DE;In German)
Consumption Rates
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
Cracking
Behavior during steam cracking of model molecules and of hydrotreated vacuum distillates, 11:47220 (R;FR;In French)
Injection Wells
Guidance document on evaluation of injection-well manifold monitoring systems, 11:47226 (R;US)
Separation Processes
Membrane separation technology, 11:47230 (B;US)
Underground Storage
Guidance document on evaluation of injection-well manifold monitoring systems, 11:47226 (R;US)
Viscosity
Measurement of viscosity of gaseous mixtures at atmospheric pressure, 11:47237 (R;US)
NATURAL GAS APPLIANCES
See GAS APPLIANCES
NATURAL GAS DEPOSITS
Exploitation
Arctic energy opportunities: Perspectives on U.S. resources and development, 11:47814 (BA;US)
Resource Assessment
Arctic energy opportunities: Perspectives on U.S. resources and development, 11:47814 (BA;US)
NATURAL GAS DISTRIBUTION SYSTEMS
Pipes
Reference standard polyethylene resins and piping materials. Annual report, October 1, 1984-September 30, 1985, 11:47236 (R;US)
NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS
NATURAL GAS INDUSTRY
Fluids
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1985, 11:47366 (R;US)
NATURAL GAS PROCESSING PLANTS
Membranes
Membrane separation technology, 11:47230 (B;US)
NATURAL GAS WELLS
Exploration-production studies in newly drilled Devonian-Shale gas wells. Annual report, February 1, 1985-January 31, 1986, 11:47229 (R;US)
Well Stimulation
Multiple-fracture stimulation using controlled pulse pressurization. Final report, March 1983-December 1985, 11:47233 (R;US)
NATURAL GASOLINE PLANTS
See NATURAL GAS PROCESSING PLANTS
NATURAL LIGHTING
See DAYLIGHTING
NATURAL RADIOACTIVITY
For unspecified naturally occurring radioisotopes only; not for BACKGROUND RADIATION.
Dose Rates
Increase of local dose rates on the islands in the North Sea, resulting from heavy mineral accumulation. Final report, 11:48710 (R;DE;In German)
Scintillation Counting
Low backround underground laboratory for radiochemical research, 11:48561 (RA;CS)
NAVIGATIONAL INSTRUMENTS
Fiber Optics
Remotely readable fiber optic compass, 11:48646 (P;US)
Readout Systems
Remotely readable fiber optic compass, 11:48646 (P;US)
NEBULAE
Cosmic Dust
Dust distribution in the Rosette nebula and MON OB2 association region, 11:48986 (RA;CS;In Russian)
NEEDLE CHAMBERS
Specifications
Proportional needle counter, 11:48569 (RA;CS)
NEODYMIUM 143 TARGET
Neutron Reactions
Gas proportional telescope used to investigate rare reactions induced by 3 MeV neutrons, 11:49319 (RA;CS)
NEODYMIUM 145
Energy Levels
Deep-lying *v*hsub(11/2) hole states in ^{145}Nd, 11:49324 (R;NO)
NEODYMIUM 146 TARGET
Helium 3 Reactions
Deep-lying *v*hsub(11/2) hole states in ^{145}Nd, 11:49324 (R;NO)
NEON
Emission Spectroscopy
Electronic fourier transform spectroscopy: performance and application, 11:48105 (BA;US)
Energy-Level Transitions
Alignment and orientation production in hydrogenic states, 11:49039 (RA;US)
Mean life measurements in fluorine, 11:49038 (RA;US)
Ion-Atom Collisions
Low-energy heavy-atom impact as a tool for production and classification of doubly excited states, 11:49074 (R;DK)
Metastable States
Optical pumping of rare-gas metastable atom beams with a frequency modulated multimode dye laser, 11:49091 (J;US)
Optical Pumping
Optical pumping of rare-gas metastable atom beams with a frequency modulated multimode dye laser, 11:49091 (J;US)
Photon-Atom Collisions
Laser-fast ion beam interactions at the Dynamitron, 11:49041 (RA;US)
NEON 20 REACTIONS
Elastic Scattering
3-body final states in peripheral heavy-ion collisions: nuclear clustering structure and projectile excitation revisited, 11:49261 (R;US)
Inclusive Interactions
Neutron emission in heavy ion reactions as measure for the excitation energy and the transfer of linear momentum - experiments with a 4π-scintillator tank, 11:49352 (R;DE;In German)
Neutron Emission
Neutron emission in heavy ion reactions as measure for the excitation energy and the transfer of linear momentum - experiments with a 4π-scintillator tank, 11:49352 (R;DE;In German)
NEON HYDRIDES
Collisions
Post-foil interaction in foil-induced molecular dissociation, 11:49045 (RA;US)
NEON IONS
Fine Structure
Lamb shifts and fine structures on n = 2 in helium-like ions, 11:49035 (RA;US)
High Spin States
High-spin states in neon, 11:49036 (RA;US)
Lamb Shift
Lamb shifts and fine structures on n = 2 in helium-like ions, 11:49035 (RA;US)
Photon-Ion Collisions
Fast ion beam-laser interactions, 11:49043 (RA;US)

NEPTUNIUM
Ion Exchange Chromatography
Multi-column step-gradient chromatography system for automated ion exchange separations, 11:48117 (BA;US)
NEPTUNIUM IONS
Valence
Photoelectron, nuclear gamma-ray and infrared absorption spectroscopic studies of neptunium in sodium silicate glass, 11:48014 (R;US)
NET TOKAMAK
Bundle Divertors
Bundle divertor. Compositional control and exhaust in tokamak experiments and the NET reactor, 11:49535 (R;GB)
NETWORKS (COMPUTER)
See COMPUTER NETWORKS
NEUTRAL ATOM BEAM INJECTION
Performance Testing
Challenge of handling long-pulse neutral beams - the NBETF experience, 11:49588 (BA;GB)
Pulses
Long-pulse beamlines for the mirror fusion test facility, 11:49587 (BA;GB)
NEUTRINO OSCILLATION
Fundamental interaction studies in nuclei, 11:49219 (R;US)
Experiment Planning
Neutrino oscillations at LAMPF, 11:49109 (RA;US)
NEUTRINO-ELECTRON INTERACTIONS
See also ANTINEUTRINO-ELECTRON INTERACTIONS
Neutral-Current Interactions
Determination of the neutrino fluxes in the Brookhaven wide-band beams, 11:49135 (J;US)
Scattering
Neutrino electron scattering at LAMPF, 11:49127 (RA;US)
NEUTRINO-NEUTRON INTERACTIONS
Quasi-Elastic Scattering
Determination of the neutrino fluxes in the Brookhaven wide-band beams, 11:49135 (J;US)
NEUTRINO-NUCLEON INTERACTIONS
See also ANTINEUTRINO-NUCLEON INTERACTIONS
NEUTRINO-NEUTRON INTERACTIONS
NEUTRINO-PROTON INTERACTIONS
Charged-Current Interactions
Azimuthal energy flow in deep inelastic neutrino scattering, 11:49124 (R;US)
Deep Inelastic Scattering
Azimuthal energy flow in deep inelastic neutrino scattering, 11:49124 (R;US)
Fragmentation
Study of the quark fragmentation in charged current ν and anti ν interactions of deuterium, 11:49119 (R;FR;In French)
NEUTRINO-PROTON INTERACTIONS
See also ANTINEUTRINO-PROTON INTERACTIONS
Neutral-Current Interactions
Determination of the neutrino fluxes in the Brookhaven wide-band beams, 11:49135 (J;US)
NEUTRON ABSORBERS
See also BURNABLE POISONS
Reactivity Worths
Measurements and analyses on reactivity effects of absorber rods in a light-water moderated UO_2 lattices, 11:47638 (R;JP;In Japanese)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON DETECTION
Dielectric Track Detectors
Semi-empirical model of neutron and charged particle interactions with CR-39, 11:48611 (R;US)
Efficiency
Superheated drop nucleation for neutron detection, 11:48625 (J;NL)
NEUTRON DETECTORS
Coincidence Circuits
Fast counting electronics for neutron coincidence counting, 11:48623 (P;US)
Counting Circuits
Fast counting electronics for neutron coincidence counting, 11:48623 (P;US)
NEUTRON DIFFRACTION
Hyperfine Structure
Study of the hyperfine augmented nuclear polarization by elastic neutron scattering, 11:49428 (R;DE;In German)
NEUTRON DIFFRACTOMETERS
Auxiliary Systems
New neutron small-angle diffraction instrument at the Brookhaven High Flux Beam Reactor, 11:48624 (BA;US)
NEUTRON DOSIMETRY
Comparative Evaluations
Neutron irradiations of proton-sensitive track detectors: results of a joint irradiation organised by CENDOS, 11:48412 (R;GB)
Dielectric Track Detectors
CENDOS joint neutron irradiation exercise - results from Berkeley Nuclear Laboratories, 11:48418 (RA;GB)
CENDOS neutron irradiation of Bristol CR-39, 11:48420 (RA;GB)
Intercomparison of neutron irradiations (CR-39 dosemeters), 11:48415 (RA;GB)
Intercomparison data (CR 39 detectors), 11:48421 (RA;GB)
Neutron irradiations of proton-sensitive track detectors: results of a joint irradiation organised by CENDOS, 11:48412 (R;GB)
NRPB neutron personal dosemeter: dependence of response on neutron energy, 11:48413 (RA;GB)
Response of electrochemically etched Kodak CN85 track detector to neutrons, 11:48419 (RA;GB)
Results of CENDOS CR-39 neutron irradiations, 11:48414 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of commercial grade CR-39, 11:48416 (RA;GB)
Summary of results obtained at AERE using electrochemical etching of Bristol University CR-39, 11:48417 (RA;GB)
NEUTRON ECONOMY

NEUTRON FLUX
Physical Radiation Effects
Discussion about modeling the effects of neutron flux exposure for nuclear reactor core analysis, 11:47621 (R;US)
NEUTRON FLUX DENSITY
See NEUTRON FLUX
NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON REACTIONS
Gas proportional telescope used to investigate rare reactions induced by 3 MeV neutrons, 11:49319 (RA;CS)
Analyzing Power
Analysing powers in free n vector p forward elastic scattering at energies from 650 to 1000 MeV, 11:49383 (R;FR)
Capture
Clean benchmark experiments and analyses at FNS, 11:49266 (RA;JP)
Direct E-italic2 neutron capture in light nuclei, 11:49416 (J;US)
Nuclear data testing on integral experiments of lithium spheres, 11:49264 (RA;JP)
Radiative neutron capture by deuterium, 11:49238 (J;US)
WNR neutron source, 11:48393 (RA;US)
Charge-Exchange Reactions
NPL upgrade, 11:48392 (RA;US)
WNR neutron source, 11:48393 (RA;US)
Coupled Channel Born Approximation
Coupled-channel analysis of neutron scattering from ^{12}C between 9 and 15 MeV, 11:49267 (R;US)
Cross Sections
14 MeV integral experiment at OKTAVIAN to check differential data of secondary neutrons, 11:49305 (RA;JP)

Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Fission cross section measurement of ^{243}Cm and ^{240}Pu. Final report, June 1, 1984-June 30, 1986, 11:49361 (R;US)
Measurement of the fission cross section of ^{239}Pu, 11:49360 (R;US)
Neutron cross sections for ^{155}Gd and ^{158}Gd, 11:49338 (R;US)
Nuclear data and integral experiments required for fusion reactor nuclear design, 11:49561 (RA;JP)

Elastic Scattering
/sup 208/Pb+n reaction and the mean nuclear field near threshold, 11:49354 (J;US)
Analysing powers in free n vector p forward elastic scattering at energies from 650 to 1000 MeV, 11:49383 (R;FR)
Analyzing power of /sup 27/Al(n-arrow-right,n-arrow-right$_0$) at 14 and 17 MeV and the isospin dependence of the optical model potential, 11:49277 (J;US)
Coupled-channel analysis of neutron scattering from ^{12}C between 9 and 15 MeV, 11:49267 (R;US)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)

Fission
Fission cross section measurement of ^{243}Cm and ^{240}Pu. Final report, June 1, 1984-June 30, 1986, 11:49361 (R;US)
Fragment angular distributions for neutron fission of /sup 232/Th, 11:49365 (J;US)
Measurement of the fission cross section of ^{239}Pu, 11:49360 (R;US)

Inelastic Scattering
Coupled-channel analysis of neutron scattering from ^{12}C between 9 and 15 MeV, 11:49267 (R;US)
Nuclear data testing on integral experiments of lithium spheres, 11:49264 (RA;JP)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)
Update of ENDF/B-V Mod 3 iron: neutron-producing reaction cross sections and energy-angle correlations, 11:49292 (R;US)

J Codes
Format of JENDL, 11:49220 (RA;JP)
Processing of the nuclear data file and the problems of JENDL, 11:49221 (RA;JP)

Knock-Out Reactions
Nuclear data testing on integral experiments of lithium spheres, 11:49264 (RA;JP)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)
Update of ENDF/B-V Mod 3 iron: neutron-producing reaction cross sections and energy-angle correlations, 11:49292 (R;US)

Neutron Emission
Double differential neutron emission cross sections at 14 MeV measured at OKTAVIAN, 11:49222 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)

Nuclear Data Collections
14 MeV integral experiment at OKTAVIAN to check differential data of secondary neutrons, 11:49305 (RA;JP)
Clean benchmark experiments and analyses at FNS, 11:49266 (RA;JP)
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Double differential neutron emission cross sections at 14 MeV measured at OKTAVIAN, 11:49222 (RA;JP)
High tritium breeding ratio (TRB) blanket concept and requirements for nuclear data relating to TBR, 11:49562 (RA;JP)
Nuclear data testing on integral experiments of lithium spheres, 11:49264 (RA;JP)
Review on nuclear data for fusion reactors, 11:49559 (RA;JP)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)
Status of JENDL-3PR1 and 3PR2, 11:49560 (RA;JP)

Quasi-Elastic Scattering
Clean benchmark experiments and analyses at FNS, 11:49266 (RA;JP)
Evaluation of (n, 2n) reaction cross sections for ^{46}Ti, ^{107}Ag and ^{109}Ag, 11:49329 (R;PL)
Nuclear data testing on integral experiments of lithium spheres, 11:49264 (RA;JP)
Revision of the neutron nuclear data of lithium, 11:49262 (RA;JP)

Scattering
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Test of time reversal symmetry with resonance neutron scattering, 11:49171 (R;US)

T Invariance
Test of time reversal symmetry with resonance neutron scattering, 11:49171 (R;US)

Thermal Fission
Subthreshold fission cross section of ^{240}Pu and the fission cross sections of ^{236}U and ^{239}Pu, 11:49367 (J;US)

Total Cross Sections
Multilevel analysis of the low-energy ^{239}Pu cross sections, 11:49366 (J;US)

NEUTRON SOURCE FACILITIES

Design
WNR neutron source, 11:48393 (RA;US)

Performance
WNR neutron source, 11:48393 (RA;US)

NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Calculation of spatial distribution of the EURACOS II converter source, 11:49423 (RA;BR;In Portuguese)

Design
New neutron small-angle diffraction instrument at the Brookhaven High Flux Beam Reactor, 11:48624 (BA;US)

Meetings
Proceedings of the 14. International Symposium on the Interaction of Fast Neutrons with Nuclei - Neutron Generators and Application - organized by the Technical University of Dresden, 11:49432 (R;DD;In English and Russian)

NEUTRON SPECTROMETERS

Time-of-Flight Spectrometers
Construction of a time-of-flight neutron spectrometer for reaction angles $0^0 <= \text{theta} <= 180^0$ and study of the reaction ^{65}Cu(p,xn) ^{65}Zn for Esub(p)=26.7 MeV, 11:48603 (R;DE;In German)

NEUTRON STARS

Lectures
Neutron stars and supernovae, 11:48963 (R;FR;In French)

Research Programs
Research in nuclear astrophysics: stellar collapse and supernovae. Progress report, 11:48964 (R;US)

NEUTRON TRANSPORT

Monte Carlo Method
Alternative technique for simulating volumetric cylindrical sources in the Morse code utilization, 11:49425 (RA;BR;In Portuguese)

Numerical Solution
Collision probability in two-dimensional lattice by ray-trace method and its applications to cell calculations, 11:47620 (R;JP)

P Codes
PALLAS-2DCY-FX: a code for direct integration of transport equation in two-dimensional (R, Z) geometry, 11:49430 (R;JP)

Penetration Depth
Alternative technique for simulating volumetric cylindrical sources in the Morse code utilization, 11:49425 (RA;BR;In Portuguese)

S Codes
Legendre-series development of the anisotropy density of neutron elastic scattering by means of cubic splines (SUPERTOG - computer code), 11:49420 (R;XA)

NEUTRONS
See also THERMAL NEUTRONS

Background Radiation
Natural neutron background in localities of various altitude, 11:48687 (RA;CS)
Beta Decay
Neutron beta decay, 11:49110 (RA;US)
Elastic Scattering
Legendre-series development of the anisotropy density of neutron elastic scattering by means of cubic splines, 11:49420 (R;XA)
Electric Dipole Moments
Measurement of the electric dipole moment of the neutron, 11:49112 (RA;US)
Microdosimetry
Radiation physics, biophysics, and radiation biology. Progress report, December 1, 1985-November 30, 1986, 11:48829 (R;US)
Quality Factor
Determination of the quality factor of mixed neutron-gamma fields using a proportional counter, 11:48842 (RA;CS;In Slovak)
Radiobiology
Radiation physics, biophysics, and radiation biology. Progress report, December 1, 1985-November 30, 1986, 11:48829 (R;US)
Transmission
Evaluation of resonance self-shielding factors for ^{238}U in the unresolved resonance region, 11:49421 (R;XA)
Group cross-sections and resonance self-shielding factors for ^{239}Pu in the unresolved resonance region, 11:49422 (R;XA)

NEVADA
Radiation Monitoring
Off-site environmental monitoring report. Radiation monitoring around United States nuclear test areas, calendar year 1985, 11:48684 (R;US)

NEVADA TEST SITE
Program Management
Status of the graphic overview system in relation to Department of Energy facilities, 11:48789 (RA;US)
Radiation Protection
Radiation safety manual for the Nevada Test Site. Revision 3, 11:48880 (R;US)

NEW JERSEY
Remedial Action
Site cleanup lessons learned: formerly utilized sites remedial action program (FUSRAP) Middlesex Site, 11:47303 (RA;US)
Residential Buildings
Assessing the training and technical-assistance needs of weatherization program subgrantees: a practical methodology which yields policy-maker-useful data, 11:47844 (RA;US)

NEW MEXICO
Coal Deposits
Assessment of development and production potential of federal coal leases. Volume 2. Working papers. Part 1, Vol. 2. Analysis of federal coal leases in mine plans: detailed summaries of mine plans and lease blocks in Colorado, New Mexico, and Utah, 11:47209 (R;US)
Wind Power
New Mexico anemometer loan program. Final report, 11:47450 (R;US)

NEW YORK
Residential Buildings
Assessing the training and technical-assistance needs of weatherization program subgrantees: a practical methodology which yields policy-maker-useful data, 11:47844 (RA;US)

See NET TOKAMAK

NICKEL
Absorption Spectroscopy
Analytical applications of ICP-FTS, 11:48104 (BA;US)
Bonding
Intermixing at Ni-porous zirconia junctions, 11:47998 (BA;US)
Catalytic Effects
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
Studies of alkali metal interactions with chemisorbed CO on Ni(111), 11:48089 (J;US)
The effect of catalyst preparation on catalyst activity, 11:48156 (J;US)
Corrosion Resistance
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)
Diffusion Welding
Intermixing at Ni-porous zirconia junctions, 11:47998 (BA;US)
Electrochemical Corrosion
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)
Electronic Structure
Electronic structure of the (2 x 2)C-italic rho4g-italic carbidic phase on Ni{100}, 11:47986 (J;US)
Embrittlement
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Materials Recovery
Supported liquid membranes in 1986: new technology or scientific curiosity, 11:48057 (R;US)
Mechanical Properties
Intermixing at Ni-porous zirconia junctions, 11:47998 (BA;US)
Neutron Reactions
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Oxidation
Reactions at the Ni-ZrO_2 interface, 11:47970 (BA;US)
Phase Studies
Reactions at the Ni-ZrO_2 interface, 11:47970 (BA;US)
Photoelectron Spectroscopy
Electronic structure of the (2 x 2)C-italic rho4g-italic carbidic phase on Ni{100}, 11:47986 (J;US)
Physical Radiation Effects
Collapse of defect cascades to dislocation loops during self-ion irradiations of Fe, Ni and Cu at 30, 300 and 600°K, 11:47920 (R;US)
Solvent Extraction
Supported liquid membranes in 1986: new technology or scientific curiosity, 11:48057 (R;US)
Sorptive Properties
Studies of alkali metal interactions with chemisorbed CO on Ni(111), 11:48089 (J;US)
Spin Waves
Direct observation of spin waves above T-italic/sub C/ for nickel, 11:47965 (J;US)
Stress Corrosion
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Titration
Automated analyzer for the determination of free acid, 11:48128 (BA;US)
X-Ray Spectra
A TEM study of Ti induced grain growth and precipitation in hot pressed alumina, 11:47999 (BA;US)

NICKEL 58 REACTIONS
Elastic Scattering
Elastic and inelastic scattering for ^{58}Ni + /sup 116,124/Sn, 11:49311 (RA;US)
Heavy Ion Fusion Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
Inelastic Scattering
Elastic and inelastic scattering for ^{58}Ni + /sup 116,124/Sn, 11:49311 (RA;US)

Pickup Reactions
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
Transfer Reactions
Energy dependence of quasi-elastic heavy ion reactions, 11:49346 (RA;US)
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic neutron transfer reactions on samarium isotopes, 11:49312 (RA;US)
Study of transfer processes in the systems ^{58}Ni + ^{58}Ni and ^{58}Ni + ^{64}Ni at energies in the vicinity of the barrier, 11:49296 (RA;US)

NICKEL 58 TARGET
Lithium 7 Reactions
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
Nickel 58 Reactions
Study of transfer processes in the systems ^{58}Ni + ^{58}Ni and ^{58}Ni + ^{64}Ni at energies in the vicinity of the barrier, 11:49296 (RA;US)
Pion Minus Reactions
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)
Pion Plus Reactions
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)
Reaction /sup 58/Ni(π^+,2p-italic) at 160 MeV, 11:49295 (J;US)
Sulfur 32 Reactions
Proximity effects in deep-inelastic collisions of ^{32}S + ^{58}Ni, 11:49284 (RA;US)

NICKEL 60 TARGET
Pion Minus Reactions
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)
Pion Plus Reactions
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)

NICKEL 64 REACTIONS
Heavy Ion Fusion Reactions
l-distributions in fusion of ^{64}Ni + ^{96}Zr and ^{12}C + ^{144}Sm measured with the Darmstadt-Heidelberg crystal ball, 11:49315 (RA;US)
Limits to fusion in heavy systems, 11:49314 (RA;US)
Stripping
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
Transfer Reactions
Energy dependence of quasi-elastic heavy ion reactions, 11:49346 (RA;US)
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)

NICKEL 64 TARGET
Nickel 58 Reactions
Study of transfer processes in the systems ^{58}Ni + ^{58}Ni and ^{58}Ni + ^{64}Ni at energies in the vicinity of the barrier, 11:49296 (RA;US)
Pion Minus Reactions
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)
Pion Plus Reactions
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)

NICKEL ALLOYS
See also CHROMIUM-NICKEL STEELS
NICKEL BASE ALLOYS
Chemical Composition
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report, 11:47926 (R;US)
Self-Diffusion
Thermodynamics and diffusion processes in the Fe-Ni-Cr system, 11:47940 (RA;CS;In Czech)
Thermodynamics
Thermodynamics and diffusion processes in the Fe-Ni-Cr system, 11:47940 (RA;CS;In Czech)

NICKEL BASE ALLOYS
Corrosion Resistance
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)
Electrochemical Corrosion
Corrosion resistance of nickel and some nickel base alloys in water electrolyzers working at 200°C. Final report, 11:47931 (R;DE;In French)

NICKEL COMPLEXES
Catalytic Effects
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Chemical Reactions
Transition metal catalysis of hydrogen shuttling in coal liquefaction, 11:47163 (R;US)
Dehydrocyclization
Facile cyclization of the valeronitrile group bound to a nickel macrocycle, 11:48174 (J;US)
Reaction Intermediates
Facile cyclization of the valeronitrile group bound to a nickel macrocycle, 11:48174 (J;US)

NICKEL IONS
Diffusion
Inner-shell x-ray line spectra of highly ionized titanium, chromium, iron, and nickel and their application to laboratory plasmas, 11:49499 (J;US)
Electron-Ion Collisions
Electron-impact ionization of multicharged metal ions: Ni/sup 3+/, Cu/sup 2+/, Cu/sup 3+/, and Sb/sup 3+/, 11:49092 (J;US)
Fine Structure
Lamb shifts and fine structures on n = 2 in helium-like ions, 11:49035 (RA;US)
Lamb Shift
Lamb shifts and fine structures on n = 2 in helium-like ions, 11:49035 (RA;US)
X-Ray Spectra
Inner-shell x-ray line spectra of highly ionized titanium, chromium, iron, and nickel and their application to laboratory plasmas, 11:49499 (J;US)

NICKEL OXIDES
Diffusion
Impurity diffusion in NiO grain boundaries, 11:47973 (R;GB)

NICKEL-CADMIUM BATTERIES
Battery Separators
Performance evaluation of nickel-cadmium cell separator material, 11:47758 (BA;US)

NICKEL-CHROMIUM STEELS
Corrosion Fatigue
Effect of long-term operating exposure to sodium and steam-water mixture on creep strength and fatigue properties (Cr20Ni35Ti, Cr18Ni11, and Cr2.25Mo1Nb), 11:47938 (RA;CS;In Czech)
Corrosion Resistance
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)

NICKEL-HYDROGEN BATTERIES
Design
Design and cost study of a 15 kWh hydrogen/nickel oxide battery for photovoltaic applications, 11:47760 (BA;US)
Electrodes
Long life nickel electrodes for a nickel-hydrogen cell: cycle life tests, 11:47754 (R;US)
Service Life
Design and cost study of a 15 kWh hydrogen/nickel oxide battery for photovoltaic applications, 11:47760 (BA;US)
Technology Assessment
Mission and status of the U.S. Department of Energy's battery energy storage program, 11:47759 (BA;US)

NILSSON MODEL
See NILSSON-MOTTELSON MODEL

NILSSON POTENTIAL
See NILSSON-MOTTELSON MODEL
NILSSON SCHEME
See NILSSON-MOTTELSON MODEL
NILSSON-MOTTELSON MODEL
Bosons
Deformed bosons in the Nilsson scheme, 11:49395 (RA;BR)
Nuclear Deformation
Deformed bosons in the Nilsson scheme, 11:49395 (RA;BR)
NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reactions
Laser-driven chemical reaction for etching $LiNbO_3$, 11:48032 (J;US)
Crystal-Phase Transformations
Effect of microstructure and surface characteristics on phase stability (LaNb/sub 1-x/V/sub x/O_4), 11:48016 (R;US)
Etching
Laser-driven chemical reaction for etching $LiNbO_3$, 11:48032 (J;US)
Phase Transformations
Manipulation of displacive phase transformations (LaNb/sub 1-x/V/sub x/O_4; BiV/sub 1-x/Nb/sub x/O_4), 11:48015 (R;US)
Physical Radiation Effects
Effects of temperature and irradiation on piezoelectric acoustic transducers and materials, 11:47974 (R;GB)
Temperature Effects
Effects of temperature and irradiation on piezoelectric acoustic transducers and materials, 11:47974 (R;GB)
NIOBIUM
Diffusion
Thermodynamics of material properties degradation in fast reactor steam generator under effect of liquid sodium, 11:47515 (RA;CS;In Czech)
Heavy Ion Reactions
Nuclear collective flow as a function of projectile energy and mass, 11:49294 (J;US)
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
Metallurgical Effects
Thermodynamics of material properties degradation in fast reactor steam generator under effect of liquid sodium, 11:47515 (RA;CS;In Czech)
Physical Radiation Effects
Irradiation swelling in self-ion irradiated niobium, 11:47586 (RA;US)
NIOBIUM 89
Energy-Level Transitions
Shell-model study of $_{4}{}^{189}$Nb, 11:49299 (RA;US)
NIOBIUM 93 TARGET
Aluminium 27 Reactions
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)
Beryllium 9 Reactions
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)
Carbon 12 Reactions
Intermediate mass fragment emission from 8 to 40 MeV/u, 11:49323 (R;US)
NIOBIUM 95
Gamma Spectroscopy
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)
NIOBIUM ALLOYS
See also INCONEL 600
NIOBIUM BASE ALLOYS
Corrosion Resistance
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)
Mechanical Properties
Availability of niobium and tantalum-base alloy products for space nuclear reactors, 11:47580 (RA;US)
Physical Radiation Effects
High temperature in-reactor testing of Nb-1Zr, PWC-11, and T-111, 11:47587 (RA;US)
NIOBIUM BASE ALLOYS
Mechanical Properties
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Physical Radiation Effects
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
NIOBIUM CARBIDES
Synthesis
Use of ammonolytic intermediates for the synthesis of nitrides and carbonitrides, 11:47976 (R;US)
NIOBIUM IONS
M1-Transitions
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
Ultraviolet Spectra
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
X-Ray Spectra
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
NIOBIUM NITRIDES
Microstructure
Electron microscopy study of sputtered NbN films, 11:47975 (R;US)
Superconductivity
Electron microscopy study of sputtered NbN films, 11:47975 (R;US)
Synthesis
Use of ammonolytic intermediates for the synthesis of nitrides and carbonitrides, 11:47976 (R;US)
NITRATES
See also LITHIUM NITRATES
PLUTONIUM NITRATES
POTASSIUM NITRATES
URANIUM NITRATES
URANYL NITRATES
Ecological Concentration
In-situ denitrification of ponds, 11:48744 (RA;US)
NITRIC OXIDE
NO.
Decomposition
Nitrogen desorption in the reaction of nitric oxide on carbon-supported platinum catalysts, 11:48149 (J;US)
Spectra
Pressure effects in the multiphoton ionization of atoms and molecules, 11:49060 (RA;US)
NITRIDES
See also ALUMINIUM NITRIDES
BORON NITRIDES
NIOBIUM NITRIDES
PRASEODYMIUM NITRIDES
SILICON NITRIDES
TITANIUM NITRIDES
Synthesis
Use of ammonolytic intermediates for the synthesis of nitrides and carbonitrides, 11:47976 (R;US)
NITRILES
See also ACETONITRILE
Dehydrocyclization
Facile cyclization of the valeronitrile group bound to a nickel macrocycle, 11:48174 (J;US)
Reaction Intermediates
Facile cyclization of the valeronitrile group bound to a nickel macrocycle, 11:48174 (J;US)
NITRO COMPOUNDS
See also NITROMETHANE
NITROPHENOL
Dissociation
Infrared multiphoton dissociation of three nitroalkanes, 11:48203 (J;US)

Isomerization
Infrared multiphoton dissociation of three nitroalkanes, 11:48203 (J;US)
Mass Spectroscopy
Tandem mass spectrometer for the detection of nitroaromatic compounds and other electronegative species in ambient air, 11:48092 (BA;US)
NITROGEN
Desorption
Nitrogen desorption in the reaction of nitric oxide on carbon-supported platinum catalysts, 11:48149 (J;US)
Ground States
Molecular physics and chemistry applications of quantum Monte Carlo, 11:49093 (J;US)
Quantitative Chemical Analysis
Determination of nitrogen in PuO_2-UO_2 mixed oxide with fusion-TCD method, 11:48083 (RA;JP)
Separation Processes
Determination of nitrogen in PuO_2-UO_2 mixed oxide with fusion-TCD method, 11:48083 (RA;JP)
NITROGEN 14 REACTIONS
Heavy Ion Fusion Reactions
Complete fusion and some evidences of incomplete fusion of the ^{14}N + ^{59}Co system, 11:49304 (RA;BR)
Evaporation-residue-velocity measurements for fusion of ^{14}N with light target nuclei, 11:49249 (RA;US)
Stopping Power
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)
NITROGEN COMPLEXES
Chemical Reactions
Conversion of the μketene ligand in [PPN][$Os_3(CO)_{10}(\mu$-I)(μ-CH_2CO)] into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
Molecular Structure
Conversion of the μketene ligand in [PPN][$Os_3(CO)_{10}(\mu$-I)(μ-CH_2CO)] into enolate, acyl, and vinyl ligands, 11:48175 (J;US)
NITROGEN COMPOUNDS
See also CARBONITRIDES
NITRATES
NITRIDES
NITROGEN FLUORIDES
NITROGEN HYDRIDES
NITROGEN OXIDES
Reaction Heat
Thermochemical comparisons of homogeneous and heterogeneous acids and bases. 1. Sulfonic acid solutions and resins as prototype Broensted acids, 11:48181 (J;US)
NITROGEN DIOXIDE
NO_2.
Tables
SAGE Aerosol Measurements. Volume 2: 1 January-31 December 1980, 11:48668 (R;US)
NITROGEN FLUORIDES
Photon-Molecule Collisions
Barrier to inversion in NF_3, 11:49024 (RA;US)
Bonding and ionization energies of N-F and P-F compounds, 11:49026 (RA;US)
NITROGEN HYDRIDES

Collisions
Post-foil interaction in foil-induced molecular dissociation, 11:49045 (RA;US)
NITROGEN IONS
Collisions
Enhanced electron capture by fast heavy di-clusters exciting solids , 11:49044 (RA;US)
Optical measurements of molecular-ion fragmentation, 11:49037 (RA;US)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
NITROUS OXIDE
Air Pollution Abatement
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
Reduction of NOsub(x)-emission of gas-fired furnaces, 11:48663 (R;DE;In German)
Air Pollution Control
System design study to reduce capital and operating cost of a moving distributor, AFB advanced concept - comparison with an oil-fired boiler. Final report, 11:47204 (R;US)
Emission
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)
Removal
Demonstration of the iodine and NO/sub x/ removal systems in the Oak Ridge National Laboratory (ORNL) Integrated Equipment Test (IET) facility , 11:47305 (R;US)
NITROMETHANE
Dissociation
Infrared multiphoton dissociation of three nitroalkanes, 11:48203 (J;US)
Isomerization
Infrared multiphoton dissociation of three nitroalkanes, 11:48203 (J;US)
NITROPHENOL
Chemical Reaction Kinetics
Real-time analysis using the Kalman filter, 11:48124 (BA;US)
NITROSO COMPOUNDS
See also NITROSOUREAS
Mutagen Screening
Classifying mutagens as to their specificity in causing the six possible transitions and transversions: a simple analysis using the Salmonella mutagenicity assay, 11:48921 (J;US)
NITROSOUREAS
Genetic Effects
Sister chromatid exchange induction and persistence in peripheral blood and spleen lymphocytes of mice treated with ethylnitrosourea, 11:48918 (J;US)
NITROUS OXIDE
N_2O.
Solvent Properties
Characterization of supercritical fluid solvents using solvatochromic shifts, 11:48154 (J;US)
NMR
See NUCLEAR MAGNETIC RESONANCE
NOBELIUM
Solvent Extraction
Contributions to the chemistry of lanthanides and transplutonium elements, 11:48085 (RA;DD;In German)
NOBLE GASES
See RARE GASES
NONDESTRUCTIVE TESTING
Nondestructive testing at Sandia National Laboratories, Albuquerque, 11:48292 (R;US)
Eddy Current Testing
Multiparameter methods with pulsed eddy currents, 11:48290 (R;US)
Ultrasonic Testing
Analytic signal converter for nondestructive testing, 11:48296 (R;US)
NONLINEAR PROBLEMS
Numerical Solution
Projected gradient methods for linearly constrained problems, 11:49604 (R;US)
NONLINEAR SYSTEMS
See NONLINEAR PROBLEMS
NONLUMINOUS MATTER
(In outer space.)
Ultralow background searches for β β-decay, cold dark matter and solar axions, 11:49306 (R;US)
NON-PROLIFERATION TREATY
Legal Aspects
US arms control obligations under the Non-Proliferation Treaty, 11:48655 (R;US)
NONRADIOACTIVE WASTE DISPOSAL
See WASTE DISPOSAL

NONRADIOACTIVE WASTES

LIQUID WASTES
NORTH AMERICA
See also USA
Seismic P Waves
Attenuation and scattering of broadband P-italic and S-italic waves across North America, 11:48944 (J;US)
Seismic S Waves
Attenuation and scattering of broadband P-italic and S-italic waves across North America, 11:48944 (J;US)
NORTH ATLANTIC REGION
See FEDERAL REGION I
NORTH CAROLINA
Estuaries
Physical oceanographic processes affecting larval transport around and through North Carolina inlets, 11:48931 (R;US)
NORTH SEA
Natural Radioactivity
Increase of local dose rates on the islands in the North Sea, resulting from heavy mineral accumulation. Final report, 11:48710 (R;DE;In German)
NORTHERN TERRITORY
Uranium Deposits
Pandanus Creek Uranium Mine, Northern Territory, Australia, 11:47253 (RA;XA)
Uranium Mines
Pandanus Creek Uranium Mine, Northern Territory, Australia, 11:47253 (RA;XA)
NOVA FACILITY
Energy and Technology Review, April-May 1986, 11:49576 (R;US)
X-Ray Lasers
X-ray laser experiments research at the Nova Laser Facility, 11:48267 (BA;US)
NOVO VORONEZH-5 REACTOR
See WWER-5 REACTOR
NOXSO PROCESS
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
NOZZLES
Fracture Properties
Transition and upper shelf fracture toughness properties of an A508 Class 3 PWR nozzle cut-out, 11:47908 (R;GB)
NRTS
See IDAHO NATIONAL ENGINEERING LABORATORY
NSCR REACTOR
Reactor Operation
Texas A and M University Nuclear Science Center. Twenty-second progress report, January 1-December 31, 1985, 11:47645 (R;US)
NSLS
Monochromators
Versatile monochromator for synchrotron x-rays, 11:48407 (J;NL)
Operation
Operation, maintenance and upgrading of SUNY facilities at the National Synchrotron Light Source. Final report, 1 October 1980-31 May 1986, 11:48382 (R;US)
NSRR REACTOR
Nuclear Safety Research Reactor in Japan.
Irradiation Capsules
Study on evaluation methods of explosive proof tests of NSRR capsule, 11:47648 (R;JP;In Japanese)
NUCLEAR ACCIDENTS
See ACCIDENTS
NUCLEAR ATTACKS

Design
Neutronics characteristics of space power reactors, 11:47566 (RA;US)
Mass Spectroscopy
Evaluation of the MAT-thermal ionization quadrupole mass spectrometer for potential use for on-situ safeguards verifications, 11:48101 (BA;US)
Performance
Neutronics characteristics of space power reactors, 11:47566 (RA;US)
Quantitative Chemical Analysis
Automated analyzer for the determination of free acid, 11:48128 (BA;US)

NUCLEAR INDUSTRY
Standards
Nuclear technology transfer via standards: the OMB Circular A-119 in action, 11:47784 (J;US)

NUCLEAR INSURANCE
Government Policies
S. 1225: a bill to amend the Atomic Energy Act of 1954, as amended, to establish a comprehensive, equitable, reliable, and efficient mechanism for full compensation of the public in the event of an accident... Introduced in the Senate of the United States, Ninety-Ninth Congress, Second Session, May 24, 1985, 11:47745 (B;US)

NUCLEAR MAGNETIC RESONANCE
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Low-rank coal liquefaction mechanisms. Final report for the period ending March 31, 1986, 11:47150 (R;US)
Phase Shift
Indirect phase detection of NMR spinor transitions, 11:49444 (J;US)
Quantum Mechanics
Indirect phase detection of NMR spinor transitions, 11:49444 (J;US)

NUCLEAR MATERIALS MANAGEMENT
Implementation
International training course on implementation of state systems of accounting for and control of nuclear materials: proceedings, 11:47345 (R;US)

NUCLEAR MATTER
Cluster Model
Coupled cluster and variational calculations of nuclear matter, 11:49370 (RA;US)
Magnetic Moments
Resolution of the magnetic moment problem in relativistic theories, 11:49415 (J;US)
Mean-Field Theory
Resolution of the magnetic moment problem in relativistic theories, 11:49415 (J;US)
Variational Methods
Coupled cluster and variational calculations of nuclear matter, 11:49370 (RA;US)

NUCLEAR MEDICINE
See also RADIOLOGY
Research Programs
[Iraqi Atomic Energy Commission]. Annual report 1982-1983 (Iraqi Atomic Energy Commission), 11:47778 (R;IQ)

NUCLEAR MODELS
See also NILSSON-MOTTELSON MODEL
Monte Carlo Method
Monte Carlo studies of nuclear many-particle systems, 11:49418 (J;US)
Three-Body Problem
Minimal relativistic model for the three nucleon system, 11:49413 (R;US)

NUCLEAR MOLECULES
U-3 Groups
U(3) principle as base of a microscopical U(3) model for the clarification of the phenomenon of nuclear molecules. Development of an analytical concept describing nucleus-nucleus collisions in the framework of the Composite Particle Theory in the Bargmann space, 11:49407 (R;DE;In German)

NUCLEAR POTENTIAL
Impulse Approximation
Reactive content of the proton-nucleus impulse-approximation Dirac optical potential, 11:49287 (RA;BR)

NUCLEAR POWER
Technology Assessment
Technology development in the field of tension between its intrinsic dynamics and the goals defined in the public discussion. Nuclear energy, microelectronics and genetic engineering: a comparative approach, 11:48790 (R;DE;In German)

NUCLEAR POWER PLANTS
Capitalized Cost
Cost estimate guidelines for advanced nuclear power technologies, 11:47617 (R;US)
Construction
Nuclear Power Plant Construction Activity, 1985, 11:47782 (R;US)
Containment Systems
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Control Rooms
Ergonomic design of nuclear power plant central rooms, 11:47612 (RA;DE;In German)
Design Basis Accidents
Annual meeting on nuclear technology 1981. Technical meeting: External impact, 11:47705 (R;DE;In German)
Combined experimental-computational method for the verification of cable support systems under dynamic loading, 11:47711 (RA;DE;In German)
Mechanical behaviour of piping and machinery components under external impact loadings, 11:47710 (RA;DE;In German)
Presentation of the external impact philosophy, 11:47707 (RA;DE;In German)
Protective design against impact loads in nuclear civil engineering, 11:47708 (RA;DE;In German)
Seismic design in nuclear civil engineering, 11:47709 (RA;DE;In German)
Diagnostic Techniques
Simulation-based expert system for nuclear reactor control and diagnostics. Progress report, 11:47669 (R;US)
Engineered Safety Systems
Electronic isolators used in safety systems of US nuclear power plants, 11:47727 (R;US)
Fuel Cycle
Health risks of nuclear and coal fuel cycles in electricity generation. A critical review of comparative assessments for the United Kingdom, 11:47342 (R;GB)
Human Factors
Models of cognitive behavior in nuclear power plant personnel. A feasibility study: main report. Volume 2, 11:47641 (R;US)
Models of cognitive behavior in nuclear power plant personnel. A feasibility study: summary of results. Volume 1, 11:47640 (R;US)
In Core Instruments
Instrument accuracy in reactor vessel inventory tracking systems, 11:47665 (R;US)
Man-Machine Systems
Annual meeting on nuclear technology 1980. Technical meeting: Man-machine systems. Pt. 1, 11:47610 (R;DE;In German)
Operating manuals as a medium between man and machine, 11:47611 (RA;DE;In German)
Mechanical Structures
Transactions of the 8th International Conference on Structure Mechanics in Reactor Technology, 11:47627 (R;US)
Personnel
Models of cognitive behavior in nuclear power plant personnel. A feasibility study: main report. Volume 2, 11:47641 (R;US)
Models of cognitive behavior in nuclear power plant personnel. A feasibility study: summary of results. Volume 1, 11:47640 (R;US)

Training review criteria and procedures, 11:47639 (R;US)
Radiation Monitors
Monitor for continuous measurement of radionuclides in liquid wastes from nuclear power stations, 11:48599 (RA;CS)
Monitor for continuous measurement of tritium and noble gases in nuclear power station, 11:48600 (RA;CS)
Reactor Accidents
Reporting criteria for abnormal events at nuclear power plants, 11:47744 (TG;DE)
Reactor Control Systems
Simulation-based expert system for nuclear reactor control and diagnostics. Progress report, 11:47669 (R;US)
Reactor Cores
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Reactor Materials
Characterization and improvement of coatings protecting concrete against contamination, 11:47626 (R;FR;In French)
Reactor Monitoring Systems
Annual meeting on nuclear technology 1982. Technical meeting: Information processing in nuclear engineering, 11:47633 (R;DE;In German)
Reactor Operators
Computer-aided operator support in nuclear power plants, 11:47635 (RA;DE;In German)
Man as a protective barrier. Requirements from the point of view of the Federal Ministry of the Interior, 11:47712 (RA;DE;In German)
Reactor Physics
Discussion about modeling the effects of neutron flux exposure for nuclear reactor core analysis, 11:47621 (R;US)
Reactor Protection Systems
Annual meeting on nuclear technology 1982. Technical meeting: Information processing in nuclear engineering, 11:47633 (R;DE;In German)
Method for the development of reliable software for computer-aided safety systems, 11:47636 (RA;DE;In German)
Reactor Safety
Adjoint-based sensitivity analysis for reactor safety applications, 11:47736 (R;US)
Reporting criteria for abnormal events at nuclear power plants, 11:47744 (TG;DE)
Safety Evaluation Report related to the operation of Hope Creek Generation Station (Docket No. 50-354). Supplement No. 6, 11:47725 (R;US)
Reactor Sites
Method for assigning sites to projected generic nuclear power plants, 11:47644 (R;US)
Reactor Vessels
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Safeguards
International training course on implementation of state systems of accounting for and control of nuclear materials: proceedings, 11:47345 (R;US)
Steam Generators
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Electrochemistry and corrosion of alloys in high-temperature water. Final report, 11:47625 (R;US)
Laboratory examinations of selected tubes from test facilities of the Steam Generator Owners Group. Final report, 11:47623 (R;US)
Workshop on thermally treated alloy 690 tubes for nuclear steam generators: proceedings, 11:47624 (R;US)
NUCLEAR POWER STATIONS

Purification
Purification and characterization of glucose oxidase from ligninolytic cultures of Phanerochaete chrysosporium, 11:48795 (J;US)

OXIRANS
See EPOXIDES

OXONIUM IONS
Infrared Spectra
Infrared spectra of the cluster ions $H_7O^+{}_3xH_2$ and $H_9O^+{}_4xH_2$, 11:49086 (J;US)
Ion Pairs
Infrared spectra of the cluster ions $H_7O^+{}_3xH_2$ and $H_9O^+{}_4xH_2$, 11:49086 (J;US)

OXYGEN
Absorption Spectra
Oxygen K-edge absorption spectra of small molecules in the gas phase, 11:49050 (R;US)
Chemical Reaction Kinetics
Variational transition state theory and tunneling calculations of potential energy surface effects on the reaction of O(3P) with H_2, 11:48220 (J;US)
Chemical Reactions
Theoretical studies on the reaction of atomic oxygen (O(3P)) with acetylene. Part 2, 11:48189 (J;US)
Diffusion
Metal-oxygen systems, 11:48166 (J;US)
Neutron Reactions
Comparison between measurements of the neutron spectra from materials used in fusion reactors and calculations using JENDL-3PR1, 11:49265 (RA;JP)
Measurements of double-differential neutron emission cross sections at Tohoku University, 11:49263 (RA;JP)
Oxidation
Metal-oxygen systems, 11:48166 (J;US)
Quenching
Elementary reactions of electronically excited molecules. Pt. 6. Quenching of O_2(1 Δsub(g)) by amines, furanes, pyrroles and thiophenes, 11:48171 (R;DE)
Solubility
Metal-oxygen systems, 11:48166 (J;US)
OXYGEN 16
Energy-Level Transitions
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
OXYGEN 16 REACTIONS
Alpha-Transfer Reactions
Anomalous heavy ion optical potentials and dynamic polarization, 11:49405 (RA;BR)
Effect of α-transfer reactions on the elastic scattering of $^{28}Si + ^{16}O$ at E sub(CM) =31.6 MeV, 11:49275 (RA;BR)
Study of heavy ion transfer reactions for ^{16}O + sup(63,65) Cu systems at energies near the Coulomb barrier, 11:49301 (RA;BR)
Study of the α-transfer reaction $^{24}Mg(^{16}O, ^{20}Ne)^{20}Ne$ at E sub(CM)=27.8 MeV, 11:49274 (RA;BR)
Elastic Scattering
$^{16}O + ^{208}Pb$ near the Coulomb barrier, 11:49347 (RA;US)
Forward glory effects in elastic scattering of heavy-ions, 11:49399 (RA;BR)
Nuclear structure effects on the reaction cross section of ^{16}O + sup(46, 50) Ti, 11:49290 (RA;BR)
Fission Fragment Detection
Detection of fission like process in the sup(63,65) Cu + ^{16}O systems, 11:49303 (RA;BR)
Heavy Ion Fusion Reactions
$^{16}O + ^{208}Pb$ near the Coulomb barrier, 11:49347 (RA;US)
Fusion cross section measurements for the sup(63,65) Cu + ^{16}O systems, 11:49302 (RA;BR)
Fusion evaporation residues and the distribution of reaction strength in $^{16}O + ^{40}Ca$ and $^{28}Si + ^{28}Si$ reactions, 11:49285 (RA;US)
Fusion of the ^{16}O + sup(46, 48, 50) Ti systems near and below the Coulomb barrier, 11:49289 (RA;BR)
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Incomplete Fusion Reactions
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Inelastic Scattering
Inelastic scattering and single-nucleon transfer reactions induced by ^{16}O on ^{40}Ca, 11:49283 (RA;US)
Nuclear Molecules
U(3) principle as base of a microscopical U(3) model for the clarification of the phenomenon of nuclear molecules. Development of an analytical concept describing nucleus-nucleus collisions in the framework of the Composite Particle Theory in the Bargmann space, 11:49407 (R;DE;In German)
One-Nucleon Transfer Reactions
Inelastic scattering and single-nucleon transfer reactions induced by ^{16}O on ^{40}Ca, 11:49283 (RA;US)
Stopping Power
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)
Measurement of stopping powers of heavy ions on silicon using sandwich targets, 11:49273 (RA;BR)
Total Cross Sections
Attenuation method for σ sub(R) measurements in heavy ion systems, 11:49350 (RA;BR)
Transfer Reactions
$^{16}O + ^{208}Pb$ near the Coulomb barrier, 11:49347 (RA;US)
OXYGEN 16 TARGET
Alpha Reactions
U(3) principle as base of a microscopical U(3) model for the clarification of the phenomenon of nuclear molecules. Development of an analytical concept describing nucleus-nucleus collisions in the framework of the Composite Particle Theory in the Bargmann space, 11:49407 (R;DE;In German)
Deuteron Reactions
Deuteron-induced reactions on ^{16}O, 11:49257 (RA;BR)
Pion Reactions
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
OXYGEN 17 REACTIONS
Incomplete Fusion Reactions
Coincidence measurements between evaporation residues and light particles produced in $^{16}O + ^{40}Ca$ and $^{28}Si + ^{40}Ca$ reactions, 11:49286 (RA;US)

PHOTON-ATOM COLLISIONS
Excitation
Laser-fast ion beam interactions at the Dynamitron, 11:49041 (RA;US)
Ionization
Multiphoton ionization via Rydberg states and effects of high laser intensity, 11:49056 (RA;US)
Nonlinear Problems
Studies of collision-free nonlinear processes in the ultraviolet range, 11:49054 (RA;US)
PHOTON-ION COLLISIONS
Excitation
Fast ion beam-laser interactions, 11:49043 (RA;US)
PHOTON-MOLECULE COLLISIONS
Ionization
Barrier to inversion in NF_3, 11:49024 (RA;US)
Bonding and ionization energies of N-F and P-F compounds, 11:49026 (RA;US)
Photoionization of P_2, 11:49027 (RA;US)
Photoionization of SO radical, 11:49028 (RA;US)
Photoionization mass spectrometric study of PH_3 and PH_3, 11:49029 (RA;US)
Vibrational autoionization in PF_3: doing violence to the propensity rule, 11:49025 (RA;US)
PHOTON-NUCLEON INTERACTIONS
Capture
Electromagnetic interaction with nuclei at energy above the pion production threshold, 11:49377 (RA;US)
Scattering
Electromagnetic interaction with nuclei at energy above the pion production threshold, 11:49377 (RA;US)
PHOTONS
Particle Production
Quark and gluon jets in proton-antiproton interactions associated with large p perpendicular to photons, 11:49151 (R;PL)
PHOTONUCLEAR REACTIONS
Absorption
Total photon absorption, 11:49339 (R;FR)
PHOTOPERIOD
Biological Effects
Effect of photoperiod on gibberellin biosynthetic enzymes in spinach, 11:48819 (J;US)
PHOTOVOLTAIC CELLS
See also SOLAR CELLS
Materials
Development and testing of advanced fire-resistant photovoltaic modules, 11:47400 (BA;US)
P-Type Conductors
Liquid junction photovoltaic devices utilizing organic thin film electrodes, 11:47402 (BA;US)
PHOTOVOLTAIC POWER PLANTS
Power Conditioning Circuits
Power conditioning subsystems for photovoltaic central-station power plants - technology and performance, 11:47404 (BA;US)
Status of utility-interactive photovoltaic power conditioning technology, 11:47405 (BA;US)

PHOTOVOLTAIC POWER SUPPLIES
Computerized Control Systems
Microcomputer control of a residential photovoltaic power conditioning system, 11:47406 (BA;US)
PHTHALATES
Absorption Spectroscopy
Matrix isolation versus the light pipe as an interface for gas chromatography/fourier transform infrared spectrometry, 11:48106 (BA;US)
Gas Chromatography
Matrix isolation versus the light pipe as an interface for gas chromatography/fourier transform infrared spectrometry, 11:48106 (BA;US)
PHTHALOCYANINES
Materials Testing
Liquid junction photovoltaic devices utilizing organic thin film electrodes, 11:47402 (BA;US)
Photochemistry
Photochemical properties of rhodium(III) phthalocyanine cation radicals, 11:48206 (J;US)
Photoconductivity
Liquid junction photovoltaic devices utilizing organic thin film electrodes, 11:47402 (BA;US)
Photolysis
Photochemical properties of rhodium(III) phthalocyanine cation radicals, 11:48206 (J;US)
Voltametry
Liquid junction photovoltaic devices utilizing organic thin film electrodes, 11:47402 (BA;US)
PHYSICAL PROTECTION
Concerning the need for physical protection of facilities, devices, or materials from intentional damage or theft, and proposed or existing methods for meeting needs. See also PHYSICAL PROTECTION DEVICES.
Computerized Simulation
Activities and trends in physical protection modeling with microcomputers, 11:49639 (J;US)
PHYSICAL PROTECTION DEVICES
See also SECURITY SEALS
Design
Vehicle barrier systems, 11:47349 (R;US)
Reliability
Vehicle barrier systems, 11:47349 (R;US)
PHYSICAL RADIATION EFFECTS
Mathematical Models
Discussion about modeling the effects of neutron flux exposure for nuclear reactor core analysis, 11:47621 (R;US)
PHYTOPLANKTON
Population Dynamics
Phytoplankton dynamics within Gulf Stream intrusions on the southeastern United States continental shelf during summer 1981, 11:48791 (J;GB)
Productivity
Biological processes associated with the pycnocline and surface fronts in the southeastern Bering Sea, 11:48954 (R;US)
PIGE ANALYSIS
See PROTON REACTIONS
PINCH EFFECT
See also REVERSE-FIELD PINCH
Implosions
GAMBLE-II imploding sodium plasma. 2. Uniformly filled z-pinch. Memorandum report, October 1985-February 1986, 11:49098 (R;US)
PINES
Plant Growth
Biomass production and nutrient responses of ponderosa pine to long-term elevated CO_2 concentrations, 11:48912 (R;US)
PINNING FORCE
See MAGNETIC FLUX
PINS (FUEL)
See FUEL PINS
PION MINUS REACTIONS
Elastic Scattering
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)
Inelastic Scattering
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
Knock-Out Reactions
Study of the 165-MeV pion absorption mechanism in ^{3}He through the $(\pi^+,2p)$ and (π^-,pn) reactions, 11:49224 (RA;US)
PION MINUS-PROTON INTERACTIONS
Charge-Exchange Interactions
Forward-angle cross sections for pion-nucleon charge exchange between 100 and 150 MeV/c-italic, 11:49133 (J;US)
Exclusive Interactions
Spin effects in exclusive reactions at high P/sub perpendicular/, 11:49116 (R;US)
Inelastic Scattering
Production of G(1590) and other mesons decaying into eta pairs by 100 GeV/c π^- on protons, 11:49137 (J;NL)
Pair Production
Production of G(1590) and other mesons decaying into eta pairs by 100 GeV/c π^- on protons, 11:49137 (J;NL)
PION PLUS REACTIONS
Capture
Radiative pion capture on /sup 13/C, 11:49269 (J;US)
Reaction /sup 58/Ni(π^+,2p-italic) at 160 MeV, 11:49295 (J;US)
Elastic Scattering
Elastic scattering of 65 MeV positive and negative pions from nickel isotopes, 11:49293 (J;US)
Inelastic Scattering
Inelastic scattering of pions by ^{10}B and ^{11}B, 11:49243 (RA;US)
Knock-Out Reactions
Study of the 165-MeV pion absorption mechanism in ^{3}He through the $(\pi^+,2p)$ and (π^-,pn) reactions, 11:49224 (RA;US)
PION REACTIONS
See also PION MINUS REACTIONS
PION PLUS REACTIONS
Elastic Scattering
Tensor polarization in pion-deuteron elastic scattering, 11:49226 (RA;US)
Inelastic Scattering
Analysis of inelastic scattering of pions, 11:49253 (RA;US)
Quasi-Elastic Scattering
Study of the $(\pi,\pi p)$ reaction and quasifree scattering in ^{4}He, 11:49225 (RA;US)
Quasi-Free Reactions
Study of the $(\pi,\pi p)$ reaction and quasifree scattering in ^{4}He, 11:49225 (RA;US)
Scattering
Meson-exchange Hamiltonian for N, π, Δ and N*(1470 MeV) isobars, 11:49374 (RA;US)
Theory of mesonic and dibaryonic excitation in the πNN system, 11:49375 (RA;US)
PION-NUCLEON INTERACTIONS
Scattering
Microscopic study of D-nucleus dynamics, 11:49376 (RA;US)
PIONS
Chirality
Low momentum penguin contributions in a chiral theory, 11:49156 (R;NO)
Low momentum penguin loop contributions and the $\Delta I=1/2$ rule, 11:49157 (R;NO)
PIPE FITTINGS
Repair
In situ repair of a failed compression fitting, 11:48248 (P;US)
PIPELINE QUALITY GAS
See HIGH BTU GAS
PIPES
Drilling
Welding on water-filled pipes for drilling and repairing of mains for district heating. Final report, 11:48226 (R;DE;In German)
Liquid Flow
Liquid-metal flow in a thin conducting pipe near the end of a region of uniform magnetic field, 11:49531 (R;US)
Repair
Welding on water-filled pipes for drilling and repairing of mains for district heating. Final report, 11:48226 (R;DE;In German)

Standards
Reference standard polyethylene resins and piping materials. Annual report, October 1, 1984-September 30, 1985, 11:47236 (R;US)
Welding
Welding on water-filled pipes for drilling and repairing of mains for district heating. Final report, 11:48226 (R;DE;In German)

PITTING CORROSION
Mathematical Models
Mathematical model of crevice and pitting corrosion. Pt. 2. The mathematical solution, 11:47910 (R;GB)

PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Uses
Nuclear analysis: applications in industry and agriculture, 11:48080 (RA;ZA)

PLANETARY ATMOSPHERES
Excludes EARTH ATMOSPHERE.
See also PLANETARY MAGNETOSPHERES
Optical Properties
Reflection and transmission of polarized light by planetary atmospheres, 11:48969 (R;NL)

PLANETARY MAGNETOSPHERES
Radiation Transport
Periodic amplitude variations in Jovian continuum radiation. Progress report for period ending February 1986, 11:48959 (R;US)
Trapping
Periodic amplitude variations in Jovian continuum radiation. Progress report for period ending February 1986, 11:48959 (R;US)
Whistlers
Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986, 11:48960 (R;US)

PLANT CELLS
Physiology
Oat tonoplast H^+/Ca^{2+} antiport is a reversible, electrogenic transport system, 11:48821 (J;US)

PLANTS
See also ALGAE
HERBS
SEAWEEDS
TREES
WATER HYACINTHS
Temperature Effects
Remote sensing of wetlands at the Savannah River Plant, 11:47642 (RA;US)

PLANTS (POWER)
See POWER PLANTS

PLASMA
See also HIGH-BETA PLASMA
HOT PLASMA
Charged-Particle Transport
Time-implicit Monte Carlo Collision algorithm for particle-in-cell electron transport models, 11:49507 (J;US)
Charged-Particle Transport Theory
Slowing of charged particles by particle methods, 11:49471 (R;FR;In French)
Compression
Results from plasma compression opening switch experiments, 11:48305 (R;US)
Electric Fields
Self-consistent dynamolike activity in turbulent plasmas, 11:49511 (J;US)
Electron Beam Injection
Current enhancement for hose-unstable electron beams. Memorandum report, 11:49469 (R;US)
Energy Absorption
Slowing of charged particles by particle methods, 11:49471 (R;FR;In French)
Magnetohydrodynamics
Self-consistent dynamolike activity in turbulent plasmas, 11:49511 (J;US)
Mapping
Resonances in area-preserving maps, 11:49481 (R;US)
Neutral-Particle Transport
FETRAN - a finite element transport modelling package, 11:49474 (R;GB)
Research Programs
CSSP implementation plan for space plasma physics programs, 11:49018 (J;US)
Stochastic Processes
Computation of large scale stochasticity and universality in Hamiltonian systems: application to plasma physics, 11:49485 (R;FR;In French)
Transport Theory
User's manual for FENAT: a two-dimensional multigroup diffusion theory Finite Element Neutral Atom Transport code, 11:49498 (R;US)
Turbulence
Institute for Fusion Studies progress report, September 1, 1985-August 31, 1986, 11:49479 (R;US)
Self-consistent dynamolike activity in turbulent plasmas, 11:49511 (J;US)

PLASMA ACCELERATORS
See PLASMA GUNS

PLASMA CONFINEMENT
Boundary Conditions
Fractal basin boundaries in nonlinear dynamical systems, 11:49524 (BA;US)
Differential Equations
Progress in computing Lyapunov exponents from experimental data, 11:49519 (BA;US)
Diffusion
Collisional diffusion in a torus with imperfect magnetic surfaces, 11:49521 (BA;US)
Efficiency
Trapping of gun-injected plasma by a tokamak, 11:49510 (J;US)
Forecasting
Progress in fusion technology in the U.S. Magnetic Fusion Program, 11:49590 (BA;GB)
Hamiltonians
Hamilton's principle and the splitting of periodic orbits, 11:49518 (BA;US)
Magnetic field lines, Hamiltonian mechanics, and symmetries and invariants, 11:49515 (BA;US)
Kinetic Equations
Kinetic description of a chaotic motion in a classical conservative system with two degrees of freedom, 11:49520 (BA;US)
Lyapunov Method
Progress in computing Lyapunov exponents from experimental data, 11:49519 (BA;US)
Magnetic Field Configurations
Magnetic field lines, Hamiltonian mechanics, and symmetries and invariants, 11:49515 (BA;US)
Searching for integrable systems, 11:49516 (BA;US)
Magnetic Surfaces
Collisional diffusion in a torus with imperfect magnetic surfaces, 11:49521 (BA;US)
Renormalization and the breakup of magnetic surfaces, 11:49513 (BA;US)
Nonlinear Problems
Fractal basin boundaries in nonlinear dynamical systems, 11:49524 (BA;US)
Statistical physics and chaos in fusion plasmas, 11:49523 (B;US)
Plasma Density
Impact of clumps on plasma stability and the nature of turbulence in a saturated state, 11:49522 (BA;US)
Research Programs
Progress in fusion technology in the U.S. Magnetic Fusion Program, 11:49590 (BA;GB)
Resonance
Resonance behavior of the perturbed Toda lattice, 11:49517 (BA;US)
Statistics
Statistical physics and chaos in fusion plasmas, 11:49523 (B;US)
Stochastic Processes
Long-time correlations in stochastic systems, 11:49514 (BA;US)

PLASMA DIAGNOSTICS
Advanced concepts theory: annual report, 1985. Memorandum report, January-December 1985, 11:49470 (R;US)
Cameras
Optical and UV/x-ray imaging diagnostics for imploding plasma experiments, 11:49503 (J;US)
Computer Codes
Calculation of spectral line emission from plasmas. 2. The organisation and use of basic atomic data, 11:49473 (R;GB)
Data Processing
Calculation of spectral line emission from plasmas. 2. The organisation and use of basic atomic data, 11:49473 (R;GB)
Electrostatic Probes
Electrostatic ion probe for tokamak-plasma-edge diagnostic, 11:49501 (J;US)
Emission Spectroscopy
Calculation of spectral line emission from plasmas. 2. The organisation and use of basic atomic data, 11:49473 (R;GB)
Faraday Effect
Faraday rotation in a multimode optical fiber in a fast rise-time, high magnetic field, 11:49504 (J;US)
Ion Probes
Electrostatic ion probe for tokamak-plasma-edge diagnostic, 11:49501 (J;US)
Thomson Scattering
Study of the effects of photoelectron statistics on Thomson scattering data, 11:49502 (J;US)
X-Ray Spectroscopy
Inner-shell x-ray line spectra of highly ionized titanium, chromium, iron, and nickel and their application to laboratory plasmas, 11:49499 (J;US)
PLASMA GUNS
Plasma Expansion
Trapping of gun-injected plasma by a tokamak, 11:49510 (J;US)
PLASMA MACROINSTABILITIES
Two-Dimensional Calculations
Two-dimensional simulations of magnetically-driven instabilities, 11:49492 (R;US)
PLASMA OSCILLATIONS
See PLASMA WAVES
PLASMA SCRAPE-OFF LAYER
Transport Theory
Limiter effects on scrape-off layer fluctuations and transport, 11:49484 (R;US)
Turbulence
Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas, 11:49480 (R;US)
PLASMA SIMULATION
Institute for Fusion Studies progress report, September 1, 1985-August 31, 1986, 11:49479 (R;US)
F Codes
FETRAN - a finite element transport modelling package, 11:49474 (R;GB)
Finite Element Method
FETRAN - a finite element transport modelling package, 11:49474 (R;GB)
Guiding-Center Approximation
Two- and three-dimensional magnetoinductive particle codes with guiding center electron motion, 11:49482 (R;US)
PLASMA WAVES
Detection
Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986, 11:48960 (R;US)
Mathematical Models
Coherence in chaos and the Zakharov model, 11:49527 (BA;US)
Morphological study of waves in the thermosphere using DE-2 observations. Final Technical Report, 11:49019 (R;US)
Solitons
Solitons in turbulent flow, 11:49529 (BA;US)
Statistics
Statistical description of drift wave turbulence, 11:49528 (BA;US)
Topics in the theory of statistical closure approximations for plasma physics, 11:49530 (BA;US)
Turbulence
Coherence in chaos and the Zakharov model, 11:49527 (BA;US)
Evolution from coherence to turbulence in plasmas, 11:49526 (BA;US)
Impact of clumps on plasma stability and the nature of turbulence in a saturated state, 11:49522 (BA;US)
Solitons in turbulent flow, 11:49529 (BA;US)
Statistical description of drift wave turbulence, 11:49528 (BA;US)
Topics in the theory of statistical closure approximations for plasma physics, 11:49530 (BA;US)
PLASTIC FOAMS
Permeability
Aging of polyurethane foams, the influence of gas diffusion on thermal conductivity (ECVA (AGE) code), 11:48010 (R;US)
Thermal Conductivity
Aging of polyurethane foams, the influence of gas diffusion on thermal conductivity (ECVA (AGE) code), 11:48010 (R;US)
PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS
PLASTIC SCINTILLATION DETECTORS
Performance
Radioactive gas monitor based on a plastic scintillation chamber, 11:48596 (RA;CS)
PLASTICS
See also POLYURETHANES
Plating
Electroless metal plating of plastics, 11:48011 (P;US)
PLATING SOLUTIONS
See PROCESS SOLUTIONS
PLATINUM
Catalytic Effects
Elementary processes in the catalytic combustion of methane (mechanism, intermediates, and controlling reactions). Final report, October 1981-December 1985, 11:47239 (R;US)
High-temperature oxidation of H_2 on a platinum catalyst, 11:48221 (J;US)
Nitrogen desorption in the reaction of nitric oxide on carbon-supported platinum catalysts, 11:48149 (J;US)
PLATINUM 184
Yrast States
Recoil distance lifetime measurements in ^{184}Pt, 11:49337 (RA;US)
PLATINUM ALLOYS
Antiferromagnetism
Antiferromagnetic spin fluctuations and the heavy fermion system UPt_3, 11:47914 (R;US)
Chemical Composition
Structure and chemisorptive properties of the Pt_3Ti surface, 11:48148 (J;US)
Electronic Structure
CO adsorption on (111) and (100) surfaces of the Pt_3Ti alloy: evidence for parallel binding and strong activation of CO, 11:48150 (J;US)
Sorptive Properties
CO adsorption on (111) and (100) surfaces of the Pt_3Ti alloy: evidence for parallel binding and strong activation of CO, 11:48150 (J;US)
Structural Chemical Analysis
Structure and chemisorptive properties of the Pt_3Ti surface, 11:48148 (J;US)
PLATINUM COMPOUNDS
Ferromagnetism
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Fluctuations
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Specific Heat
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)

PLESIOTHERAPY
See RADIOTHERAPY
PLUMES
Aerial Monitoring
Multispectral remote sensing at the Savannah River Plant, 11:48662 (RA;US)
PLUTONIUM
Dilution
Robotic sample preparation for radiochemical plutonium and americium analyses, 11:48118 (BA;US)
Extraction
Robotic sample preparation for radiochemical plutonium and americium analyses, 11:48118 (BA;US)
Extraction Chromatography
Reversed phase chromatographic separations with tri-n-octyl phosphine oxide for the isotopic and isotope dilution analysis of mixed U, Pu nuclear fuel materials, 11:48126 (BA;US)
Gamma Spectroscopy
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Nondestructive assay of plutonium residue in horizontal storage tanks, 11:48111 (BA;US)
Ion Exchange Chromatography
Multi-column step-gradient chromatography system for automated ion exchange separations, 11:48117 (BA;US)
Mass Spectroscopy
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Production and certification of an equal atom plutonium isotopic standard - the New Brunswick Laboratory certified reference material (CRM) No. 128, 11:48116 (BA;US)
Reversed phase chromatographic separations with tri-n-octyl phosphine oxide for the isotopic and isotope dilution analysis of mixed U, Pu nuclear fuel materials, 11:48126 (BA;US)
Neutron Transport
Group cross-sections and resonance self-shielding factors for ^{239}Pu in the unresolved resonance region, 11:49422 (R;XA)
Nondestructive Analysis
Temperature and composition effect on the volumic masses of uranium and plutonium nitric acid solutions, 11:47276 (R;FR;In French)
Oxidation
Oxidation mechanisms and catalytic properties of the actinides, 11:48167 (J;GB)
Self-Shielding
Group cross-sections and resonance self-shielding factors for ^{239}Pu in the unresolved resonance region, 11:49422 (R;XA)
Spectrophotometry
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Spectrophotometric determination of plutonium with high precision and heavy sample throughput, 11:48110 (BA;US)
Titration
High precision plutonium and uranium assay with an automatic titrator, 11:48108 (BA;US)
Voltametry
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Computer-assisted controlled-potential coulometer for the determination of plutonium, 11:48109 (BA;US)
On-line analysis of plutonium by energy dispersive x-ray fluorescence, 11:48113 (BA;US)
X-Ray Fluorescence Analysis
On-line analysis of plutonium by energy dispersive x-ray fluorescence, 11:48113 (BA;US)
PLUTONIUM 238
Isotope Ratio
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
PLUTONIUM 238 TARGET
Neutron Reactions
Fission cross section measurement of ^{242}Cm and ^{240}Pu. Final report, June 1, 1984-June 30, 1986, 11:49361 (R;US)
Measurement of the fission cross section of ^{238}Pu, 11:49360 (R;US)
PLUTONIUM 239
Biological Accumulation
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Biological Localization
United States Transuranium Registry annual report, October 1, 1984-September 30, 1985, 11:48833 (R;US)
Internal Pair Production
Internal pair production in alpha-decaying nuclei, 11:48548 (RA;CS)
Isotope Ratio
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Production and certification of an equal atom plutonium isotopic standard - the New Brunswick Laboratory certified reference material (CRM) No. 128, 11:48116 (BA;US)
Neutron Reactions
Group cross-sections and resonance self-shielding factors for ^{239}Pu in the unresolved resonance region, 11:49422 (R;XA)
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radioecological Concentration
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Decline of airborne plutonium following decommissioning of a liquid waste disposal ditch in the Hanford Site 200 Area, 11:48677 (RA;US)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)
Soil to plant transfer factors for Cs-137 and Pu-239+240 determined by field and glasshouse measurements in Great Britain, 11:48715 (RA;NL)
PLUTONIUM 239 TARGET
Neutron Reactions
Multilevel analysis of the low-energy ^{239}Pu cross sections, 11:49366 (J;US)
Subthreshold fission cross section of ^{240}Pu and the fission cross sections of ^{235}U and ^{239}Pu, 11:49367 (J;US)
PLUTONIUM 240
Biological Accumulation
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Isotope Ratio
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radioecological Concentration
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Decline of airborne plutonium following decommissioning of a liquid waste disposal ditch in the Hanford Site 200 Area, 11:48677 (RA;US)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)

Soil to plant transfer factors for Cs-137 and Pu-239+240 determined by field and glasshouse measurements in Great Britain, 11:48715 (RA;NL)

PLUTONIUM 240 TARGET
Neutron Reactions
Subthreshold fission cross section of ^{240}Pu and the fission cross sections of ^{235}U and ^{239}Pu, 11:49367 (J;US)

PLUTONIUM 241
Alpha Spectroscopy
Measurement of plutonium-241 in the terrestrial environment, 11:48070 (RA;CS)
Isotope Ratio
Comparison of different methods of determining plutonium content and isotopic composition, 11:48107 (BA;US)

PLUTONIUM 242
Isotope Ratio
Production and certification of an equal atom plutonium isotopic standard - the New Brunswick Laboratory certified reference material (CRM) No. 128, 11:48116 (BA;US)

PLUTONIUM DIOXIDE
Chemical Analysis
Determination of nitrogen in PuO_2-UO_2 mixed oxide with fusion-TCD method, 11:48083 (RA;JP)

PLUTONIUM NITRATES
Criticality
Calculation of critical parameters for uranium and/or plutonium nitrate solution, 2. Discussion of basic critical parameters for nitrate solution system, 11:47619 (R;JP;In Japanese)
Quantitative Chemical Analysis
Spectrophotometric determination of plutonium with high precision and heavy sample throughput, 11:48110 (BA;US)
Titration
High precision plutonium and uranium assay with an automatic titrator, 11:48108 (BA;US)

PLUTONIUM RECYCLE
Actinide Nuclei
Impairment of properties of actinide mixes in the fuel cycles of LWR-type reactors and fast breeder reactors, 11:47490 (RA;DE;In German)
Economics
Present and future use of plutonium in LWR-type reactors, 11:47615 (RA;DE;In German)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNEUMATIC TRANSPORT
Test Facilities
Operation and maintenance of DOE/PETC Combustion Test facilities. Final activity report, April 1978-December 19, 1982, 11:47203 (R;US)

PNL
See BATTELLE PACIFIC NORTHWEST LABORATORIES

POINT CHARGE
Electromagnetic Radiation
Radiation of a charge in a perfectly conducting cylindrical pipe with a jump in its cross section, 11:48362 (R;US)

POINT CONTACTS
See ELECTRIC CONTACTS

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLAND
Uranium Deposits
Two uranium deposits in the Polish part of the Sudety Mountains, 11:47269 (RA;XA)

POLARIZED TARGETS
Design
Feasibility study of electron-scattering experiments with a tensor-polarized deuterium target in an electron storage ring, 11:48408 (RA;US)
Performance
Feasibility study of electron-scattering experiments with a tensor-polarized deuterium target in an electron storage ring, 11:48408 (RA;US)

POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY

POLLUTION REGULATIONS
Regulations for nonradioactive pollution only; see also CONTAMINATION REGULATIONS.
Compliance
Clean Water Act and biological studies at the Savannah River Plant, 11:47195 (RA;US)
Enforcement
Environmental monitoring program interaction between the West Valley Demonstration Project and New York State agencies, 11:48683 (RA;US)

POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES

POLONIUM 200
High Spin States
High-spin states in ^{200,201}Po and systematical features of Po isotopes, 11:49351 (RA;FI)

POLONIUM 201
High Spin States
High-spin states in ^{200,201}Po and systematical features of Po isotopes, 11:49351 (RA;FI)

POLONIUM 210
Internal Pair Production
Internal pair production in alpha-decaying nuclei, 11:48548 (RA;CS)

POLYACETYLENES
Electron-Electron Coupling
Quantum Monte Carlo studies of electron—electron interaction effects in conducting polymers, 11:48012 (J;US)
Oxidation
Polyacetylene batteries, 11:47762 (BA;US)
Reduction
Polyacetylene batteries, 11:47762 (BA;US)

POLYACRYLONITRILE
See NITRILES
ORGANIC POLYMERS

POLYCYCLIC AROMATIC HYDROCARBONS
Formation Heat
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)
Pyrolysis
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)
Pyrolysis Products
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)
Reaction Kinetics
Highly stabilized radicals: benzylic radicals in polycyclic aromatic systems, 11:48194 (J;US)

POLY(ISOBUTYLENE OXIDE)
See EPOXIDES
ORGANIC POLYMERS

POLYMERS
See also ELASTOMERS
ORGANIC POLYMERS
Chemical Preparation
Radiation-induced cationic polymerization of limonene oxide, α-pinene oxide, and β-pinene oxide, 11:48209 (J;US)
Deposition
Sol-gel derived thin films: critical issues, 11:48027 (R;US)
Mass Spectroscopy
Polymer mass spectrometry: the problem ad its solution, 11:48099 (BA;US)
Molecular Weight
Polymer mass spectrometry: the problem ad its solution, 11:48099 (BA;US)

POLYNUCLEAR AROMATIC HYDROCARBONS

DEXTRIN
GUM ACACIA
LIGNIN
Enzymatic Hydrolysis
Enzymes from auxin-pretreated pea tissue which hydrolyze xyloglucan and a xyloglucan fragment oligosaccharide, 11:48914 (J;US)

POLYSULFIDES
See SULFIDES
POLYTETRAFLUOROETHYLENE
Desorption
Thermal desorption study of physical forces at the PTFE surface, 11:48009 (R;US)
Physical Radiation Effects
Thermal desorption study of physical forces at the PTFE surface, 11:48009 (R;US)
POLYTETRAOXANE
See ORGANIC POLYMERS
POLYURETHANES
Chemical Preparation
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
Performance Testing
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
Permeability
Aging of polyurethane foams, the influence of gas diffusion on thermal conductivity (ECVA (AGE) code), 11:48010 (R;US)
Thermal Conductivity
Aging of polyurethane foams, the influence of gas diffusion on thermal conductivity (ECVA (AGE) code), 11:48010 (R;US)
Thermal Testing
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
Uses
Development of polyurethane-based hydrophobic insulating compounds with long-term thermal and vapour diffusion resistance. Final report, 11:48007 (R;DE;In German)
POLYVINYL ALCOHOL
See PVA
PONDS
See also SOLAR PONDS
Denitrification
In-situ denitrification of ponds, 11:48744 (RA;US)
POOL BOILING
Void Fraction
Prediction of pool void fraction by new drift flux correlation, 11:47735 (R;US)
POOLS
See PONDS
POOR PEOPLE
See LOW INCOME GROUPS
PORE STRUCTURE
See POROSITY
POROSITY
Correlations
Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
Image Processing
Use of digital image analysis to estimate fluid permeability of porous materials: Application of two-point correlation functions, 11:48949 (J;US)
Measuring Methods
Use of digital image analysis to estimate fluid permeability of porous materials: Application of two-point correlation functions, 11:48949 (J;US)
POROUS MATERIALS
Porosity
Use of digital image analysis to estimate fluid permeability of porous materials: Application of two-point correlation functions, 11:48949 (J;US)
PORPHYRINS

HEMOGLOBIN
Chemical Reaction Kinetics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
Thermodynamics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
PORTSMOUTH GASEOUS DIFFUSION PLANT
Material Balance
Characterization of process holdup material at the Portsmouth Gaseous Diffusion Plant, 11:47344 (R;US)
Nuclear Materials Management
Characterization of process holdup material at the Portsmouth Gaseous Diffusion Plant, 11:47344 (R;US)
PORTSMOUTH PLANT
See PORTSMOUTH GASEOUS DIFFUSION PLANT
PORTUGAL
Uranium Deposits
Uranium veins in Portugal, 11:47260 (RA;XA)
POSITION INDICATORS
See DISPLACEMENT GAGES
POSITION SENSITIVE DETECTORS
Detection of charged particles in amorphous silicon layers, 11:48455 (RA;AT)
Parallel electrode position sensitive detector system for high counting rates, 11:48445 (RA;AT)
Counting Rates
High count rate position-sensitive detectors for synchrotron radiation experiments, 11:48448 (RA;AT)
Fabrication
On the possibility of the new-type coordinate sensitive detector construction, 11:48517 (RA;AT)
Performance Testing
Microvertex detector - present trends and future perspectives, 11:48477 (RA;AT)
On the possibility of the new-type coordinate sensitive detector construction, 11:48517 (RA;AT)
Position sensitive silicon detectors inside the tevatron collider, 11:48534 (RA;AT)
Specifications
Position sensitive drift chamber, 11:48585 (RA;CS)
POSITIVE IONS
See CATIONS
POSITRON COMPUTED TOMOGRAPHY
Compton scatter correction for the MGH analog ring positron camera, 11:49433 (R;US)
Gamma Cameras
Development studies of a new gamma camera for positron emission tomography, 11:48803 (RA;AT)
POSITRONS
Lifetime
Surface areas by positron annihilation spectroscopy, 11:48047 (BA;US)
POTASSIUM
Catalytic Effects
Studies of alkali metal interactions with chemisorbed CO on Ni(111), 11:48089 (J;US)
Chemisorption
Studies of alkali metal interactions with chemisorbed CO on Ni(111), 11:48089 (J;US)
Desorption
Influence of surface phase transitions on desorption kinetics: the compensation effect, 11:48142 (J;US)
POTASSIUM 40
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radioecological Concentration
Monitoring of the radioactive materials in the Baltic Sea, -11:48766 (RA;XA)
POTASSIUM CARBONATES
Catalytic Effects
Catalyzed gasification of coal: isotope and XPS studies, May 16-August 15, 1986, 11:47162 (R;US)
Labelling
Catalyzed gasification of coal: isotope and XPS studies, May 16-August 15, 1986, 11:47162 (R;US)

POTASSIUM CHLORIDES
Chemical Preparation
Preparation of fused chloride salts for use in pyrochemical plutonium recovery operations at Los Alamos, 11:48138 (R;US)
Chemical Reaction Kinetics
Activity of water mixed with molten salts at 317°C, 11:48153 (J;US)
Melting
High-pressure melting curve of KCl: Evidence against lattice-instability theories of melting, 11:48038 (J;US)
POTASSIUM HYDROXIDES
Chemical Reaction Kinetics
Activity of water mixed with molten salts at 317°C, 11:48153 (J;US)
POTASSIUM NITRATES
Thermodynamic Properties
Thermodynamics of multicomponent, miscible, ionic systems: the system $LiNO_3$-KNO_3-H_2O, 11:48152 (J;US)
POWDERS
Compacting
Die-target for dynamic powder consolidation, 11:48039 (P;US)
POWER CONDITIONING CIRCUITS
Comparative Evaluations
Status of utility-interactive photovoltaic power conditioning technology, 11:47405 (BA;US)
Computerized Control Systems
Microcomputer control of a residential photovoltaic power conditioning system, 11:47406 (BA;US)
Design
Design and operating experience of an AC-DC power converter for a superconducting magnetic energy storage unit, 11:47747 (BA;US)
Operation
Design and operating experience of an AC-DC power converter for a superconducting magnetic energy storage unit, 11:47747 (BA;US)
Technology Assessment
Power conditioning subsystems for photovoltaic central-station power plants - technology and performance, 11:47404 (BA;US)
Status of utility-interactive photovoltaic power conditioning technology, 11:47405 (BA;US)
POWER DEMAND
Economic Growth
Electricity in economic growth, 11:47819 (R;US)
Evaluation
Effects of a municipal energy audit program on electricity consumption in single-family residences, 11:47801 (RA;US)
Forecasting
Bonneville Power Administration forecast of electricity consumption in the Pacific Northwest. Executive summary, 11:47817 (R;US)
Hourly impacts of residential weatherization - the shape of things to come, 11:47845 (RA;US)
Monitoring
Hourly impacts of residential weatherization - the shape of things to come, 11:47845 (RA;US)
POWER DISTRIBUTION SYSTEMS
Automation
Athens automation and control experiment: substation and distribution system automation designs and costs, 11:47489 (R;US)
Control Systems
Athens automation and control experiment: substation and distribution system automation designs and costs, 11:47489 (R;US)
POWER GENERATION

Reactor Accidents
Top-down versus bottom-up processing of influence diagrams in probabilistic analysis, 11:47667 (R;US)
Reactor Physics
Discussion about modeling the effects of neutron flux exposure for nuclear reactor core analysis, 11:47621 (R;US)
Reactor Safety
Adjoint-based sensitivity analysis for reactor safety applications, 11:47736 (R;US)
Nuclear energy - overview of development trends. Summary report of a paper presented by Leonard Konstantinov, 11:47783 (R;DD)
Top-down versus bottom-up processing of influence diagrams in probabilistic analysis, 11:47667 (R;US)
POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
SPACECRAFT POWER SUPPLIES
Reliability
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also BRAYTON CYCLE POWER SYSTEMS
INTERCONNECTED POWER SYSTEMS
RANKINE CYCLE POWER SYSTEMS
Planning
Integrated power system analysis package: scoping study. Volume 1. Industry survey. Final report, 11:47821 (R;US)
Integrated power system analysis package: scoping study. Volume 2. Software evaluation and integration. Final report, 11:47822 (R;US)
Superconducting Magnetic Energy Storage
Superconducting magnetic energy storage for asynchronous electrical systems, 11:47746 (P;US)
Systems Analysis
Integrated power system analysis package: scoping study. Volume 1. Industry survey. Final report, 11:47821 (R;US)
Integrated power system analysis package: scoping study. Volume 2. Software evaluation and integration. Final report, 11:47822 (R;US)
POWER TRANSMISSION LINES
HVDC Systems
High voltage direct current research program, 11:47484 (R;US)
Mass
Mass and loss analysis of a space-type radiation cooled insulated DC transmission line, 11:47589 (RA;US)
Power Losses
Mass and loss analysis of a space-type radiation cooled insulated DC transmission line, 11:47589 (RA;US)

PRASEODYMIUM 135
High Spin States
Spectroscopic study of the high-spin states in /sup 135/Pr, 11:49327 (J;US)
PRASEODYMIUM 144
Gamma Spectroscopy
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)
PRASEODYMIUM CHLORIDES
Crystal Growth
Synthesis and growth of single crystals of $PrCl_3$, 11:48137 (R;BR;In Portuguese)
Zone Melting
Synthesis and growth of single crystals of $PrCl_3$, 11:48137 (R;BR;In Portuguese)
PRASEODYMIUM IONS
Photon-Ion Collisions
Fast ion beam-laser interactions, 11:49043 (RA;US)
PRASEODYMIUM NITRIDES
Synthesis
Synthesis and characterization of compounds containing discrete tetranuclear clusters and extended arrays of molybdenum atoms, 11:48164 (D;US)
PRASEODYMIUM OXIDES
Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
PRECIPITATIONS (ATMOSPHERIC)

PROTON BEAMS
Energy Losses
Slowing down and straggling of protons and heavy ions in matter, 11:49429 (R;NL)
Recovery
Resonance scraping, 11:48356 (R;US)
Slowing-Down
Slowing down and straggling of protons and heavy ions in matter, 11:49429 (R;NL)

PROTON REACTIONS
Reactive content of the proton-nucleus impulse-approximation Dirac optical potential, 11:49287 (RA;BR)
Backscattering
Tensor analyzing power in backward pd elastic scattering and its connection to pp → πd at intermediate energies, 11:49233 (R;JP)
Capture
High-spin, two-particle, one-hole, stretched states excited by proton induced negative pion production in nuclei, 11:49330 (RA;US)
Charge-Exchange Reactions
Construction of a time-of-flight neutron spectrometer for reaction angles 0° < =theta < =180° and study of the reaction ^{65}Cu(p,xn) ^{65}Zn for Esub(p)=26.7 MeV, 11:48603 (R;DE;In German)
NPL upgrade, 11:48392 (RA;US)
sup(10, 11)B(p,n)sup(10, 11)C reactions between E sub(p)=13.7 and 14.7 MeV, 11:49258 (RA;BR)
Elastic Scattering
Analyzing power of /sup 27/Al(n-arrow-right,n-arrow-right$_0$) at 14 and 17 MeV and the isospin dependence of the optical model potential, 11:49277 (J;US)
Tensor analyzing power in backward pd elastic scattering and its connection to pp → πd at intermediate energies, 11:49233 (R;JP)

Inelastic Scattering
Giant resonance structure in /sup 208/Pb measured using the (p,p/sup '/) reaction at 334 MeV, 11:49356 (J;US)
Polarized proton scattering from ^{26}Mg, 11:49270 (RA;US)
One-Nucleon Transfer Reactions
Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions, 11:49320 (R;NL)
Particle Production
Study of the (p,π^-) reaction very close to threshold, 11:49242 (RA;US)
Pickup Reactions
Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions, 11:49320 (R;NL)
Polarization-Asymmetry Ratio
Tensor analyzing power in backward pd elastic scattering and its connection to pp $\rightarrow$ πd at intermediate energies, 11:49233 (R;JP)
Quasi-Elastic Scattering
Continuum polarization transfer in 500 MeV proton scattering and pionic collectivity in nuclei, 11:49239 (J;US)
Stripping
Single proton transfer reactions on odd-even nuclei. Nuclear structure studies in the platinum and tin regions through stripping and pickup reactions, 11:49320 (R;NL)
Two-Nucleon Transfer Reactions
Mass of /sup 146/Gd, 11:49325 (J;US)

PROTON-ANTIPROTON INTERACTIONS
Intermediate Bosons
QCD at collider energies, 11:49155 (R;FR)
Jets
Quark and gluon jets in proton-antiproton interactions associated with large p perpendicular to photons, 11:49151 (R;PL)
Particle Production
Quark and gluon jets in proton-antiproton interactions associated with large p perpendicular to photons, 11:49151 (R;PL)
Radiative corrections to the ratio of Z- and W-boson production, 11:49167 (J;US)
Quantum Chromodynamics
QCD at collider energies, 11:49155 (R;FR)
Radiative Corrections
Radiative corrections to the ratio of Z- and W-boson production, 11:49167 (J;US)
Reviews
Elastic and inelastic scattering of antiprotons, 11:49118 (R;FR)

PROTON-INDUCED X-RAY EMISSION ANALYSIS
See PIXE ANALYSIS

PROTON-PROTON INTERACTIONS
Pions Plus
Study of the reaction p/sub up-arrow/p$\rightarrow$pπ^+n with polarized beam from 3 to 12 GeV/c, 11:49136 (J;US)
Polarized Beams
Study of the reaction p/sub up-arrow/p$\rightarrow$pπ^+n with polarized beam from 3 to 12 GeV/c, 11:49136 (J;US)

PROTONS
Form Factors
Measurement of elastic electron scattering from the proton at high momentum transfer, 11:49134 (J;US)

PROTOPLASTS
See PLANT CELLS

PROTOTYPE FAST REACTOR DOUNREAY
See PFR REACTOR

PSEUDOMONAS
Toxins
Role of glutamine synthetase adenylylation in the self-protection of Pseudomonas syringae subsp. tabaci from its toxin, tabtoxinine-β-lactam, 11:48794 (J;US)

PSI-3105 RESONANCES
Hadronic Particle Decay
J/psi results from Mark III, 11:49132 (R;US)
Radiative Decay
J/psi results from Mark III, 11:49132 (R;US)

PTFE
See POLYTETRAFLUOROETHYLENE

PUBLIC UTILITIES
See also ELECTRIC UTILITIES
GAS UTILITIES
Energy Demand
Energy analysis and alternative fuels and vehicles, 11:47870 (R;US)

PUERTO RICO
Electric Utilities
Decision support for problems in which alternative actions affect downstream decisions, with an energy application, 11:47820 (R;US)

PULMONARY LAVAGE
See LUNGS

PULPS
See SLURRIES

PULSARS
Cosmic Muons
New evidence from Soudan 1 for underground muons associated with Cygnus X-3, 11:48962 (R;US)

PULSE COMBUSTORS
Combustion Kinetics
Chemical kinetic analysis of pulse combustors, 11:48324 (R;US)

PULSES
Scattering
Scattering of a pulse by a cavity in an elastic half-space, 11:49458 (J;US)

PULVERIZED FUEL ASH
See FLY ASH

PULVERIZED FUELS
Burners
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
Oxidation
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, March 1-May 31, 1986, 11:47206 (R;US)
Pneumatic Transport
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)

PUMICE
Particle Size Classifiers
Development of a dry separation process for the sorting of raw pumice into heat restraining building material. Final report, 11:47831 (R;DE;In German)
Sorting
Development of a dry separation process for the sorting of raw pumice into heat restraining building material. Final report, 11:47831 (R;DE;In German)

PUMP TURBINES
Ultrahigh head pump/turbine development program. Volume 1. Technical summary. Final report, 11:47379 (R;US)

PUMPED STORAGE POWER PLANTS
Pump Turbines
Ultrahigh head pump/turbine development program. Volume 1. Technical summary. Final report, 11:47379 (R;US)

PUMPS
See also ELECTROMAGNETIC PUMPS
WIND-POWERED PUMPS
Seals
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility, 11:47173 (R;US)
Rotary pump seals in 2000 MW power stations, 11:47482 (R;US)

PUREX PROCESS
High-Level Radioactive Wastes
Composition of high fission product wastes resulting from future reprocessing of commercial nuclear fuels, 11:47318 (R;US)
Remote Handling Equipment
Remote handling equipment for laboratory research of fuel reprocessing in Nuclear Research Institute at Rez, 11:47281 (R;CS)

PVA
Mechanical Properties
Preparation and properties of polyvinyl alcohol microspheres, 11:49577 (R;US)
PWR TYPE REACTORS
See also BOHUNICE V-1 REACTOR
DIABLO CANYON-1 REACTOR
THREE MILE ISLAND-2 REACTOR
WWER TYPE REACTORS
After-Heat Removal
Current status of decay heat measurements, evaluations, and needs, 11:47737 (R;US)
Burnable Poisons
Study concerning the calculation of burn-up of gadolinia-bearing PWR fuel elements, 11:47502 (R;DE;In German)
Capitalized Cost
Power plant economy of scale and cost trends: further analyses and review of empirical studies, 11:47616 (R;US)
Containment Systems
Containment pressure response to a meltdown condition of the light water reactor, 11:47703 (RA;US)
Impact of heat-generating debris on containment loading - an overview, 11:47694 (RA;US)
Systematic approach to containment performance criteria, 11:47656 (R;US)
Core Flooding Systems
BERTHA: a programme for the thermal/hydraulic analysis of reflooding experiments, 11:47653 (R;GB)
Design Basis Accidents
Annual meeting on nuclear technology 1981. Technical meeting: External impact, 11:47705 (R;DE;In German)
Common practice of component and systems for LWR-type reactors against external impact, 11:47706 (RA;DE;In German)
Engineered Safety Systems
Electronic isolators used in safety systems of US nuclear power plants, 11:47727 (R;US)
Fuel Cans
Phase transformations in neutron-irradiated Zircaloys, 11:47917 (R;US)
Fuel Elements
Annual meeting on nuclear technology 1981. Technical meeting: Fuel elements and fuel element materials, 11:47629 (R;DE;In German)
Loss of Coolant
BERTHA: a programme for the thermal/hydraulic analysis of reflooding experiments, 11:47653 (R;GB)
Evaluation report on CCTF core-II reflood test C2-6 (Run 64). Effect of radial power profile, 11:47720 (R;JP)
ROSA-IV large scale test facility (LSTF) system description, 11:47719 (R;JP)
Mechanical Structures
Trend curve data development and testing, 11:47491 (R;US)
Meltdown
Analytic advanced development in the German Risk Study on Nuclear Power Plants. Papers presented at the project committee session of October 17, 1983, at BMFT, 11:47713 (R;DE;In German)
Description of an improvement concept to prevent overpressure containment rupture. Final report, 11:47655 (R;DE;In German)
Effects of methodic deficiencies on the quantification of core meltdown frequency, 11:47716 (RA;DE;In German)
Methodological aspects of core meltdown accidents frequency estimates, 11:47715 (RA;DE;In German)
Nozzles
Transition and upper shelf fracture toughness properties of an A508 Class 3 PWR nozzle cut-out, 11:47908 (R;GB)
Plutonium Recycle
Present and future use of plutonium in LWR-type reactors, 11:47615 (RA;DE;In German)
Pressure Vessels
Effect of reactor environment on embrittlement of Cr-Mo-V steel, 11:47943 (RA;CS;In Czech)
ORVIRT.PC (Version 2.0): a 2-D finite-element fracture analysis program for a microcomputer. Revision 1, 11:47493 (R;US)
Primary Coolant Circuits
Depressurization of the primary circuit during a PWR-high-pressure meltdown accident, 11:47693 (RA;US)
Microstructural characterization of primary coolant pipe steel, 11:47922 (R;US)
Natural circulation phenomena and primary system failure in station blackout accidents, 11:47692 (RA;US)
Reactor Accidents
Aerosol release and transport program. Semiannual progress report, October 1985-March 1986. Volume 3, No. 1, 11:47728 (R;US)
Argument about the climatological-meteorological data base of the German Risk Study on Nuclear Power Plants, 11:47718 (RA;DE;In German)
Containment pressure response to a meltdown condition of the light water reactor, 11:47703 (RA;US)
Coolability of UO_2 debris beds in pressurized water pools: DCC-1 and DCC-2 experiment results, 11:47678 (RA;US)
CORCON-MOD1 modelling improvements, 11:47701 (RA;US)
Core melt - concrete interaction: status of the WECHSL code development and present results, 11:47702 (RA;US)
Depressurization of the primary circuit during a PWR-high-pressure meltdown accident, 11:47693 (RA;US)
Dryout of a multi-dimensional porous bed, 11:47677 (RA;US)
Experimental studies of dryout during boiling in particle beds at AEE Winfrith (UKAEA), 11:47676 (RA;US)
Extended dryout and rewetting of small-particle core debris, 11:47685 (RA;US)
Flooding in particle beds and its role in dryout heat flux prediction, 11:47671 (RA;US)
Fluidization of a particulate bed during quenching by flooding from bottom, 11:47682 (RA;US)
Geometrical radiation exchange factors for axial radiative transfer in an LWR core filled with absorbing-emitting gases, 11:47679 (RA;US)
Impact of heat-generating debris on containment loading - an overview, 11:47694 (RA;US)
Interfacial heat transfer between bubble agitated immiscible liquid layers, 11:47700 (RA;US)
Mathematical model of vapour film destabilisation, 11:47654 (R;GB)
Model of the consequences of an accident, 11:47717 (RA;DE;In German)
Natural circulation phenomena and primary system failure in station blackout accidents, 11:47692 (RA;US)
Progression of a PWR severe accident from core melt to cavity interactions, 11:47696 (RA;US)
Quenching by top flooding of a heat generating particulate bed with gas injection at the bottom, 11:47680 (RA;US)
Radionuclide release calculations for selected severe accident scenarios. PWR, large dry containment design. Volume 5, 11:47734 (R;US)
Radionuclide release calculations for selected severe accident scenarios. PWR, ice condenser design. Volume 2, 11:47731 (R;US)
Radionuclide release calculations for selected severe accident scenarios. Volume 3. PWR, subatmospheric containment design, 11:47732 (R;US)
Refined model for the coolability of core debris with flow entry from the bottom, 11:47672 (RA;US)
Research related to severe reactor accidents, 11:47670 (RA;US)
Review of IDCOR effort, 11:47698 (RA;US)
Scale effects and structure of dryout zone in debris bed coolability experiments, 11:47675 (RA;US)
Severe accident sequence analysis with respect to debris formation and coolability, 11:47697 (RA;US)
Thermal-hydraulic uncertainties affecting severe accident progression, 11:47691 (RA;US)
Transient analysis of debris bed heat transfer, 11:47674 (RA;US)
Transient quenching of superheated debris beds during bottom reflood, 11:47681 (RA;US)
Two-phase flow in stratified porous media, 11:47673 (RA;US)

Reactor Components
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)
Reactor Control Systems
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
Reactor Instrumentation
Components Technology Division: programs, projects, and supporting activities, FY 1985, 11:47511 (R;US)
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
Reactor Materials
Long-term embrittlement of cast duplex stainless steels in LWR systems. Annual report, October 1984-September 1985, 11:47494 (R;US)
Reactor Monitoring Systems
Control technology in a nuclear power plant and its significance for reactor safety, 11:47634 (RA;DE;In German)
Reactor Operators
Qualification of shift personnel, 11:47614 (RA;DE;In German)
Reactor Protection Systems
Control technology in a nuclear power plant and its significance for reactor safety, 11:47634 (RA;DE;In German)
Reactor Safety
Nuclear Safety technical progress review, January-March 1986. Volume 27, No. 1, 11:47739 (R;US)
Reactor Safety Experiments
Evaluation report on CCTF core-II reflood test C2-6 (Run 64). Effect of radial power profile, 11:47720 (R;JP)
ROSA-IV large scale test facility (LSTF) system description, 11:47719 (R;JP)
Reactor Shutdown
Reactor shutdown experience, 11:47495 (J;US)
Reactor Simulators
Experience gained in the training of nuclear power plant operating personnel with nuclear power plant simulators, 11:47613 (RA;DE;In German)
Risk Assessment
Scientific technical risk analysis and political decision-making processes, 11:47714 (RA;DE;In German)
Secondary Coolant Circuits
Condensate polishers for brackish water-cooled PWRs, 11:47497 (R;US)
Condenser improvements for PWRs, 11:47498 (R;US)
Industrywide survey of PWR organics. Final report, 11:47500 (R;US)
Steam Generators
Effects of oxygen, copper and acid chlorides on denting corrosion, 11:47499 (R;US)
PYRENE
Hydrogenation
Catalyst preparation via hydrous metal oxide ion-exchangers, 11:48024 (R;US)
PYROCARBON
See PYROLYTIC CARBON
PYROCATECHIN
See PYROCATECHOL
PYROCATECHOL
Boiling Points
Condensation products of methyl chloro silane with dioxybenzenes, 11:48195 (TJ;US)
PYROCHLORE
Microstructure
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
Phase Studies
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
PYROLYSIS
Controlled Atmospheres
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
Economic Analysis
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
Flash Heating
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
Mathematical Models
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis. Final technical progress report, 11:47154 (R;US)
Yields
Effect of non-reacting gases on the flash methanolysis of coal, 11:47145 (R;US)
PYROLYSIS PRODUCTS
See also CHARS
Oxidation
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly technical report, March 1-May 31, 1986, 11:47206 (R;US)
PYROLYTIC CARBON
Vibrational States
Energy-dispersive X-ray diffraction study of mean-square atom displacements in highly oriented pyrolytic graphite, 11:48043 (J;DK)
PYROPHYLLITE
Chemical Properties
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)
Flotation
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)
Surface Properties
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)
PYROTECHNIC DEVICES
Ignition
Laser initiation of TiH/sub x//$KClO_4$ (x = 0.2, 0.65, 1.65), 11:48650 (R;US)
PYRRHITE
See PYROCHLORE
PYRROLES
Chemical Reaction Kinetics
Elementary reactions of electronically excited molecules. Pt. 6. Quenching of $O_2(^1\Delta sub(g))$ by amines, furanes, pyrroles and thiophenes, 11:48171 (R;DE)
PZT
Electron Diffraction
Convergent beam electron diffraction studies on lead zirconate titanate, 11:48051 (BA;US)
Phase Studies
Convergent beam electron diffraction studies on lead zirconate titanate, 11:48051 (BA;US)
Physical Radiation Effects
Effects of temperature and irradiation on piezoelectric acoustic transducers and materials, 11:47974 (R;GB)
Temperature Effects
Effects of temperature and irradiation on piezoelectric acoustic transducers and materials, 11:47974 (R;GB)

Q

QUALITY ASSURANCE
Research Programs
DOE's Assurance Program for Remedial Action (APRA), 11:47334 (RA;US)
Evaluation of analytical results on DOE Quality Assessment Program Samples, 11:48678 (RA;US)
QUANTITATIVE CHEMICAL ANALYSIS
Calibration Standards
Certification of the contents (mass fraction) of carbon, hydrogen, nitrogen, chlorine, arsenic, cadmium, manganese, mercury, lead, selenium, vanadium and zinc in three coals.

Gas coal CRM No. 180; Coking coal CRM No. 181; Steam coal CRM No. 182, 11:47186 (R;DE)
Comparative Evaluations
Determination of total sulphur in soil - a comparison of methods, 11:48707 (R;DE;In German)
QUANTUM CHROMODYNAMICS
Axial-Vector Currents
Renormalization of the axial vector current in QCD, 11:49181 (R;US)
Computerized Simulation
Comparison of an exact fermion Monte Carlo algorithm with the pseudofermion method using staggered fermions, 11:49205 (J;US)
Final-State Interactions
Unusual initial and final state effects in quantum chromodynamics. Final report, July 15, 1983-July 14, 1986, 11:49184 (R;US)
Lattice Field Theory
Molecular dynamics algorithm for simulation of field theories in the canonical ensemble, 11:49215 (J;NL)
Monte Carlo Method
Large-scale calculations for hadron spectroscopy, 11:49212 (J;US)
Numerical Analysis
Numerical determination of the QCD β function, 11:49202 (J;US)
Parton Model
QCD radiative corrections to parton-parton scattering, 11:49169 (J;NL)
Phase Transformations
Deconfining phase transition in lattice quantum chromodynamics, 11:49211 (J;US)
Radiative Corrections
QCD radiative corrections to parton-parton scattering, 11:49169 (J;NL)
String Models
Quark vacuum polarization and the Luescher term, 11:49201 (J;US)
Structure Functions
Large-n-italic behavior of the deep-inelastic structure functions and the renormalization- and factorization-scheme dependences, 11:49204 (J;US)
QUANTUM ELECTRODYNAMICS
Exotic Resonances
Exotic states in QED, 11:49417 (J;US)
Quantum Numbers
Induced quantum numbers in (2+1)-dimensional QED, 11:49198 (J;US)
Rest Mass
Gauss'-law and the infraparticle problem, 11:49145 (R;DE)

RADIOACTIVE WASTE DISPOSAL
Activity Levels
Calculations of radiation field arising from heat generating radioactive waste emplaced in ocean sediments, 11:47292 (R;GB)
Containers
Mathematical model of crevice and pitting corrosion. Pt. 2. The mathematical solution, 11:47910 (R;GB)
Directories
Information Services Directory, 11:47307 (R;US)
Geologic Models
Construction, emplacement, and retrievability (preclosure), 11:47295 (RA;US)
Government Policies
Radioactive waste management. The national strategy, 11:47314 (R;GB)
Ground Disposal
Radiological measurement at the Maxey Flats radioactive waste burial site - 1974 to 1975, 11:47317 (R;US)
Information Dissemination
Information Services Directory, 11:47307 (R;US)
Monitoring
Radiological measurement at the Maxey Flats radioactive waste burial site - 1974 to 1975, 11:47317 (R;US)
Regulations
Performance assessment, 11:47294 (RA;US)
Saturation
Flow and transport in the unsaturated zone. Final report, 11:47291 (R;GB)
Site Selection
Disposal of high-level nuclear waste. Hearing before the Committee on Environment and Public Works, United States Senate, Ninety-Ninth Congress, First Session, October 30, 1985, 11:47322 (B;US)

RADIOACTIVE WASTE FACILITIES
Decommissioning
Allowable residual contamination levels for decommissioning. Part 1. A description of the method, 11:47302 (RA;US)
Allowable residual contamination levels for decommissioning. Part 2. A summary of example results, 11:47329 (RA;US)
Licensing
Licensing information needs for a high-level waste repository, 11:47293 (RA;US)
Performance
Performance assessment, 11:47294 (RA;US)

RADIOACTIVE WASTE MANAGEMENT
Government Policies
Radioactive waste management. The national strategy, 11:47314 (R;GB)
Recommendations
Radiological protection guidelines for the Formerly Utilized Sites Remedial Action Program and remote Surplus Facilities Management Program, 11:47327 (RA;US)
Research Programs
Radiological protection guidelines for the Formerly Utilized Sites Remedial Action Program and remote Surplus Facilities Management Program, 11:47327 (RA;US)

RADIOACTIVE WASTE PROCESSING
Calcination
Exploitation of the FLK-60 slagging incinerator for different alpha waste streams and study of the feasibility of medium-level alpha-beta-gamma waste incineration in FLK-60, 11:47310 (R;FR)
Ceramic Melters
Electrical service and controls for joule heating of a nuclear waste experimental glass melter, 11:47324 (BA;US)
Magnetic Filters
Treatment of alpha-contaminated effluents by magnetite precipitation. Progress report from April to October 1983, 11:47289 (R;GB)

RADIOACTIVE WASTE STORAGE
Geologic Models
Construction, emplacement, and retrievability (preclosure), 11:47295 (RA;US)
Regulations
Performance assessment, 11:47294 (RA;US)
Underground Storage
Radiation protection measurements and environmental monitoring within the area of the Asse mine shaft. Annual report 1984, 11:47313 (R;DE;In German)

RADIOACTIVE WASTES

HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Decontamination
Site cleanup lessons learned: formerly utilized sites remedial action program (FUSRAP) Middlesex Site, 11:47303 (RA;US)
Environmental Impacts
Prevention of biological transport of radioactivity in the Hanford 200 areas, 11:47333 (RA;US)
Monitored Retrievable Storage
Nuclear Waste Policy Act of 1982: progress and problems. Hearings before the Subcommittee on Energy Research and Production of the Committee on Science and Technology,

House of Representatives, Ninety-Ninth Congress, First Session, November 6, 7, 1985, 11:47321 (B;US)

Qualitative Chemical Analysis
Laboratory experience in the analysis of orphan waste, 11:48094 (BA;US)

Quantitative Chemical Analysis
Laser fluorimeter for uranium detection in waste, 11:48119 (BA;US)

Radioactive Waste Disposal
Development of improved risk assessment tools for prioritizing hazardous and radioactive-mixed waste disposal sites, 11:47301 (RA;US)
Ranking system for mixed radioactive and hazardous waste sites, 11:47300 (RA;US)

Radioactive Waste Management
Assessment of alternatives for long-term management of uranium ore residues and contaminated soils located at DOE's Niagara Falls Storage Site, 11:48711 (RA;US)

Radioactive Waste Storage
Site cleanup lessons learned: formerly utilized sites remedial action program (FUSRAP) Middlesex Site, 11:47303 (RA;US)

Risk Assessment
Problems of risk balancing for regulating environmental hazards, 11:47326 (RA;US)

Transport
Nuclear Waste Policy Act of 1982: progress and problems. Hearings before the Subcommittee on Energy Research and Production of the Committee on Science and Technology, House of Representatives, Ninety-Ninth Congress, First Session, November 6, 7, 1985, 11:47321 (B;US)

Underground Disposal
Flow and transport in the unsaturated zone. Final report, 11:47291 (R;GB)
Hydrochemistry of the groundwater flow systems in the Harwell region, 11:47311 (R;GB)
Retardation of radionuclide transport by fracture flow in granite and argillaceous rocks. Final report (April 1983-April 1985), 11:47290 (R;GB)

Vitrification
Analytical methods and laboratory facility for the Defense Waste Processing Facility, 11:47323 (BA;US)

Waste Management
Nuclear Waste Policy Act of 1982: progress and problems. Hearings before the Subcommittee on Energy Research and Production of the Committee on Science and Technology, House of Representatives, Ninety-Ninth Congress, First Session, November 6, 7, 1985, 11:47321 (B;US)

Waste Transportation
Probability of traffic accidents associated with the transport of radioactive wastes, 11:47285 (R;GB)

RADIOACTIVITY
For measured values of radioactivity and for unidentified radiation sources; not for experimental studies.
See also NATURAL RADIOACTIVITY

Environmental Transport
Prevention of biological transport of radioactivity in the Hanford 200 areas, 11:47333 (RA;US)

RADIOBIOLOGY

Mathematical Models
Microdosimetric characteristics and biological effect of ionizing particles, 11:48837 (RA;CS;In Czech)

Meetings
10th AINSE radiation biology conference, 22-23 August 1985, Lucas Heights - AINSE Theatre. Conference handbook, 11:48857 (R;AU)
Second national congress on medical biology and genetics with international participation. Abstracts of reports from the plenary meeting, 11:48843 (R;BG;In Bulgarian)

Neutrons
SNIF - the standard neutron irradiation facility at Lucas Heights, 11:48879 (RA;AU)

Detection
Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986, 11:48960 (R;US)
RADISHES
Radioactivity
Strontium-90 and cesium-137 in vegetables (producing districts) from November 1983 to March 1984. Environmental and dietary materials, 11:48728 (RA;JP)
Strontium-90 and cesium-137 in vegetables (consuming districts) from November 1983 to February 1984. Environmental and dietary materials, 11:48729 (RA;JP)
RADIUM
Radioecological Concentration
Radium accumulation in the water-lily, nymphaea, from the Magela Creek, N.T. , 11:48776 (RA;AU)
RADIUM 218
Alpha Decay
/sup 218/Ra α reduced width and its consequences for α clustering in the heavy elements, 11:49357 (J;US)
RADIUM 223
Alpha Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Beta Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Electrodeposition
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
RADIUM 224
Alpha Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Beta Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Electrodeposition
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
RADIUM 226
^{222}Rn and ^{226}Ra in fresh waters: measurement method and results, 11:48772 (RA;CS)
Alpha Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Beta Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Electrodeposition
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Gamma Detection
Computer-controlled system for rapid soil analysis of ^{226}Ra, 11:48093 (BA;US)
Radiation Hazards
Concentrations of ^{222}Rn and its short-lived decay products in a number of Greek radon spas, 11:48854 (RA;CS)
Radioecological Concentration
Assessment of alternatives for long-term management of uranium ore residues and contaminated soils located at DOE's Niagara Falls Storage Site, 11:48711 (RA;US)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
RADIUM 228
Alpha Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Beta Spectroscopy
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
Electrodeposition
Measurement of all radium isotopes at environmental levels on a single electrodeposited source, 11:48069 (RA;CS)
RADIUM D

REACTOR CONTROL SYSTEMS
Expert Systems
Simulation-based expert system for nuclear reactor control and diagnostics. Progress report, 11:47669 (R;US)
Mathematical Models
Application of reflected kinetics to nuclear space reactor scoping studies, 11:47631 (RA;US)
Power Supplies
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
REACTOR CONTROL THEORY
See REACTOR KINETICS
REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
SECONDARY COOLANT CIRCUITS
Vapor Condensation
Design and test program for a micro-gravity convective condensation experiment, 11:47542 (RA;US)
REACTOR CORE DISRUPTION
Risk Assessment
Summary of the Knoxville International Topical Meeting on Fast Reactor Safety, 11:47741 (J;US)
REACTOR CORE RESTRAINTS
Design
Penetration of a heated pool into a melting miscible substrate, 11:47688 (RA;US)
REACTOR CORES
Design
Fast reactor status review: mechanical and thermohydraulic core engineering of large breeders, 11:47521 (TJ;GB)
Heat Transfer
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Hydraulics
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
REACTOR FUEL ELEMENTS
See FUEL ELEMENTS
REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
See also IN CORE INSTRUMENTS
Power Supplies
Improved reliability for analog instrument and control systems. Volume 1. Failure analysis and demonstration module. Final report, 11:47632 (R;US)
REACTOR KINETICS
Gamma Transport Theory
Recent developments in discrete-ordinates electron transport, 11:47622 (R;US)
M Codes
Subgroup version of MONK, 11:47618 (R;GB)
Monte Carlo Method
Subgroup version of MONK, 11:47618 (R;GB)
REACTOR LICENSING
Regulations
NRC licensing of Diablo Canyon. Hearing before the Subcommittee on Energy Conservation and Power of the Committee on Energy and Commerce, House of Representatives, Ninety-Ninth Congress, First Session, July 10, 1985, 11:47504 (B;US)
Regulatory policy for advanced nuclear reactors. Hearing before the Subcommittee on Energy Research and Production of the Committee on Science and Technology, US House of Representatives, Ninety-Ninth Congress, First Session, October 31, 1985, 11:47509 (B;US)
REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
See also NUCLEAR FUELS
Mechanical Properties
Fast reactor status review: mechanical and thermohydraulic core engineering of large breeders, 11:47521 (TJ;GB)
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Physical Radiation Effects
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
REACTOR MONITORING SYSTEMS
Measuring and evaluation systems for performance monitoring of reactor or its components. Not to be confused with reactor control systems.
Meetings
Annual meeting on nuclear technology 1982. Technical meeting: Information processing in nuclear engineering, 11:47633 (R;DE;In German)
On-Line Systems
Annual meeting on nuclear technology 1982. Technical meeting: Information processing in nuclear engineering, 11:47633 (R;DE;In German)
Control technology in a nuclear power plant and its significance for reactor safety, 11:47634 (RA;DE;In German)
REACTOR OPERATION
Data Processing
ATOG - a status oriented method for dealing with accidents, 11:47637 (RA;DE;In German)
Manuals
Operating manuals as a medium between man and machine, 11:47611 (RA;DE;In German)
REACTOR OPERATORS
Education
Man as a protective barrier. Requirements from the point of view of the Federal Ministry of the Interior, 11:47712 (RA;DE;In German)
Qualification of shift personnel, 11:47614 (RA;DE;In German)
Educational Facilities
Experience gained in the training of nuclear power plant operating personnel with nuclear power plant simulators, 11:47613 (RA;DE;In German)
Human Factors
Man as a protective barrier. Requirements from the point of view of the Federal Ministry of the Interior, 11:47712 (RA;DE;In German)
Information Systems
ATOG - a status oriented method for dealing with accidents, 11:47637 (RA;DE;In German)
Computer-aided operator support in nuclear power plants, 11:47635 (RA;DE;In German)
Operating manuals as a medium between man and machine, 11:47611 (RA;DE;In German)
REACTOR PROTECTION SYSTEMS
See also ECCS
REACTOR CORE RESTRAINTS
Computerized Simulation
Activities and trends in physical protection modeling with microcomputers, 11:49639 (J;US)
Meetings
Annual meeting on nuclear technology 1982. Technical meeting: Information processing in nuclear engineering, 11:47633 (R;DE;In German)
Microprocessors
Method for the development of reliable software for computer-aided safety systems, 11:47636 (RA;DE;In German)
On-Line Systems
Annual meeting on nuclear technology 1982. Technical meeting: Information processing in nuclear engineering, 11:47633 (R;DE;In German)
Control technology in a nuclear power plant and its significance for reactor safety, 11:47634 (RA;DE;In German)
REACTOR SAFETY
A Codes
Adjoint-based sensitivity analysis for reactor safety applications, 11:47736 (R;US)
F Codes
Adjoint-based sensitivity analysis for reactor safety applications, 11:47736 (R;US)
Regulations
Energy and water development appropriations for 1987. Part 9. Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, Ninety-Ninth Congress, Second Session, 11:47743 (B;US)
Reporting Requirements
Reporting criteria for abnormal events at nuclear power plants, 11:47744 (TG;DE)
Research Programs
Development of ultrasonic thermometry for high-temperature high-resolution temperature profiling applications in LMFBR safety research, 11:47738 (R;US)
Safety Engineering
Energy and water development appropriations for 1987. Part 9. Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, Ninety-Ninth Congress, Second Session, 11:47743 (B;US)
V Codes
Adjoint-based sensitivity analysis for reactor safety applications, 11:47736 (R;US)
REACTOR SITES
Site Selection
Method for assigning sites to projected generic nuclear power plants, 11:47644 (R;US)
REACTOR SITING
See SITE SELECTION
REACTOR TECHNOLOGY
Meetings
Annual meeting on nuclear technology 1980. Technical meeting: Man-machine systems. Pt. 1, 11:47610 (R;DE;In German)
REACTOR VESSELS
For nonpressurized containers of reactor cores and associated components.
Heat Transfer
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Hydraulics
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Stress Analysis
Finite element analysis of the 2240 MW HTGR PCRV, 11:47508 (R;US)

REACTORS
See also IRRADIATION REACTORS
LIQUID METAL COOLED REACTORS
POWER REACTORS
WATER MODERATED REACTORS
Environmental Effects
Agency interaction at the Savannah River Plant under the Endangered Species Act, 11:47643 (RA;US)
Remote sensing of wetlands at the Savannah River Plant, 11:47642 (RA;US)
Environmental Impacts
Clean Water Act and biological studies at the Savannah River Plant, 11:47195 (RA;US)
READOUT SYSTEMS
Improved readout system for multi-crystal gamma cameras, 11:48620 (P;US)
Fiber Optics
Remotely readable fiber optic compass, 11:48646 (P;US)
REATTORE CASACCIA-1
See TRIGA-2-ROME REACTOR
RECEPTORS
Agglomeration
Diffusion-limited forward rate constants in two dimensions: application to the trapping of cell surface receptors by coated pits, 11:48796 (J;US)
Biochemical Reaction Kinetics
Binding of [^{125}I] Concanavalin A to isolated Langerhans islets of rats, 11:48792 (R;DE;In German)
Reaction Kinetics
Diffusion-limited forward rate constants in two dimensions: application to the trapping of cell surface receptors by coated pits, 11:48796 (J;US)
RECIPROCAL TRANSLOCATIONS
See CHROMOSOMAL ABERRATIONS
RECTISOL PROCESS
Computerized Simulation
ASPEN sensitivity study for the Great Plains Gasification Plant rectisol section, 11:47159 (R;US)
RECYCLE (FUEL)
See FUEL CYCLE
RECYCLING (FUEL)
See REPROCESSING
REDUCTASES
See OXIDOREDUCTASES
REENTRY VEHICLES
Armor
Bumper shield analysis, 11:48222 (R;US)
REFERENCE MATERIALS (STANDARD)
See CALIBRATION STANDARDS
REFINING
Cost Estimation
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Thirteenth interim report, processing of 750 degrees end point Illinois ITSL oil: engineering design studies and estimated processing costs, 11:47147 (R;US)
REFRACTORIES
Chemical Reactions
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Synthesis
Solid combustion processes for improved synthesis of non-oxide materials, 11:48216 (R;US)
REFRACTORY METALS
Mechanical Properties
Selection of structural materials for space nuclear power generators, 11:47581 (RA;US)
REFRIGERANTS
Testing
Development and testing of a low cost screw compressor for the refrigerants R 12 and R 114. Final report, 11:47830 (R;DE;In German)
REGION I
See FEDERAL REGION I
REGION II
See FEDERAL REGION II
REGION X
See FEDERAL REGION X
REINFORCED MATERIALS
Fabrication
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
RELEASE (FISSION PRODUCT)
See FISSION PRODUCT RELEASE
REMEDIAL ACTION
Planning
Environmental protection in the UMTRA PROJECT, 11:47330 (RA;US)
Quality Assurance
DOE's Assurance Program for Remedial Action (APRA), 11:47334 (RA;US)
Recommendations
Review of standards and guidelines pertinent to DOE's Remedial Action programs, 11:47328 (RA;US)
Research Programs
Radiological protection guidelines for the Formerly Utilized Sites Remedial Action Program and remote Surplus Facilities Management Program, 11:47327 (RA;US)
Standards
Review of standards and guidelines pertinent to DOE's Remedial Action programs, 11:47328 (RA;US)
REMOTE SENSING
Research Programs
Comprehensive, integrated, remote sensing at DOE sites, 11:48661 (RA;US)
Multispectral remote sensing at the Savannah River Plant, 11:48662 (RA;US)
REMOVAL (AFTER-HEAT)
See AFTER-HEAT REMOVAL
REPROCESSING
See also FLUORIDE VOLATILITY PROCESS
PUREX PROCESS
Environmental Impacts
Soil to plant transfer factors for Cs-137 and Pu-239+240 determined by field and glasshouse measurements in Great Britain, 11:48715 (RA;NL)
Organic Solvents
New extractants for nuclear fuels, 11:47275 (R;FR;In French)
REPUBLIC OF KOREA
International Cooperation
Germano-Korean cooperation for erection and test of industrialized solar technologies. Final report, 11:47403 (R;DE;In German)
RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
Economic Policy
Department of Energy posture hearing. Hearing before the Committee on Science and Technology, US House of Representatives, Ninety-Ninth Congress, Second Session, February 19, 1986, 11:47772 (B;US)
International Cooperation
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)
Planning
Report on the first international forum for enhanced collaboration in the clean use of coal: coal liquefaction, 11:47148 (R;US)
RESERVOIR PRESSURE
Time Dependence
Thermal injection well falloff testing, SUPRI TR-33, 11:47217 (R;US)
RESERVOIR ROCK
Fluid Flow
Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
Permeability
Development of a predictive model for corosity distribution in the Smackover Formation of southwest Alabama. Final report, project year 1984-1985, 11:47214 (R;US)

Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
Porosity
Development of a predictive model for corosity distribution in the Smackover Formation of southwest Alabama. Final report, project year 1984-1985, 11:47214 (R;US)
Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
Simulation
Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
Structural Models
Development of a predictive model for corosity distribution in the Smackover Formation of southwest Alabama. Final report, project year 1984-1985, 11:47214 (R;US)

RESERVOIRS (WATER)
See WATER RESERVOIRS

RESID
See PETROLEUM RESIDUES

RESIDENCES
See HOUSES

RESIDENTIAL BUILDINGS
See also HOUSES
Boilers
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
Cold Storage
Market constraints for residential cool storage systems. Final report, 11:47749 (R;US)
Energy Audits
Effects of a municipal energy audit program on electricity consumption in single-family residences, 11:47801 (RA;US)
Theoretical case study in utility planning and evaluation, 11:47815 (RA;US)
Energy Conservation
Alternative approaches for treatment of self-selection bias in evaluation of energy use impacts of a home weatherization kit program, 11:47852 (RA;US)
Analysis of a cooling and heat pump rebate program, 11:47843 (RA;US)
Application of end-use disaggregation models to energy audit program evaluation, 11:47847 (RA;US)
Assessment of the potential and actual load benefits of SDG and E's residential air conditioner cycling program, 11:47846 (RA;US)
Comparative evaluation of six different energy conservation programs serving low income households in Massachusetts, 11:47788 (RA;US)
Dynamics effects of utility energy conservation programs: a residential retrofit program example, 11:47842 (RA;US)
Economic impact of energy education for limited resource households, 11:47849 (RA;US)
Effects of a municipal energy audit program on electricity consumption in single-family residences, 11:47801 (RA;US)
Evaluating energy conservation regulations, 11:47833 (RA;US)
Evaluating the marketing phase of the Hennepin County Residential Shared Savings Demonstration Project, 11:47839 (RA;US)
Evaluation of the Massachusetts Energy Conservation Service, 11:47800 (RA;US)
Evaluation consideration: confounding variables, 11:47802 (RA;US)
Evaluation of Shawnee County low/fixed income consultation program, 11:47850 (RA;US)
PRISM: a standardized method for keeping score on energy saved in houses, 11:47834 (RA;US)
Protecting data quality in weatherization evaluations, 11:47848 (RA;US)
Residential energy-efficiency program for Burlington Electric Department: research and development of a program design, 11:47838 (RA;US)
Residential conservation incentives: a review of loan impacts, 11:47841 (RA;US)
Self-selection: are we beating a dead horse?, 11:47851 (RA;US)
Taking the con out of conservation program evaluation, 11:47812 (RA;US)
Use of detailed evaluation data to develop a low cost monitoring system: the BPA Residential Weatherization Program, 11:47853 (RA;US)
Energy Consumption
Data quality considerations in using the PRISM program, 11:47799 (RA;US)
Furnaces
Operation and maintenance of DOE/PETC combustion test facilities. Quarterly technical progress report, April 1-June 30, 1986, 11:47207 (R;US)
Photovoltaic Power Supplies
Microcomputer control of a residential photovoltaic power conditioning system, 11:47406 (BA;US)
Power Conditioning Circuits
Microcomputer control of a residential photovoltaic power conditioning system, 11:47406 (BA;US)
Weatherization
Assessing the training and technical-assistance needs of weatherization program subgrantees: a practical methodology which yields policy-maker-useful data, 11:47844 (RA;US)
Evaluating weatherization options: a comparison of three service alternatives, 11:47790 (RA;US)
Evaluation of Wisconsin's Low-Income Weatherization Program, 11:47789 (RA;US)
Hourly impacts of residential weatherization - the shape of things to come, 11:47845 (RA;US)
Process evaluation and program design: two BPA residential weatherization programs, 11:47836 (RA;US)
Protecting data quality in weatherization evaluations, 11:47848 (RA;US)
Tale of two programs: an application of the Princeton Scorekeeping Method to evaluate energy savings of two weatherization programs, 11:47792 (RA;US)
Weatherization assistance program. Final monitoring report for Arizona, California, the Navajo Nation, and Nevada, 11:47855 (R;US)

RESIDENTIAL SECTOR
Energy Conservation
Effective residential energy conservation, 11:47840 (RA;US)

RESIDUAL OILS
See PETROLEUM RESIDUES

RESIDUES
See also ASHES
SMOKES
Thermal Gravimetric Analysis
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)

RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES

RESONANCE CAVITIES
See CAVITY RESONATORS

RESONANCE IONIZATION MASS SPECTROSCOPY
Performance
Sputter atomization/resonance ionization mass spectrometry for high sensitivity isotopic analysis, 11:48100 (BA;US)

RESONANCE STATES
See ENERGY LEVELS

RESONATORS
See also CAVITY RESONATORS
Design
Piezoelectric shear wave resonator and method of making same, 11:48320 (P;US)
Wave Propagation
Piezoelectric shear wave resonator and method of making same, 11:48320 (P;US)

RESORCIN
See RESORCINOL

RESORCINOL
Boiling Points
Condensation products of methyl chloro silane with dioxybenzenes, 11:48195 (TJ;US)

RESOURCE DEVELOPMENT
Space Power Reactors
Power requirements for space resource utilization, 11:47527 (RA;US)

RESPIRABLE DUSTS
See DUSTS
RESPIRATORS
Quality Assurance
Operating policy of DOE filter test program. Revision, 11:48235 (R;US)
Quality assurance testing of HEPA filters. Revision, 11:48236 (R;US)
Standards
Operating policy of DOE filter test program. Revision, 11:48235 (R;US)
Quality assurance testing of HEPA filters. Revision, 11:48236 (R;US)
Testing
Operating policy of DOE filter test program. Revision, 11:48235 (R;US)
Quality assurance testing of HEPA filters. Revision, 11:48236 (R;US)
RESPIRATORY EQUIPMENT
See RESPIRATORS
RESPIRATORY SYSTEM DISEASES
Diagnosis
Efficiency index: a new parameter to define breathing patterns during dynamic Xe-127 ventilation studies, 11:48810 (J;US)
Regional measurement of ventilation and perfusion to detect subtle lung abnormalities in coal miners, 11:47212 (J;US)
Disease Incidence
Effects of passive smoking on health of children, 11:48926 (J;US)
RETORTED SHALES
See SPENT SHALES
RETROFITTING
Economic Impact
Economic impact of energy education for limited resource households, 11:47849 (RA;US)
Evaluation
Comparative evaluation of six different energy conservation programs serving low income households in Massachusetts, 11:47788 (RA;US)
Financial Assistance
Residential conservation incentives: a review of loan impacts, 11:47841 (RA;US)
REVERSE-FIELD PINCH
Energy Balance
Liner compression of magnetically-confined, FRC plasmas, 11:49493 (R;US)
REVERSIBLE TURBINES
See PUMP TURBINES
RF SYSTEMS
Breakdown
Rf breakdown studies in a SLAC disk-loaded structure, 11:48402 (R;US)
RHENIUM 187
Half-Life
Direct laboratory determination of the ^{187}Re half-life, 11:49344 (J;GB)
RHENIUM ALLOYS
Ductile-Brittle Transitions
Observations on the as-welded (GTAW) bend ductility of Mo-13 Re alloy, 11:47584 (RA;US)
Mechanical Properties
Molybdenum-rhenium alloy development for space nuclear power applications, 11:47583 (RA;US)
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Physical Radiation Effects
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
RHENIUM BROMIDES
Isomers
Pressure-induced torsional isomerism in $[n\text{-}Bu_4N]_3[Re_2X_8]$ (X = Br, I), 11:48161 (J;US)
RHENIUM COMPLEXES
Chemical Preparation
Inter- and intramolecular insertion of rhenium into carbon-hydrogen bonds, 11:48180 (J;US)
RHENIUM IODIDES
Isomers
Pressure-induced torsional isomerism in $[n\text{-}Bu_4N]_3[Re_2X_8]$ (X = Br, I), 11:48161 (J;US)
RHEOLOGY
Measuring Instruments
Relationship between chemistry and rheology in coal-water slurries, 11:47187 (B;US)
Surface Properties
Relationship between chemistry and rheology in coal-water slurries, 11:47187 (B;US)
RHEUMATIC DISEASES
Therapy
Medium power YAG laser treatment of rheumatoid arthritis, 11:48809 (RA;AT)
RHEUMATOID DISEASES
See RHEUMATIC DISEASES
RHODIUM
Photochemistry
Photochemical properties of rhodium(III) phthalocyanine cation radicals, 11:48206 (J;US)
Photolysis
Photochemical properties of rhodium(III) phthalocyanine cation radicals, 11:48206 (J;US)
Sorptive Properties
The influence of TiO/sub x/ promoters on the chemisorption and hydrogenation of CO on polycrystalline Rh, 11:47371 (J;US)
Thermal decomposition of benzene on the Rh(111) crystal surface, 11:48217 (J;US)
RHODIUM 106
Gamma Spectroscopy
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)
RHODIUM COMPLEXES
Chemical Reaction Kinetics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
Reduction
Isotope effects in arene C-H bond activation by $[(C_5Me_5)Rh(PMe_3)]$, 11:48179 (J;US)
Thermodynamics
Reactivity of rhodium and iridium octaethylporphyrin hydrides toward carbon monoxide: thermodynamic studies of the rhodium formyl and iridium hydrido carbonyl complexes, 11:48188 (J;US)
RICE
Strontium-90 and cesium-137 in rice (producing districts) from November 1983 to January 1984. Environmental and dietary materials, 11:48724 (RA;JP)
RIEMANN WAVES
See SHOCK WAVES
RIMS
See RESONANCE IONIZATION MASS SPECTROSCOPY
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Mathematical Models
Problems of risk balancing for regulating environmental hazards, 11:47326 (RA;US)
Meetings
Risk quantitation and regulatory policy, 11:48929 (B;US)
Political Aspects
Scientific technical risk analysis and political decision-making processes, 11:47714 (RA;DE;In German)
RIVERS
Flow Rate
Hells Canyon environmental investigation. Final report, 11:47380 (R;US)

Radioactivity
Radionuclides in sediments - a comparative analysis 1983, 11:48758 (R;DE;In German)
Radionuclide Migration
Bioaccumulation of radionuclides in flora and fauna of the Alligator Rivers region, 11:48777 (RA;AU)
ROADS
Physical Protection Devices
Vehicle barrier systems, 11:47349 (R;US)
ROBOTS
Artificial Intelligence
Intelligent machine operating system for hypercube ensemble architectures, 11:48241 (RA;US)
O-theory - a hybrid uncertainty theory, 11:48243 (RA;US)
Synthesis of digital machines with provable epistemic properties, 11:48240 (RA;US)
Computer Architecture
Programming robotics applications on an advanced hypercube multiprocessor, 11:49610 (R;US)
Electronic Guidance
Multiple levels of representation and problem-solving using maps from sonar data, 11:48239 (RA;US)
Navigation
Multiple levels of representation and problem-solving using maps from sonar data, 11:48239 (RA;US)
Planning for transit in unknown natural terrain, 11:48242 (RA;US)
Operation
Intelligent machine operating system for hypercube ensemble architectures, 11:48241 (RA;US)
Performance
New laboratory robotic system for automated sample preparation and integrated analysis, 11:48095 (BA;US)
Robotic sample preparation for radiochemical plutonium and americium analyses, 11:48118 (BA;US)
Programming
Programming robotics applications on an advanced hypercube multiprocessor, 11:49610 (R;US)
ROCK CAVERNS
Construction
Construction, emplacement, and retrievability (preclosure), 11:47295 (RA;US)
Geology
Cumulative release to the accessible environment, 11:47299 (RA;US)
Fractional release from the engineered barrier system, 11:47298 (RA;US)
Ground-water travel time, 11:47297 (RA;US)
Regional ground-water system, 11:47296 (RA;US)
Hydrology
Cumulative release to the accessible environment, 11:47299 (RA;US)
Fractional release from the engineered barrier system, 11:47298 (RA;US)
Ground-water travel time, 11:47297 (RA;US)
Regional ground-water system, 11:47296 (RA;US)
ROCK SALT
See SALT DEPOSITS
ROCKS
See also IGNEOUS ROCKS
SEDIMENTARY ROCKS
SYNTHETIC ROCKS
Beta Detection
Low-cost automated counter for laboratory beta-ray assay of rock and mineral samples, 11:48594 (RA;CS)
Fragmentation
Status of fragmentation modeling development, 11:47243 (R;US)
Motion
Status of fragmentation modeling development, 11:47243 (R;US)
Natural Radioactivity
Gamma-ray spectrometric measurement of natural radionuclides distribution in rocks, 11:48068 (RA;CS)
Quantitative Chemical Analysis
Application of thermal and epithermal neutron activation analysis to rock and sediment samples. Advantages of matrix preseparation for rare earth element determination, 11:48058 (R;IT)
RODS (CONTROL)
See CONTROL ELEMENTS
RODS (FUEL)
See FUEL RODS
ROOFS
Research Programs
Development of a major center for roof research in the United States, 11:47832 (R;US)
Solar Cell Arrays
Photovoltaic membrane (PVM) roof system. Second quarter technical progress report, 1986, 11:47387 (R;US)
Testing
Development of a major center for roof research in the United States, 11:47832 (R;US)
RUNOFF
Mathematical Models
Automatic calibration of conceptual catchment models using derivative-based optimization algorithms, 11:48741 (J;US)
RUTHENIUM
Catalytic Effects
Studies of carbon deposition and consumption on Ru/TiO_2 during Fischer-Tropsch synthesis, 11:47369 (J;US)
Mass Spectroscopy
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
RUTHENIUM 106
Gamma Spectroscopy
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)
RUTHENIUM ALLOYS
Production
Formation of icosahedral Al-Mn and Al-Ru by solid-state processes (By ion beam mixing), 11:47951 (R;US)
RUTHENIUM COMPLEXES
Electron Transfer
Comparison of electron-transfer matrix elements for transition-metal complexes: t/sub 2g/ vs. e/sub g/ transfer and NH_3 vs. H_2O ligands, 11:48146 (J;US)
Photochemistry
Reduction of transition metal complexes by tris(bipyridyl)ruthenium(1+) ion, chromium(II) ion, and the 10-hydroxy-1-methylethyl radical, 11:48163 (D;US)
Sorptive Properties
Separation of gas mixtures by supported complexes, 11:47175 (R;US)
RUTHERFORD SCATTERING
Vacuum Polarization
Analytic evaluation of the effects of vacuum polarization on sub-barrier heavy-ion elastic scattering cross section, 11:49398 (RA;BR)

S

S CODES
Manuals
Preliminary user's manual for SAPPAC: a multisupport modal time integrator and transfer function plotter for SAP4 models, 11:49624 (R;US)
S WAVES (SEISMIC)
See SEISMIC S WAVES
SACCHAROMYCES CEREVISIAE
Enzyme Activity
Pyrimidine-specific cleavage by an endoribonuclease of Saccharomyces cerevisiae, 11:48818 (J;US)
SAFETY
For general aspects of safety and protection of personnel.

SALINE ZONE
See OIL SHALES
SALINITY GRADIENT POWER PLANTS
Upwelling
Salinity driven oceanographic upwelling, 11:47414 (P;US)
SALMON
Ecology
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Pacific Northwest). Coho salmon (Oncorhynchus kisutch), 11:48738 (R;US)
Predator-Prey Interactions
Feeding activity, rate of consumption, daily ration and prey selection of major predators in John Day Reservoir. Annual report, 11:48781 (R;US)
SALMONELLA TYPHIMURIUM
Biological Radiation Effects
Frameshift mutagenesis in S. typhimurium, 11:48875 (RA;AU)
SALT DEPOSITS
Density
Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites, 11:48951 (R;US)
Elasticity
Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites, 11:48951 (R;US)
Poisson Ratio
Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites, 11:48951 (R;US)
Radioactive Waste Disposal
Selecting metallic canister materials for disposal of high-level radioactive wastes in rock salt formations, 11:47320 (R;DD;In German)
Specific Heat
Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites, 11:48951 (R;US)
Thermal Conductivity
Preliminary thermomechanical analyses of a conceptual nuclear waste repository at four salt sites, 11:48951 (R;US)
SAMARIUM
Isotope Separation
Separation of rare earth isotopes using resonance ionization time-of-flight mass spectrometry, 11:48159 (BA;US)
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Resonance Ionization Mass Spectroscopy
Separation of rare earth isotopes using resonance ionization time-of-flight mass spectrometry, 11:48159 (BA;US)
Sputter atomization/resonance ionization mass spectrometry for high sensitivity isotopic analysis, 11:48100 (BA;US)
SAMARIUM 144 TARGET
Carbon 12 Reactions
l-distributions in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$ measured with the Darmstadt-Heidelberg crystal ball, 11:49315 (RA;US)
Limits to fusion in heavy systems, 11:49314 (RA;US)
Nickel 58 Reactions
Quasielastic neutron transfer reactions on samarium isotopes, 11:49312 (RA;US)
SAMARIUM 149 TARGET
Nickel 58 Reactions
Quasielastic neutron transfer reactions on samarium isotopes, 11:49312 (RA;US)
SAMARIUM 150 TARGET
Nickel 58 Reactions
Quasielastic neutron transfer reactions on samarium isotopes, 11:49312 (RA;US)
SAMARIUM 152 TARGET
Nickel 58 Reactions
Quasielastic neutron transfer reactions on samarium isotopes, 11:49312 (RA;US)
SAMARIUM 154 TARGET
Nickel 58 Reactions
Quasielastic neutron transfer reactions on samarium isotopes, 11:49312 (RA;US)
Oxygen 16 Reactions
Heavy ion fusion and fission reactions, 11:49349 (R;US)
SAMPLERS
See also AIR SAMPLERS
Design
Battery pack/controller for high temperature applications, 11:47438 (R;US)
SAMPLING
Computerized Simulation
Improved sample size determination for attributes and variables sampling, 11:49638 (J;US)
Optimization
Improved sample size determination for attributes and variables sampling, 11:49638 (J;US)
SAND PRESSURE
See RESERVOIR PRESSURE
SANDIA LABORATORIES
Technology Transfer
Annual report: technology transfer, Sandia National Laboratories, fiscal year 1985, 11:49599 (R;US)
Waste Disposal
Investigation of ground water contamination potential at Sandia National Laboratories, Albuquerque, NM, 11:48749 (RA;US)
SANDSTONES
Dissolution
Literature review on agents to inhibit mineral dissolution. Project BE4B, Milestone 2, Task 5D, 11:47218 (R;US)
Permeability
Reservoir characterization for numerical simulation. Final report, 11:47215 (R;US)
Porosity
Use of digital image analysis to estimate fluid permeability of porous materials: Application of two-point correlation functions, 11:48949 (J;US)
SARSON
See BRASSICA
SASKATCHEWAN
Uranium Deposits
Geological environment of the vein-type deposits in the Aphebian basement of the Carswell structure on the Athabasca plateau (Northern Saskatchewan). Comparison with other deposits of the same type, 11:47252 (RA;XA)
SAVANNAH RIVER PLANT
Aerial Surveying
Aerial radiological monitoring survey Savannah River Plant, 11:48680 (RA;US)
Decontamination
Radioactive waste spill and cleanup on storage tank at the Savannah River Plant, 11:47308 (R;US)
Endangered Species
Agency interaction at the Savannah River Plant under the Endangered Species Act, 11:47643 (RA;US)
Environmental Policy
Effective environmental auditing on a 200,000 acre plant site, 11:48787 (RA;US)
NPDES program at the Savannah River Plant, 11:48750 (RA;US)
SRP comprehensive ground water protection program. The Savannah River Operations Office's management approach, 11:48782 (RA;US)
Operation
Savannah River Laboratory monthly report, January 1986, 11:47652 (R;US)

Program Management
Status of the graphic overview system in relation to Department of Energy facilities, 11:48789 (RA;US)
Radiation Accidents
Radioactive waste spill and cleanup on storage tank at the Savannah River Plant, 11:47308 (R;US)
Remote Sensing
Comprehensive, integrated, remote sensing at DOE sites, 11:48661 (RA;US)
Multispectral remote sensing at the Savannah River Plant, 11:48662 (RA;US)
Remote sensing of wetlands at the Savannah River Plant, 11:47642 (RA;US)
Reporting Requirements
Savannah River Laboratory monthly report, January 1986, 11:47652 (R;US)
Savannah River Laboratory monthly report, November 1985, 11:47651 (R;US)
Research Programs
Development and implementation of a comprehensive ground water protection program at the Savannah River Plant, 11:48746 (RA;US)
Waste Management
Decommissioning of the CMP Pits, 11:48743 (RA;US)
Environmental protection during construction of the defense waste processing facility at the Savannah River plant, 11:48228 (RA;US)
Water Pollution Control
Clean Water Act and biological studies at the Savannah River Plant, 11:47195 (RA;US)
Water Quality
NPDES program at the Savannah River Plant, 11:48750 (RA;US)

SCALE CONTROL
Reagents
Literature review on agents to inhibit mineral dissolution. Project BE4B, Milestone 2, Task 5D, 11:47218 (R;US)

SCALING
Control
Applied fields for energy conservation, water treatment, and industrial applications. Final report, 11:48321 (R;US)
Inhibition
Literature review on agents to inhibit mineral dissolution. Project BE4B, Milestone 2, Task 5D, 11:47218 (R;US)

SCANDIUM 44
Coincidence Spectrometry
Measurement of electron capture to positron emission ratios in light and medium nuclides, 11:48549 (RA;CS)

SCANDIUM 47
High Spin States
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)

SCANDIUM COMPOUNDS
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)

SCANNERS (IMAGE)

SCHROEDINGER EQUATION
Resonance
Bounds on resolvents of dilated Schroedinger operators with non trapping potentials, 11:49451 (R;FR)

SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS

SCINTILLATION COUNTERS
See also GAS SCINTILLATION DETECTORS
LIQUID SCINTILLATION DETECTORS
SOLID SCINTILLATION DETECTORS
Performance
Complex of scintillation equipments for high-precision measurements of radiocarbon abundance, 11:48575 (RA;CS)
Thin Films
RF sputtered Ce^{+3} activated SiO_2 glass films as scintillators for alpha particles detection, 11:48438 (R;FR)

SCINTILLATION COUNTING
Scintillation Quenching
Influence of quenching effects to the scintillation efficiency of alpha- and beta-particles, 11:48577 (RA;CS)

SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS

SCRUBBERS
See also DRY SCRUBBERS
Maintenance
FGD maintenance guidelines. Volume 1. FGD maintenance programs. Final report, 11:47192 (R;US)

SEA BED
Cables
Ocean thermal conversion (OTEC) project bottom cable protection study. Analysis and selection of protection techniques, 11:47412 (R;US)
Radioactive Waste Disposal
Calculations of radiation field arising from heat generating radioactive waste emplaced in ocean sediments, 11:47292 (R;GB)

SEALS
See also SECURITY SEALS
Materials Testing
Evaluation of selected elastomer O-ring pump seals for service at the Wilsonville, Alabama, Advanced Coal Liquefaction Research and Development Facility, 11:47173 (R;US)
Reliability
Rotary pump seals in 2000 MW power stations, 11:47482 (R;US)

SEAWATER
Metals
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Particulates
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Radioactivity
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radionuclide Migration
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)

Radiological investigations in the Baltic Sea, including the Danish Straits and the Kattegat during 1982 and 1983, 11:48765 (RA;XA)
Releases distribution and pathways for radionuclides in the Baltic Sea, 11:48768 (RA;XA)
Results of the radiological Baltic-monitoring programme of the GDR during 1975-1983, 11:48764 (RA;XA)
Study of radioactive materials in the Baltic Sea. Report of the final research co-ordination meeting held in Helsinki, Finland 24-28 September 1984, 11:48714 (R;XA)
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)

SEAWEEDS
See also FUCUS
Gasification
Energy recovery from aquatic biomass in a thermochemical reactor, 11:47367 (R;US)
Radionuclide Kinetics
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)

SEBACEOUS GLANDS
See SKIN

SECONDARY BATTERIES
See ELECTRIC BATTERIES

SECONDARY COOLANT CIRCUITS
Corrosion
Effects of time, temperature and rotation of water on the corrosion rate of different types of steels, 11:47949 (R;MY)
Heat Transfer
Two-phase alkali-metal experiments in reduced gravity, 11:47599 (R;US)
Hydraulics
Two-phase alkali-metal experiments in reduced gravity, 11:47599 (R;US)
Organic Acids
Industrywide survey of PWR organics. Final report, 11:47500 (R;US)
Steam Condensers
Condenser improvements for PWRs, 11:47498 (R;US)
Steam Generators
Condensate polishers for brackish water-cooled PWRs, 11:47497 (R;US)
Industrywide survey of PWR organics. Final report, 11:47500 (R;US)

SECURITY
Workshop report: nuclear techniques for mine detection research, July 22-25, 1985, Lake Luzerne, New York, 11:47350 (R;US)

SECURITY SEALS
Image Processing
Automatic image processing as a means of safeguarding nuclear material, 11:47348 (R;DD)

SEDIMENTARY ROCKS
See also CARBONATE ROCKS
SANDSTONES
Age Estimation
High precision U-Pb geochronology and implications for the tectonic evolution of the Superior Province, 11:48941 (RA;US)

SEDIMENTS
Chemical Composition
Distributions of trace elements, secondary elements and main elements on sediments and manganese nodules in the Central Pacific south east of Hawaii, 11:48952 (R;DE;In German)
Heat Transfer
In situ heat transfer experiment (ISHTE): Ocean Test Cruise report (Alcyone Cruise, Leg IV) September 1985 (High-level waste disposal), 11:48956 (R;US)
Metals
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Particulates
Fate of particles and particle-reactive trace metals in coastal waters: radioisotope studies in microcosms, 11:48757 (BA;US)
Quantitative Chemical Analysis
Application of thermal and epithermal neutron activation analysis to rock and sediment samples. Advantages of matrix preseparation for rare earth element determination, 11:48058 (R;IT)
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Hazardous waste analysis by direct-linked fused silica capillary column gas chromatography/fourier transform infrared/mass spectrometry, 11:48090 (BA;US)
Radioactivity
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Radiometric Analysis
Radionuclides in sediments - a comparative analysis 1983, 11:48758 (R;DE;In German)
Radionuclide Migration
Development of environmental monitoring programs at four Formerly Utilized Sites Remedial Action Program (FUSRAP) sites, 11:47331 (RA;US)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Los Alamos low-level waste performance assessment status, 11:47338 (R;US)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Radiological investigations in the Baltic Sea, including the Danish Straits and the Kattegat during 1982 and 1983, 11:48765 (RA;XA)
Results of the radiological Baltic-monitoring programme of the GDR during 1975-1983, 11:48764 (RA;XA)
Study of radioactive materials in the Baltic Sea. Report of the final research co-ordination meeting held in Helsinki, Finland 24-28 September 1984, 11:48714 (R;XA)
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)
Sampling
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Nashua Impoundment sediment sampling, June 1985, 11:48753 (R;US)

SEEDLINGS
Germination
Microsite abundance and distribution of woody seedlings in a South Carolina cypress-tupelo swamp, 11:48913 (J;US)

SEISMIC P WAVES
Attenuation
Attenuation and scattering of broadband P-italic and S-italic waves across North America, 11:48944 (J;US)

SEISMIC S WAVES
Attenuation
Attenuation and scattering of broadband P-italic and S-italic waves across North America, 11:48944 (J;US)

SEISMIC SURVEYS
Data Analysis
Evaluation of seismic reflection data in the Davis and Lavender Canyons study area, Paradox Basin, Utah, 11:48939 (R;US)

SELENIUM 76
Energy Levels
Search for the double-β decay of /sup 76/Ge, 11:49307 (J;US)

SELENIUM 78
Heavy Ion Fusion Reactions
Fusion of ^{78}Se + ^{78}Se and ^{82}Se + ^{82}Se, 11:49297 (RA;US)

SELENIUM 78 TARGET
Selenium 78
Fusion of ^{78}Se + ^{78}Se and ^{82}Se + ^{82}Se, 11:49297 (RA;US)

SELENIUM 80 TARGET
Selenium 80 Reactions
Heavy ion fusion and fission reactions, 11:49349 (R;US)

SELENIUM 82
Double Beta Decay
Experimental investigation of double-beta decay in /sup 82/Se, 11:49308 (J;US)
SELENIUM 82 REACTIONS
Heavy Ion Fusion Reactions
Fusion of $^{78}Se + ^{78}Se$ and $^{82}Se + ^{82}Se$, 11:49297 (RA;US)
SELENIUM 82 TARGET
Selenium 82 Reactions
Fusion of $^{78}Se + ^{78}Se$ and $^{82}Se + ^{82}Se$, 11:49297 (RA;US)
SELLAFIELD REPROCESSING PLANT
Radioactive Effluents
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)
SEM (MICROSCOPY)
See SCANNING ELECTRON MICROSCOPY
SEMICONDUCTOR DIODES
See also TUNNEL DIODES
Radiation Hardening
Gigarad-Tolerant power switches and memory elements, 11:47531 (RA;US)
SEMICONDUCTOR LASERS
Magnesium Tellurides
Contribution to study of laser emission in semiconductors II-VI with wide forbidden band: ZnTe and MgZnTe, 11:48257 (R;FR;In French)
Mode Locking
Preliminary results toward injection locking of an incoherent laser array, 11:48259 (RA;US)
Two-dimensional phase-locked semiconductor-laser array, 11:48266 (P;US)
Resonators
Optoelectronic devices and related physical phenomena in thin-film semiconductor configurations. Final report, 11:48255 (R;US)
Zinc Tellurides
Contribution to study of laser emission in semiconductors II-VI with wide forbidden band: ZnTe and MgZnTe, 11:48257 (R;FR;In French)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Activation Analysis
High sensitive activation analysis using an underground laboratory for gamma-spectroscopy, 11:48062 (RA;CS)
Electron-Electron Interactions
Dissipation due to a "valley wave" channel in the quantum Hall effect of a multivalley semiconductor, 11:49445 (J;US)
Electronic Structure
Analysis of the decay of picosecond fluorescence in semiconductors. Criteria for the presumption of electroneutrality during the decay of an exponential electron-hole profile, 11:49448 (J;NL)
Recursion method in the k-space representation, 11:49449 (J;US)
Spin-orbit splitting in semiconductors and insulators from the a-italicb-italic i-italicn-italici-italict-italici-italico-italic pseudopotential, 11:49443 (J;US)
Fluorescence
Analysis of the decay of picosecond fluorescence in semiconductors. Criteria for the presumption of electroneutrality during the decay of an exponential electron-hole profile, 11:49448 (J;NL)
Hall Effect
Dissipation due to a "valley wave" channel in the quantum Hall effect of a multivalley semiconductor, 11:49445 (J;US)
Physical Radiation Effects
Performance of polysilicon gate CMOS devices in space and SDI environments, 11:48309 (R;US)
SEMICONDUCTOR RESISTORS
Microstructure
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
Phase Studies
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
SEPARATION EQUIPMENT
Design
Design concept of cryogenic falling liquid film helium separator, 11:49584 (J;US)
SEPARATION PROCESSES
See also ISOTOPE SEPARATION
REPROCESSING
Simplified kinetic treatment of heavy molecule velocity persistence effects: application to species separation, 11:49107 (J;US)
Economics
Separation of gas mixtures by supported complexes, 11:47175 (R;US)
SEWAGE SLUDGE
Electrolysis
Hydrogen production with the electrocatalytic oxidation system. Final report, 11:47360 (R;US)
SHALE OIL
Chemical Composition
Complex mixtures: comparative chemical and toxicological characterization, 11:48905 (R;US)
Mutagenesis
Complex mixtures: comparative chemical and toxicological characterization, 11:48905 (R;US)
Neoplasms
Toxicological benchmarks for synfuels characterization, 11:47171 (R;US)
Toxicity
Toxicological benchmarks for synfuels characterization, 11:47171 (R;US)

SHEATHS (FUEL)
See FUEL CANS
SHELTERS
Roofs
Effects of edge restraint on slab behavior. Final report, 11:49643 (R;US)
Slabs
Effects of edge restraint on slab behavior. Final report, 11:49643 (R;US)
SHF RADIATION
See RADIOWAVE RADIATION
SHIELDING
A Codes
Nuclear reactor shielding calculation using the ANISN and SABINE-3 nuclear codes, 11:49424 (RA;BR;In Portuguese)
Computer Calculations
Nuclear reactor shielding calculation using the ANISN and SABINE-3 nuclear codes, 11:49424 (RA;BR;In Portuguese)
Maintenance
Designer's guidebook for first wall/blanket/shield assembly, maintenance, and repair, 11:49549 (R;US)
S Codes
Nuclear reactor shielding calculation using the ANISN and SABINE-3 nuclear codes, 11:49424 (RA;BR;In Portuguese)
SHIELDS
Design
Radiation transport phenomena in SP-100 shielding designs, 11:47565 (RA;US)
Performance
Radiation transport phenomena in SP-100 shielding designs, 11:47565 (RA;US)
SHIFT PROCESSES
Catalysts
Low-rank coal liquefaction mechanisms. Final report for the period ending March 31, 1986, 11:47150 (R;US)
SHOCK WAVES
Attenuation
Attenuation of shock waves in copper and stainless steel, 11:47946 (R;US)

Computerized Simulation
Attenuation of shock waves in copper and stainless steel, 11:47946 (R;US)
S Codes
Attenuation of shock waves in copper and stainless steel, 11:47946 (R;US)
SHOES
See CLOTHING
SHOTFIRING
See EXPLOSIVE FRACTURING
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Calibration
CDF end plug e,m, calorimeter calibration and monitoring, 11:48528 (RA;AT)
Construction
Soudan 2 nucleon decay experiment, 11:49113 (R;US)
Design
Status of the Soudan 2 nucleon decay experiment, 11:48436 (R;US)
Monitoring
CDF end plug e,m, calorimeter calibration and monitoring, 11:48528 (RA;AT)
Multiwire Proportional Chambers
Development of calorimeters using thin chambers operating in a high gain mode, 11:48468 (RA;AT)
New high gain thin gap detectors for the OPAL hadron calorimeter, 11:48469 (RA;AT)
Production and tests of gas tube chambers for the endcaps of the L3 uranium hadron calorimeter, 11:48499 (RA;AT)
Stack of bidimentional MWPCs using analogue read-out as a part of an electromagnetic calorimeter, 11:48498 (RA;AT)
Performance Testing
Calorimeters: comparison between gaseous readout techniques and alternatives, 11:48467 (RA;AT)
Target calorimeter and its streamer tube system of the CHARM II calorimeter, 11:48465 (RA;AT)
Uranium sampling calorimetry with gas chamber readout, 11:48466 (RA;AT)
Readout Systems
Calorimeters: comparison between gaseous readout techniques and alternatives, 11:48467 (RA;AT)
Uranium sampling calorimetry with gas chamber readout, 11:48466 (RA;AT)
Scintillator-Photodiode Detectors
Results from a test of a Cu-scintillator calorimeter module with photodiode readout, 11:48610 (R;DE)
SHUTIN PRESSURE

SILANES
Chemical Reactions
Condensation products of methyl chloro silane with dioxybenzenes, 11:48195 (TJ;US)
Photoconductivity
Photoconductivity and light-induced change in a-italic-Si:H, 11:48035 (J;US)
SILICA
Absorption Spectra
Two-photon induced fluorescence and other optical effects in irradiated and doped fused silica, 11:49077 (R;US)
Crystal Defects
Surface areas by positron annihilation spectroscopy, 11:48047 (BA;US)
Deposition
Sol-gel derived thin films: critical issues, 11:48027 (R;US)
Electron Density
Surface areas by positron annihilation spectroscopy, 11:48047 (BA;US)
Gamma Spectroscopy
Surface areas by positron annihilation spectroscopy, 11:48047 (BA;US)
Raman Spectra
Two-photon induced fluorescence and other optical effects in irradiated and doped fused silica, 11:49077 (R;US)
Solubility
Model of gypsum, calcite and silica solubilities for application to geothermal waters over a wide range of temperature, P/sub CO_2/ and ionic strength. Final technical report, October 1, 1983-September 30, 1984, 11:47446 (R;US)
Surface Properties
Surface areas by positron annihilation spectroscopy, 11:48047 (BA;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
Absorption Spectra
Effect of static charge on the infrared spectrum of amorphous silicon, 11:48033 (J;US)
Annealing
On the kinetics of thermal donor formation in silicon, 11:48042 (J;US)
Auger Electron Spectroscopy
Initial stage of thermal oxidation of the Si(111)-(7 x 7) surface, 11:48036 (J;US)
Carrier Lifetime
Contactless measurement of bulk free-carrier lifetime in cast polycrystalline silicon ingots, 11:48029 (J;US)
Charged Particle Detection
Detection of charged particles in amorphous silicon layers, 11:48455 (RA;AT)
Electron Diffraction
Initial stage of thermal oxidation of the Si(111)-(7 x 7) surface, 11:48036 (J;US)
Electronic Structure
Effect of static charge on the infrared spectrum of amorphous silicon, 11:48033 (J;US)
Initial stage of thermal oxidation of the Si(111)-(7 x 7) surface, 11:48036 (J;US)
Impurities
On the kinetics of thermal donor formation in silicon, 11:48042 (J;US)
Infrared Spectra
Contactless measurement of bulk free-carrier lifetime in cast polycrystalline silicon ingots, 11:48029 (J;US)
Interfaces
Overview of electron paramagnetic resonance studies of Si-SiO_2 interface states, 11:48025 (R;US)
Lattice Vibrations
Effect of static charge on the infrared spectrum of amorphous silicon, 11:48033 (J;US)
Oxidation
Initial stage of thermal oxidation of the Si(111)-(7 x 7) surface, 11:48036 (J;US)

Oxygen 16 Reactions
Measurement of stopping powers of heavy ions on silicon using sandwich targets, 11:49273 (RA;BR)
Photoelectron Spectroscopy
Initial stage of thermal oxidation of the Si(111)-(7 x 7) surface, 11:48036 (J;US)
Reflective Coatings
Silicon diffraction gratings for multilayer structures, 11:48224 (R;US)
Reflectivity
Time-resolved reflectivity measurements on silicon and germanium using a pulsed excimer KrF laser heating beam, 11:48034 (J;US)

SILICON 28 REACTIONS
Alpha-Transfer Reactions
Anomalous heavy ion optical potentials and dynamic polarization, 11:49405 (RA;BR)
Elastic Scattering
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Heavy Ion Fusion Reactions
Fusion evaporation residues and the distribution of reaction strength in $^{16}O + {}^{40}Ca$ and $^{28}Si + {}^{28}Si$ reactions, 11:49285 (RA;US)
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Incomplete Fusion Reactions
Coincidence measurements between evaporation residues and light particles produced in $^{16}O + {}^{40}Ca$ and $^{28}Si + {}^{40}Ca$ reactions, 11:49286 (RA;US)
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Inelastic Scattering
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Transfer Reactions
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)

SILICON 28 TARGET
Carbon 12 Reactions
Entrance channel limit on the fusion of /sup 28/Si with /sup 12/C at high energy, 11:49278 (J;US)
Oxygen 16 Reactions
Effect of α-transfer reactions on the elastic scattering of $^{28}Si + {}^{16}O$ at E sub(CM) =31.6 MeV, 11:49275 (RA;BR)
Silicon 28 Reactions
Fusion evaporation residues and the distribution of reaction strength in $^{16}O + {}^{40}Ca$ and $^{28}Si + {}^{28}Si$ reactions, 11:49285 (RA;US)

SILICON 30 REACTIONS
Elastic Scattering
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Inelastic Scattering
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)
Transfer Reactions
Quasi-elastic processes in Si-induced reactions on Pb and Ca, 11:49345 (RA;US)

SILICON 32
Low Level Counting
Preliminary results of the underground laboratory in Freiberg, GDR , 11:48562 (RA;CS)

SILICON ALLOYS
Crystal Structure
Ordering and decomposition in semiconductor alloys, 11:48041 (J;US)
Decomposition
Ordering and decomposition in semiconductor alloys, 11:48041 (J;US)

SILICON BORIDES
Crystal Structure
Crystal structure of SiB_6, 11:47989 (J;US)

SILICON CARBIDES
Corrosion
Mechanical properties and corrosion behavior of structural ceramics exposed to coal gasification environments, 11:47146 (R;US)
Flexural Strength
Improved consolidation of silicon carbide, 11:47982 (R;US)
Fracture Properties
Mechanical properties and corrosion behavior of structural ceramics exposed to coal gasification environments, 11:47146 (R;US)
Hall Effect
Compensation in epitaxial cubic SiC films, 11:47984 (R;US)
Physical Properties
Sintered alpha silicon carbide ceramics for high temperature structural application - Status review and recent developments, 11:48001 (BA;CN)
Surface Properties
Characterization of silicon carbide and nitride powder surfaces, 11:48000 (BA;US)

SILICON HYDRIDES
See SILANES

SILICON IONS
Energy Losses
Slowing down and straggling of protons and heavy ions in matter, 11:49429 (R;NL)
Slowing-Down
Slowing down and straggling of protons and heavy ions in matter, 11:49429 (R;NL)

SILICON NITRIDES
Bonding
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Chemical Composition
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Chemical Preparation
Solid combustion processes for improved synthesis of non-oxide materials, 11:48216 (R;US)
Creep
Oxidation and creep behaviour of dense silicon nitride materials with different compositions, 11:47981 (R;DE;In German)
Density
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Elasticity
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Fabrication
Ceramic life prediction methodology. Final report, 11:47978 (R;US)
Fractures
Ceramic life prediction methodology. Final report, 11:47978 (R;US)
Grinding
Particle size reduction of Si_3N_4 with Si_3N_4 milling hardware, 11:47983 (R;US)
Microstructure
Oxidation and creep behaviour of dense silicon nitride materials with different compositions, 11:47981 (R;DE;In German)
Oxidation
Oxidation and creep behaviour of dense silicon nitride materials with different compositions, 11:47981 (R;DE;In German)
Sintering
Manufacture of sintered silicon nitrides, 11:47997 (TG;US)
Stresses
Ceramic life prediction methodology. Final report, 11:47978 (R;US)
Surface Properties
Characterization of silicon carbide and nitride powder surfaces, 11:48000 (BA;US)

Thermal Conductivity
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Thermal Expansion
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
SILICON OXIDES
See also QUARTZ
SILICA
Catalytic Effects
Methane suppression from metal-zeolite catalysts in synthesis gas conversion, 11:47368 (J;US)
Interfaces
Overview of electron paramagnetic resonance studies of Si-SiO_2 interface states, 11:48025 (R;US)
Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS
SILICON SOLAR CELLS
Carrier Lifetime
Contactless measurement of bulk free-carrier lifetime in cast polycrystalline silicon ingots, 11:48029 (J;US)
Efficiency
Potential of thin-film solar cell module technology, 11:47401 (BA;US)
Optical Properties
Investigation of the optical properties of solar cells. Final report, 11:47385 (R;DE;In German)
Physical Radiation Effects
Reduction of radiation damage in solar cells. A study of radiation defects in silicon. Final Report, 11:47391 (R;FR)
Technology Assessment
Potential of thin-film solar cell module technology, 11:47401 (BA;US)
SILVER
Materials Recovery
Method for the recovery of silver from silver zeolite, 11:48129 (P;US)
Purification
Method for the recovery of silver from silver zeolite, 11:48129 (P;US)
Quantitative Chemical Analysis
Determination of total sulphur in soil - a comparison of methods, 11:48707 (R;DE;In German)
Sulfur 32 Reactions
Coincidence measurements of intermediate mass fragments produced in /sup 32/S-induced reactions on Ag at E-italic/A-italic = 22.5 MeV, 11:49328 (J;US)
SILVER 107 BEAMS
Acceleration
Acceleration of silver beams with the Linac accelerator, 11:48352 (RA;US)
Particle Identification
Acceleration of silver beams with the Linac accelerator, 11:48352 (RA;US)
SILVER 107 TARGET
Neutron Reactions
Evaluation of (n, 2n) reaction cross sections for ^{46}Ti, ^{107}Ag and ^{109}Ag, 11:49329 (R;PL)
SILVER 108 TARGET
Krypton 84 Reactions
Some aspects of heavy ion physics between 20 and 50 MeV/u, 11:49348 (R;FR)
SILVER 109 TARGET
Neutron Reactions
Evaluation of (n, 2n) reaction cross sections for ^{46}Ti, ^{107}Ag and ^{109}Ag, 11:49329 (R;PL)
SILVER 110
Radiation Monitoring
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)
Radioecological Concentration
Local patterns of the distribution of radionuclide releases from the Loviisa nuclear power station, 11:48769 (RA;XA)
SIMS
See ION MICROPROBE ANALYSIS
MASS SPECTROSCOPY
SITE SELECTION
Evaluation
Ranking system for mixed radioactive and hazardous waste sites, 11:47300 (RA;US)
Risk Assessment
Development of improved risk assessment tools for prioritizing hazardous and radioactive-mixed waste disposal sites, 11:47301 (RA;US)
SITES (REACTOR)
See REACTOR SITES
SKELETON
Radionuclide Kinetics
United States Transuranium Registry annual report, October 1, 1984-September 30, 1985, 11:48833 (R;US)
X-Ray Emission Analysis
Elemental concentrations in bones from an ancient Egyptian mummy and from a recent man, 11:48900 (R;US)
SKIN
See also HAIR
Biological Radiation Effects
UV-induced skin cancers, 11:48878 (RA;AU)
Radiation Doses
Dose factors for contamination of skin and clothing, 11:48832 (R;DE;In German)
Surface Contamination
Dose factors for contamination of skin and clothing, 11:48832 (R;DE;In German)
SKIN DISEASES
See also TELANGIECTASIS
DNA Repair
Trace elements and excision repair in light sensitive skin diseases, 11:48895 (RA;AT)
Iron Ions
Determination of iron levels in cutaneous porphyrias, 11:48798 (RA;AT)
SLABS
Thicker than PLATES, primarily for use in shielding studies.
Testing
Effects of edge restraint on slab behavior. Final report, 11:49643 (R;US)
SLAGS
Chemical Composition
Mechanical properties and corrosion behavior of structural ceramics exposed to coal gasification environments, 11:47146 (R;US)
Chemical Reactions
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Corrosive Effects
Mechanical properties and corrosion behavior of structural ceramics exposed to coal gasification environments, 11:47146 (R;US)
SLC
See STANFORD LINEAR COLLIDER
SLC DETECTORS
Data Acquisition Systems
Front-end data processing the SLD data acquisition system, 11:48617 (R;US)
Data Processing
Front-end data processing the SLD data acquisition system, 11:48617 (R;US)
SLD

SODA ASH
See SODIUM CARBONATES
SODIUM
Activation Analysis
Assay of ceramic headers for sodium by neutron activation, 11:48079 (R;US)
Chemical Reaction Kinetics
Experimental and theoretical study on the reaction of hot liquid sodium with concretes, 11:47704 (R;DE;In German)
Chemical Reactions
Effects of the presence of core debris on the behavior of sodium-concrete reactions, 11:47690 (RA;US)
Corrosive Effects
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)
Effect of long-term operating exposure to sodium and steam-water mixture on creep strength and fatigue properties (Cr20Ni35Ti, Cr18Ni11, and Cr2.25Mo1Nb), 11:47938 (RA;CS;In Czech)
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Excited States
Multiply-excited states of the sodium isoelectronic sequence, 11:49040 (RA;US)
Metallurgical Effects
Effect of long-term operating exposure to sodium and steam-water mixture on creep strength and fatigue properties (Cr20Ni35Ti, Cr18Ni11, and Cr2.25Mo1Nb), 11:47938 (RA;CS;In Czech)
Experimental approach to the study of the effect of sodium on long-term properties, 11:47937 (RA;CS;In Czech)
Some fundamental studies of metal-induced embrittlement, 11:47909 (R;GB)
Pinch Effect
GAMBLE-II imploding sodium plasma. 2. Uniformly filled z-pinch. Memorandum report, October 1985-February 1986, 11:49098 (R;US)
SODIUM 22
Coincidence Spectrometry
Measurement of electron capture to positron emission ratios in light and medium nuclides, 11:48549 (RA;CS)
Fresh Water
Cosmogenic sodium-22 and dating of natural fresh waters, 11:48933 (RA;CS)
Low Level Counting
Cosmogenic sodium-22 and dating of natural fresh waters, 11:48933 (RA;CS)
Uptake
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)
SODIUM CARBONATES

SODIUM PHOSPHATES
Crystal Doping
Cation effects in $NaPO_3$ glasses doped with metal nitrides and oxides, 11:48046 (J;US)
Melting Points
Cation effects in $NaPO_3$ glasses doped with metal nitrides and oxides, 11:48046 (J;US)
Thermal Expansion
Cation effects in $NaPO_3$ glasses doped with metal nitrides and oxides, 11:48046 (J;US)

SODIUM SILICATES
Density
Density of molten sodium aluminosilicates, 11:48045 (J;US)
Neptunium Ions
Photoelectron, nuclear gamma-ray and infrared absorption spectroscopic studies of neptunium in sodium silicate glass, 11:48014 (R;US)

SODIUM SULFATES
Chemical Reaction Yield
Mechanism of deposition in coal-fired gas turbine systems, October 1, 1985-October 1, 1986, 11:47201 (R;US)
Vapor Condensation
Mechanism of deposition in coal-fired gas turbine systems, October 1, 1985-October 1, 1986, 11:47201 (R;US)

SODIUM-SULFUR BATTERIES
Solid Electrolytes
Ceramic electrolytes for energy storage, 11:47757 (BA;US)
Strength improvement in beta" alumina by incorporation of zirconia, 11:47755 (R;US)
Technology Assessment
Mission and status of the U.S. Department of Energy's battery energy storage program, 11:47759 (BA;US)

SOILING
See SURFACE CONTAMINATION

SOILS
Alpha Spectroscopy
Impulse ionization chamber for spectrometry of low-level alpha-activities and fission products, 11:48555 (RA;CS)
Contamination
Allowable residual contamination levels for decommissioning. Part 2. A summary of example results, 11:47329 (RA;US)
Assessment of alternatives for long-term management of uranium ore residues and contaminated soils located at DOE's Niagara Falls Storage Site, 11:48711 (RA;US)
Decommissioning of the CMP Pits, 11:48743 (RA;US)
Fermilab soil activation experience, 11:48712 (RA;US)
Low Level Counting
Application of low-level gamma spectrometers constructed in CLRP for measurements of environmental samples and building materials, 11:48546 (RA;CS)
NMR Spectra
Nuclear magnetic resonance spectroscopy of soils and related materials. Relaxation of ^{13}C nuclei in cross polarization nuclear magnetic resonance experiments, 11:48709 (J;GB)
Quantitative Chemical Analysis
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Computer-controlled system for rapid soil analysis of ^{226}Ra, 11:48093 (BA;US)
Radionuclide Migration
Fermilab soil activation experience, 11:48712 (RA;US)
Investigation of the subsurface environment at the Idaho National Engineering Laboratory Radioactive Waste Management Complex, 11:47336 (RA;US)
Los Alamos low-level waste performance assessment status, 11:47338 (R;US)
Sampling
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Installation restoration program. Phase II. Confirmation/quantification. Stage I report for Williams Air Force Base, Chandler, Arizona. Final report, September 1984-January 1986, 11:48706 (R;US)
Structural Chemical Analysis
Nuclear magnetic resonance spectroscopy of soils and related materials. Relaxation of ^{13}C nuclei in cross polarization nuclear magnetic resonance experiments, 11:48709 (J;GB)

SOLAR ACTIVITY

Heat Losses
Test results of immersed-coil heat exchangers and liquid storage tanks used in the packaged systems program, 11:47423 (R;US)
Performance
Test results of immersed-coil heat exchangers and liquid storage tanks used in the packaged systems program, 11:47423 (R;US)
SOLAR NEUTRINOS
Prior to July, 1975 information was indexed to NEUTRINOS.
Neutrino Detection
Detection of single atoms by resonance ionization spectroscopy, 11:49068 (R;US)
Feasibility studies of accelerator mass spectrometry of ^{205}Pb and its application to solar neutrino detection, 11:48961 (RA;US)
SOLAR ONE POWER PLANT
See BARSTOW SOLAR PILOT PLANT
SOLAR PONDS
Erosion
Physical model of gradient zone erosion in thermohaline systems, 11:47428 (R;US)
Temperature Gradients
Physical model of gradient zone erosion in thermohaline systems, 11:47428 (R;US)
SOLAR PROMINENCES
Solar-Geophysical Data Number 499, March 1986. Part 2 (comprehensive reports). Data for September 1985, and miscellanea, 11:49011 (R;US)
Solar-Geophysical Data Number 499, March 1986. Supplement, 11:49012 (R;US)
SOLAR RADIATION
X Radiation
Solar-Geophysical Data Number 499, March 1986. Part 2 (comprehensive reports). Data for September 1985, and miscellanea, 11:49011 (R;US)
SOLAR RADIO BURSTS
Solar-Geophysical Data Number 499, March 1986. Part 2 (comprehensive reports). Data for September 1985, and miscellanea, 11:49011 (R;US)
SOLAR REGENERATORS
System or device for regenerating absorbent solutions by solar heating, used in absorption solar air conditioning.
Heat Transfer
Open-cycle absorption solar cooling. Part II. Heat and mass transfer analysis for glazed collector/regeneration. Final report, 11:47419 (R;US)
Open-cycle absorption solar cooling. Part I. Combined heat and mass transfer on an open flow liquid absorbent solar collector/regenerator. Final report, 11:47418 (R;US)
Mass Transfer
Open-cycle absorption solar cooling. Part II. Heat and mass transfer analysis for glazed collector/regeneration. Final report, 11:47419 (R;US)
Open-cycle absorption solar cooling. Part I. Combined heat and mass transfer on an open flow liquid absorbent solar collector/regenerator. Final report, 11:47418 (R;US)
SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS
SOLAR THERMAL POWER PLANTS
Computerized Simulation
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Design
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Heat Storage
Advanced latent heat of fusion thermal energy storage for solar power systems, 11:47410 (BA;US)
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
Heat Transfer
Numerical study of the performance of latent heat storage for solar dynamic power systems, 11:47411 (BA;US)
SOLAR WIND
Trapping
Periodic amplitude variations in Jovian continuum radiation. Progress report for period ending February 1986, 11:48959 (R;US)
SOLENOIDS
Alignment
Misalignment of axial B-field in the advanced test accelerator, 11:48366 (R;US)
SOL-GEL PROCESS
Droplets
Turbulent dispersion results from gel-sphere processes and application to centrifugal contactors, 11:48081 (R;US)

Quality Control
Turbulent dispersion results from gel-sphere processes and application to centrifugal contactors, 11:48081 (R;US)
SOLID CLUSTERS
Chemistry
Chemistry of isolated transition metal clusters, 11:48134 (R;US)
Reviews
Chemistry of isolated transition metal clusters, 11:48134 (R;US)
SOLID ELECTROLYTES
Strength improvement in beta" alumina by incorporation of zirconia, 11:47755 (R;US)
Materials Testing
Beta"-alumina solid electrolytes, 11:47756 (BA;US)
Ceramic electrolytes for energy storage, 11:47757 (BA;US)
SOLID LUBRICANTS
Sputtered cadmium oxide as a surface pretreatment for graphite solid lubricant films, 11:48022 (R;US)
SOLID SCINTILLATION DETECTORS
See also BGO DETECTORS
NAI DETECTORS
PLASTIC SCINTILLATION DETECTORS
Performance
Tests of prototype hexagon BGO detectors for the inner array of the γ-ray facility for ATLAS, 11:48433 (RA;US)
Portable Equipment
Measurements of gamma radiation in some Tatra caves with the portable scintillation counter for TL and ESR dating, 11:48592 (RA;CS)
SOLID STATE LASERS
Chinese Journal of Lasers (selected articles), 11:48265 (TJ;US)
Design
Recent progress in high repetition rate high power, line-narrowed alexandrite laser, 11:48269 (BA;US)
Laser Materials
Alexandrite laser systems: Scaling to kilowatt powers, 11:48270 (BA;US)
Recent progress in high repetition rate high power, line-narrowed alexandrite laser, 11:48269 (BA;US)
Theoretical methods for the study of transition metals in crystals, 11:48272 (BA;US)
Trivalent cerium doped crystals as tunable laser systems: Two bad apples, 11:48271 (BA;US)
Optical Pumping
Trivalent cerium doped crystals as tunable laser systems: Two bad apples, 11:48271 (BA;US)
Performance
Recent progress in high repetition rate high power, line-narrowed alexandrite laser, 11:48269 (BA;US)
Power
Alexandrite laser systems: Scaling to kilowatt powers, 11:48270 (BA;US)
Recent progress in high repetition rate high power, line-narrowed alexandrite laser, 11:48269 (BA;US)
Tuning
Theoretical methods for the study of transition metals in crystals, 11:48272 (BA;US)
Trivalent cerium doped crystals as tunable laser systems: Two bad apples, 11:48271 (BA;US)
SOLIDS
Elasticity
Model of cohesive properties and structural phase transitions in non-metallic solids, 11:49441 (R;US)
Mathematical Models
Model of cohesive properties and structural phase transitions in non-metallic solids, 11:49441 (R;US)
Multi-Photon Processes
Detection of single atoms by resonance ionization spectroscopy, 11:49068 (R;US)
Phase Transformations
Model of cohesive properties and structural phase transitions in non-metallic solids, 11:49441 (R;US)
SOLIDS FLOW
Flow Rate
Acoustic cross-correlation flowmeter for solid-gas flow, 11:48288 (P;US)
Metering
Acoustic cross-correlation flowmeter for solid-gas flow, 11:48288 (P;US)
SOLVENT PROPERTIES
Mathematical Models
Solvent reorganization in optical and thermal electron-transfer processes, 11:48184 (J;US)
SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS
SOMATIC CELLS
See also STEM CELLS
Genetic Radiation Effects
Assays for human genotoxicity monitoring: in vivo dosimeters versus surrogate markers for genotoxic disease, 11:48858 (RA;AU)
SONAR
Performance
Multiple levels of representation and problem-solving using maps from sonar data, 11:48239 (RA;US)
SOUND NAVIGATION AND RANGING
See SONAR
SOUTH AUSTRALIA
Uranium Deposits
Mt. Painter uranium deposits, 11:47255 (RA;XA)
SOUTH CAROLINA
Geologic Structures
Identification of a northwest trending seismogenic graben near Charleston, South Carolina, 11:48942 (R;US)
SOUTH KOREA
See REPUBLIC OF KOREA
SOVIET UNION
See USSR
SP GROUPS
Irreducible Representations
Closed, analytic, boson realizations for Sp(4), 11:49459 (J;US)
SPACE FLIGHT
Financing
Can the US afford a lunar base, 11:49597 (R;US)
SPACE HEATERS
Performance
Advanced heat-pipe heat exchanger and microprocessor-based modulating burner controls development. Annual report, January 1985-January 1986, 11:47238 (R;US)
SPACE LATTICES
See CRYSTAL LATTICES
SPACE POWER REACTORS
A Codes
ATHENA: a thermal hydraulic simulation code for space reactor system design and analysis, 11:47569 (RA;US)
Simulation of the preliminary General Electric SP-100 space reactor concept using the ATHENA computer code, 11:47571 (RA;US)
After-Heat Removal
Decay heat thermal management of SP-100 systems, 11:47663 (RA;US)
Configuration
Reactor/organic Rankine conversion - a sota solution to near term high power needs in space, 11:47604 (BA;US)
Tethered nuclear power for the space station, 11:47603 (BA;US)
Coolants
Thawing of lithium in the SP-100 reactor core configuration, 11:47538 (RA;US)
Design
ATHENA: a thermal hydraulic simulation code for space reactor system design and analysis, 11:47569 (RA;US)
Comparison of electric propulsion orbit transfer with SP-100 class reactors, 11:47556 (RA;US)
Liquid metal reactor (LMR) design flexibility for space power needs, 11:47562 (RA;US)
Nuclear design of compact reactors for space application, 11:47564 (RA;US)
Nuclear electric propulsion system and trajectory analysis for a Mars payload transfer system, 11:47555 (RA;US)
Particle bed reactor propulsion vehicle performance and characteristics as an orbital transfer rocket, 11:47558 (RA;US)
PEGASUS: a multi-megawatt nuclear electric propulsion system, 11:47557 (RA;US)

Pellet bed reactor for multi-modal space power, 11:47594 (RA;US)
Preliminary assessment of the accident probabilities of a NERVA derivative reactor for space power applications, 11:47658 (RA;US)
SNPSAM - space nuclear power system analysis model, 11:47568 (RA;US)
Space electronuclear generators the French approach, 11:47567 (RA;US)
Status of CEA reactor studies for a 200 kWe turbo electric space power system, 11:47563 (RA;US)
Transient analysis of space reactors, 11:47570 (RA;US)
Use of nuclear energy for bimodal applications in space, 11:47522 (R;US)

Electric Generators
Cryogenic aluminum-wound generator rotor concept for space nuclear reactor systems, 11:47591 (RA;US)

Electromagnetic Pumps
Self-induced thermoelectric-electromagnetic pump model for SP-100 systems, 11:47540 (RA;US)
Thermoelectric electromagnetic (TEM) pump test results, 11:47576 (RA;US)

Energy Conversion
Performance aspects of integrating 100 kW/sub e/ class of space reactor systems, 11:47544 (RA;US)

Fiber Optics
Review of the effects of radiation on optical fiber waveguides, 11:47533 (RA;US)

Fuel Cans
Oxygen transport in a high temperature reactor, 11:47548 (RA;US)
SP-100 thermionic reactor: fueled emitter lifetime, 11:47550 (RA;US)

Fuel Elements
Cermet fuels for space power systems, 11:47551 (RA;US)
Irradiation behavior of nitride fuel compared, 11:47553 (RA;US)
Neutronics characteristics of space power reactors, 11:47566 (RA;US)
Optimization of uranium nitride fuel designs for SP-100, 11:47552 (RA;US)

Fuel Pellets
Uranium nitride fuel fabrication process development, 11:47545 (RA;US)

Fuel Pins
Operating conditions of the SP-1 fuel test: a basis for post-test performance analysis, 11:47546 (RA;US)
Postirradiation examination results from SP-1, 11:47547 (RA;US)
Predicting nitride fuel performance for SP-100 conditions, 11:47549 (RA;US)
SP-1 and SP-2 fuel pin fabrication, 11:47554 (RA;US)
SP-100 thermionic reactor: fueled emitter lifetime, 11:47550 (RA;US)

Heat Exchangers
Liquid droplet heat exchanger studies, 11:47539 (RA;US)

Heat Pipes
Heat pipe entrainment analysis via optical methods, 11:47541 (RA;US)
Simulation of heat pipe rapid transient performance using a multi-nodal implicit finite difference scheme, 11:47537 (RA;US)

Integrated Circuits
Optimizing the radiation hardness of a Si-gate CMOS process, 11:47530 (RA;US)

Lifetime
Burnup versus criticality limitations for a potential space reactor design in the 1 to 100 MWth range, 11:47597 (RA;US)

Materials
Availability of niobium and tantalum-base alloy products for space nuclear reactors, 11:47580 (RA;US)
Composite aluminum conductors for pulsed power applications at hydrogen temperatures, 11:47590 (RA;US)
Current state of the art in molybdenum and tungsten mill products, 11:47579 (RA;US)
High temperature in-reactor testing of Nb-1Zr, PWC-11, and T-111, 11:47587 (RA;US)
Irradiation swelling in self-ion irradiated niobium, 11:47586 (RA;US)
Molybdenum-rhenium alloy development for space nuclear power applications, 11:47583 (RA;US)
Observations on the as-welded (GTAW) bend ductility of Mo-13 Re alloy, 11:47584 (RA;US)
Radiation effects on molybdenum and molybdenum alloys, 11:47588 (RA;US)
Refractory metal-matrix composites for space nuclear power applications, 11:47582 (RA;US)
Selection of structural materials for space nuclear power generators, 11:47581 (RA;US)
Thermal aging effects in refractory metal alloys, 11:47585 (RA;US)

Microelectronic Circuits
Radiation damage analysis for state of the art microelectronics, 11:47528 (RA;US)

MOSFET
Radiation and high temperature effects in MOSFET, 11:47529 (RA;US)

Neutron Transport
Recent BeO-reflector-controlled reactor experiments in, 11:47572 (RA;US)

Nuclear Fuels
Neutronics characteristics of space power reactors, 11:47566 (RA;US)

Organic Compounds
TGA technique for determining the dose and dose-rate susceptibility of organic materials in nuclear power systems, 11:47532 (RA;US)

Performance
ATHENA: a thermal hydraulic simulation code for space reactor system design and analysis, 11:47569 (RA;US)
Particle bed reactor propulsion vehicle performance and characteristics as an orbital transfer rocket, 11:47558 (RA;US)
Simulation of the preliminary General Electric SP-100 space reactor concept using the ATHENA computer code, 11:47571 (RA;US)
SNPSAM - space nuclear power system analysis model, 11:47568 (RA;US)
Status of CEA reactor studies for a 200 kWe turbo electric space power system, 11:47563 (RA;US)
Transient analysis of space reactors, 11:47570 (RA;US)

Performance Testing
Space nuclear power plant technology development philosophy for a ground engineering phase, 11:47605 (BA;US)

Physical Radiation Effects
Survivability of space nuclear power, 11:47534 (RA;US)

Power Conditioning Circuits
TEC and ultralloys for high-power space systems, 11:47608 (BA;US)

Power Transmission Lines
Mass and loss analysis of a space-type radiation cooled insulated DC transmission line, 11:47589 (RA;US)

Primary Coolant Circuits
Two-phase alkali-metal experiments in reduced gravity, 11:47599 (R;US)

Radiation Hardening
Survivability of space nuclear power, 11:47534 (RA;US)

Radiation Hazards
Tethered nuclear power for the space station, 11:47603 (BA;US)

Radiators
Experimental test of liquid droplet radiator performance, 11:47535 (RA;US)
Heat-pipe cooled radiator for a Brayton cycle space power system, 11:47536 (RA;US)
Rotating bubble membrane radiator for space applications, 11:47600 (R;US)

Reactor Accidents
Decay heat thermal management of SP-100 systems, 11:47663 (RA;US)

Inherent safety of the thermionic space reactor, 11:47660 (RA;US)
Launch pad safety and the space reactor disassembly accident, 11:47659 (RA;US)
Preliminary assessment of the accident probabilities of a NERVA derivative reactor for space power applications, 11:47658 (RA;US)
Reentry safety of the thermionic space reactor, 11:47661 (RA;US)
Reactor Components
Ammonia cleanup of SP-100 lithium components, 11:47574 (RA;US)
Lithium draining techniques and effectiveness, 11:47575 (RA;US)
Reactor Control Systems
Application of reflected kinetics to nuclear space reactor scoping studies, 11:47631 (RA;US)
Reactor Cooling Systems
Design and test program for a micro-gravity convective condensation experiment, 11:47542 (RA;US)
Reactor Materials
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Reactor Safety
Inherent safety of the thermionic space reactor, 11:47660 (RA;US)
Liquid metal reactor (LMR) design for operational reliability and safety, 11:47664 (RA;US)
Reentry safety of the thermionic space reactor, 11:47661 (RA;US)
Study of nuclear reactor disposal/replacement concepts for the growth space station, 11:47662 (RA;US)
Reactor Shutdown
Decay heat thermal management of SP-100 systems, 11:47663 (RA;US)
Reliability
Liquid metal reactor (LMR) design for operational reliability and safety, 11:47664 (RA;US)
Research Programs
SP-100 program developments, 11:47601 (BA;US)
Reviews
SP-100 program developments, 11:47601 (BA;US)
S Codes
SNPSAM - space nuclear power system analysis model, 11:47568 (RA;US)
Secondary Coolant Circuits
Two-phase alkali-metal experiments in reduced gravity, 11:47599 (R;US)
Semiconductor Diodes
Gigarad-Tolerant power switches and memory elements, 11:47531 (RA;US)
Shielding
Tethered nuclear power for the space station, 11:47603 (BA;US)
Shields
Radiation transport phenomena in SP-100 shielding designs, 11:47565 (RA;US)
Specifications
Space electronuclear generators the French approach, 11:47567 (RA;US)
Stirling Engines
Overview of the 1985 NASA Lewis Research Center SP-100 free-piston Stirling engine activities, 11:47606 (BA;US)
Superconducting Wires
Inorganic dielectric insulation for superconducting Nb_3Sn wire, 11:47592 (RA;US)
T Codes
Transient analysis of space reactors, 11:47570 (RA;US)
Technology Assessment
Space nuclear power plant technology development philosophy for a ground engineering phase, 11:47605 (BA;US)
Static and dynamic high power, space nuclear electric generating systems, 11:47607 (BA;US)
Test Facilities
SP-100 ground engineering system test at Hanford, 11:47577 (RA;US)
SP-100 ground engineering system test facility for the Nevada Test Site, 11:47578 (RA;US)
Space-power advanced components engineering facility, 11:47573 (RA;US)
Thermionic Converters
Lifetime performance projections for in-core thermionic converters, 11:47560 (RA;US)
Thermionic Fuel Elements
TEC and ultralloys for high-power space systems, 11:47608 (BA;US)
Thermoelectric Generators
Analysis of the transient behavior of thermoelectric generators, 11:47561 (RA;US)
Uses
Application of nuclear power to the mining of the Martian moons, 11:47526 (RA;US)
Lunar nuclear power feasibility study, 11:47525 (RA;US)
Power requirements for space resource utilization, 11:47527 (RA;US)
Space power needs and forecasted technologies for the nineties and beyond, 11:47524 (RA;US)

SPACE REFLECTION
See P INVARIANCE

SPACE VEHICLES
See also REENTRY VEHICLES
Design
Multi-mode nuclear space power systems, 11:47593 (RA;US)
Space Power Reactors
Lunar nuclear power feasibility study, 11:47525 (RA;US)
Uses
Multi-mode nuclear space power systems, 11:47593 (RA;US)

SPACECRAFT POWER SUPPLIES
Comparative Evaluations
Comparison of multi-megawatt space nuclear power systems, 11:47596 (RA;US)
Design
Expert system for space power supplies, 11:47543 (RA;US)
Electrochemical Cells
Principles for system level electrochemistry, 11:47753 (R;US)
Evaluation
Expert system for space power supplies, 11:47543 (RA;US)
Pebble Bed Reactors
Use of nuclear energy for bimodal applications in space, 11:47522 (R;US)
Radiators
Rotating bubble membrane radiator for space applications, 11:47600 (R;US)
Research Programs
Nuclear power: opening new vistas in space, 11:47523 (RA;US)
Systems Analysis
Application and use of nuclear power for future spacecraft, 11:47602 (BA;US)
Thermoelectric Generators
Liquid metal cooled reactor - alkali metal thermoelectric space power system concept for multi megawatt applications, 11:47595 (RA;US)
Transistors
Programmable automated transistor test system, 11:48300 (RA;US)

SPAIN
Uranium Deposits
Origin of uranium vein deposits in metasedimentary rocks: Fe Mine, Salamanca (Spain), 11:47261 (RA;XA;In Spanish)

SPARK IGNITION ENGINES
Automotive Fuels
Effect of methanol fuel formulations on exhaust products. Status report, 11:47373 (R;US)

SPATIAL DISTRIBUTION
Mathematical Models
Significance of proximity function for radiobiological effect study, 11:48838 (RA;CS;In Czech)

SPECTRALLY SELECTIVE SURFACES
Polymers
Effect of the size of structural bulk inhomogeneities on the specular transmittance of polymer films, 11:47432 (R;US)

SPECTROCHEMISTRY

Design
Development work on a Bragg curve spectrometer, 11:48424 (RA;US)
Performance
Development work on a Bragg curve spectrometer, 11:48424 (RA;US)
SPENT FUEL CASKS
Design
Summary of the technical review of the safety analysis reports for packaging (SARP) for the transnuclear transport/storage casks: TN-BRP and TN-REG, 11:48238 (R;US)
Transporting fuel debris from TMI-2 to INEL, 11:47284 (R;US)
Licensing
Transporting fuel debris from TMI-2 to INEL, 11:47284 (R;US)
Packaging
Summary of the technical review of the safety analysis reports for packaging (SARP) for the transnuclear transport/storage casks: TN-BRP and TN-REG, 11:48238 (R;US)
Performance Testing
Drop and puncture testing of 1/4 scale model of NUPAC 125B rail cask, 11:48252 (J;US)
SPENT FUEL ELEMENTS
Mechanical Decladding
Decladding of fast breeder reactor fuel elements with lattice spaces, 11:47279 (RA;DE;In German)
Mechanical decladding of fuel elements, 11:47278 (RA;DE;In German)
SPENT FUEL STORAGE
See also DRY STORAGE
Security Seals
Application of IAEA seals to spent-fuel cooling ponds at the Bruno Leuschner NPP, Greifswald, 11:47347 (R;DD)
SPENT FUELS
Containment
Drop and puncture testing of 1/4 scale model of NUPAC 125B rail cask, 11:48252 (J;US)
Dissolution
Test plan for Series 3 NNWSI spent fuel leaching/dissolution tests, 11:47980 (R;US)
Leaching
Test plan for Series 3 NNWSI spent fuel leaching/dissolution tests, 11:47980 (R;US)
Oxidation
Test plan for long-term, low-temperature oxidation of spent fuel, Series 1 (NNWSI project), 11:47979 (R;US)
Rail Transport
Barnwood review, 11:47286 (R;GB)
Summary of the technical review of the safety analysis reports for packaging (SARP) for the transnuclear transport/storage casks: TN-BRP and TN-REG, 11:48238 (R;US)
Reprocessing
New extractants for nuclear fuels, 11:47275 (R;FR;In French)
SPENT SHALES
Chemical Composition
Extraction of inorganic chemical constituents from retorted oil shale by complexometric agents, 11:47247 (R;US)
Leaching
Extraction of inorganic chemical constituents from retorted oil shale by complexometric agents, 11:47247 (R;US)
SPERM
See SPERMATOZOA
SPERMATIDS
See SPERMATOZOA
SPERMATOGONIA
Genetic Radiation Effects
Reciprocal translocations in the germ cells of male mice after one-way inoculation of tritiated water, 11:48851 (RA;BG;In Bulgarian)
SPERMATOZOA
Freezing
Basic concepts in freezing cells, 11:48898 (R;US)
SPHERICAL CONFIGURATION
Calculation of energy deposition in spherical volumes, 11:48840 (RA;CS;In Czech)
SPHEROMAK DEVICES
Plasma Diagnostics
Study of the effects of photoelectron statistics on Thomson scattering data, 11:49502 (J;US)
SPICULES
See SOLAR PROMINENCES
SPINACH
Radioactivity
Strontium-90 and cesium-137 in vegetables (producing districts) from November 1983 to March 1984. Environmental and dietary materials, 11:48728 (RA;JP)
Strontium-90 and cesium-137 in vegetables (consuming districts) from November 1983 to February 1984. Environmental and dietary materials, 11:48729 (RA;JP)
SPINELS
Crystallography
Characterization of crystallographic phases in the Al_2O_3-AlN system by convergent beam electron diffraction, 11:48050 (BA;US)
Microstructure
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
Phase Studies
Characterization of crystallographic phases in the Al_2O_3-AlN system by convergent beam electron diffraction, 11:48050 (BA;US)
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
Precipitation Hardening
Kinetics of precipitation of α-Al_2O_3 in polycrystalline supersaturated $MgOx2Al_2O_3$ spinel solid solution, 11:48044 (J;US)
SPIN-OFF
See TECHNOLOGY TRANSFER
SRM
See CALIBRATION STANDARDS
STACKS
Height
Report on the calculations of the height of the stack for PUSPATI laboratories, 11:47346 (R;MY)
STAINLESS STEEL-304
Acoustic Emission Testing
Detecting and monitoring crack growth in austenitic and ferritic steels. Progress report, 1 December 1985-30 November 1986, 11:47925 (R;US)
Crack Propagation
Detecting and monitoring crack growth in austenitic and ferritic steels. Progress report, 1 December 1985-30 November 1986, 11:47925 (R;US)
Gas Tungsten-Arc Welding
Relative concentration measurements of Mn and Mn^+ in a gas tungsten welding arc using laser-induced fluorescence, 11:47958 (J;US)
Stress Corrosion
Effects of dynamic strain on crack tip chemistry. Volume 1. Tests using a segmented artificial crevice. Final report, 11:47930 (R;US)
Ultrasonic Waves
Angular dependence of ultrasonic wave propagation in a stressed, orthorhombic continuum: Theory and application to the measurement of stress and texture, 11:47953 (J;US)
STAINLESS STEEL-304L
Shock Waves
Attenuation of shock waves in copper and stainless steel, 11:47946 (R;US)

STAINLESS STEEL-316
Creep
Creep fatigue behaviours of stainless steel (316-SS) at elevated temperatures, 11:47950 (R;MY)
Fatigue
Creep fatigue behaviours of stainless steel (316-SS) at elevated temperatures, 11:47950 (R;MY)
Heat Treatments
Creep fatigue behaviours of stainless steel (316-SS) at elevated temperatures, 11:47950 (R;MY)
STAINLESS STEELS
STAINLESS STEEL-304

STANFORD LINEAR ACCELERATOR CENTER
Operation
Stanford Linear Accelerator Center monthly report for June 1986, 11:48336 (R;US)
Research Programs
Stanford Linear Accelerator Center monthly report for June 1986, 11:48336 (R;US)
STANFORD LINEAR COLLIDER
Prototype results of a high resolution vertex drift chamber for the Mark-II SLC upgrade detector, 11:48519 (RA;AT)
Beam Monitoring
Beam-beam deflections as an interaction point diagnostic for the SLC, 11:48364 (R;US)
Beam Monitors
SLC energy spectrum monitor using synchrotron radiation, 11:48403 (R;US)
Beam Optics
Beam optical design and studies of the SLC arcs, 11:48348 (R;US)
Beam-Beam Interactions
Beam-beam deflections as an interaction point diagnostic for the SLC, 11:48364 (R;US)
Bremsstrahlung
Beamstrahlung monitor for SLC final focus using gamma ray energies, 11:48615 (R;US)
Design
Beam optical design and studies of the SLC arcs, 11:48348 (R;US)
Electric Fields
Increasing the energy of SLC by transient wake field, 11:48405 (J;NL)
STAR CLUSTERS
Age Groups
Age groups and composite diagrams for young open clusters, 11:48972 (RA;CS)
Black Holes
Dynamical evolution of the environment of an OB association, 11:48985 (RA;CS)
Body Composition
Behaviour of brighter binaries and yellow giants in open clusters, 11:48973 (RA;CS)
Investigation of central parts of globular clusters, performed in Pulkovo, 11:48980 (RA;CS;In Russian)
Search for possible members of open clusters among known Ap stars, 11:48975 (RA;CS)
Brightness
Brightness distribution in globular clusters derived by the narrow-slit scanning method, 11:48981 (RA;CS)
Cosmic Dust
Dust distribution in the Rosette nebula and MON OB2 association region, 11:48986 (RA;CS;In Russian)
Fragmentation of molecular clouds and the IMF, 11:48992 (RA;CS;In Russian)
Dimensions
Lessons from the globular cluster NGC 5466, 11:48982 (RA;CS)
Distance
Lessons from the globular cluster NGC 5466, 11:48982 (RA;CS)
Disturbances
Structural properties of open star clusters and their relation to the Galaxy, 11:48971 (RA;CS;In Russian)
Gravitational Collapse
Fate of globular clusters, 11:48984 (RA;CS;In Russian)
H2 Regions
Dynamical evolution of the environment of an OB association, 11:48985 (RA;CS)
Indexes
Lund catalogue of open cluster parameters, 11:48977 (RA;CS)
Instability
Collective processes in the formation of star clusters, 11:48978 (RA;CS;In Russian)
Non-stable motions and instability in stellar associations, 11:48987 (RA;CS)
Luminosity
Effect of stellar luminosity and temperature calibration on determination of initial mass function, 11:48993 (RA;CS;In Russian)
Many-Body Problem
Binaries and evolution of globular clusters, 11:48979 (RA;CS)
Meetings
Star clusters and associations. Physics and evolutions of stars, 11:48970 (R;CS;In English and Russian)
Orbits
Galactic orbits of globular clusters, 11:48983 (RA;CS)
Photometry
Brightness distribution in globular clusters derived by the narrow-slit scanning method, 11:48981 (RA;CS)
Present state of the international star cluster photometry programme, 11:48976 (RA;CS)
Proper Motion
Hyades moving group, 11:48990 (RA;CS)
Non-stable motions and instability in stellar associations, 11:48987 (RA;CS)
Proper motions and kinematical properties of Orion Trapezium type stellar systems, 11:48988 (RA;CS;In Russian)
Rotation
Collective effects in the rotation of stars in clusters and associations, 11:48974 (RA;CS;In Russian)

Spatial Distribution
Galactic distribution of open clusters of different ages and the angular velocity of the spiral structure, 11:49000 (RA;CS)
On the scale of distances of the Galaxy based on the study of the open star-cluster subsystem, 11:48999 (RA;CS;In Russian)
Spiral Configuration
Excitation of spiral patterns in responsive density wave theory, 11:48996 (RA;CS)
Stability
Proper motions and kinematical properties of Orion Trapezium type stellar systems, 11:48988 (RA;CS;In Russian)
Star Models
Evolution of a sparse stellar system, 11:48991 (RA;CS;In Russian)
Stellar Flares
On the most probable number of flare stars in the Pleiades field, 11:48989 (RA;CS)
Time Dependence
Evolution of globular clusters, 11:49001 (RA;CS;In English and Russian)

STAR EVOLUTION
Age groups and composite diagrams for young open clusters, 11:48972 (RA;CS)

STARCH GUM
See DEXTRIN

STARS
See also BINARY STARS
GIANT STARS
NEUTRON STARS
VARIABLE STARS
Age Dependence
Velocity-age relation for B and A stars, 11:48995 (RA;CS;In English and Russian)
Motion
Kinematics of B and A stars, 11:48997 (RA;CS)
Proper Motion
Hyades moving group, 11:48990 (RA;CS)
Rotation
Collective effects in the rotation of stars in clusters and associations, 11:48974 (RA;CS;In Russian)
Spatial Distribution
Local galactic kinematics, 11:49003 (RA;CS)
Ultraviolet Spectra
International Ultraviolet Explorer atlas of O-type spectra from 1200 to 1900 angstrom, 11:49005 (R;US)
Velocity
Velocity-age relation for B and A stars, 11:48995 (RA;CS;In English and Russian)

STATE GOVERNMENT
Energy Conservation
Building evaluation into operating programs, 11:47806 (RA;US)
Calculation and application of the non-participant test within the cost-benefit analysis of utility load management programs in California, 11:47816 (RA;US)
Software in the evaluation context: choosing and using the right tools, 11:47807 (RA;US)
Energy Facilities
Pennsylvania Energy Center performance evaluation, 11:47808 (RA;US)

STATES (ENERGY)

STEAM GENERATORS
Corrosion
Activity of water mixed with molten salts at 317°C, 11:48153 (J;US)
Electrochemistry and corrosion of alloys in high-temperature water. Final report, 11:47625 (R;US)
Industrywide survey of PWR organics. Final report, 11:47500 (R;US)
Corrosion Protection
Condensate polishers for brackish water-cooled PWRs, 11:47497 (R;US)
Corrosion Resistance
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)
Evaporators
Analysis of conditions of corrosion fatigue of material of fast reactor steam generator evaporator and their simulation, 11:47517 (RA;CS;In Czech)
Heat Transfer
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Hydraulics
COBRA-NC: a thermal hydraulics code for transient analysis of nuclear reactor components. Volume 2. COBRA-NC numerical solution methods, 11:47726 (R;US)
Thermodynamic Activity
Thermodynamics of material properties degradation in fast reactor steam generator under effect of liquid sodium, 11:47515 (RA;CS;In Czech)
Tubes
Analysis of conditions of corrosion fatigue of material of fast reactor steam generator evaporator and their simulation, 11:47517 (RA;CS;In Czech)
Effect of technological design of tube-tubeplate joint of WWER steam generator on resistance to long-term stress in operating conditions, 11:47503 (RA;CS;In Czech)
Effects of oxygen, copper and acid chlorides on denting corrosion, 11:47499 (R;US)
Laboratory examinations of selected tubes from test facilities of the Steam Generator Owners Group. Final report, 11:47623 (R;US)
Methods of estimating the service life of steam generator tubes considering the corrosion medium effect, 11:47516 (RA;CS;In Czech)
Workshop on thermally treated alloy 690 tubes for nuclear steam generators: proceedings, 11:47624 (R;US)

STEAM INJECTION
Data Analysis
Thermal injection well falloff testing, SUPRI TR-33, 11:47217 (R;US)
Heat Losses
Thermal injection well falloff testing, SUPRI TR-33, 11:47217 (R;US)

STEAM REFORMER PROCESSES
Design
Solar reformer experiment design study, 11:47407 (R;US)

STEAM TURBINES
Turbine Blades
Microstructure and texture effects on titanium alloys, 11:47928 (R;US)

STEEL INDUSTRY
See METAL INDUSTRY

STEEL-ASTM-A508
Ductile-Brittle Transitions
Transition and upper shelf fracture toughness properties of an A508 Class 3 PWR nozzle cut-out, 11:47908 (R;GB)
Fracture Properties
Transition and upper shelf fracture toughness properties of an A508 Class 3 PWR nozzle cut-out, 11:47908 (R;GB)
STEELS
See also AUSTENITIC STEELS
CARBON STEELS
STAINLESS STEELS
STEEL-ASTM-A508
Bonding
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Chemical Analysis
Role and potential of analytical chemistry in the production of WWER-1000 nuclear reactors, 11:48076 (RA;CS;In Czech)
Chemical Composition
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Corrosion
Effects of time, temperature and rotation of water on the corrosion rate of different types of steels, 11:47949 (R;MY)
Corrosion Fatigue
Long-term mechanical properties of steels under effect of corrosive medium. Seminar, 11:47941 (R;CS;In Czech)
Crack Propagation
Development of a thermomechanical measuring procedure for characterizing the material behaviour at fast, ductile fracture, 11:47932 (R;DE;In German)
Crevice Corrosion
Mathematical model of crevice and pitting corrosion. Pt. 2. The mathematical solution, 11:47910 (R;GB)
Elasticity
Steel bonded dense silicon nitride compositions and method for their fabrication, 11:48048 (P;US)
Heat Affected Zone
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Hydrogen Embrittlement
Effect of reactor environment on embrittlement of Cr-Mo-V steel (Low alloy steels Cr-Mo-V and Cr-Ni-Mo-V), 11:47943 (RA;CS;In Czech)
Ion Implantation
Characterization of ion-implanted and laser-processed wear surfaces. Final report, 1 December 1984-28 February 1986, 11:48002 (R;US)
Materials Testing
Experimental approach to the study of the effect of sodium on long-term properties, 11:47937 (RA;CS;In Czech)
Mechanical Properties
Development of a thermomechanical measuring procedure for characterizing the material behaviour at fast, ductile fracture, 11:47932 (R;DE;In German)
Mechanical Structures
Trend curve data development and testing, 11:47491 (R;US)
Permeability
Thermodynamics of material properties degradation in fast reactor steam generator under effect of liquid sodium, 11:47515 (RA;CS;In Czech)
Physical Radiation Effects
Effect of reactor environment on embrittlement of Cr-Mo-V steel (Low alloy steels Cr-Mo-V and Cr-Ni-Mo-V), 11:47943 (RA;CS;In Czech)
Pitting Corrosion
Mathematical model of crevice and pitting corrosion. Pt. 2. The mathematical solution, 11:47910 (R;GB)
Production
Competitive position of natural gas: steel-reheat applications. Topical report, January 1985-May 1986, 11:47232 (R;US)
Quantitative Chemical Analysis
ICP-MS and its application in a nuclear laboratory, 11:48102 (BA;US)
Stress Corrosion
Effects of dynamic strain on crack tip chemistry. Volume 1. Tests using a segmented artificial crevice. Final report, 11:47930 (R;US)
Sulfidation
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
STELLARATORS
Meetings
1986 USSR-US Exchange II.4. Topical meeting: magnetic configurations, plasma equilibrium, and stability of stellarators. Volume II. US presentations, 11:49547 (R;US)
STEM CELLS
Cell Proliferation
Comparative studies on the proliferation and differentiation of granulocytic progenitor cells CFU-C from the blood and bone marrow of dogs under normal conditions and after 80 R whole-body irradiation, 11:48855 (R;DE;In German)
STIMULATED EMISSION DEVICES
See LASERS
MASERS
STIRLING ENGINES
Ceramics
Tribolgy of selected ceramics at temperatures to 900 deg C, 11:47897 (R;US)
Performance Testing
Overview of the 1985 NASA Lewis Research Center SP-100 free-piston Stirling engine activities, 11:47606 (BA;US)
Performance of the Vanguard Solar Dish-Stirling Engine Module. Final report, 11:47430 (R;US)
Research Programs
Overview of the 1986 free-piston Stirling SP-100 activities at the NASA Lewis Research Center, 11:48328 (R;US)
Test Facilities
Reversing Flow Test Facility. Technical report, March 1986, 11:48327 (R;US)

STRONG INTERACTIONS
Coupling Constants
Is there a delta-delta-pi problem, 11:49148 (R;US)
STRONTIUM
Solvent Extraction
Contributions to the chemistry of lanthanides and transplutonium elements, 11:48085 (RA;DD;In German)
STRONTIUM 88 TARGET
Proton Reactions
High-spin, two-particle, one-hole, stretched states excited by proton induced negative pion production in nuclei, 11:49330 (RA;US)
STRONTIUM 90
Air
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)
Biological Accumulation
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Half-Life
On the statistical evaluation of inconsistent measurement results illustrated on the example of the ^{90}Sr half-life, 11:49318 (R;NL)
Radiation Monitoring
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Strontium-90 and cesium-137 in milk (producing districts for domestic program) from June 1983 to September 1983. Environmental and dietary materials, 11:48725 (RA;JP)
Strontium-90 and cesium-137 in milk (consuming districts) from May 1983 to May 1984. Environmental and dietary materials, 11:48726 (RA;JP)
Strontium-90 and cesium-137 in milk (powderd milk). Environmental and dietary materials, 11:48727 (RA;JP)
Strontium-90 and cesium-137 in vegetables (producing districts) from November 1983 to March 1984. Environmental and dietary materials, 11:48728 (RA;JP)
Strontium-90 and cesium-137 in vegetables (consuming districts) from November 1983 to February 1984. Environmental and dietary materials, 11:48729 (RA;JP)
Strontium-90 and cesium-137 in tea (Japanese tea). Environmental and dietary materials, 11:48730 (RA;JP)
Radioecological Concentration
Accumulation of certain long-lived radionuclides by littoral algae and bottom animals, 11:48767 (RA;XA)
Characterization of the homogeneous reactor experiment No. 2 (HRE) impoundment, 11:47316 (R;US)
Comparison of methods for collection and preconcentration of radionuclides in atmospheric precipitations, 11:48689 (RA;CS)
Fallout of low radioactivities ^{137}Cs, ^{90}Sr and ^{210}Pb on the mountains, 11:48720 (RA;CS)
Inventories of certain long-lived radionuclides in the Baltic Sea, 11:48763 (RA;XA)
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)
Radiological investigations in the Baltic Sea, including the Danish Straits and the Kattegat during 1982 and 1983, 11:48765 (RA;XA)
Results of the radiological Baltic-monitoring programme of the GDR during 1975-1983, 11:48764 (RA;XA)
Strontium-90 and cesium-137 in shellfish from February 1984 to July 1984. Environmental and dietary materials, 11:48778 (RA;JP)
Strontium-90 and cesium-137 in seaweeds from February 1984 to June 1984. Environmental and dietary materials, 11:48779 (RA;JP)
Strontium-90 and cesium-137 in total diet from October 1983 to July 1984. Environmental and dietary materials, 11:48780 (RA;JP)
Strontium-90 and cesium-137 in rice (producing districts) from November 1983 to January 1984. Environmental and dietary materials, 11:48724 (RA;JP)
Transfer of radiocesium and ^{90}Sr from Sellafield to the Danish Straits, 11:48762 (RA;XA)
Rain
Radioactive fallout in air and rain: results to the end of 1984, 11:48676 (R;GB)

SUBBITUMINOUS COAL
Calorific Value
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Chemical Composition
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Desashing
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Moisture
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
Petrography
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)

Surface Area
Physical properties and moisture. Final report for the period ending March 31, 1986, 11:47182 (R;US)
SUBSURFACE ENVIRONMENTS
Microorganisms
Microbial metabolism of aromatic compounds under anaerobic conditions, 11:48813 (R;US)
SUBURBS
See URBAN AREAS
SUDDEN IONOSPHERIC DISTURBANCE
Solar-Geophysical Data Number 499, March 1986. Part 1 (prompt reports). Data for February 1986, January 1986, and late data, 11:49010 (R;US)
Solar-Geophysical Data Number 499, March 1986. Supplement, 11:49012 (R;US)
SULFIDES
See also CADMIUM SULFIDES
CARBON SULFIDES
HYDROGEN SULFIDES
Chemical Reaction Kinetics
Sulfide precipitation of nickel and other heavy metals from single- and multi-metal systems. Final report, 11:48751 (R;US)
SULFONIC ACIDS
Chemical Reaction Kinetics
Activity of water mixed with molten salts at 317°C, 11:48153 (J;US)
Reaction Heat
Thermochemical comparisons of homogeneous and heterogeneous acids and bases. 1. Sulfonic acid solutions and resins as prototype Broensted acids, 11:48181 (J;US)
SULFUR
Corrosive Effects
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Photoionization
Molecular beam photoionization spectrometry. (1) Photoionization studies of high temperature vapors. (2) State-selected and state-to-state studies of electron transfer reactions, 11:48204 (D;US)
Quantity Ratio
Quantitative determination of sulfur and chlorine in crude oils by X-ray fluorescence spectrometry (Energy dispersive), 11:48061 (R;GT;In Spanish)
Retention
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
X-Ray Fluorescence Analysis
Quantitative determination of sulfur and chlorine in crude oils by X-ray fluorescence spectrometry (Energy dispersive), 11:48061 (R;GT;In Spanish)
SULFUR 32 REACTIONS
Deep Inelastic Heavy Ion Reactions
Proximity effects in deep-inelastic collisions of $^{32}S + ^{58}Ni$, 11:49284 (RA;US)
Fragmentation
Coincidence measurements of intermediate mass fragments produced in /sup 32/S-induced reactions on Ag at E-italic/A-italic = 22.5 MeV, 11:49328 (J;US)
Heavy Ion Fusion Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + ^{92}Zr$ and $^{12}C + ^{144}Sm$, 11:49331 (RA;US)
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Incomplete Fusion Reactions
Projectile-target dependence of incomplete fusion processes, 11:49248 (RA;US)
Time-of-flight measurements of evaporation residues from $^{32}S + ^{24}Mg$, 11:49272 (RA;US)
Inelastic Scattering
Coincidence measurements of intermediate mass fragments produced in /sup 32/S-induced reactions on Ag at E-italic/A-italic = 22.5 MeV, 11:49328 (J;US)
Quasi-Elastic Scattering
Coincidence measurements of intermediate mass fragments produced in /sup 32/S-induced reactions on Ag at E-italic/A-italic = 22.5 MeV, 11:49328 (J;US)
SULFUR 36 REACTIONS
Heavy Ion Fusion Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + ^{92}Zr$ and $^{12}C + ^{144}Sm$, 11:49331 (RA;US)
SULFUR 36 TARGET
Carbon 14 Reactions
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)

SULFUR DIOXIDE
Air Pollution Abatement
Evaluation of calcium impregnated coal as a fuel for turbine combustors. Final report, September 1984-November 1985, 11:47205 (R;US)
Air Pollution Control
FGD maintenance guidelines. Volume 1. FGD maintenance programs. Final report, 11:47192 (R;US)
Permittivity
Pressure dependence of the dielectric strength of SO_2 and n-C_4F_{10}, 11:48196 (J;GB)
Removal
Sulfur dioxide emission control by furnace injection of a dry sorbent. Phase III. Economic assessment. Final report, 11:47483 (R;US)
SULFUR FLUORIDES
Decomposition
Process for measuring degradation of sulfur hexafluoride in high voltage systems, 11:48647 (P;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR OXIDES
See also SULFUR DIOXIDE
SULFUR TRIOXIDE
Photon-Molecule Collisions
Photoionization of SO radical, 11:49028 (RA;US)
SULFUR SULFIDES
See SULFUR
SULFUR TRIOXIDE
Chemical Reaction Yield
Mechanism of deposition in coal-fired gas turbine systems, October 1, 1985-October 1, 1986, 11:47201 (R;US)
SUNSPOTS
Solar-Geophysical Data Number 499, March 1986. Supplement, 11:49012 (R;US)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCOMPUTERS
Computer Architecture
Programming robotics applications on an advanced hypercube multiprocessor, 11:49610 (R;US)
Performance Testing
ELEFUNT test results under FX/FORTRAN Version 1.0 on the Alliant FX/8, 11:49607 (R;US)
Programming
Programming robotics applications on an advanced hypercube multiprocessor, 11:49610 (R;US)
Unified approach to parallel computation: performance evaluation and architecturally independent parallel programming. Progress report, September 1, 1985-August 31, 1986, 11:49613 (R;US)
SUPERCONDUCTING COILS
Design
TFCX - mechanical design, 11:49591 (BA;GB)

SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Power Conditioning Circuits
Design and operating experience of an AC-DC power converter for a superconducting magnetic energy storage unit, 11:47747 (BA;US)
SUPERCONDUCTING MAGNETS
Cooling
Sub-cooled liquid helium flow supply for design D magnet cooling at MDTF (Magnet Development and Test Facility), 11:48385 (R;US)
Design
Offset coil designs for superconducting magnets, a logical development, 11:48384 (R;US)
Materials Testing
Materials studies for magnetic fusion energy applications at low temperatures - IX, 11:49558 (R;US)
Monitoring
Transformer current sensor for superconducting magnetic coils, 11:48250 (P;US)
SUPERCONDUCTING SUPER COLLIDER
Computer Networks
Offline computing and networking, 11:48376 (R;US)
Trigger Circuits
SSC physics signatures and trigger requirements, 11:49114 (R;US)
SUPERCONDUCTING WIRES
Electrical Insulation
Inorganic dielectric insulation for superconducting Nb_3Sn wire, 11:47592 (RA;US)
SUPERCONDUCTORS
Crystal Structure
Novel structure modulation in the first ambient-pressure sulfur-based organic superconductor (BEDT-TTF)$_2I_3$, 11:48054 (J;US)
Ferromagnetism
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Fluctuations
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Specific Heat
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Structural Chemical Analysis
Novel structure modulation in the first ambient-pressure sulfur-based organic superconductor (BEDT-TTF)$_2I_3$, 11:48054 (J;US)
Structure of di(3,3',4,4'-tetramethyl-2,2',5,5'-tetraselenafulvalenium) pentafluorosilicate, $(C_{10}H_{12}Se_4)_2SiF_5$ at 293 and 125 K, 11:48053 (J;DK)
SUPERCRITICAL GAS EXTRACTION
Yields
Supercritical solvent extraction. Final report for the period ending March 31, 1986, 11:47153 (R;US)
SUPERGRAVITY
Conformal Mapping
Unconstrained multiplet in N=2 conformal supergravity, 11:49130 (R;JP)
Gauge Invariance
N=1 supergravity on the light-cone superspace, 11:49187 (R;JP)
Light Cone
N=1 supergravity on the light-cone superspace, 11:49187 (R;JP)
Multiplets
Unconstrained multiplet in N=2 conformal supergravity, 11:49130 (R;JP)
Reviews
Supergravity theories, 11:49191 (R;JP)
SUPERHEAVY ELEMENTS
See TRANS 104 ELEMENTS
SUPERLATTICES
Optical Properties
Superlattices and NiPi structures in new forms of cascade solar cells. Semiannual Report, 23 October 1985-22 April 1986, 11:47392 (R;US)
Uses
Superlattice photoelectrodes for photoelectrochemical cells, 11:47399 (P;US)
SUPERNOVAE
Lectures
Neutron stars and supernovae, 11:48963 (R;FR;In French)
Research Programs
Research in nuclear astrophysics: stellar collapse and supernovae. Progress report, 11:48964 (R;US)
SUPERSONIC FLOW
Measuring Methods
Time-of-flight characterization of pulsed supersonic helium free-jet expansions, 11:48287 (J;US)
Velocity
Time-of-flight characterization of pulsed supersonic helium free-jet expansions, 11:48287 (J;US)
SUPERSYMMETRY
[Research in the theory of condensed matter and elementary particles.] Progress report, 11:49186 (R;US)
Chirality
Supersymmetric extension of the chiral model and the Wess-Zumino term in two dimensions, 11:49189 (R;DK)
Postulated Particles
SSC physics signatures and trigger requirements, 11:49114 (R;US)
Symmetry Breaking
Dynamical supersymmetry breaking, 11:49170 (R;FR)
Tree unitarity constraints on supersymmetric theories, 11:49180 (R;US)
Unitarity
Tree unitarity constraints on supersymmetric theories, 11:49180 (R;US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTED LIQUID MEMBRANES
Performance
Supported liquid membranes in 1986: new technology or scientific curiosity, 11:48057 (R;US)
SURFACE AIR
Activity Levels
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)
Method of absolute measurements of radon-daughters concentration in air, 11:48587 (RA;CS)
Radon measurements in air, 11:48586 (RA;CS)
Radioactivity
Determination of the radon concentration in the atmosphere using NaI(Tl) spectrometer, 11:48591 (RA;CS)
SURFACE CONTAMINATION
Dose Rates
Dose factors for contamination of skin and clothing, 11:48832 (R;DE;In German)
SURFACE MINING
Computerized Simulation
Dragline operator training simulator, 11:47196 (BA;US)
Draglines
Dragline operator training simulator, 11:47196 (BA;US)
SURFACE WATERS
See also COASTAL WATERS
ESTUARIES
LAKES
PONDS
STREAMS
WATER RESERVOIRS
Alpha Spectroscopy
^{222}Rn determination from total alpha-activity time relationship, 11:48775 (RA;CS)
Radionuclide Migration
* Development of environmental monitoring programs at four Formerly Utilized Sites Remedial Action Program (FUSRAP) sites, 11:47331 (RA;US)

Los Alamos low-level waste performance assessment status, 11:47338 (R;US)
Low radioactivity investigations of tritium in natural waters, 11:48771 (RA;CS)
SURFACE-ACTIVE AGENTS
See SURFACTANTS
SURFACES
See also SPECTRALLY SELECTIVE SURFACES
Acoustic Testing
Design of an acousto-optic goniometric specimens mount. Report No. 2 on modeling of acoustic microscopes, 11:48293 (R;US)
Photon Collisions
Multiphoton ionization spectroscopy of surface molecules, 11:49065 (RA;US)
Wear
Characterization of ion-implanted and laser-processed wear surfaces. Final report, 1 December 1984-28 February 1986, 11:48002 (R;US)
SURFACTANTS
Comparative Evaluations
Comparison of a nonionic surfactant and an anionic dispersant as coal water additives, 11:47188 (B;US)
SURVEILLANCE (RADIOACTIVITY)
See RADIATION MONITORING
SURVEY (RADIOACTIVITY)
See RADIATION MONITORING
SUSPENSIONS
See also SLURRIES
Fluid Flow
Viscous resuspension, 11:48289 (J;GB)
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWEAT GLANDS
See SKIN
SWEDEN
Uranium Deposits
Uranium genesis within the Arjeplog-Arvidsjaur-Sorsele uranium province, Northern Sweden, 11:47250 (RA;XA)
SWEEP EFFICIENCY
Calculation Methods
Thermal injection well falloff testing, SUPRI TR-33, 11:47217 (R;US)
SWITCHES
Design
Design of a fast-plate generator driving plasma flow switch, 11:48306 (R;US)
Reusable fast opening switch, 11:48318 (P;US)
SYMPLECTIC GROUPS
See SP GROUPS
SYNCHROTRON RADIATION
Position Sensitive Detectors
High count rate position-sensitive detectors for synchrotron radiation experiments, 11:48448 (RA;AT)
SYNROC
See SYNTHETIC ROCKS
SYNTHESIS GAS
Production
Production of synthesis gas, town gas and substitute natural gas by the gasification of coarse graded hard coal under pressure using oxygen - Lurgi pressure gasification process. Report on operation phase II. Final report, 11:47144 (R;DE;In German)
Yields
Energy recovery from aquatic biomass in a thermochemical reactor, 11:47367 (R;US)
SYNTHETASES
See LIGASES
SYNTHETIC FUELS
See also HYDROGEN FUELS
DOE Synthetic Fuel Center monthly progress report No. 9, 1-30 July 1986, 11:47902 (R;US)
Electric-Powered Vehicles
Energy analysis and alternative fuels and vehicles, 11:47870 (R;US)
Energy Analysis
Energy analysis and alternative fuels and vehicles, 11:47870 (R;US)
Environmental Impacts
Energy analysis and alternative fuels and vehicles, 11:47870 (R;US)
SYNTHETIC NATURAL GAS
See HIGH BTU GAS
SYNTHETIC ROCKS
Leaching
Evaluation of Synroc-C as a second-generation waste form, 11:47985 (R;US)
SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

T

T CODES
Manuals
Source Term Code Package: a user's guide (Mod 1), 11:47729 (R;US)
T INVARIANCE
Experiment Planning
Test of time reversal symmetry with resonance neutron scattering, 11:49171 (R;US)
Symmetry Breaking
Parity and time-reversal violation in nuclei and atoms, 11:49123 (R;US)
TADPOLES
See AMPHIBIANS
TALC
Chemical Properties
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)
Flotation
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)
Surface Properties
Surface-chemical and mineralogical properties relevant to the flotation of talc and other layer silicates, 11:48078 (R;ZA)
TAMMUZ-1 REACTOR
See TZ1 REACTOR
TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
Electron Drift
Studies of plasma transport relevant to tandem mirrors. Final technical report, March 1, 1982-February 28, 1985, 11:49477 (R;US)
Transport Theory
Studies of plasma transport relevant to tandem mirrors. Final technical report, March 1, 1982-February 28, 1985, 11:49477 (R;US)
TANKS
Quantitative Chemical Analysis
Nondestructive assay of plutonium residue in horizontal storage tanks, 11:48111 (BA;US)
TANTALUM
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
TANTALUM 181 TARGET
Sulfur 32 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
Sulfur 36 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
TANTALUM ALLOYS
Aging
Thermal aging effects in refractory metal alloys, 11:47585 (RA;US)

Chemical Preparation
Copper-tantalum alloy, 11:47959 (P;US)
Mechanical Properties
Availability of niobium and tantalum-base alloy products for space nuclear reactors, 11:47580 (RA;US)
Physical Radiation Effects
High temperature in-reactor testing of Nb-1Zr, PWC-11, and T-111, 11:47587 (RA;US)

TARGET CHAMBERS
Construction
Design and construction of a scattering chamber facility for ATLAS, 11:48369 (RA;US)
Design
Design and construction of a scattering chamber facility for ATLAS, 11:48369 (RA;US)
Feasibility study of electron-scattering experiments with a tensor-polarized deuterium target in an electron storage ring, 11:48408 (RA;US)
Performance
Feasibility study of electron-scattering experiments with a tensor-polarized deuterium target in an electron storage ring, 11:48408 (RA;US)

THIONAPHTHENES
Biodegradation
Microbial removal of organic sulfur from coal. Third quarterly report, April-June 1986 (Dibenzothiophene and benzothiophene), 11:47169 (R;US)
Solubility
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, April 1-June 30, 1986, 11:47165 (R;US)
THIOPHENE
Chemical Reaction Kinetics
Elementary reactions of electronically excited molecules. Pt. 6. Quenching of $O_2(^1\Delta sub(g))$ by amines, furanes, pyrroles and thiophenes, 11:48171 (R;DE)
Desulfurization
Surface chemistry of sulfur containing heterocylcic molecules on Mo (110), 11:48157 (J;US)
THOMSON SCATTERING
Computerized Simulation
Study of the effects of photoelectron statistics on Thomson scattering data, 11:49502 (J;US)
THORIUM
Crystal Structure
Th-U (thorium-uranium) system, 11:47971 (J;US)
Gamma Spectroscopy
Gamma-ray spectrometric measurement of natural radionuclides distribution in rocks, 11:48068 (RA;CS)
Ion Exchange Chromatography
Multi-column step-gradient chromatography system for automated ion exchange separations, 11:48117 (BA;US)
Mass Spectroscopy
ICP-MS and its application in a nuclear laboratory, 11:48102 (BA;US)
Oxidation
Oxidation mechanisms and catalytic properties of the actinides, 11:48167 (J;GB)
Phase Diagrams
Th-U (thorium-uranium) system, 11:47971 (J;US)
Specific Heat
Th-U (thorium-uranium) system, 11:47971 (J;US)
Superconductivity
Th-U (thorium-uranium) system, 11:47971 (J;US)
Titration
Automated analyzer for the determination of free acid, 11:48128 (BA;US)
THORIUM 232
Natural Occurrence
Increase of local dose rates on the islands in the North Sea, resulting from heavy mineral accumulation. Final report, 11:48710 (R;DE;In German)
Radioecological Concentration
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
THORIUM 232 TARGET
Neutron Reactions
Fragment angular distributions for neutron fission of /sup 232/Th, 11:49365 (J;US)
Oxygen 16 Reactions
Heavy ion fusion and fission reactions, 11:49349 (R;US)
THORIUM D
See LEAD 208
THORIUM OXIDES
Catalytic Effects
Method and apparatus for synthesizing hydrocarbons, 11:47375 (P;US)
Oxidation mechanisms and catalytic properties of the actinides, 11:48167 (J;GB)
THORIUM X

THREE MILE ISLAND-2 REACTOR
Dauphin County, Pennsylvania, USA
Reactor Accidents
Analysis of severe accident phenomena using EXMEL, EXMEL-B and MELSIM, 11:47695 (RA;US)
Spent Fuels
Drop and puncture testing of 1/4 scale model of NUPAC 125B rail cask, 11:48252 (J;US)
THREE-BODY PROBLEM
Faddeev Equations
Faddeev calculations in the three-particle model for the A=18 system: Energy levels of ^{18}F, 11:49256 (RA;BR)
One-Dimensional Calculations
Three-body problem in one dimension: Effect of core excitation on the bound and continuum states, 11:49396 (RA;BR)
Wave Functions
Faddeev wave functions of A=18 bound states, 11:49397 (RA;BR)
THRUSTERS
See also ION THRUSTERS
Design
Comparison of electric propulsion orbit transfer with SP-100 class reactors, 11:47556 (RA;US)
Nuclear-microwave-electric propulsion, 11:47559 (RA;US)
Particle bed reactor propulsion vehicle performance and characteristics as an orbital transfer rocket, 11:47558 (RA;US)
PEGASUS: a multi-megawatt nuclear electric propulsion system, 11:47557 (RA;US)
Performance
Particle bed reactor propulsion vehicle performance and characteristics as an orbital transfer rocket, 11:47558 (RA;US)
Space Power Reactors
Comparison of electric propulsion orbit transfer with SP-100 class reactors, 11:47556 (RA;US)
Particle bed reactor propulsion vehicle performance and characteristics as an orbital transfer rocket, 11:47558 (RA;US)
PEGASUS: a multi-megawatt nuclear electric propulsion system, 11:47557 (RA;US)
THTR-300 REACTOR
Hammuentrop, North Rhein Westfalia, Federal Republic of Germany
Fuel Cycle
HTGR fuel elements for the U/Pu or Th/U fuel cycle and related problems of waste management, 11:47506 (RA;DE;In German)
THULIUM 150
Energy-Level Transitions
Shell-model states in N = 81-83 nuclei, 11:49317 (RA;US)

THYMIDINE
Laser Radiation
DNA metabolism of spleen cells of mice after HeNe laser irradiation, 11:48881 (RA;AT;In German)
Metabolism
DNA metabolism of spleen cells of mice after HeNe laser irradiation, 11:48881 (RA;AT;In German)
Tritium
DNA metabolism of spleen cells of mice after HeNe laser irradiation, 11:48881 (RA;AT;In German)
TIGHT SANDS
See PERMEABILITY
SANDSTONES
TIME PROJECTION CHAMBERS
See PROJECTION SPARK CHAMBERS
TIME-OF-FLIGHT SPECTROMETERS
Gas Chromatography
Time-of-flight mass spectrometer with ^{252}Cf surface ionisation coupled with high-pressure liquid chromatography for determining pharmaceutical substances in the blood, 11:48075 (R;DE;In German)
Performance
Tandem mass spectrometer for the detection of nitroaromatic compounds and other electronegative species in ambient air, 11:48092 (BA;US)
TIME-REVERSAL INVARIANCE
See T INVARIANCE
TIMING CIRCUITS
Design
Timing apparatus, 11:48633 (R;NL;In Dutch)
TIN
Hyperfine Structure
Charge radii and moments of tin nuclei by laser spectroscopy, 11:49322 (R;DE)
TIN 112 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
Nickel 64 Reactions
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
TIN 113
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 114 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 115 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 116 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
Elastic and inelastic scattering for ^{58}Ni + /sup 116,124/Sn, 11:49311 (RA;US)
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
Nickel 64 Reactions
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
TIN 117 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 118 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 119 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 120 TARGET
Fluorine 19 Reactions
Spectroscopic study of the high-spin states in /sup 135/Pr, 11:49327 (J;US)
Lithium 7 Reactions
Determination of the spectroscopic quadrupole moment and the polarizability of ^{7}Li by Coulomb scattering of oriented Li ions, 11:49259 (R;DE;In German)
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
Nickel 64 Reactions
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
TIN 121
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 122 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 123
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
TIN 124 TARGET
Nickel 58 Reactions
Angular momentum dependent fission barriers for /sup 170-188/pt, 11:49313 (RA;US)
Elastic and inelastic scattering for ^{58}Ni + /sup 116,124/Sn, 11:49311 (RA;US)
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
Nickel 64 Reactions
Quasielastic transfer strength near the barrier for ^{58}Ni + Sn, 11:49309 (RA;US)
Quasielastic transfer for /sup 58,64/Ni induced reactions on even-A tin isotopes well above the barrier, 11:49310 (RA;US)
TIN ISOTOPES
See also TIN 113
TIN 121
TIN 123
Magnetic Dipole Moments
Charge radii and moments of tin nuclei by laser spectroscopy, 11:49322 (R;DE)
Nuclear Radii
Charge radii and moments of tin nuclei by laser spectroscopy, 11:49322 (R;DE)
Quadrupole Moments
Charge radii and moments of tin nuclei by laser spectroscopy, 11:49322 (R;DE)
TIN OXIDES
Synthesis
Synthesis and characterization of compounds containing discrete tetranuclear clusters and extended arrays of molybdenum atoms, 11:48164 (D;US)

TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
See also PZT
Phase Studies
The system TiO_2-$Bi_2Ti_4O_{11}$, 11:47993 (J;US)
TITANIUM
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
Nitrogen 14 Reactions
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)
Oxygen 16 Reactions
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)
Transmission Electron Microscopy
A TEM study of Ti induced grain growth and precipitation in hot pressed alumina, 11:47999 (BA;US)
X-Ray Spectra
A TEM study of Ti induced grain growth and precipitation in hot pressed alumina, 11:47999 (BA;US)
TITANIUM 46 TARGET
Neutron Reactions
Evaluation of (n, 2n) reaction cross sections for ^{46}Ti, ^{107}Ag and ^{109}Ag, 11:49329 (R;PL)
Oxygen 16 Reactions
Fusion of the ^{16}O + sup(46, 48, 50) Ti systems near and below the Coulomb barrier, 11:49289 (RA;BR)
Nuclear structure effects on the reaction cross section of ^{16}O + sup(46, 50) Ti, 11:49290 (RA;BR)
TITANIUM 47
High Spin States
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)
TITANIUM 48
High Spin States
High-spin (f-italic/sub 7/2/)/sup A-40/ states in /sup 47/Ti, /sup 47/Sc, /sup 44/Ca, /sup 45/Ca, and /sup 48/Ti via /sup 36/S+/sup 14/C fusion-evaporation reactions, 11:49279 (J;US)
TITANIUM 48 TARGET
Oxygen 16 Reactions
Fusion of the ^{16}O + sup(46, 48, 50) Ti systems near and below the Coulomb barrier, 11:49289 (RA;BR)
TITANIUM 50 TARGET
Calcium 40 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
Chlorine 35 Reactions
On the influence of valence protons in fusion cross sections near the Coulomb barrier, 11:49291 (RA;BR)
Oxygen 16 Reactions
Fusion of the ^{16}O + sup(46, 48, 50) Ti systems near and below the Coulomb barrier, 11:49289 (RA;BR)
Nuclear structure effects on the reaction cross section of ^{16}O + sup(46, 50) Ti, 11:49290 (RA;BR)
TITANIUM ALLOYS
See also TITANIUM BASE ALLOYS
Chemical Composition
Structure and chemisorptive properties of the Pt_3Ti surface, 11:48148 (J;US)
Corrosion Resistance
Corrosion resistance in liquid sodium and residual life after 40,000-hour exploitation of structural materials used for BOR-1 steam generator, 11:47514 (RA;CS;In Czech)
Electronic Structure
CO adsorption on (111) and (100) surfaces of the Pt_3Ti alloy: evidence for parallel binding and strong activation of CO, 11:48150 (J;US)
Mechanical Properties
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Microstructure
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)
Sorptive Properties
CO adsorption on (111) and (100) surfaces of the Pt_3Ti alloy: evidence for parallel binding and strong activation of CO, 11:48150 (J;US)
Structural Chemical Analysis
Structure and chemisorptive properties of the Pt_3Ti surface, 11:48148 (J;US)
Thermodynamic Properties
Processing and microstructural characterization of boron carbide/titanium composites, 11:48006 (BA;US)

ZIRCONIUM
Activation Analysis
Application of thermal and epithermal neutron activation analysis to rock and sediment samples. Advantages of matrix preseparation for rare earth element determination, 11:48058 (R;IT)
Hartree-Fock Method
Mayer-Fermi theory and the long sequences in the periodic table, 11:49067 (R;US)
TRANSITION METALS
See TRANSITION ELEMENTS
TRANSITION RADIATION DETECTORS
For detection of transition radiation emitted by particles going from one medium to another.
Design
Design and rejection studies for a cylindrical transition radiation detector, 11:48541 (RA;AT)
Performance Testing
Design and rejection studies for a cylindrical transition radiation detector, 11:48541 (RA;AT)
Electron identification up to 100 GeV by means of transition radiation, 11:48460 (RA;AT)
Large area transition radiation detector for electron identification of the UA-6 experiment, 11:48509 (RA;AT)
Transition radiation detectors and particle identification, 11:48475 (RA;AT)
TRANSMISSION (DATA)
See DATA TRANSMISSION
TRANSMISSION ELECTRON MICROSCOPY
Sample Preparation
Controlled removal by ion beam etching of surface contaminant layers on transmission electron microscope specimens, 11:49022 (R;GB)
TRANSMISSION (HEAT)
See HEAT TRANSFER
TRANSMISSION LINES
See POWER TRANSMISSION LINES
TRANSPLUTONIUM COMPOUNDS

TRANSPORTATION SECTOR
Energy Demand
Energy analysis and alternative fuels and vehicles, 11:47870 (R;US)
TRANSPORTATION SYSTEMS
See also BUSES
Energy Consumption
Advanced propulsion systems and alternative fuels for non-highway transportation. Annex and compendium of research and development. [Final report. Volume 3], 11:47868 (R;US)
Energy Demand
Transportation energy demand from 1980 to 2010: structure and results of the Transportation Energy and Emissions Modeling System, 11:47867 (R;US)
Forecasting
Transportation energy demand from 1980 to 2010: structure and results of the Transportation Energy and Emissions Modeling System, 11:47867 (R;US)
TRANSURANIUM WASTES
See ALPHA-BEARING WASTES
TRAVELLING WAVES
Numerical Solution
The numerical calculation of traveling wave solutions of nonlinear parabolic equations, 11:49634 (J;US)
TREAT REACTOR
Mixed Oxide Fuels
Progress and future plans in the PFR/TREAT safety testing programs, 11:47666 (R;US)
TREE RINGS
Activity Levels
Relation between tree ring records and short-term ^{3}H-contamination of precipitation, 11:48716 (RA;CS)

TREES
See also OAKS
PINES
Distribution
Microsite abundance and distribution of woody seedlings in a South Carolina cypress-tupelo swamp, 11:48913 (J;US)
Plant Growth
Seedling tree responses to nutrient stress under atmospheric CO_2 enrichment (Quercus alba; Liriodendron tulipifera; Pinus virginiana), 11:48903 (R;US)
TRETAMINE

TRITIUM
Environmental Transport
Atmospheric transport calculations versus measured tritium concentrations, 11:48679 (RA;US)
Statistical/modeling approach to ground water monitoring at Brookhaven National Laboratory, 11:48760 (RA;US)
Hypernuclei
Binding energies of hypernuclei and 3-body Λ NN forces, 11:49138 (RA;US)
Inventories
Tritium system for a tokamak reactor with a self-pumped limiter, 11:49540 (R;US)
Low Level Counting
10 years low level counting in the underground laboratory in Bern, Switzerland, 11:48560 (RA;CS)
Low level tritium counting facilities: a survey, 11:48584 (RA;CS)
New low-level laboratory of the "Bundesversuchs- und Forschungsanstalt Arsenal, Wien", 11:48564 (RA;CS)
Preliminary results of the underground laboratory in Freiberg, GDR , 11:48562 (RA;CS)
Monitoring
Statistical/modeling approach to ground water monitoring at Brookhaven National Laboratory, 11:48760 (RA;US)
Mutagenesis
Mutagenic effect of radionuclides incorporated into DNA of Drosophila melanogaster. Technical progress report, December 15, 1985-July 15, 1986, 11:48828 (R;US)
Purification
Design concept of cryogenic falling liquid film helium separator, 11:49584 (J;US)
Radiation Monitoring
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Monitor for continuous measurement of tritium and noble gases in nuclear power station, 11:48600 (RA;CS)
Relation between tree ring records and short-term ^{3}H-contamination of precipitation, 11:48716 (RA;CS)
Radioactivity
Radiation protection measurements and environmental monitoring within the area of the Asse mine shaft. Annual report 1984, 11:47313 (R;DE;In German)
Radioecological Concentration
Anthropogenic radionuclides ^{3}H, ^{14}C, ^{85}Kr and ^{133}Xe in the atmosphere, 11:48692 (RA;CS)
Atmospheric transport calculations versus measured tritium concentrations, 11:48679 (RA;US)
Investigation of the radioactive contamination of the Baltic Sea in 1980-1983, 11:48770 (RA;XA)
Monitoring of the radioactive materials in the Baltic Sea, 11:48766 (RA;XA)
Radiological investigations in the Baltic Sea, including the Danish Straits and the Kattegat during 1982 and 1983, 11:48765 (RA;XA)
Results of the radiological Baltic-monitoring programme of the GDR during 1975-1983, 11:48764 (RA;XA)
Uptake
Influence of relative humidity of air on the level of aqueous tritium in corn, wheat and sunflower, 11:48826 (RA;PL)
TRITIUM COMPOUNDS
See also TRITIUM OXIDES
Radiobiology
Chromosome aberrations induced by H-3-thymidine and H-3-uridine in Rana ridibunda L. , 11:48852 (RA;BG;In Bulgarian)
TRITIUM OXIDES
Radiobiology
Reciprocal translocations in the germ cells of male mice after one-way inoculation of tritiated water, 11:48851 (RA;BG;In Bulgarian)
Uptake
Incorporation of tritiated water from the atmosphere into aqueous and organic components of plants, 11:48825 (RA;PL)
TRITONS
Binding Energy
Relativistic effects in three-body nuclei, 11:49230 (RA;US)
Nuclear Radii
Relativistic effects in three-body nuclei, 11:49230 (RA;US)
Nucleon-Nucleon Potential
Faddeev-Monte Carlo studies of three-body forces in the triton, 11:49228 (RA;US)
TRONA
Catalytic Effects
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
Chemical Composition
Kinetics of catalyzed steam gasification of low-rank coals to produce hydrogen. Final report for the period ending March 31, 1986, 11:47149 (R;US)
TROPOSPHERE
Radionuclide Migration
^{7}Be in the troposphere, 11:48688 (RA;CS)
TRU WASTES
See ALPHA-BEARING WASTES
TRUCKS
Diesel Engines
Agglomerating self-cleaning air cleaner. Final report, 11:47901 (R;US)
TRX-1
See REVERSE-FIELD PINCH
TSL PROCESS
Catalysts
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Organic Solvents
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
Yields
Coal pretreatment for two stage liquefaction. Quarterly report, April 1-June 30, 1986, 11:47198 (R;US)
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Corrosion
Effect of technological design of tube-tubeplate joint of WWER steam generator on resistance to long-term stress in operating conditions, 11:47503 (RA;CS;In Czech)
Workshop on thermally treated alloy 690 tubes for nuclear steam generators: proceedings, 11:47624 (R;US)
Corrosion Fatigue
Analysis of conditions of corrosion fatigue of material of fast reactor steam generator evaporator and their simulation, 11:47517 (RA;CS;In Czech)
Long-term mechanical properties of steels under effect of corrosive medium. Seminar, 11:47941 (R;CS;In Czech)

Methods of estimating the service life of steam generator tubes considering the corrosion medium effect, 11:47516 (RA;CS;In Czech)
Some theoretical and experimental aspects of assessing corrosion fatigue of metals, 11:47936 (RA;CS;In Czech)
Cracking
Laboratory examinations of selected tubes from test facilities of the Steam Generator Owners Group. Final report, 11:47623 (R;US)
Crevice Corrosion
Effects of oxygen, copper and acid chlorides on denting corrosion, 11:47499 (R;US)
Laboratory examinations of selected tubes from test facilities of the Steam Generator Owners Group. Final report, 11:47623 (R;US)
Explosion Welding
Effect of technological design of tube-tubeplate joint of WWER steam generator on resistance to long-term stress in operating conditions, 11:47503 (RA;CS;In Czech)
Materials Testing
Analysis of conditions of corrosion fatigue of material of fast reactor steam generator evaporator and their simulation, 11:47517 (RA;CS;In Czech)
Service Life
Methods of estimating the service life of steam generator tubes considering the corrosion medium effect, 11:47516 (RA;CS;In Czech)
Stress Corrosion
Laboratory examinations of selected tubes from test facilities of the Steam Generator Owners Group. Final report, 11:47623 (R;US)
Thermal Fatigue
Effect of technological design of tube-tubeplate joint of WWER steam generator on resistance to long-term stress in operating conditions, 11:47503 (RA;CS;In Czech)
Thickness
Tube wall thickness measurement apparatus, 11:48645 (P;US)
TUBES (CONDUITS)
See PIPES
TUFF
Explosive Fracturing
High energy gas fracture experiments in liquid-filled boreholes: potential geothermal application, 11:47441 (R;US)
Hydrothermal Alteration
Hydrothermal interaction of crushed Topopah Spring tuff and J-13 water at 90, 150, and 250°C using Dickson-type, gold-bag rocking autoclaves, 11:48948 (R;US)
Rock-Fluid Interactions
Hydrothermal interaction of crushed Topopah Spring tuff and J-13 water at 90, 150, and 250°C using Dickson-type, gold-bag rocking autoclaves, 11:48948 (R;US)
TUNGSTEN
Erosion
Sputtering/redeposition analysis of alkali-based tungsten composites for limiter/divertor applications, 11:47934 (R;US)
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
Mechanical Properties
Current state of the art in molybdenum and tungsten mill products, 11:47579 (RA;US)
Sputtering
Sputtering/redeposition analysis of alkali-based tungsten composites for limiter/divertor applications, 11:47934 (R;US)
TUNGSTEN 181
Sulfur 32 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
Sulfur 36 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
TUNGSTEN 184 TARGET
Sulfur 32 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
Sulfur 36 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
TUNGSTEN ALLOYS
See also HASTELLOY XR
TUNGSTEN BASE ALLOYS
Mechanical Properties
Current state of the art in molybdenum and tungsten mill products, 11:47579 (RA;US)
Refractory metal-matrix composites for space nuclear power applications, 11:47582 (RA;US)
TUNGSTEN BASE ALLOYS
Mechanical Properties
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Physical Radiation Effects
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
TUNGSTEN COMPLEXES
Chemical Preparation
Syntheses and structures of $[HB(pz)_3](CO)_3(CS)W\text{-}Au(PR_3)$. First examples of a semibridging CS ligand, 11:48172 (J;US)
TUNNEL DIODES
Capacitance
Equilibrium properties of thin-oxide metal-oxide-semiconductor diodes, 11:48314 (J;US)
Electric Conductivity
Equilibrium properties of thin-oxide metal-oxide-semiconductor diodes, 11:48314 (J;US)
TURBINE BLADES
Bonding
Advanced development of diffusion bonding processes for joining of turbine blades and vanes with complex cooling configuration and other near net-shape components. Final report, 11:47911 (R;DE;In German)
Ceramics
Ceramic components, gas turbines. Phase 3, 11:47891 (R;DE;In German)
Deposits
Mechanism of deposition in coal-fired gas turbine systems, October 1, 1985-October 1, 1986, 11:47201 (R;US)
Diffusion Welding
Advanced development of diffusion bonding processes for joining of turbine blades and vanes with complex cooling configuration and other near net-shape components. Final report, 11:47911 (R;DE;In German)
Materials
Microstructure and texture effects on titanium alloys, 11:47928 (R;US)
Mechanical Vibrations
Application of a personal computer for the uncoupled vibration analysis of wind turbine blade and counterweight assemblies, 11:47459 (R;US)
Protective Coatings
Life prediction and constitutive models for engine hot section anisotropic materials program. Annual Status Report, 11:47896 (R;US)
Service Life
Life prediction and constitutive models for engine hot section anisotropic materials program. Annual Status Report, 11:47896 (R;US)
TURBINE PUMPS
See PUMP TURBINES
TURNIPS
See BRASSICA
TWO-PHASE FLOW
Computerized Simulation
Nearly-implicit hydrodynamic numerical scheme for two-phase flows, 11:48286 (J;US)
Flow Rate
Acoustic cross-correlation flowmeter for solid-gas flow, 11:48288 (P;US)

Fokker-Planck Equation
Simplified kinetic treatment of heavy molecule velocity persistence effects: application to species separation, 11:49107 (J;US)
Heat Transfer
Prediction of pool void fraction by new drift flux correlation, 11:47735 (R;US)
Mass Transfer
Prediction of pool void fraction by new drift flux correlation, 11:47735 (R;US)
Metering
Acoustic cross-correlation flowmeter for solid-gas flow, 11:48288 (P;US)
TZ1 REACTOR
Research Programs
[Iraqi Atomic Energy Commission]. Annual report 1982-1983 (Iraqi Atomic Energy Commission), 11:47778 (R;IQ)

Activation Analysis
Neutron activation method of U content determination by ^{133}Xe, 11:48066 (RA;CS)
Crystal Structure
Th-U (thorium-uranium) system, 11:47971 (J;US)
Diffusion
Evaluation of Synroc-C as a second-generation waste form, 11:47985 (R;US)
Electron Microprobe Analysis
Automated electron microprobe, 11:48097 (BA;US)
Extraction Chromatography
Reversed phase chromatographic separations with tri-n-octyl phosphine oxide for the isotopic and isotope dilution analysis of mixed U, Pu nuclear fuel materials, 11:48126 (BA;US)
Fluorescence Spectroscopy
Laser fluorimeter for uranium detection in waste, 11:48119 (BA;US)
Gamma Spectroscopy
Gamma-ray spectrometric measurement of natural radionuclides distribution in rocks, 11:48068 (RA;CS)
Ion Exchange Chromatography
Multi-column step-gradient chromatography system for automated ion exchange separations, 11:48117 (BA;US)
Isotopic Exchange
Results from uranium deposition studies for development of a limited frequency-unannounced access inspection strategy for gas centrifuge enrichment plants, 11:48251 (J;US)

Mass Spectroscopy
Detecting isotopic ratio outliers, 11:48121 (BA;US)
ICP-MS and its application in a nuclear laboratory, 11:48102 (BA;US)
Reversed phase chromatographic separations with tri-n-octyl phosphine oxide for the isotopic and isotope dilution analysis of mixed U, Pu nuclear fuel materials, 11:48126 (BA;US)
Mineralization
Contribution to the problems on pre-Variscan precursors of uranium vein deposits in the Bohemian Massif, 11:47268 (RA;XA)
Fault-controlled uranium black ore mineralization from the western edge of the Bohemian Massif (NE Bavaria, FR Germany), 11:47265 (RA;XA)
Geology and origin of the Schwartzwalder uranium deposit, Front Range, Colorado, USA, 11:47258 (RA;XA)
Geology and genesis of uranium deposits at the Pitch Mine, Saguache County, Colorado, 11:47259 (RA;XA)
Granite-type uranium deposits of China, 11:47271 (RA;XA)
Grossschloppen-Hebanz uranium occurrences - a prototype of mineralized structure zones characterized by desilicification and silicification, 11:47264 (RA;XA)
Metallotectonic control of the uranium mineralization in vein-type deposits of Central Iran (Anarak District), 11:47272 (RA;XA)
Origin of uranium vein deposits in metasedimentary rocks: Fe Mine, Salamanca (Spain), 11:47261 (RA;XA;In Spanish)
Two uranium deposits in the Polish part of the Sudety Mountains, 11:47269 (RA;XA)
Uranium-bearing siliceous veins in younger granites, Eastern Desert, Egypt, 11:47257 (RA;XA)
Uranium deposits spatially related to granites in the French part of the Hercynian orogen, 11:47262 (RA;XA)
Uranium deposit 'Krunkelbach' in the Southern Black Forest, Federal Republic of Germany, 11:47263 (RA;XA)
Uranium deposit of Jachymov, Czechoslovakia, 11:47266 (RA;XA)
Uranium deposit of Pribram, Czechoslovakia, 11:47267 (RA;XA)
Uranium veins in Portugal, 11:47260 (RA;XA)
Vein uranium deposits in granites of Xiazhuang ore field, 11:47270 (RA;XA)
Neutron Transport
Evaluation of resonance self-shielding factors for ^{238}U in the unresolved resonance region, 11:49421 (R;XA)
Nondestructive Analysis
Temperature and composition effect on the volumic masses of uranium and plutonium nitric acid solutions, 11:47276 (R;FR;In French)
Oxidation
Oxidation mechanisms and catalytic properties of the actinides, 11:48167 (J;GB)
Phase Diagrams
Th-U (thorium-uranium) system, 11:47971 (J;US)
Polarography
On-line analyzer for monitoring uranium and technetium in the vent stacks to a gaseous diffusion plant, 11:48114 (BA;US)
Quantitative Chemical Analysis
Analytical applications of ICP-FTS, 11:48104 (BA;US)
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Evaluation of the MAT-thermal ionization quadrupole mass spectrometer for potential use for on-situ safeguards verifications, 11:48101 (BA;US)
Resonance Ionization Mass Spectroscopy
Sputter atomization/resonance ionization mass spectrometry for high sensitivity isotopic analysis, 11:48100 (BA;US)
Sampling
Uranium sampling calorimetry with gas chamber readout, 11:48466 (RA;AT)
Self-Shielding
Evaluation of resonance self-shielding factors for ^{238}U in the unresolved resonance region, 11:49421 (R;XA)
Spatial Distribution
Concentration and microdistribution of U in the cathode of Fe-Cr alloy for the gas counter, 11:48543 (RA;CS)
Specific Heat
Th-U (thorium-uranium) system, 11:47971 (J;US)
Superconductivity
Th-U (thorium-uranium) system, 11:47971 (J;US)
Titration
Automated analyzer for the determination of free acid, 11:48128 (BA;US)
High precision plutonium and uranium assay with an automatic titrator, 11:48108 (BA;US)
Toxicity
Investigation of some physicochemical characteristics of uraniferous compounds on workplace layout, 11:47340 (R;FR;In French)
URANIUM 234
Air Pollution Monitoring
Continuous vent sampler for monitoring radionuclide emissions, 11:48681 (RA;US)
Isotope Ratio
Detecting isotopic ratio outliers, 11:48121 (BA;US)
Radioecological Concentration
Continuous vent sampler for monitoring radionuclide emissions, 11:48681 (RA;US)
Scintillation Counting
Determination of ^{238}U/^{234}U ratio by means of liquid scintillation technique, 11:48065 (RA;CS)
URANIUM 235
Fission Yield
Yields of products from thermal-neutron induced fission of ^{235}U, 11:49364 (R;SE)
Fuel Pellets
Compact nuclear power systems based on particle bed reactors, 11:47505 (R;US)
Gamma Spectroscopy
Imaging detector for X and gamma rays, 11:48115 (BA;US)
Isotope Ratio
Detecting isotopic ratio outliers, 11:48121 (BA;US)
URANIUM 235 TARGET
Neutron Reactions
Subthreshold fission cross section of ^{240}Pu and the fission cross sections of ^{235}U and ^{239}Pu, 11:49367 (J;US)
URANIUM 236
Isotope Ratio
Detecting isotopic ratio outliers, 11:48121 (BA;US)
URANIUM 236 TARGET
Carbon 12 Target
Heavy ion fusion and fission reactions, 11:49349 (R;US)
URANIUM 238
Giant Resonance
Decay of the giant monopole resonance in heavy nuclei, 11:49362 (R;NL)
Isotope Ratio
Detecting isotopic ratio outliers, 11:48121 (BA;US)
Natural Occurrence
Increase of local dose rates on the islands in the North Sea, resulting from heavy mineral accumulation. Final report, 11:48710 (R;DE;In German)
Neutron Reactions
Evaluation of resonance self-shielding factors for ^{238}U in the unresolved resonance region, 11:49421 (R;XA)
Scintillation Counting
Determination of ^{238}U/^{234}U ratio by means of liquid scintillation technique, 11:48065 (RA;CS)
URANIUM 238 TARGET
Neon 20 Reactions
Neutron emission in heavy ion reactions as measure for the excitation energy and the transfer of linear momentum - experiments with a 4π-scintillator tank, 11:49352 (R;DE;In German)
Sulfur 32 Reactions
Evaporation residue cross-sections in fusion of ^{64}Ni + ^{92}Zr and ^{12}C + ^{144}Sm, 11:49331 (RA;US)
Sulfur 36 Reactions
Evaporation residue cross-sections in fusion of ^{64}Ni + ^{92}Zr and ^{12}C + ^{144}Sm, 11:49331 (RA;US)

URANIUM BASE ALLOYS
Magnetic Susceptibility
Uranium magnetism in UGa_3 and U(Gasub(1-x)Alsub(x))$_3$ compounds, 11:47933 (R;FR;In French)
Magnetization
Uranium magnetism in UGa_3 and U(Gasub(1-x)Alsub(x))$_3$ compounds, 11:47933 (R;FR;In French)
Structural Chemical Analysis
^{57}Fe Mossbauer spectroscopy of U_6Fe, 11:47915 (R;US)
Vibrational States
^{57}Fe Mossbauer spectroscopy of U_6Fe, 11:47915 (R;US)

URANIUM COMPOUNDS
See also URANIUM NITRATES
URANIUM OXIDES
URANIUM SILICIDES
Absorption Spectroscopy
Lattice dynamics of the heavy Fermion compound UBe/sub 13/, 11:49049 (R;US)
Ferromagnetism
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Fluctuations
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)
Quantitative Chemical Analysis
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Specific Heat
Pressure dependence of spin-fluctuation effects in the specific heat of the heavy-fermion superconductor UPt_3, 11:47960 (J;US)

URANIUM DEPOSITS
Geology
Vein type uranium deposits. Report of the Working Group on Uranium Geology, 11:47248 (R;XA)
Metamorphism
Geological environment of the vein-type deposits in the Aphebian basement of the Carswell structure on the Athabasca plateau (Northern Saskatchewan). Comparison with other deposits of the same type, 11:47252 (RA;XA)
Mt. Painter uranium deposits, 11:47255 (RA;XA)
Pandanus Creek Uranium Mine, Northern Territory, Australia, 11:47253 (RA;XA)
Petrographic-geochemical characteristics and genesis of an albitized uraniferous granite in Northern Cameroon, Africa, 11:47256 (RA;XA)
Problem of uranium mineralization in precambrian metamorphic shear tectonites - with particular reference to the Singhbhum copper-uranium belt, Eastern India, 11:47249 (RA;XA)
Structure related uranium mineralization in the Westmoreland District, Queensland, Australia, 11:47254 (RA;XA)
Uranium genesis within the Arjeplog-Arvidsjaur-Sorsele uranium province, Northern Sweden, 11:47250 (RA;XA)
Vein type uranium deposits. Report of the Working Group on Uranium Geology, 11:47248 (R;XA)
Vein-type uranium mineral occurrences in South Greenland, 11:47251 (RA;XA)

URANIUM DIOXIDE
Chemical Analysis
Determination of nitrogen in PuO_2-UO_2 mixed oxide with fusion-TCD method, 11:48083 (RA;JP)
Dissolution
Test plan for Series 3 NNWSI spent fuel leaching/dissolution tests, 11:47980 (R;US)
Leaching
Test plan for Series 3 NNWSI spent fuel leaching/dissolution tests, 11:47980 (R;US)
Oxidation
Test plan for long-term, low-temperature oxidation of spent fuel, Series 1 (NNWSI project), 11:47979 (R;US)
Solubility
Hydrothermal solubility of uraninite. Final technical report, 11:48135 (R;US)
X-Ray Spectra
Hydrothermal solubility of uraninite. Final technical report, 11:48135 (R;US)

URANIUM II
See URANIUM 234

URANIUM MILLS
See FEED MATERIALS PLANTS

URANIUM MINES
Metamorphism
Pandanus Creek Uranium Mine, Northern Territory, Australia, 11:47253 (RA;XA)

URANIUM NITRATES
Criticality
Calculation of critical parameters for uranium and/or plutonium nitrate solution, 2. Discussion of basic critical parameters for nitrate solution system, 11:47619 (R;JP;In Japanese)

URANIUM ORES
Geology
Uranium deposit of Jachymov, Czechoslovakia, 11:47266 (RA;XA)
Uranium deposit of Pribram, Czechoslovakia, 11:47267 (RA;XA)
Mineralization
Geological environment of the vein-type deposits in the Aphebian basement of the Carswell structure on the Athabasca plateau (Northern Saskatchewan). Comparison with other deposits of the same type, 11:47252 (RA;XA)
Mt. Painter uranium deposits, 11:47255 (RA;XA)
Pandanus Creek Uranium Mine, Northern Territory, Australia, 11:47253 (RA;XA)
Petrographic-geochemical characteristics and genesis of an albitized uraniferous granite in Northern Cameroon, Africa, 11:47256 (RA;XA)
Problem of uranium mineralization in precambrian metamorphic shear tectonites - with particular reference to the Singhbhum copper-uranium belt, Eastern India, 11:47249 (RA;XA)
Structure related uranium mineralization in the Westmoreland District, Queensland, Australia, 11:47254 (RA;XA)
Uranium genesis within the Arjeplog-Arvidsjaur-Sorsele uranium province, Northern Sweden, 11:47250 (RA;XA)
Vein type uranium deposits. Report of the Working Group on Uranium Geology, 11:47248 (R;XA)
Vein-type uranium mineral occurrences in South Greenland, 11:47251 (RA;XA)
Petrogenesis
Contribution to the problems on pre-Variscan precursors of uranium vein deposits in the Bohemian Massif, 11:47268 (RA;XA)
Fault-controlled uranium black ore mineralization from the western edge of the Bohemian Massif (NE Bavaria, FR Germany), 11:47265 (RA;XA)
Geological environment of the vein-type deposits in the Aphebian basement of the Carswell structure on the Athabasca plateau (Northern Saskatchewan). Comparison with other deposits of the same type, 11:47252 (RA;XA)
Geology and origin of the Schwartzwalder uranium deposit, Front Range, Colorado, USA, 11:47258 (RA;XA)
Geology and genesis of uranium deposits at the Pitch Mine, Saguache County, Colorado, 11:47259 (RA;XA)
Granite-type uranium deposits of China, 11:47271 (RA;XA)
Grossschloppen-Hebanz uranium occurrences - a prototype of mineralized structure zones characterized by desilicification and silicification, 11:47264 (RA;XA)

Metallotectonic control of the uranium mineralization in vein-type deposits of Central Iran (Anarak District), 11:47272 (RA;XA)
Mt. Painter uranium deposits, 11:47255 (RA;XA)
Origin of uranium vein deposits in metasedimentary rocks: Fe Mine, Salamanca (Spain), 11:47261 (RA;XA;In Spanish)
Pandanus Creek Uranium Mine, Northern Territory, Australia, 11:47253 (RA;XA)
Petrographic-geochemical characteristics and genesis of an albitized uraniferous granite in Northern Cameroon, Africa, 11:47256 (RA;XA)
Problem of uranium mineralization in precambrian metamorphic shear tectonites - with particular reference to the Singhbhum copper-uranium belt, Eastern India, 11:47249 (RA;XA)
Structure related uranium mineralization in the Westmoreland District, Queensland, Australia, 11:47254 (RA;XA)
Two uranium deposits in the Polish part of the Sudety Mountains, 11:47269 (RA;XA)
Uranium-bearing siliceous veins in younger granites, Eastern Desert, Egypt, 11:47257 (RA;XA)
Uranium deposits spatially related to granites in the French part of the Hercynian orogen, 11:47262 (RA;XA)
Uranium deposit 'Krunkelbach' in the Southern Black Forest, Federal Republic of Germany, 11:47263 (RA;XA)
Uranium genesis within the Arjeplog-Arvidsjaur-Sorsele uranium province, Northern Sweden, 11:47250 (RA;XA)
Uranium veins in Portugal, 11:47260 (RA;XA)
Vein type uranium deposits. Report of the Working Group on Uranium Geology, 11:47248 (R;XA)
Vein-type uranium mineral occurrences in South Greenland, 11:47251 (RA;XA)
Vein uranium deposits in granites of Xiazhuang ore field, 11:47270 (RA;XA)

URANIUM OXIDES
See also URANIUM DIOXIDE
Catalytic Effects
Oxidation mechanisms and catalytic properties of the actinides, 11:48167 (J;GB)

URANIUM SILICIDES
Correlation Functions
Differential anomalous-x-ray-scattering study of icosahedral and amorphous Pd/sub 58.8/U/sub 20.6/Si/sub 20.6/, 11:47963 (J;US)
Distribution Functions
Differential anomalous-x-ray-scattering study of icosahedral and amorphous Pd/sub 58.8/U/sub 20.6/Si/sub 20.6/, 11:47963 (J;US)
Structure Factors
Differential anomalous-x-ray-scattering study of icosahedral and amorphous Pd/sub 58.8/U/sub 20.6/Si/sub 20.6/, 11:47963 (J;US)

URANIUM TETRAFLUORIDE
Inhalation
Investigation of some physicochemical characteristics of uraniferous compounds on workplace layout, 11:47340 (R;FR;In French)

URANUS PLANET
Plasma Waves
Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986, 11:48960 (R;US)
Radiowave Radiation
Plasma-wave observations at Uranus from Voyager 2. Progress report for period ending February 1986, 11:48960 (R;US)

URANYL NITRATES
Quantitative Chemical Analysis
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)

URBAN AREAS
Air Pollution
Transformation processes and wet deposition on the urban scale (Philadelphia field study), 11:48675 (BA;US)
Electric Utilities
Evaluating energy conservation regulations, 11:47833 (RA;US)
Residential Buildings
Evaluating energy conservation regulations, 11:47833 (RA;US)

US DOD
Nuclear Weapons
DOD (Department of Defense) nuclear mishaps. Special report, 11:48653 (R;US)

Administrative Procedures
Nuclear technology transfer via standards: the OMB Circular A-119 in action, 11:47784 (J;US)
S. 1225: a bill to amend the Atomic Energy Act of 1954, as amended, to establish a comprehensive, equitable, reliable, and efficient mechanism for full compensation of the public in the event of an accident... Introduced in the Senate of the United States, Ninety-Ninth Congress, Second Session, May 24, 1985, 11:47745 (B;US)
Budgets
Department of Energy posture hearing. Hearing before the Committee on Science and Technology, US House of Representatives, Ninety-Ninth Congress, Second Session, February 19, 1986, 11:47772 (B;US)
Contracts
Report to Congress on the small business program of the Department of Energy, FY 1985, 11:49596 (R;US)
Coordinated Research Programs
Participation in the United States Department of Energy Reactor Sharing Program. Annual report, September 1982-August 1983, 11:47650 (R;US)
Program Management
Disposal of high-level nuclear waste. Hearing before the Committee on Environment and Public Works, United States Senate, Ninety-Ninth Congress, First Session, October 30, 1985, 11:47322 (B;US)
Radioactive Waste Management
Outdoor radon monitoring at DOE remedial action sites, 11:47332 (RA;US)
Radioisotopes
List of DOE radioisotope customers with summary of radioisotope shipments, FY 1985, 11:48210 (R;US)
Research Programs
Department of Energy posture hearing. Hearing before the Committee on Science and Technology, US House of Representatives, Ninety-Ninth Congress, Second Session, February 19, 1986, 11:47772 (B;US)
Small Businesses
Report to Congress on the small business program of the Department of Energy, FY 1985, 11:49596 (R;US)
Waste Management
Opening address to conference on environmental protection, 11:47325 (RA;US)

US FEMA
Emergency Plans
Effects of edge restraint on slab behavior. Final report, 11:49643 (R;US)

US NRC
United States Nuclear Regulatory Commission-prior to 1975 was part of US AEC.
Administrative Procedures
Energy and water development appropriations for 1987. Part 9. Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, Ninety-Ninth Congress, Second Session, 11:47743 (B;US)
Regulatory policy for advanced nuclear reactors. Hearing before the Subcommittee on Energy Research and Production of the Committee on Science and Technology, US House of Representatives, Ninety-Ninth Congress, First Session, October 31, 1985, 11:47509 (B;US)

S. 1225: a bill to amend the Atomic Energy Act of 1954, as amended, to establish a comprehensive, equitable, reliable, and efficient mechanism for full compensation of the public in the event of an accident... Introduced in the Senate of the United States, Ninety-Ninth Congress, Second Session, May 24, 1985, 11:47745 (B;US)

Bibliographies

PWR TYPE REACTORS
Control Elements
Measurements and analyses on reactivity effects of absorber rods in a light-water moderated UO_2 lattices, 11:47638 (R;JP;In Japanese)
Neutron Absorbers
Measurements and analyses on reactivity effects of absorber rods in a light-water moderated UO_2 lattices, 11:47638 (R;JP;In Japanese)

WATER MODERATOR
See WATER
WATER POLLUTION
Absorption Spectroscopy
USEPA (United States Environmental Protection Agency) method study 7. Analyses for trace elements in water by atomic absorption spectroscopy (direct aspiration) and colorimetry. Final report, 11:48755 (R;US)
Research Programs
Inventory of non-federally funded marine pollution research, development and monitoring activities: Northeast and Mid-Atlantic Region, 11:48752 (R;US)
WATER POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Guidance document on evaluation of injection-well manifold monitoring systems, 11:47226 (R;US)
WATER POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Sulfide precipitation of nickel and other heavy metals from single- and multi-metal systems. Final report, 11:48751 (R;US)
WATER QUALITY
Computerized Simulation
Environmental and water-quality operational studies. Initial evaluation of a computer algorithm for simulating anaerobic conditions in reservoirs and lakes. Final report, 11:48742 (R;US)
Standards
Clean Water Act and biological studies at the Savannah River Plant, 11:47195 (RA;US)
WATER RESERVOIRS
Hazardous Materials
Nashua Impoundment sediment sampling, June 1985, 11:48753 (R;US)
Sampling
Nashua Impoundment sediment sampling, June 1985, 11:48753 (R;US)
Water Quality
Environmental and water-quality operational studies. Initial evaluation of a computer algorithm for simulating anaerobic conditions in reservoirs and lakes. Final report, 11:48742 (R;US)
WATER SOLUTIONS
See AQUEOUS SOLUTIONS
WATER SUPPLY
Used in the sense of a public utility or of an engineered system (e.g., irrigation system) as contrasted to a natural system, for which use WATER RESOURCES.
Absorption Spectroscopy
USEPA (United States Environmental Protection Agency) method study 7. Analyses for trace elements in water by atomic absorption spectroscopy (direct aspiration) and colorimetry. Final report, 11:48755 (R;US)
WATER TREATMENT
Applied fields for energy conservation, water treatment, and industrial applications. Final report, 11:48321 (R;US)
Synergism
Development of synergistic waste treatment into applied technology, 11:47886 (R;US)
WATERBORNE PARTICLES
See PARTICULATES
WATERSHEDS
Hydrology
Hydrology and geochemistry of small tundra drainage basins in response to active layer disturbance. Progress report, 11:48733 (R;US)
WAVE EQUATIONS
See also SCHROEDINGER EQUATION
Analytical Solution
Simple waves in quasilinear hyperbolic systems. Part 1. Theory of simple waves and simple states. Examples of applications, 11:49453 (R;PL)
WAVE FUNCTIONS
Faddeev Equations
Faddeev wave functions of A=18 bound states, 11:49397 (RA;BR)
WAVES (SHOCK)
See SHOCK WAVES
WAVES (TRAVELLING)
See TRAVELLING WAVES
WAZ 16
See NICKEL BASE ALLOYS
WEAK CHARGED CURRENTS
Axial Symmetry
Axial weak currents in the Wess-Zumino term, 11:49159 (R;JP)
Gauge Invariance
Axial weak currents in the Wess-Zumino term, 11:49159 (R;JP)
WEAK NEUTRAL CURRENTS
Axial Symmetry
Axial weak currents in the Wess-Zumino term, 11:49159 (R;JP)
Gauge Invariance
Axial weak currents in the Wess-Zumino term, 11:49159 (R;JP)
WEAR
Activation Analysis
Thin layer surface activation by charged particles used for wear investigations, 11:48067 (RA;CS)
WEATHERIZATION
Data Analysis
Protecting data quality in weatherization evaluations, 11:47848 (RA;US)
Timely evaluations: a method for undertaking and evaluating an energy conservation program in under one year, 11:47798 (RA;US)
Economic Impact
Hourly impacts of residential weatherization - the shape of things to come, 11:47845 (RA;US)
Evaluation
Alternative approaches for treatment of self-selection bias in evaluation of energy use impacts of a home weatherization kit program, 11:47852 (RA;US)
Comparative evaluation of six different energy conservation programs serving low income households in Massachusetts, 11:47788 (RA;US)
Evaluating weatherization options: a comparison of three service alternatives, 11:47790 (RA;US)
Evaluation of Wisconsin's Low-Income Weatherization Program, 11:47789 (RA;US)
Evaluation of a financial incentive program: the BPA Residential Weatherization Program, 11:47791 (RA;US)
Process evaluation and program design: two BPA residential weatherization programs, 11:47836 (RA;US)
Protecting data quality in weatherization evaluations, 11:47848 (RA;US)
Real world application: field testing the value of house doctoring as an incremental conservation measure, 11:47835 (RA;US)
Taking the con out of conservation program evaluation, 11:47812 (RA;US)
Tale of two programs: an application of the Princeton Scorekeeping Method to evaluate energy savings of two weatherization programs, 11:47792 (RA;US)
Use of detailed evaluation data to develop a low cost monitoring system: the BPA Residential Weatherization Program, 11:47853 (RA;US)
Field Tests
Real world application: field testing the value of house doctoring as an incremental conservation measure, 11:47835 (RA;US)
Financial Incentives
Evaluation of a financial incentive program: the BPA Residential Weatherization Program, 11:47791 (RA;US)
Program Management
Assessing the training and technical-assistance needs of weatherization program subgrantees: a practical methodology which yields policy-maker-useful data, 11:47844 (RA;US)

Tale of two programs: an application of the Princeton Scorekeeping Method to evaluate energy savings of two weatherization programs, 11:47792 (RA;US)
Use of detailed evaluation data to develop a low cost monitoring system: the BPA Residential Weatherization Program, 11:47853 (RA;US)

WECS
See WIND TURBINES

WEINBERG LEPTON MODEL
Computerized Simulation
$E^+ e^-$ event generator EPOCS, 11:49617 (R;JP;In Japanese)

WEINBERG MODEL
See WEINBERG LEPTON MODEL

WELDED JOINTS
Crack Propagation
Properties of long-term operated welded joints, 11:47939 (RA;CS;In Czech)
Failures
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report (Welds of 2-1/4Cr-1Mo to 2-1/4Cr-1Mo using 2-1/4Cr-1Mo filler material; and austenitic to ferritic steel welds made by fusion welding alloy-800H to 2-1/4Cr-1Mo using nickel base filler metal ERNiCr-3), 11:47926 (R;US)
Fatigue
Estimation of the high temperature low cycle fatigue strength of welded joints. 1. Proposal of fundamental estimation methods, 11:47967 (TJ;GB;British Library Lending Div., Boston Spa, England)
Evalution of low cycle fatigue strength of welded joints at elevated temperature: applicability of methods of evaluation and plastic restraint, 11:47968 (TJ;GB)
Hardness
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report (Welds of 2-1/4Cr-1Mo to 2-1/4Cr-1Mo using 2-1/4Cr-1Mo filler material; and austenitic to ferritic steel welds made by fusion welding alloy-800H to 2-1/4Cr-1Mo using nickel base filler metal ERNiCr-3), 11:47926 (R;US)
Materials
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report (Welds of 2-1/4Cr-1Mo to 2-1/4Cr-1Mo using 2-1/4Cr-1Mo filler material; and austenitic to ferritic steel welds made by fusion welding alloy-800H to 2-1/4Cr-1Mo using nickel base filler metal ERNiCr-3), 11:47926 (R;US)
Ruptures
Dissimilar-weld failure analysis and development. Comparative behavior of similar and dissimilar welds. Final report (Welds of 2-1/4Cr-1Mo to 2-1/4Cr-1Mo using 2-1/4Cr-1Mo filler material; and austenitic to ferritic steel welds made by fusion welding alloy-800H to 2-1/4Cr-1Mo using nickel base filler metal ERNiCr-3), 11:47926 (R;US)

WELDS
See WELDED JOINTS

WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Radar
Downhole radar system for fracture detection, 11:48325 (R;US)

WELL STIMULATION
Hydraulic Fracturing
Multiple-fracture stimulation using controlled pulse pressurization. Final report, March 1983-December 1985, 11:47233 (R;US)

WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY

WETLANDS
Mapping
Remote sensing of wetlands at the Savannah River Plant, 11:47642 (RA;US)
Remote Sensing
Remote sensing of wetlands at the Savannah River Plant, 11:47642 (RA;US)

WHEAT
Market
Imperfectly competitive equilibria in international commodity markets, 11:47771 (J;US)

WHITE DWARF STARS
Ultraviolet Spectra
Search for metal lines in the spectra of DA white dwarfs. Semiannual Report, 1 October 1984-31 March 1985, 11:49007 (R;US)

WIND
Forecasting
Prediction of extreme offshore wind speeds at moderate elevations using upper-level wind data , 11:47456 (R;GB)
Monthly Variations
Evaluating the impacts of an incomplete data set on estimating the wind power potential. Final report, 11:47449 (R;US)
Seasonal Variations
Evaluating the impacts of an incomplete data set on estimating the wind power potential. Final report, 11:47449 (R;US)
Simulation
Review of wind simulation methods for horizontal-axis wind turbine analysis, 11:47470 (R;US)
Velocity
Prediction of extreme offshore wind speeds at moderate elevations using upper-level wind data , 11:47456 (R;GB)

WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES

WIND FARMS
See WIND TURBINE ARRAYS

WIND GENERATORS
See ELECTRIC GENERATORS
WIND TURBINES

WIND POWER
Evaluating the impacts of an incomplete data set on estimating the wind power potential. Final report, 11:47449 (R;US)
Availability
New Mexico anemometer loan program. Final report, 11:47450 (R;US)
Bibliographies
Wind energy technical reading list, 11:47471 (R;US)
Computerized Simulation
Model for simulating rotational data for wind turbine applications, 11:47469 (R;US)
Directories
Wind power instrumentation directory. Final report, 11:47464 (R;US)
Economics
Utility considerations for wind energy purchase agreements. Final report, 11:47455 (R;US)
Technology Assessment
Testing requirements for variable-speed generating technology for wind turbine applications. Final report, 11:47465 (R;US)
Wind power stations: 1985 performance and reliability. Final report, 11:47467 (R;US)
Uses
Feasibility of using wind power for an aerostat-borne radar system, 11:47473 (R;US)

WIND POWER PLANTS
Performance
[Wind-powered generators. Final report], 11:47461 (R;US)

WIND TUNNELS
Performance
Use of a toxic and hazardous aerosol research facility to evaluate fate and effects of army smoke screen materials, 11:48673 (BA;US)

WIND TURBINE ARRAYS
Design
Integration methodology for large wind-energy conversion systems. Final report, 11:47462 (R;US)

WIND TURBINES
See also VERTICAL AXIS TURBINES
Aerodynamics
Model for simulating rotational data for wind turbine applications, 11:47469 (R;US)

Demonstration Programs
Port Townsend wind energy demonstration project. Project report, 11:47460 (R;US)
Design
Uncertainties in the aerodynamics and structural dynamics of rotors suitable for reliable and long life operation of small HAWTS, 11:47457 (R;US)
Directories
Wind power instrumentation directory. Final report, 11:47464 (R;US)
Electric Generators
Port Townsend wind energy demonstration project. Project report, 11:47460 (R;US)
Reactive power compensating system, 11:47474 (P;US)
Fatigue
Review of wind simulation methods for horizontal-axis wind turbine analysis, 11:47470 (R;US)
Field Tests
Wind power stations: 1985 performance and reliability. Final report, 11:47467 (R;US)
Performance Testing
HAWT performance with dynamic stall, 11:47472 (R;US)
Solano MOD-2 wind turbine: operating experience, September 1984-August 1985. Final report, 11:47466 (R;US)
Reliability
Wind power stations: 1985 performance and reliability. Final report, 11:47467 (R;US)
Research Programs
Solano MOD-2 wind turbine: operating experience, September 1984-August 1985. Final report, 11:47466 (R;US)
Rotors
Uncertainties in the aerodynamics and structural dynamics of rotors suitable for reliable and long life operation of small HAWTS, 11:47457 (R;US)
Technology Assessment
Testing requirements for variable-speed generating technology for wind turbine applications. Final report, 11:47465 (R;US)
Wind power stations: 1985 performance and reliability. Final report, 11:47467 (R;US)
Testing
Review of wind simulation methods for horizontal-axis wind turbine analysis, 11:47470 (R;US)
Turbine Blades
Application of a personal computer for the uncoupled vibration analysis of wind turbine blade and counterweight assemblies, 11:47459 (R;US)

WINDOWS
Light Transmission
Defining daylighting from windows in terms of candlepower distribution curves, 11:47864 (BA;US)

WIND-POWERED PUMPS
Wind-mechanical pumps only; for wind-electric pumps use WIND TURBINES and PUMPS.
Economic Analysis
Cost of windmill irrigation. Cost analysis of wind pumps and diesel pumps used for small scale irrigation, 11:47451 (R;NL)

WINDSCALE REPROCESSING PLANT
See SELLAFIELD REPROCESSING PLANT

WINE
See BEVERAGES

WIRE SPARK CHAMBERS
Performance Testing
Wire chamber conference, 11:48444 (R;AT)

WISCONSIN
Residential Buildings
Evaluation of Wisconsin's Low-Income Weatherization Program, 11:47789 (RA;US)
Tale of two programs: an application of the Princeton Scorekeeping Method to evaluate energy savings of two weatherization programs, 11:47792 (RA;US)

WOLFRAM
See TUNGSTEN

WOOD ALCOHOL
See METHANOL

WORKERS
See PERSONNEL

WORLD-WIDE FALLOUT
See GLOBAL FALLOUT

WWER TYPE REACTORS
See also GREIFSWALD-1 REACTOR
GREIFSWALD-2 REACTOR
GREIFSWALD-3 REACTOR
GREIFSWALD-4 REACTOR
LOVIISA-1 REACTOR
LOVIISA-2 REACTOR
MOCHOVCE-1 REACTOR
WWER-5 REACTOR
Steam Generators
Effect of technological design of tube-tubeplate joint of WWER steam generator on resistance to long-term stress in operating conditions, 11:47503 (RA;CS;In Czech)

WWER-1000 REACTOR
See WWER-5 REACTOR

WWER-5 REACTOR
Reactivity Coefficients
Solution of 2D and 3D hexagonal geometry benchmark problems by using the finite element diffusion code DIFGEN, 11:47501 (R;DE)

WWER-500 REACTOR
See WWER-5 REACTOR

WYOMING
Coal Deposits
Assessment of development and production potential of federal coal leases. Volume 2. Working papers. Part E, Vol. 1. Development and production potential of undeveloped federal coal leases and preference-right lease applications in the Powder River Basin and other Wyoming coal basins: Wyoming task force report. Working paper, 11:47208 (R;US)
Oil Sand Deposits
Reconnaissance examination of selected oil sand and oil spring occurrences in Wyoming. Final report, 11:47241 (R;US)

X

X RADIATION
Mutagenesis
Mutagenic effect of radionuclides incorporated into DNA of Drosophila melanogaster. Technical progress report, December 15, 1985-July 15, 1986, 11:48828 (R;US)
Radiobiology
Effect of physiological concentrations of cysteine on x-ray induced DNA damage in cultured cells, 11:48868 (RA;AU)
Evidence for a general relationship between the induced level of DNA double-strand breakage and mammalian cell killing after x-irradiation, 11:48865 (RA;AU)
Reflection
Interpretation of glancing-incidence scattering measurements, 11:49450 (R;US)
Silicon diffraction gratings for multilayer structures, 11:48224 (R;US)

XENON
Electron Reactions
Exploratory gas-target experiment at PEP using the TPC/2 γ facility, 11:49235 (R;US)
Photon-Atom Collisions
Multiphoton transitions in the ionization continuum of atoms, 11:49052 (RA;US)

XENON 125
Chemical Preparation
Method for the simultaneous preparation of radon-211, xenon-125, xenon-123, astatine-211, iodine-125 and iodine-123, 11:48812 (P;US)

XENON 133
Radioecological Concentration
Anthropogenic radionuclides ^{3}H, ^{14}C, ^{85}Kr and ^{133}Xe in the atmosphere, 11:48692 (RA;CS)

XENON 136
Double Beta Decay
Multielement proportional chamber for ^{136}Xe $\beta\beta$ decay, 11:48530 (RA;AT)

XENON COMPOUNDS
Photoionization
Molecular beam photoionization spectrometry. (1) Photoionization studies of high temperature vapors. (2) State-selected and state-to-state studies of electron transfer reactions, 11:48204 (D;US)
XI PARTICLES
Particle Production
Search for the $\xi(2.2)$ in anti pp formation, 11:49117 (R;US)
XP CELLS
Genetic Radiation Effects
Cytotoxic and mutagenic effects of specific carcinogen-DNA adducts in diploid human fibroblasts, 11:48924 (J;US)
X-RASERS
See X-RAY LASERS
X-RAY DETECTION
Multiwire Proportional Chambers
X-ray position detection in the region of 5 microns RMS with wire proportional chambers, 11:48472 (RA;AT)
Wire Spark Chambers
Multisectional wire chamber for investigation of impulse X-ray and VUV plasma radiation, 11:48456 (RA;AT)
X-RAY EMISSION ANALYSIS
See also PIXE ANALYSIS
Quality Assurance
Some uncertainties associated with preparation of standards in organic matrix, 11:48056 (R;US)
X-RAY FLUORESCENCE ANALYZERS
Design
High spatial resolution in x-ray fluorescence, 11:48631 (R;US)
Proportional Counters
Proportional counter in a portable energy dispersive X-ray analyzer, 11:48504 (RA;AT)
Spatial Resolution
High spatial resolution in x-ray fluorescence, 11:48631 (R;US)
X-RAY LASERS
Performance
X-ray laser experiments research at the Nova Laser Facility, 11:48267 (BA;US)
Research Programs
X-ray laser experiments research at the Nova Laser Facility, 11:48267 (BA;US)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Holography
X-ray holographic microscopy experiments at the Brookhaven synchrotron light source, 11:48649 (J;US)
X-RAY SPECTROMETERS
Gratings
Reflection grating spectrometer for the x-ray multi-mirror (XMM) space observatory: design and calculated performance, 11:48632 (R;US)
X-RAY SPECTROSCOPY
EXAFS and reflectivity studies of surfaces and interfaces using glancing angle x-rays, 11:48629 (R;US)
X-RAY TUBES
Design
SLAC pulsed x-ray facility, 11:48614 (R;US)
Pulse Circuits
SLAC pulsed x-ray facility, 11:48614 (R;US)

Y

YAMS
Radiopreservation
Use of gamma radiation as a form of preservation of sweet potatoes. [Final technical] quarterly progress report, 11:47352 (R;US)
YANG-MILLS THEORY
Many-Dimensional Calculations
Feeble intermediate-range forces from higher dimensions, 11:49200 (J;US)
YOSHIDA SARCOMA
See EXPERIMENTAL NEOPLASMS
YTTERBIUM 151
Energy-Level Transitions
Shell-model states in N = 81-83 nuclei, 11:49317 (RA;US)
YTTERBIUM 171 TARGET
Sulfur 32 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
Sulfur 36 Reactions
Evaporation residue cross-sections in fusion of $^{64}Ni + {}^{92}Zr$ and $^{12}C + {}^{144}Sm$, 11:49331 (RA;US)
YTTRIUM 88
Coincidence Spectrometry
Measurement of electron capture to positron emission ratios in light and medium nuclides, 11:48549 (RA;CS)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM IONS
M1-Transitions
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
Ultraviolet Spectra
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
X-Ray Spectra
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
YTTRIUM OXIDES
Fluorescence
Laser-induced fluorescence of europium-doped yttrium oxide for remote high-temperature thermometry, 11:48130 (BA;US)
Infrared Spectra
Carbonate associated with hydroxide sol-gel processing of yttria: An infrared spectroscopic study, 11:47990 (J;US)
Laser Spectroscopy
Laser-induced fluorescence of europium-doped yttrium oxide for remote high-temperature thermometry, 11:48130 (BA;US)
Sintering
Carbonate associated with hydroxide sol-gel processing of yttria: An infrared spectroscopic study, 11:47990 (J;US)
Sol-Gel Process
Carbonate associated with hydroxide sol-gel processing of yttria: An infrared spectroscopic study, 11:47990 (J;US)
Stimulated Emission
Trivalent cerium doped crystals as tunable laser systems: Two bad apples, 11:48271 (BA;US)
YTTRIUM SILICATES
Crystal Growth
Investigation of single-crystal silicates for blue tunable lasers. Quarterly progress report No. 1, 1 September-30 November 1985, 11:48253 (R;US)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEOLITES
Catalytic Effects
Methane suppression from metal-zeolite catalysts in synthesis gas conversion, 11:47368 (J;US)
Chemical Preparation
Advanced NMR characterization of zeolite catalysts. Final technical report, 11:48136 (R;US)
Labelling
Advanced NMR characterization of zeolite catalysts. Final technical report, 11:48136 (R;US)
NMR Spectra
Advanced NMR characterization of zeolite catalysts. Final technical report, 11:48136 (R;US)

Structural Chemical Analysis
Advanced NMR characterization of zeolite catalysts. Final technical report, 11:48136 (R;US)

ZINC
Nitrogen 14 Reactions
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)
Oxygen 16 Reactions
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)

ZINC 65
Radiation Monitoring
Report of intercalibration exercises organized for the laboratories participating in the IAEA's co-ordinated research programme "Study of Radioactive Materials in the Baltic Sea" in 1981-1984, 11:48761 (RA;XA)
Uptake
Behaviour of cesium 137, chromium 51, cobalt 60, manganese 54, sodium 22 and zinc 65 in simulated estuarine environments. Effects of suspended mineral particles and dissolved organic matters, 11:48759 (R;FR;In French)

ZINC COMPOUNDS
See also ZINC OXIDES
Chemical Bonds
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Preparation
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Chemical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Molecular Structure
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)
Physical Properties
Synthesis and characterization of some reduced ternary and quaternary molybdenum oxide phases with strong metal-metal bonds, 11:48162 (D;US)

ZINC OXIDES
Microstructure
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)
Phase Studies
Microstructure and microanalysis of spinel and pyrochlore phases in ZnO varistors, 11:48052 (BA;US)

ZINC-BROMINE BATTERIES
Technology Assessment
Mission and status of the U.S. Department of Energy's battery energy storage program, 11:47759 (BA;US)

ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
Fuel Cans
Phase transformations in neutron-irradiated Zircaloys, 11:47917 (R;US)
Irradiation
Phase transformations in neutron-irradiated Zircaloys, 11:47917 (R;US)
Phase Transformations
Phase transformations in neutron-irradiated Zircaloys, 11:47917 (R;US)
Quantitative Chemical Analysis
ICP-MS and its application in a nuclear laboratory, 11:48102 (BA;US)

ZIRCALOY 2
Crack Propagation
Environment induced cracking of Zircaloy-2 fuel cladding tube, 11:47628 (R;IN)
Cracks
Environment induced cracking of Zircaloy-2 fuel cladding tube, 11:47628 (R;IN)
Stress Corrosion
Environment induced cracking of Zircaloy-2 fuel cladding tube, 11:47628 (R;IN)

ZIRCONIUM
Mass Spectroscopy
Application of inductively coupled plasma mass spectrometry to the analysis of uranium metal and uranium compounds, 11:48103 (BA;US)
Application of ICP/MS in the analysis of uranic materials, 11:48125 (BA;US)
Nitrogen 14 Reactions
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)
Oxygen 16 Reactions
Measurement of stopping powers of heavy ions in solids, 11:49288 (RA;BR)

ZIRCONIUM 89
Energy Levels
High-spin, two-particle, one-hole, stretched states excited by proton induced negative pion production in nuclei, 11:49330 (RA;US)

ZIRCONIUM 92 TARGET
Nickel 64 Reactions
l-distributions in fusion of $^{64}Ni + {}^{92}Zr$ and $^{13}C + {}^{144}Sm$ measured with the Darmstadt-Heidelberg crystal ball, 11:49315 (RA;US)
Limits to fusion in heavy systems, 11:49314 (RA;US)

ZIRCONIUM 95
Gamma Spectroscopy
Gamma-spectrometric investigation of low activities of technogenic radionuclides in the surface air layer, 11:48071 (RA;CS)

ZIRCONIUM ALLOYS
Anisotropy
Crystallographic texture: experimental geometry and defocussing correction, 11:47829 (R;GB)
Crystallography
Crystallographic texture: experimental geometry and defocussing correction, 11:47829 (R;GB)
Mechanical Properties
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)
Physical Radiation Effects
Refractory alloy performance: unresolved issues and status summary, 11:47598 (R;US)

ZIRCONIUM IONS
M1-Transitions
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
Ultraviolet Spectra
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)
X-Ray Spectra
Transitions of the type 2s-italic-2p-italic in oxygenlike Y, Zr, and Nb, 11:49088 (J;US)

ZIRCONIUM OXIDES
Bonding
Intermixing at Ni-porous zirconia junctions, 11:47998 (BA;US)
Chemical Reactions
Reactions at the Ni-ZrO_2 interface, 11:47970 (BA;US)
Crystal Structure
Factors influencing the stability of the tetragonal form of zirconia, 11:47988 (J;US)
Diffusion Welding
Intermixing at Ni-porous zirconia junctions, 11:47998 (BA;US)
Mechanical Properties
Intermixing at Ni-porous zirconia junctions, 11:47998 (BA;US)
Phase Diagrams
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending March 31, 1986, 11:47142 (R;US)
Phase Studies
Reactions at the Ni-ZrO_2 interface, 11:47970 (BA;US)
Precipitation
Factors influencing the stability of the tetragonal form of zirconia, 11:47988 (J;US)

ZPPR REACTOR
Neutron Transport
Recent BeO-reflector-controlled reactor experiments in,
11:47572 (RA;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	Abstract No.	Report No.
AC01-76ET29201	Ohio Brass Co., Wadsworth (USA). Frank B. Black Research Center	
	11:47486	DOE/ET/29201—T1
AC01-80RA50256	Univ. of Arizona, Tucson	
	11:48741	21 NO. 4. 473-485 (Apr 1985).
AC01-84CE50070	Southwest Research Inst., San Antonio, TX (USA). Fuels and Lubricants Research Div.	
	11:47902	DOE/CE/50070—T16
AC01-84DP50039	Eagle Research Group, Inc., Arlington, VA (USA)	
	11:48655	DOE/DP/50039—T1
AC01-84ER30063	Mueller Associates, Inc., Baltimore, MD (USA)	
	11:47868	DOE/ER/30063—H2
AC02-76CH00016	Brookhaven National Lab., Upton, NY (USA)	
	11:47145	BNL—38255
	Brookhaven National Lab., Upton, NY (USA). Technical Support Organization	
	11:47343	BNL—38314
	Brookhaven National Lab., Upton, NY (USA)	
	11:47445	BNL—38019
	11:47505	BNL—38379
	11:47522	BNL—38312
	New Mexico Univ., Albuquerque (USA). Inst. for Space Nuclear Power Studies	
	11:47558	CONF-860102—Summs.(1986).
	Brookhaven National Lab., Upton, NY (USA). Nuclear Energy Dept.	
	11:47656	BNL-NUREG—37691
	Brookhaven National Lab., Upton, NY (USA). Applied Science Dept.	
	11:47773	BNL—38299
	Brookhaven National Lab., Upton, NY (USA)	
	11:47889	BNL—51999
	11:47914	BNL—38329
	11:47957	34 NO. 4. 2971-2974 (15 Aug 1986).
	11:48008	BNL—38242
	11:48043	Journal of Applied Crystallography 19 NO. 3. 200-201 (1 Jun 1986).
	11:48056	BNL—38365
	11:48146	Journal of Physical Chemistry 90 NO. 16. 3734-3739 (31 Jul 1986).
	11:48184	Journal of Physical Chemistry 90 NO. 16. 3657-3668 (31 Jul 1986).
	11:48335	BNL—34518-Ed.3
	11:48377	BNL—38307
	Brookhaven National Lab., Upton, NY (USA). AGS Dept.	
	11:48378	BNL—38310
	Army Research and Development Command, Dover, NJ (USA)	
	11:48379	BNL—38387
	Brookhaven National Lab., Upton, NY (USA)	
	11:48380	BNL—38398
	11:48437	BNL—38229
	11:48799	BNL—38283
	11:48800	BNL—51997
	11:48811	(4 Oct 1985).
	11:48812	(1 Jul 1985).
	Pennsylvania State Univ., University Park (USA). Soil Microbiology Lab.	
	11:48813	DOE/ER—0289
	Brookhaven National Lab., Upton, NY (USA)	
	11:48899	BNL—38355
	11:48900	BNL—38357
	11:48901	BNL—38373
	11:48902	BNL—38374
	Brookhaven National Lab., Upton, NY (USA). Applied Science Dept.	
	11:48954	BNL—38342
	Brookhaven National Lab., Upton, NY (USA)	
	11:49049	BNL—38396
	State Univ. of New York, Stony Brook (USA). Dept. of Physics	
	11:49050	BNL—38486
	Brookhaven National Lab., Upton, NY (USA). Physics Dept.	
	11:49115	BNL—38285
	Brookhaven National Lab., Upton, NY (USA). AGS Dept.	
	11:49116	BNL—38304
	New York Univ., NY (USA). Dept. of Physics	
	11:49117	BNL—38385
	11:49202	57 NO. 1. 40-43 (7 Jul 1986).
	11:49203	57 NO. 1. 44-47 (7 Jul 1986).
	11:49205	56 NO. 25. 2659-2663 (23 Jun 1986).
	11:49212	43 NO. 3. 1117-1128 (Jun 1986).
	Brookhaven National Lab., Upton, NY (USA). Physics Dept.	
	11:49217	BNL—38297
	11:49218	BNL—38298
	Brookhaven National Lab., Upton, NY (USA)	
	11:49232	BNL—38336
	11:49279	34 NO. 1. 136-151 (Jul 1986).
	11:49338	BNL-NCS—37975
	11:49448	Journal of Electroanalytical Chemistry 185 209-228 (1985).
	Army Research and Development Command, Dover, NJ (USA)	
	11:49450	BNL—38386
	Brookhaven National Lab., Upton, NY (USA)	
	11:49532	BNL—38384
AC02-76CH03000	Fermi National Accelerator Lab., Batavia, IL (USA)	
	11:48354	FNAL/C—86/52-E
	11:48356	FNAL-TM—1407
	11:48383	FNAL-TM—1403
	11:48384	FNAL-TM—1406
	11:48385	FNAL-TM—1409

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form, DE82000001 or TI82000001, appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 5 to 8% illegibility, available PC and MF; 2 = 9 to 12% illegibility, available MF only; 3 = 13% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

FILE NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by file number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($5.95).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE		E01	$7.50	T01	$145.00
A01	$5.95	E02	10.00	T02	160.00

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 85-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

DOCUMENT TYPES

J	Journal article
TJ	Translation of a journal article
R	Report
RA	Report analytic
B	Book
BA	Book analytic
P	Patent
E	Engineering materials
D	Dissertation
TG	Translation (general)
TA	Translation (analytic)

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
